Materials, Specifications of. British Standard Specification for Metallic Resistance Materials for Electrical Purposes. British Eng. Standards Assn., no. 115, Sept. 1921, 13 pp. Specifications for resistivity, variation and uniformity of resistance, thermal electromotive force, temperature coefficient, maximum working temperature, quality, mechanical properties of wire and tape, etc. Standard sizes of wires, thicknesses of sheets and strips and dimensions of tapes.

Neutralization. Resistance Neutralization, Edward Bennett and Leo James Peters. Am. Inst. Elec. Engrs., Jl., vol. 41, no. 3, Mar. 1922, pp. 234-248, 13 figs. An application of thermionic amplifier circuits. Discusses current and power relations which obtain in circuits having a resistance neutralizer associated with them; and treats of optimum conditions in receiving circuits containing a resistance neutralizer.

ELECTRIC WELDING

Cyc-Arc. The "Cyc-Arc" Process of Automatic Electric Welding, L. J. Steele and H. Martin. Instn. Elec. Engrs., Jl., vol. 60, no. 305, Jan. 1922, pp. 136-157 and (discussion) 158-162, 14 figs. Detailed description of the processes, by which metals of widely differing character and section can successfully be welded electrically.

Steel Construction. Electric Welding Applied to Steel Construction, with Special Reference to Ships, A. T. Wall. Engineering, vol. 113, no. 2930, Feb. 24, 1922, pp. 241-244, 14 figs. Writer calls attention to various ways in which electric welding is being applied to ship construction, and indicates further possibilities in this connection for steel structures. Paper read before Instn. Mech. Engrs.

ELECTRIC WELDING, ARC

Cast Iron. Arc-Welding of Cast Iron. Machy. (Lond.), vol. 19, no. 490, Feb. 16, 1922, pp. 593-596, 6 figs. Use and application of methods for welding cast iron by electric arc.

Practical Points. Practical Points in Arc Welding, J. A. Wilson, Am. Mach., vol. 56, no. 10, Mar. 9, 1922, pp. 357-358, 4 figs. Notes on keeping work clean; bevelling edges; allowing for expansion and contraction; guarding against injury; making solid welds.

Refrigerating Machinery. Arc Welding of Refrigerating Machinery, A. M. Candy. Welding Engr., vol. 7, no. 2, Feb. 1922, pp. 21-23, 9 figs. Advantages in repair and production work. Paper read before Am. Soc. Refrig. Engrs.

ELECTROLYSIS

Underground Pipe. Prevention of Electrolysis Troubles in Underground Pipe Structures, E. B. Stewart. Am. Water Works Assn. Jl., vol. 9, no. 2, Mar. 1922, pp. 274-283. Discusses electrolytic problems most generally encountered by pipe-owning companies and methods of mitigating them.

ELEVATORS

Motor Controller. Operation of a Drum-Type, Elevator-Machine Alternating-Current Motor Controller, William Zepernick. Power, vol. 55, no. 8, Feb. 21, 1922, pp. 295-298, 9 figs. Functions of different parts and circuits of a one-speed elevator controller. Tracing out circuits for one direction of machine.

Passenger, Safeguarding. Passenger Elevator Protection, J. J. Lamb. Power Plant, Eng., vol. 26, no. 4, Feb. 15, 1922, pp. 231-234, 3 figs. Arrangement and safeguarding to prevent accidents and reduce fire hazard to a minimum.

EMPLOYEES' REPRESENTATION

Shop Committees. How Shop Committees Function Under Depression, Lionel D. Edie. Indus. Management, vol. 63, no. 2, Feb. 1922, pp. 92-95. Account of what happened to shop committees of Int. Harvester Co., and how these committees have handled lay-offs and wage reductions. Record includes wage cut of 20 per cent decided entirely by shop committees.

EMPLOYEES, TRAINING OF

Manufacturing. The Training of Workers in Manufacture, J. V. L. Morris. Am. Mach., vol. 56, no. 9, Mar. 2, 1922, pp. 320-322. Apprenticeship practices regarding indenture, age, payment and certificates. Public School substitutes. Evening, part-time and cooperative schools.

Methods. Making Industrial Improvements Permanent, Paul M. Atkins. Management Eng., vol. 2, no. 3, Mar. 1922, pp. 153-158, 4 figs. Through patient teaching based on written instructions. Two classes of employee instruction. Specific forms of training.

EMPLOYMENT MANAGEMENT

Eye Examinations. Better Work and More Work per Man Through Better Sight, E. LeRoy Ryer and Willard B. Fisher. Indus. Management, vol. 63, no. 2, Feb. 1922, pp. 111-117, 2 figs. Industrial eye examinations and their importance in management.

Principles Involved. Increasing Man Power Through Management, L. W. Olson. Indus. Management, vol. 63, no. 2, Feb. 1922, pp. 88-91. Writer discusses cardinal principles involved in management of men.

Testing Motormen. Psychological Tests for Motormen, Alfred Gradenwitz. Elec. Ry. Jl., vol. 59, no. 4, Jan. 28, 1922, pp. 143-146, 13 figs. Discusses physical and psychological tests which must be passed by candidates for position of motormen in Berlin.

ENGINEERING

Economics of. The Economics of Engineering, H. W. Pitt. Eng. Production, vol. 4, nos. 73 and 74, Feb. 23 and Mar. 2, 1922, pp. 173-175 and 197-199. Feb. 23: Deals with design economics; production and consumption cost; designing for a given market; standardization and accuracy as cost reducers; designing and costing. Mar. 2: Designer and consumer; production and factory economics; division of labour; economics of purchasing and of selling and using.

ENGINEERS

Licensing. Licensing and Engineering Ethics, C. E. Waddell. Professional Engr., vol. 7, no. 1, Jan. 1922, pp. 8-9. Status of the expert witness, contractor, manufacturer, salesman, college graduate and practising engineer.

EVAPORATORS

Basic Principles. Evaporators—What They Are and How They Operate. Power, vol. 55, no. 8, Feb. 21, 1922, pp. 292-294, 3 figs. Writer seeks to present clear idea of basic principles of evaporators as used in power plants to produce distilled makeup water

F

FACTORY MANAGEMENT

See Industrial Management.

FILTRATION PLANTS

Loading. The Loading of Filter Plants, H. W. Streeter. Am. Water Works Assn. Jl., vol. 9, no. 2, Mar. 1922, pp. 157-171, 2 figs. It is shown how bacterial correlation between influent and effluent, such as is described, may be utilized in practical way as basis of predicting probable loading conditions under which water-purification plants are likely to become overburdened, as far as their producing effluents of specified bacterial quality is concerned.

FLIGHT

Soaring. Soaring Flight, Its Development and Prospects, Wm. Knight. Aerial Age, vol. 14, no. 24, Feb. 20, 1922, pp. 562-563, 8 figs. Describes Klemperer and Loessl gliders, and gives tables of distance and time of flights made.

FOREMEN

Requirements and Training. Can Foremanship Help to Rebuilt Profits? B. M. Nussbaum. Indus. Management, vol. 63, no. 3, Mar. 1922, pp. 155-159. Notes on cost saving and the foreman; foremen as advisers to directors; train- [illegible] foremanship.

FOUNDRIES

[illegible] Conveying and Mechanical Handling [illegible] vol. 20, no. 6, Feb. 10, 1922, pp. 123-127, 3 figs. Emphasizes necessity of keeping foundry handling costs [illegible] to the end.

Dust Removal from Cleaning Room. Removing the Dust from the Casting Cleaning Room, C. C. Hermann. Indus. Management, vol. 63, no. 3, Mar. 1922, pp. 171-174, 3 figs. Design of suitable system requires competent consideration of (1) suction at hoods; (2) friction losses in piping; (3) selection of blower unit; (4) discharge resistance; (5) losses due to collector.

Gas, Application in. The Application of Gas in the Foundry. Foundry Trade Jl., vol. 25, no. 286, Feb. 9, 1922, pp. 97-100, 7 figs. Describes way in which Mond gas generated at works of Nat. Gas Engine Co., Ltd., is fully utilized. Plant consists of a gas generator, scrubber, gas purifier, exhauster and pressure regulator.

Machine-Tool Industry. Machine Builder Erects Foundry, Pat Dwyer. Iron Trade Rev., vol. 70, no. 10, Mar. 9, 1922, pp. 683-686, 7 figs. Melting and crane equipment was installed sufficient to handle single castings up to 50 tons and daily normal output of 100 tons of castings. Details of new foundry of Toledo Machine & Tool Co., Toledo, Ohio.

Modern Designs. Modern Foundries, M. Fischer. Eng. Progress, vol. 3, no. 2, Feb. 1922, pp. 29-32, 14 figs. Principles governing construction of modern foundries as regards initial costs, enlargement, workmen, and auxiliary arrangements.

FREIGHT HANDLING

Container System. Containers Carry Freight in Cincinnati. Elec. Ry. Jl., vol., 59, no. 8, Feb. 25, 1922, pp. 315-318, 8 figs. An interurban electric railway without tracks downtown gives through freight service by containers which are carried on motor trucks within city and on electric cars for interurban run.

Electric Tractors and Trailers. Modern Methods of Handling Package Freight, G. Marks. Ry. Age, vol. 72, no. 8, Feb. 25, 1922, pp. 469-470. Use of electric tractors and trailers in freight houses, and savings effected on New Haven line. (Abstract.) Paper read before New Eng. R. R. Club.

Erie Railroad. Erie Adopts Direct Freight Delivery at New York. Ry. Age, vol. 72, no. 3, Jan. 21, 1922, pp. 233-234, 1 fig Plan involves breaking bulk at Jersey City, N.J., and use of auto trucks, tractors and trailers and ferries.

FUELS

Gas. Burning Fuel Gases Efficiently, H. S. Watts. Iron Trade Rev., vol. 70, no. 9, Mar. 2, 1922, pp. 605-609, 2 figs. Combustion temperature and stack loss are important factors from standpoint of economy. Design and operation of gas burners and principles of continuous heating are discussed.

Fuel Gases and Their Use in Iron and Steel Plants, H. S. Watts. Assn. Iron & Steel Elec. Engrs., vol. 4, no. 2, Feb. 1922, pp. 97-126, 5 figs. Characteristics of gases; design and operation of gas burners; principles of continuous heating.

High-Ash Coal. Low-Ash Coal Not Always Desirable, S. W. Flagg. Power, vol. 55, no. 9, Feb. 28, 1922, pp. 328-330, 4 figs. Discussion of conditions under which it was found that coal with high ash content reduced stoker trouble.

Sawmill Refuse. Generating Power from Waste, H. S. Bastian. Elec. World, vol. 79, no. 8, Feb. 25, 1922, pp. 373-375, 5 figs. "Hogged fuel," or sawmill refuse, proves to be a valuable combustible in lumber-producing regions; care must, however, be exercised in firing if best results are to be obtained.

FURNACES, ANNEALING

Sheet and Tin Mill. Sheet and Tin Mill Furnaces, T. J. Costello and J. H. Knapp. Blast Furnace & Steel Plant, vol. 10, no. 2, Feb. 1922, pp. 141-144, 3 figs. Improvements in furnaces used for heating and annealing sheet and tin.

FURNACES, FORGING

Types. Discussion of Forge Furnaces, Charles Longenecker. Forging & Heat Treating, vol. 8, no. 2, Feb. 1922, pp. 122-124. Discusses soaking pits, regenerative-type furnaces, non-regenerative type, and furnaces of small hearth area, pointing out possibilities for saving and increased efficiency with various classes of fuel.

G

GARBAGE DISPOSAL

Methods. Present Day Aspects of the Refuse Disposal Problem, Samuel A. Greeley. Western Soc. Engrs. Jl., vol. 27, no. 2, Feb. 1922, pp. 33-44 and (discussion) 44-46, 9 figs. Refuse disposal in large and small towns; house treatment, collection, transportation, and final disposal; describes modern garbage reduction plants.

GAS

By-Product. Value of By-Product Gas to Industry, H. Dobrin. Assn. Iron & Steel Elec. Engrs., vol. 4, no. 2, Feb. 1922, pp. 79-90 and (discussion) 91-96. Flame temperatures of various gases; use of by-product gas in glass, iron, boiler, and automobile works; furnace design; combustion.

Fuel. *See Fuels, Gas.*

GAS ENGINES

Manufacture of Parts. How Large Engine Parts Are Made, Pat Dwyer. Foundry, vol. 50, nos 2 and 3, Jan 15 and Feb 1, 1922, pp. 66-73 and 114-119, 18 figs. Jan. 15: Molding practice at plant of Allis Chalmers Co., West Allis, Wis., in production of what are claimed to be largest gas engines in world. Feb. 1: Handling of large engine castings after they are made.

GAS PRODUCERS

Benoid Automatic. Benoid Gas Producer. Eng. Progress, vol. 3, no. 2, Feb. 1922, pp. 37-38, 2 figs. Arrangement, drive and [illegible] of an automatically acting gas producer, properties of gas suitable for [illegible] and heating purposes.

Coupled to Gas-Engine Plant. Some Observations on a Producer-Gas Power Plant, H. S. Denny. Engineering, vol. 113, nos. 2926, 2927 and 2928, Jan. 27, Feb. 3 and 10, 1922, pp. 119-122, 152-154 and 184, 10 figs. Account of investigation of large-capacity Mond gas-producer plant coupled up to gas-engine plant of equivalent size. Paper read before Instn. Mech. Engrs. For discussion, see no. 2928, Feb. 10, pp. 160-162.

GAS TURBINES

Economy. Economy and the Gas Turbine, Norman Davey. Engineer, vol. 133, no. 3451, Feb. 17, 1922, p. 177. Gives comparative analyses of gas-turbine cycles (heat absorption at constant pressure) working with common rotary compressor and with kinetic compressor. Writer maintains that gas turbine competes essentially with steam turbine. (Letter to editor.)

Efficiency, Determination of. Thermodynamic Bases for Determining Efficiency to be Expected from Gas Turbines, H. Schmolke. Mech. Eng., vol. 44, no. 3, Mar. 1922, pp. 187-190, 4 figs. Presents, among others, diagrams developed by W. Schüle showing process and efficiency of Holzwarth turbines. Translated from Zeit. für Dampfkessel u. Maschinenbetrieb, vol. 44, no. 44, Nov. 4, 1921, p. 351.

GAS WORKS

Chemical Problems. Solved and Unsolved Problems in Gasworks Chemistry, E. V. Evans. Chem. Age (Lond.), vol. 6, no. 139, Feb. 11, 1922, pp. 168-169. Notes on naphthalene deposits in mains; removal of hydrogen sulphide; reduction of dyestuffs; low-temperature carbonization; etc. (Abstract.) Paper read before Roy. Soc. of Arts.

GASES

Heat Transfer Between Liquids and. Rates of Absorption and Heat Transfer between Gases and Liquids, W. G. Whitman and J. L. Keats. Jl. Indus. & Eng. Chem, vol. 14, no. 3, Mar. 1922, pp. 186-191, 3 figs. Presentation of theory involved in liquid-gas interactions. Summary of Lewis' mathematical treatment with modifications. Verification of theory. Presentation of equations showing effect of operating variables on coefficients for various types of apparatus.

GEAR CUTTING

Multiple Shaper. Develops Multiple Shaper for Intern Gears. Iron Age, vol. 109, no. 9, Mar. 2, 1922, pp. 592-593, 4 figs. Down-stroke model supplements previous machine of Stevenson Gear Co., Indianapolis; essential features retained.

Planing Spur Gears. Planing Large Spur Gears, Franklin D. Jones. Machy. (N. Y.), vol. 28, no. 7, Mar. 1922, pp. 529-532, 6 figs. Application of gear planers which cut gear teeth by reproducing shape of templet.

Tooth-Chamfering Machine. Gear Tooth Chamfering Machine. Machy. (Lond.), vol. 19, no. 488, Feb. 2, 1922, p. 558, 4 figs. Describes machine built by Parkinson & Son, Shipley. Effect of chamfer on engagement of gears.

Worm-Gear Generator. A New Worm Gear Generator. British Machine Tool Eng., vol. 2, no. 13, Jan.-Feb. 1922, pp. 439-445, 9 figs. Describes 12-in. worm-gear generator of Smith & Coventry, Ltd., Manchester.

GEARS

Bevel-Gear Testing Machine. The Saurer Bevel Gear Testing Machine. Engineering, vol. 113, no. 2930, Feb. 24, 1922, pp. 228-229, 9 figs. Bed of machine is heavy, circular casting, upon which a pair of sliding heads can be locked in any position, so that angle between axes of heads corresponds to that of bevels to be tested, a range from 52 to 150 deg. being obtainable.

Chain. The Application of Chain Gearing, H. T. Hildage. Can. Manufacturer, vol. 42, no. 2, Feb. 1922, pp. 31 and 51. When adaptable to certain needs; type of chain required; what it will cost, how much space it will occupy, how long it will last.

Friction. Friction Gearing, Chas. S. Pettit. Machy. (Lond.), vol. 19, no. 489, Feb. 9, 1922, pp. 567-569. Discusses frictional contact between driving and driven members ;coefficient of friction; pressures of contact; variable-speed disc drives; cup and cone friction clutches; etc.

Herringbone. Standardization of Herringbone Gears, Am. Mach., vol. 56, no. 9, Mar. 2, 1922, pp. 329-330, 2 figs. Recommendations which are result of careful investigation by committee of Am. Gear Mfrs. Assn.

Hot-Rolling. Forming Gears by Hot Rolling, Reginald Trautschold. Iron Trade Rev., vol. 70, no. 6, Feb. 9, 1922, pp. 396-399, 6 figs. Independent application of power to die roll and gear blank and synchronization of their rotation are said to be factors contributing to success of gear-rolling processes.

Spiral Bevel. End Thrusts and Bearing Loads due to Spiral Bevel Gears. Machy. (Lond.), vol. 19, no. 488, Feb. 2, 1922, pp. 545-548, 4 figs. Discusses pinion-cut left-hand spiral, rotating clockwise; pinion-cut left-hand spiral, rotating counter-clockwise; pinion-cut right-hand spiral, rotating clockwise; and pinion-cut right-hand spiral, rotating counter-clock-wise.

GRAVEL

New Hampshire Road Material. Systematic Survey of Gravel for Road Purpose, Wallace F. Purrington. Good Roads, vol. 62, no. 7, Feb. 15, 1922, pp. 100 and 102-103. Experiences in testing of gravels in New Hampshire.Paper presented before Am. Road Builders' Assn.

GRINDING MACHINES

Plain. A New Precision Grinding Machine. Machy. (Lond.), vol. 19, no. 488, Feb. 2, 1922, pp. 532-534, 5 figs. Plain grinder with positive-acting table traverse and reversing mechanism

H

HEATING

Central Producer-Gas Plant. Central Heating by Steam, Water or Gas, Samuel R. Lewis. Power vol. 55, no. 7, Feb. 14, 1922, pp. 267-268. Central producer-gas plant with automatic gas-fired boilers in each building shows an estimated saving in initial investment of $173,000 and a reduction in annual operating expense of $14,700 over steam heating.

Gas. Possibilities of Gaseous Heating, H. H. Clark. Western Soc. Engrs. Jl., vol. 27, no. 2, Feb. 1922, pp. 51-56 and (discussion) 56-58, 5 figs. Relative combustion efficiency of the various gases assuming perfect combustion; comparison of costs of various fuels; comparison of gas and electricity for heating, power and light. Gives a number of charts.

HEAVY-OIL ENGINES

Naphthalene. Naphthalene Engines (Moteurs à naphthaline), P. Maréchal. Nature, no. 2493, Jan. 14, 1922, pp. 22-23, 1 figs. Describes operation of a recent type in which fuel is vaporized by gasifying at low temperature, which makes engine run smoothly.

HIGHWAYS

Maintenance. The Highway Maintenance System of Pennsylvania, W. A. Van Duzer. Eng. & Contracting, vol. 57, no. 9, Mar. 1, 1922, pp. 196-198. Its organization and operation. Paper read before Assn. State Highway Officials.

HOUSES, CONCRETE

Kent System. Colonel Kent's Patent System of House Construction, H. V. Kent. Royal Engrs., Jl., vol. 35, no. 2, Feb. 1922, pp. 87-92, 5 figs. partly on supp. plate. System based on "Pier and Panel" principle, piers being of reinforced concrete, anchored into foundations, and panels consisting of long thin slabs of concrete, or other suitable material, which bridge spaces between piers. Piers and slabs are precast.

HOUSING

National Problem. The National Housing Problem. Am. Soc. Civ. Engrs. Proc., vol. 48, no. 2, Feb. 1922, pp. 196-263. Symposium containing following papers followed by discussion: Broad Economic Phases of the Housing Problem, Lawson Purdy. Housing: Broad Economic Aspects, John M. Gries. National Housing Problem: Planning and Zoning Joseph C. Wagner. Relation of Zoning to the Housing Problem, B. Antrim Haldeman. City Planning in Relation to the Housing Problem, Charles M. Reppert. Water Supply, H. Malcolm Pirnie. Basic Principles of the Public Sewerage of Municipalities, W. L. Stevenson. Paper on legislation and financing, by Allan Robinson, Edward M. Bassett, William H. Ham, and John Ihlder.

Railway Workmen's Dwellings. On the Question of Workmen's Dwellings (All Countries except America), Fausto Lolli. Int. Ry. Assn. Bul., vol. 4, no. 2, Feb. 1922 pp. 359, 418, 12 figs. Replies to following question: How is problem of dwellings for their workmen and lower-grade emp oyees solved by railway? How do administrations assist individual efforts made by staff, in particular as regards building of dwellings for use of laborers and employees?

HYDRAULIC TURBINES

Draft-Tube Designs. A Discussion of Draft-Tube Designs, Webster K. Ramsay. Mech. Eng., vol. 44, no. 3, Mar. 1922, pp. 171-176, 11 figs. With special reference to recent forms known as hydraucone regainer and spreading draft tube.

Flow in Conival Draft Tube. Flow in Conical Draft Tubes of Varying Angles, George E. Lyon. Mech. Eng., vol. 44, no. 3, Mar. 1922, pp. 177-180, 7 figs. Account of investigation to determine velocity curves at several cross sections of straight conical draft tubes.

Measuring Efficiency. New Methods for Measuring the Efficiency of Hydraulic Turbines (Note sur un nouveau procédé de mesure du rendement des turbines hydrauliques), L. Barbillion and A. Poirson. Bul.Technique del a Suisse Romande, vol. 48, no. 2, Jan. 21, 1922, pp. 19-21, 1 fig. Describes thermometric method by which losses are measured from temperature difference of water before and after passing turbine.

HYDROELECTRIC DEVELOPMENTS

Canada. A Review of Hydro-Electric Progress in Canada. Can. Engr., vol. 42, no. 8, Feb. 21, 1922, pp. 241-244, 3 figs. Progress in developments during 1921, 300,000 hp. installed in Dominion, with 177,000 hp. in Ontario and 90,000 hp. in Quebec.

Ontario System. Hydro-Electric System of Province of Ontario Investigated, W. S. Murray. Elec. World, vol. 79, no. 10, Mar. 11, 1922, pp. 471-474. In report made public by Nat. Elec. Light Assn. writer finds it inefficient, expensive, and wasteful and that, in spite of all claims made for it, service from private utilities in United States and Canada is cheaper and better.

SHAWINIGAN FALLS, CANADA. The New 41,000 Hp Unit at Shawinigan Falls, Julian C. Smith. Eng. Jl. (Eng. Inst. Can.), vol. 5, no. 3, Mar. 1922, pp. 134-139, 7 figs. Describes design features of latest hydroelectric development of Shawinigan Water & Power Co.

ST. LAWRENCE RIVER. St. Lawrence Navigation and Power Investigations. Can. Engr., vol. 42, no. 3, Jan. 17, 1922, pp. 139-145, 1 fig. Details of double development plan as proposed by New York & Ontario Power Co. Suggestions based on 14 years' study of conditions in vicinity of Waddington. Proposed sites at Rapid du Plat and Long Sault.

HYDROELECTRIC PLANTS

HIGH-HEAD. Highest Head Hydroelectric Power Installations of the World, A. T. Parsons. Jl. Electricity & Western, vol. 48, no. 4, Feb. 15, 1922, p. 155. Discusses limiting factors entering into design and construction of hydroelectric plants for very high heads.

INTERCONNECTION OF STEAM AND. Michigan a Leader in Interconnection of Hydro and Steam Plants, Harry J. Burton and William W. Tefft, Elec. World, vol. 79, no 7, Feb. 18, 1922, pp. 328-331, 2 figs. Twenty water-power and eleven steam stations joined by Consumers' Power Company's 140-Kv. transmission system. Bearing of hydro experience on Middle Western developments. How some problems have been solved.

I

ICE PLANTS

ELECTRICALLY OPERATED. 300-Ton Ice Factory at Grimsby. Engineer, vol. 133, no. 3451, Feb. 17, 1922, pp. 171-173, 5 figs. Describes what is believed to be largest electrically operated direct-expansion ice-making plant in world, recently erected and put to work for Standard Ice & Cold Storage Co., Ltd., by Pluperfeet Refrigeration Co., Ltd., Manchester, England.

Central Station Service in the Ice Industry, H. M. Jones. Ice & Refrigeration, vol. 62, no. 2, Feb. 1922, 136-138. Electric drive for ice-making plants; power required; kind and size of motors; comparative cost of operating.

RAILWAY. Establishing Icing Facilities on a Large Scale, W. C. Phillips. Ry. Age, vol. 72, no. 9, Mar. 4, 1922, pp. 533-534, 2 figs. System recently inaugurated on Southern Pacific and Union Pacific gives highly satisfactory results.

IMPACT TESTING

ENDURANCE TESTS. Impact Endurance Tests of Rods of Varying Cross-Section, Engineering, vol. 113, no. 2930, Feb. 24, 1922, p. 246. Describes endurance tests to which W. Müller and H. Leber, of the Material Testing Bureau at Darmstadt. Germany have been submitting rods of varying cross-section. Translated from Zeit. des Vercines deutscher Ingenieure (pp. 1089-1094, 1921).

INDUSTRIAL MANAGEMENT

FORMS. The Principles of Designing Forms, H. P. Losely, Management Eng., vol. 2, no. 3, Mar. 1922, pp. 158-160, 3 figs. Presents and discusses five principles governing design and use of forms.

INVENTORY METHODS. How to Cut Cost Corners Through Inventory, W. M. Romig. Indus. Management, vol. 63, no. 2, Feb. 1922, pp. 86-87, 2 figs. How well managed inventory methods help to stabilize profits.

LABOR ROUTINE CHART. Labor Routine. Indus. Management, vol. 63, no. 3, Mar. 1922, pp. 176-177. Presents chart developed for Todd Dry Dock & Constr. Co. by William C. Bober showing how systems of routine may be charted to bring out each step.

PLANNING. Planning in Large Contract Plants, George H. Shepard. Machy. (N.Y.), vol. 28, no. 7, Mar. 1922, pp. 547-551, 13 figs. Cards and records used in planning and dispatching work.

PRODUCTION CONTROL. The Measurement of Human Work, Walter N. Polakov. Management Eng., vol. 2, no. 2, Feb. 1922, pp. 91-93, 1 fig. The Gantt graphic method of controlling production is claimed to be only one on a correct unit of measurement.

PRODUCTION ORGANIZATION. Organization of Production, J. W. Curtis. Eng. & Indus. Management, vol. 7, nos. 5 and 7, Feb. 2 and 16, 1922, pp. 127-130 and 187-191, 19 figs. Discusses use of charts, and organization in erection work. Presents scheme of organization of engineering department of a medium-size works. Drawing office progress chart.

PURCHASING POLICIES. Stabilizing Profits through Proper Purchasing Policies, Park Mathewson. Indus. Management, vol. 63, no. 3, Mar. 1922, pp. 136-139. How Purchasing executive should apply fundamentals of forecasting.

REDUCED FORCE. Operating with. Operating a Factory with a Reduced Force, John C. Lease. Machy. (N.Y.), vol. 28, no. 7, Mar. 1922, pp. 533-535, 3 figs. Describes how factory was profitably operated at 30 per cent capacity.

SALES ORGANIZATION. Sales Organization and Methods, Willard E. Freeland. Taylor Soc. Bul., vol. 6, no. 6, Dec. 1921, pp. 244-251 and (discussion) pp. 251-254. Second report of committee on sales questionnaire, purpose of which was to obtain information about form of organization of sales departments, extent to which engineering phases were recognized and scientific planning and scheduling attempted and methods of control of important portions of work of distribution organization.

STANDARD LOT QUANTITIES. Establishing Profitable Standard Lot Quantities, J. A. Bennie. Indus. Management, vol. 63, no. 3, Mar. 1922, pp. 167-169, 2 figs. How to determine order points for stock parts.

TIME STUDY. *See Time Study.*

INDUSTRIAL ORGANIZATION

ADMINISTRATION PROBLEMS. Works Organization, T. E. Pattinson. Eng. Production, vol. 4, nos. 70 and 71, Feb. 2 and 9, 1922, pp. 101-104 and 124-127, 18 figs. Deals mainly with problems which have been encountered in administration of a large works organization. Paper presented before Instn. Production Engrs. See also discussion in same journal, no. 72, Feb. 16, 1922, pp. 149-152.

FUNDAMENTALS. The Body, Soul and Spirit of Organization, B. A. Franklin. Indus. Management, vol. 63, no. 3, Mar. 1922, pp. 143-145. Discusses fundamentals underlying organizing for accomplishment.

PROFIT MARGINS, RE-ESTABLISHING. Re-establishing the Profit Margins in the Edison Industries, Alfred Stuart Myers. Indus. Management, vol. 63, no. 3, Mar. 1922, pp. 131-135. Describes executive policies that successfully met problems of depression.

PROFITS, STABILIZING. Stabilizing the Profits of the Small Factory, Ernest Cordeal. Indus. Management, vol. 63, no. 3, Mar. 1922, pp. 146-149. Author points out necessity of constant attention to raw-material market, probable demand for product and stability of wage scales, and shows how useless any cost system may become unless it is intelligently followed up.

INTERNAL-COMBUSTION ENGINES

CASTINGS FOR. Some Castings for Internal Combustion Engines, Ben Shaw and James Edgar. Foundry Trade Jl., vol. 25, no. 285, Feb. 2, 1922, pp. 83-87, 26 figs. Deals with patternmaking for crankcases drawing board, and core-boxes.

FUELS, EFFECT OF. Effect of Different Fuels on the Operation of Internal-Combustion Engines (L'influence de l'emploi de combustibles différents sur le fonctionnement des moteurs à combustion interne). Henri Petit. Technique Automobile et Aerienne. vol. 12, nos. 113, 114 and 115, 1921, pp. 50-62, 72-87 and 97-115, 33 figs. No. 113:

HOT-BULB MARINE. Internal Combustion Engine, J. J. Fasola. Inst. Mar. Engrs. Trans., vol. 33, Jan. 1922, pp. 583-628, (includes discussion) 10 figs. Fundamentals and other particulars relating to a modern hot-bulb marine engine.

See also Airplane Engines; Automobile Engines; Carburetors; Diesel Engines; Gas Engines; Heavy-Oil Engines; Oil Engines.

IRON

ELECTROLYTIC DEPOSITION. Electrolytic Deposition of Iron for Building up Worn or Undersized Parts, David R. Kellogg. Min. & Metallurgy, no. 182, Feb. 1922, p. 61. Describes method successfully used in commercial work for production of repaired parts of automotive machinery. (Abstract.)

L

LABOR TURNOVER

UNAVOIDABLE, ELEMENTS OF. Elements of Unavoidable Labor Turnover, A. L. DeLeeuw. Management Eng., vol. 2, no. 3, Mar. 1922, pp. 137-142, 5 figs. It is maintained that labor turnover of whatever kind provides measure of management efficiency because its cost is an overhead expense.

LABORATORIES

FOUNDRY. Laboratory for Malleable Iron Foundry. Iron Age, vol. 109, no. 10, Mar. 9, 1922, pp. 643-644, 3 figs. Equipment for running carbon, sulphur and manganese determination facilitates control of product. Getting rid of heavy gases.

INDUSTRIAL. Research Laboratories in Industrial Establishment of the United States. Nat. Research Council, Bul., vol. 3, no. 16, Dec. 1921, 135 pp. List of laboratories arranged by firm names, with a subject classification, giving particulars as to research staff, research work and equipment in each case. Originally compiled by Alfred D. Flinn, revised and enlarged by Ruth Cobb.

LATHES

BED GUARDS. Durability in Machine Tools, P. V. Vernon. Eng. Production, vol. 4, no. 72, Feb. 16, 1922, pp. 153-154, 3 figs. Describes Herbert automatic lathe fitted with bed guards, introduced in 1910, and new model no. 11 hexagon turret lathe, embodying similar protective devices.

FAY, MACHINING ON. Cutting the Production Cost of a Difficult Part, H. A. Loudon. Am. Mach., vol. 56, no. 10, Mar. 9, 1922, pp. 369-370, 6 figs. Describes machining of one of its own parts, the cam drum worm, by the standard Fay lathe.

TURRET. Motor-car Engine Production Work on Turret Lathes. Machy. (Lond.) vol. 19, no. 489, Feb. 9, 1922, pp. 570-573, 8 figs. Time-saving and cost-reducing methods for engine department of a motor-car plant.

LIGHTHOUSES

AERIAL. Aerial Lighthouses. Aerial Age, vol. 14, no. 24, Feb. 20, 1922, pp. 564-565 and 561, 2 figs. Describes lighthouse being erected at Dijon in order to provide suitable guiding light for aerial routes between Paris and Algiers, Italy and Switzerland. Made by optical firm of Barbier Bernard and Turenne, Paris.

LIGHTING

ARTIFICIAL DAYLIGHT. Recent Improvements in the Sheringham Daylight, S. H. Groom. Illuminating Engr., vol. 14, no. 9, Nov. 1921, pp. 215-218, 4 figs. Principles upon which Sheringham daylight is based and recent improvements made.

Factory. Better Lighting Increases Production, Ward Harrison, O. F. Haas and J. W. Dopke. Iron Trade Rev., vol. 70, no. 9, Mar. 2, 1922, pp. 610-612, 2 figs. Account of investigation carried out by Dover Mfg. Co., Dover, Ohio, in its plant for purpose of obtaining further practical data showing effect of good lighting on efficiency of production.

LIGHTNING

Protection Against. Lightning Protection. Elec. World, vol. 79, no. 8, Feb. 25, 1922, pp. 376-380, 3 figs. Abstracts of articles presented before Am. Inst. Elec. Engrs. on arrester and ground-wire practice; use of Petersen coil; protecting windings against transients; defense of standard practice in lightning arresters; and economic value of overhead grounded wire.

LOCOMOTIVES

Cylinders. Locomotive Cylinders, Ry. Gaz., vol. 36, no. 4, Jan. 27, 1922, p. 138, 2 figs. Describes method of L. B. Billinton, of Lond., Brighton & South Coast Ry., and results obtained, for renewing port faces of locomotive cylinders which have become prematurely worn to scrapping limits.

Mikado and 8-Wheel. Mikado Locomotive for the Greenbrier & Eastern Railroad and Eight-Wheel Type Locomotive for the Dayton-Goose Creek Railroad. Ry. & Locomotive Eng., vol. 35, no. 2, Feb. 1922, pp. 42-43, 2 figs. Describes Mikado 2-8-2, with tractive effort of 45,750 lb., and eight-wheel 4-4-0 type, with tractive effort of 13,770 lb., Built by Baldwin Locomotive Works.

New Baldwin Locomotives for Short Line Railroads. Ry. Rev., vol. 70, no. 7, Feb. 18, 1922, pp. 213-214, 2 figs. Describes Mikado type built for Greenbrier & Eastern R. R., with tractive effort of 45,750 lb.; and 4-4-0 American type built for Dayton-Goose Creek Ry., with tractive effort of 13,770 lb.

Northern Pacific Ry. Extensive Order of New Locomotives for the Northern Pacific Railway Company. Ry. & Locomotive Eng., vol. 35, no. 2, Feb. 1922, pp. 35-36, 3 figs. Describes Pacific type 4-6-2, Mikado type 2-8-2, and Mallet type 2-8-8-2, built by Am. Locomotive Co., with tractive efforts of, respectively, 41,900 lb., 57,100 lb., and 105,100 lb.

Ownership and Operation. Factors in the Business of Owning Locomotives, C. B. Peck. Ry. Age, vol. 72, no. 8, Feb. 25, 1922, pp. 471-474. Discusses co-operation between locomotive power and operating departments in designing and operating to secure economy. Paper read before Western Ry. Club.

Rebuilt. Operating Results Show Savings by Rebuilt Power, H. F. Grewe. Ry. Age, vol. 72, no. 7, Feb. 18, 1922, pp. 423-424, 2 figs. Gives locomotive data comparative mileages and expenses; operating costs.

The Passing of the Cross-Compound. Ry. Rev., vol. 70, no. 8, Feb. 25, 1922, p. 265, 2 figs. Describes conversion of a number of ten-wheel type cross-compound locomotives into simple locomotives of same type equipped with superheaters and piston valves.

Shay Geared. Shay Geared Locomotives for Mountain Roads. Ry. Mech. Engr., vol. 96, no. 2, Feb. 1922, pp. 75-76, 3 figs. 150-ton locomotive of Shay geared three-truck type with gear ratio of 1 to 2.45; for Greenbriar, Cheat & Elk Railroad. Comparison with heavy Mikado.

Speed Indicators. The Telco Locomotive Speed-Indicator and Recorder. Engineering, vol. 113, no. 2927, Feb. 3, 1922, pp. 131-133, 27 figs. Describes instrument constructed by Hasler Telegraph Works, London, having an ordinary clock movement which gives actual time and which is combined with gear producing a time record; also a distance counter, and speed-recording gear.

Steam-Turbine. The First Steam Turbine Locomotive. Ry. Mech. Engr., vol. 96, no. 2, Feb. 1922, pp. 69-70, 3 figs. Describes locomotive designed by Belluzzo, in 1908; maximum rotative speed of turbines was 2400 r.p.m. at 28 m.p.h.

Turbine Characteristics and Design of Turbo-Locomotives. Ry. Mech. Engr., vol. 96, no. 2, Feb. 1922, p. 61. Editorial discussing difficulties that must be overcome to apply the turbine to locomotives.

Zoelly Turbine Locomotive for Swiss Federal Railways. Ry. Mech. Engr., vol. 96, no. 2, Feb. 1922, p. 70. Describes new design of Dr. Zoelly, of Escher, Wyss & Co., Zurich, Switzerland. A 4-6-0 type locomotive has been converted from a standard type with usual reciprocating steam engine to turbine-driven engine. Turbine is designed for speed of 8000 r.p.m. or 48½ m.p.h.

LUBRICATING OILS

Airplane Engines. Paraffin viz. Naphthene Base Oils. Sci. Lubrication, July 1921, pp. 5-8 and 13, 4 figs. Describes tests made for purpose of deciding various questions regarding lubrication of aeronautic engines with oils from Texas, Pennsylvania, and oils compounded with graphite.

Cutting Fluids. Cutting Fluids, Eugene C. Bingham. U. S. Bur. of Standards Technologic Papers, no. 204, Dec. 20, 1921, pp. 35-76, 8 figs. Used both to cool and lubricate. When lubrication is more important, it is generally recognized that fatty oils are superior to mineral oils, through reason has never been clearly explained. Evidence appears to be that value of fatty oils is due to their residual valence or acidity which causes their adhesion to metal to be greater than is case with mineral oils. Points out that it may yet be possible to synthesize an oil which has all of virtues of lard oil without its defects.

Dilution. Dilution of Crankcase Oil, C. M. Larson. Sci. Lubrication, Oct. 1921, pp. 13-15, 2 figs. Dilution of motor oils and possible means of preventing or correcting this condition in immediate future. Suggests that new instruments recently developed for detecting dilution be used by motorists, and that motors be drained as soon as instruments show mixture in crankcase has reached dangerous condition.

Light Force-Feed. Endurance Tests of Force Feed Oils, J. G. O'Neill. Sci. Lubrication, Aug. 1921, pp. 5-10, 10 figs. Results obtained from endurance test of oils to ascertain service obtained from light force-feed lubricating oils when used in a force-feed lubrication system. Character of changes which take place in these oils under severe service conditions. Reprinted from Jl. Am. Soc. Naval Engrs., May 1921.

Tests. Comparative Lubricating Engineering. Sci. Lubrication. Oct. 1921, pp. 20-22. Describes tests made to bring out relative lubricating qualities of various oils and tests made to determine most satisfactory and efficient lubricant for elevator worm gears.

Viscosity. Lubrication and Lubricants, Leonard Archbutt. Soc. Chem. Industry Jl., vol. 40, no. 24, Dec. 31, 1921, pp. 287T-293T. Discusses theory of viscous lubrication; measurement and expression of viscosity; effect of pressure on viscosity and density; solid contact friction; oiliness and its measurement; thickness of lubricating films; solid lubricants.

How variation of Temperature Affects Viscosity of Lubricating Oils, W. F. Osborne. Power, vol. 55, no. 11, Mar. 14, 1922, pp. 420-421, 1 fig. Includes chart showing how viscosities vary with temperature.

LUBRICATION

Lubrication Engineering. The Status of Lubrication Engineering, W. H. Bailey. Sci. Lubrication, Oct. 1921, pp. 5-7. Discusses conservation of lubricants and liquid fuels, and basis from which these commodities are derived. Outlines purposes of Am. Soc. Lubricating Engrs.

Thickness of Oil Films in Bearings. The Thickness and Resistance of Oil Films in High Speed Bearings, Gerald Stoney, R. O. Boswall and J. Massey. Engineering, vol. 113, no. 2931, Mar. 3, 1922, pp. 249-250, 7 figs. Account of experimental investigation carried out during 1921 at College of Technology, Manchester, England for purpose of determining actual thickness of oil film or of discovering in what way this thickness changes with variations in load, rubbing speed and viscosity.

M

MACHINE TOOLS

Anti-Slip Devices. Anti-Slip Devices Save Time and Money, Fred Horner. Can. Machy., vol. 27, no. 8, Feb. 23, 1922, pp. 19-20, 8 figs. Positive stops to prevent sliding; serration on tool face; anti-slip thrust screws; etc.

Electric Drive for Reversing. Electric Drive for Reversing Machine Tools, A. L. Harvey. Am. Mach., vol. 56, no. 10, Mar. 9, 1922, pp. 371-373. Notes on reversing mechanisms; dynamic braking and "plugging;" power consumed in reversing; effect of reversing on production; variation in power requirements.

MALLEABLE CASTINGS

Reactions in Malleablizing. Studies Reactions in Malleablizing, Arthur Phillips and E. S. Davenport. Foundry, vol. 50, no. 5, Mar. 1, 1922, pp. 185-194, 49 figs. Describes results of experiments showing effect of different temperatures and length of anneal.

METALLURGY

Time Factor in. The Time Factor in Metallurgy, C. A. Edwards. Metal Industry (Lond.), vol. 20, no. Feb. 10, 1922, 128-130. Importance of Effect of time in cooling of Metals; dynamic stresses; effect of temperature; tempering cold-worked copper; quenching temperatures. (Abstract.) Read before Inst. of Metals.

METALS

Calorizing. Calorizing, Arthur V. Farr. Engrs. Soc. West. Pa. Proc., vol. 37, no. 6, July, 1921, pp. 331-340 and (discussion) pp. 341-343. Description of calorizing based upon standard methods as practised under General Elec. Co.'s patent rights.

Colloidal State. Colloidal State in Metals and Alloys—III and IV, Jerome Alexander. Chem. & Met. Eng., vol. 26, nos. 4 and 5, Jan. 25 and Feb. 1, 1922, pp. 170-172 and 201-207, 11 figs. Jan. 25, White metal and brass. Feb. 1: Iron and Steel. Paper read before Am. Inst. Min. & Met. Engrs.

Failure Due to Internal Stress. The Failure of Metals Through the Action of Internal Stress Irregularities with Special Reference to Tool Steels, J. Neill Greenwood. Faraday Soc. Trans., vol. 17, part 1, no. 49, Dec. 1921, pp. 123-138, 6 figs. Investigation of basic reasons for failures and measures for minimizing their occurrences. Bibliography.

Heat Treatment. Heat Treatment of Metals (Les traitements thermiques des métaux), R. Panaud. Outillage, vol. 243, no. 3, Jan. 21, 1922, pp. 73-75, 13 figs. Tempering baths; temperature and methods of tempering and effect on steel and other metals.

Tests for Automotive Industries. Correlation Between Metallurgical and Service Tests, Walter Rosenhain, Automotive Industries, vol. 46, no. 10, Mar. 9, 1922, pp. 566-568. Discusses need for greater cooperation between metallurgical and automotive engineers with a view to developing tests, result of which can be used with greater certainty of success in selecting most suitable metals for various purposes.

Thermal Expansion. Thermal Expansion of Nickel, Monel Metal, Stellite, Stainless Steel and Aluminum, Wilmer H. Souder and Peter Hidnert. U. S. Bur. of Standards Sci. Papers, no. 426, Dec. 17, 1921, pp. 497-519, 10 figs. Data on thermal expansion of 29 samples are presented, all of which except stainless steel, were examined from room temperature to about 600 deg. cent. Samples of stainless steel were heated from room temperature to 900 deg. cent.

METRIC SYSTEM

Russia. The Metric System in Russia (Le systême métrique en Russie), Léopold Reverchon. Nature, no. 2491, Dec. 31, 1922, pp. 427-428. Discusses degrees adopting metric system and gives table of equivalents.

MILLING CUTTERS

Top and Side Rake. Formed Milling Cutters and Hobs with Top and Side Rake, Harry E. Harris. Machy. (N.Y.), vol. 28, no. 7, Mar. 1922, pp. 527-528, 2 figs. Summarizes chief advantages of providing a hook on hob and cutter teeth.

MILLING MACHINES

Locomotive Bar Frames. Profile Milling Locomotive Bar Frames. Machy. (Lond.), vol. 19, no. 490, Feb. 16, 1922, pp. 600-601 5 figs. Describes machine developed by Ernest Schiess, of Düsseldorf, with object of completely machining locomotive bar frames of about 4 in. in thickness from solid slab as furnished by rolling mills.

MINERAL OILS

Paraffin Wax, Effect of. Effect of Paraffin Wax on the Properties of Mineral Oils, A. P. Bjerregaard. Jl. Indus. & Eng. Chem., vol. 14, no. 3, Mar. 1922, pp. 215-217, 4 figs Known quantities of components of known properties were mixed, and viscosity, freezing point, and specific gravity of mixtures were determined.

MINING

Canada. Mining and Milling at the Hollinger Mine. Can. Inst. Min. & Metallurgy Bul., no. 119, Mar. 1922, pp. 326-354, 13 figs. Describes property of Hollinger Consolidated Gold Min. Co., and the Mining operations, including diamond drilling, stoping, underground transportation, sampling, hoisting; also describes milling operations.

Mining Operations at the McIntyre Porcupine Mines, Limited. Can. Inst. Min. & Metallurgy Bul., no. 119, Mar. 1922, pp. 355-382, 20 figs. Geology; stoping, surveying and sampling, safety work, pumping, etc.

MOLDING MACHINES

Hydraulic Jar-Ramming. French Molding Methods Arc Rapid. Foundry, vol 50, no. 4, Feb. 15, 1922, pp. 153-155, 7 figs. Describes new jar-ramming machine employing hydraulic principle.

MOLDING METHODS

Roll Methods. Diverse Methods of Roll Molding, R. H. Palmer. Foundry, vol. 50, no. 4, Feb. 15, 1922, pp. 159-163, 16 figs. Rolls cast in solid chills swung on supporting columns; some poured on end and others on side; various methods of gating are described.

MONEL METAL

Uses and Properties. Some Typical Uses and Properties of "Monel" Metal, Edwin S. Wheeler and Robert J. McKay. Engrs.' Soc. West Pa. Proc., vol. 37, no. 6, July 1921, pp. 311-324 and (discussion) pp. 325-330. Deals with occurrence and metallurgy; typical properties; typical and special uses.

MOTION STUDY

See *Time Study, Motion Study and.*

MOTOR BUSES

Eight-Wheel. Eight Wheels Improve Riding Qualities. Elec. Ry. Jl. (Bus Transportation), vol. 59, no. 6, Feb. 11, 1922, pp. 121 and 123, 4 figs. Describes new Californian bus. Has double-axle construction at both front and rear so that virtually it has two trucks. Front four wheels steer in unison; drive to four rear wheels is through two sets of worm and gear axles.

Local Railway Service. A Gasoline Motor Bus for Local Railway Needs (Automotrice à essence et à deux essieux pour chemins de fer d'intérêt local), G. Tartary. Génie Civil, vol. 80, no. 5, Feb. 4, 1922, p. 115, 1 fig. Describes new car seating 16 passengers, put in service by Deux-Sevres Tramway Co.

Snow Removal for. Fighting Snow on Suburban Routes. Elec. Ry. Jl. (Bus Transportation), vol. 59, no. 6, Feb. 11, 1922, pp. 103-104, 4 figs. Use of passenger buses with plows attached, for clearing snow.

MOTOR TRUCKS

Double-Reduction Axles. New Double Reduction Truck Axle. Automotive Industries, vol. 46, no. 8, Feb. 23, 1922, pp. 458-459, 2 figs. Describes new double-reduction design by John Thomson Press & Mfg. Co.

Sream. 5-Ton Steam Wagon with Uniflow Engine, Engineering, vol. 113, no. 2928 Feb. 10, 1922, pp. 162-163, 23 figs. partly on supp. plate. Describes tipping model embodying the Atkinson uniflow engine and auxiliary tipping engine, which can lift body and bring it back into position in two minutes.

O

OFFICE MANAGEMENT

Cutting Clerical Cost. Cutting the Clerical Cost, Henry Anson Piper. Indus. Management, vol. 63, no. 2, Feb. 1922, pp. 119-124, 7 figs. Planning pro- [illegible]

Scientific. The Application of the Principles of Scientific Management to the Office, William Henry Leffingwell. Bul. of Taylor Soc., vol. 7, no. 1, Feb. 1922, pp. 2-24 and (discussion) 24-26, 13 figs. Discusses planning and control, standardization, investigation and research, inspection and maintenance of quality, [illegible]

OIL ENGINES

Scott-Still. A New Development in Marine Propulsion. Engineering vol. 113, no. 2928, Feb. 10, 1922, pp. 177-178. Includes report by H. Riall Sankey on series of trials on Scott-Still engines for a Holt vessel, and gives details of engines.

OIL FUEL

Competition with Coal. Why Fuel Oil Must Continue to Compete with Coal, E. J. Billings. Power, vol. 55, no. 11, Mar. 14, 1922, pp. 417-419. Points out that fair comparison of fuel oil with coal cannot be made on basis of B.t.u. alone. Allowance must be made for higher efficiency and reduced operating expenses.

Gasification System. A System for Complete Fuel Gasification. Automotive Industries, vol. 46, no. 9, Mar. 2, 1922, pp. 509-510, 2 figs. Involves use of device for mechanical agitation of mixture, retort for heating entire charge above vaporization temperature of least volatile elements, and means for admixture of small quantities of exhaust gas to prevent detonation.

Vaporization. A Discussion of Present Methods of Fuel Vaporization, N. Julien Thompson. Automotive Industries, vol. 46, no. 9, Mar. 2, 1922, pp. 515-517, 2 figs. Preparation of fuel air mixtures for combustion prior to admission to cylinder.

OIL SHALES

Saturated and Unsaturated. A Study of the Saturated and Unsaturated Oils From Shale, C. W. Botkin. Chem. & Met. Eng., vol. 26, no. 9, Mar. 1, 1922, pp. 398-401. Results of experimental work on compositions and properties of lighter fractions and heavy undecomposed residues resulting from pyrolytic treatment of crude shale oils.

OIL WELLS

Fire Fighting. Combating an Oil-Well Fire, Arthur B. Clifford. Iron & Coal Trades Rev., vol. 104, no. 2814, Feb. 3, 1922, pp. 158. Discusses methods of extinguishing, oil-well fire, and employment in connection with it of Proto self-contained breathing apparatus. Effects of oil on apparatus. See also Colliery Guardian, vol. 123, no. 3188, Feb. 3, 1922, p. 279.

OILS

Linseed, Vanadium Driers for. Vanadium Compounds as Driers for Linseed Oil, F. H. Rhodes and K. S. Chen. Jl. Indus. & Eng. Chem., vol. 14, no. 3, Mar. 1922, pp. 222-224, 2 figs. Describes vanadium driers possessing certain advantages not shown by lead, manganese, or cobalt driers in common use, which should prove very satisfactory in preparation of certain types of paint and varnish.

OPEN-HEARTH FURNACES

Design. Open-Hearth Furnace Design, A. D. Williams. Iron Age, vol. 109, no. 9, Mar. 2, 1922, pp. 577-579, 3 figs. Calculations for hearth area, depth of metal, incline of parts and velocity of gases.

OSCILLOSCOPE

Operation. The Oscilloscope Motor Transport, vol. 34, no. 883, Jan. 30, 1922, pp. 123-124, 3 figs. Describes invention by means of which it is possible to examine any fast-running machinery either as if it were running at 1/100 of its actual speed, or, at will, as if it were stationary.

OXY-ACETYLENE CUTTING

Under Water. Submarine Cutting Torch Under Water, Robert G. Skerrett. Iron Age, vol. 109, no. 10, Mar. 9, 1922, pp. 637-639, 5 figs. Broken siphon pipe burned off by electric torch under 50 ft. of water, Discusses American progress in Submerged metal cutting.

OXY-ACETYLENE WELDING

Blowpipe Investigation. An Investigation of Oxy-acetylene Welding and Cutting Blowpipe, with Especial Reference to Their Design, Safety, and Economy in Operation, Robert S. Johnston. U. S. Bur. of Standards Technologic Papers, no. 200, Dec. 28, 1921, pp. 3-108, 71 figs. Apparatus from 14 of most prominent manufacturers were tested under standardized conditions. None of commercial cutting blowpipes procurable appear to be designed according to definite, theory and none are efficient in cutting metal of all thicknesses, none were correctly designed, nor free from flash-back phenomena. With properly designed welding blowpipe, it is believed that satisfactory fusion welds may be made.

Explosions, Prevention of. Dangers from the Use of Acetylene Gas and in Oxy-Acetylene Welding. Eng. & Indus. Management, vol. 7, no. 7, Feb. 16, 1922, pp. 192-193. Precautionary methods are given which should be observed by all employed in welding work. Deals with explosions in generator houses; high-pressure systems; and care of cylinders. Based on official memorandum issued by Factory Department of British Home Office.

P

PAINTS

Mineral Fillers. Non-metallic Mineral-filler Industry, W. M. Weigel. Min. & Metallurgy, no. 182, Feb. 1922, pp. 59-60. Common mineral fillers are white clay, barite, mica, talc, whiting, ocher, silica, graphite and slate, methods of mining and preparation of which are discussed separately. (Abstract.)

PAPER MANUFACTURE

Load Regulator for Pulp Grinders. Automatic Load Regulator for Motor-Driven Pulp Grinders, W. H. Artz. Chem. & Met. Eng., vol. 26, no. 8, Feb. 22, 1922, pp. 367-369, 4 figs. Describes apparatus, its operation, and advantages.

Process and Machinery. Paper Making and Paper Making Machinery, Ellsworth Sheldon. Am. Mach., vol. 56, no. 9, Mar. 2, 1922, pp. 317-319, 6 figs. Forest is principal source of raw material. Process is continuous from grinding wood to winding finished sheet of paper.

Southern Pine Refuse. The Manufacture of Paper and By-Products from Southern Pine Refuse, Joseph H. Wallace. Worcester Polytechnic Inst. Jl., vol. 25, no. 2, Jan. 1922, pp. 65-79, 3 figs. Discusses manufacture of chemical fiber suitable for Kraft wrapping or book paper and test board by-product manufacture of naval stores; destructive distillation of trash; improvement of lands.

PAVEMENTS

Bituminous Foundations. Bituminous Foundations for Street and Road Pavements, Hugh W. Skidmore. Can. Engr., vol. 42, no. 8, Feb. 21, 1922, pp. 247-248. Discusses rigid and flexible types of pavements and cites cases where "black base" has been used. Advantages of bituminous concrete. Paper read before Good Roads Congress of Am. Road Builders' Assn.

Structural Design. The Structural Design of Pavements. A. T. Goldbeck. Can. Engr., vol. 42, no. 7, Feb. 14, 1922, pp. 223-226, 3 figs. Sub.-base consideration and economic depth of foundation, pressure distribution and impact effects shown by tests; drainage of subgrade an important factor. (Abstract.) Paper read before Conference on City Paving, Philadelphia.

PAVEMENTS, ASPHALT

Grading Sand for Sheet Asphalt. The Selection and Proportioning of Sands for Sheet Asphalt Paving Mixtures, Prevost Hubbard. Contract Rec., vol. 36, no. 8, Feb. 22, 1922, pp. 176-179, 8 figs. Discusses three-group method of grading, and use of triaxial diagram in proportioning two and three sands.

PAVEMENTS, CONCRETE

Calcium Chloride, Curing with. Calcium Chloride in Concrete Highway Construction, B. H. Piepmeier and H. F. Clemmer. Eng. News-Rec., vol. 88, no. 10. Mar. 9, 1922, pp. 409-411, 2 figs. Laboratory and field tests indicate accelerated setting and more economical curing method than usual practice.

Mixers and Finishing Machines. Paving Mixers and Finishing Machines. Eng. News-Rec., vol. 88, no. 8, Feb. 23, 1922, pp. 320-323. Instructions gathered from manufacturers and uses of concrete paving machines and determined by field observations on many operations.

PIERS

Reinforced-Concrete. Reinforced Concrete Piers and Marine Works, W. Noble Twelvetreses. Concrete and Constructional Eng., vol. 17, no. 2, Feb. 1922, pp. 105-109 and (discussion) pp. 109-110. Deals with quays, wharves, jetties and piers; caissons and pontoons; slipways and shipbuilding berths; landing stages and coast-protection works. (Abstract.) Paper read before Concrete Inst.

PIPING

Air-Pressure Drop Through. Air Pressure Drop Due to Small Pipe, W. A. Shmidheiser. Power Plant Eng., vol. 26, no. 4, Feb. 15, 1922, pp. 234-235, 1 fig. Describes experiment made to determine air pressure drop through 1½-in. pipe.

PISTON RINGS

Design and Uses. The Piston Ring—Lilliputian in Size, Giant Among Parts in Technical and Commercial Importance, Morris A. Hall. Raw Material, vol. 5, no. 1, Feb. 1922, pp. 13-18, 10 figs. Discusses design, forms, and uses.

Locomotive. The "Rowan" Type of Piston Rings For Locomotives. Ry. Gaz., vol. 36, no. 4, Jan. 27. 1922, p. 137, 1 fig. Describes rings patented by William Rowan, of Belfast.

PISTON RODS

Packing for High Pressure. Packing a Rod For 500,000 lbs. Pressure, P. W. Bridgman. Power House, vol. 15, no. 3, Feb. 5, 1922, pp. 25-27, 4 figs. Describes principle of packing and some details of its application. Results of high-pressure experiments.

PISTONS

Manufacturing Plant. A Piston Manufacturing Plant, G. M. Ellis. Western Machy World, vol. 13, no. 2, Feb. 1922, pp. 53-55, 7 figs. Describes plant of W. H. Jahns at Los Angeles, methods and equipment used.

POWER PLANTS

Design. Developments in Power Station Design. Engineer, vol. 133, nos. 3450 and 3452, Feb. 10 and 24, 1922, pp. 148-150, 6 figs. and 201-204, 5 figs. Feb. 10: Describes Usco air heater of Underfeed Stoker Co., and the Howden air heaters for marine work. Feb. 24: Notes on high-pressure steam turbines.

Instructing Operators. Instructing Power-Plant Operators, J. A. MacMurphy. Power, vol. 55, no. 7, Feb. 14, 1922, pp. 260-262. Problems of making operator familiar with equipment for which he is responsible. Methods of providing proper instructions.

PRESSES

Notching. Notching Press for Automatic Plates and Segments. Engineer, vol. 133, no. 3451, Feb. 17, 1922, p. 188, 2 figs. Constructed with object of providing machine whereby armature plates or segments thereof may be notched internally or externally, in accurate and continuous manner.

Safety Devices. Safety Devices for Power Presses. Machy. (Lond.), vol. 19, nos. 474 and 487, Oct. 27, 1921 and Jan. 26, 1922, pp. 96-99 and 523-525, 16 figs. Oct. 27: Various types of gate guards. Jan. 26: Deals with gate, stationary and sliding guards provided for power press equipment of Cleveland Metal Products Co.'s plant, Cleveland, Ohio.

PRODUCER GAS

Analysis. Graphical Treatment of Stack Gas Analysis and of Producer Gas Analysis—II, W, Trinks. Blast Furnace & Steel Plant, vol. 10, no. 2, Feb. 1922, pp. 131-135, 8 figs. Graphical representation of producer-gas analysis. Review of graphic charts as introduced by W. Ostwald.

PULVERIZED COAL

Combustion. Combustion of Pulverized Fuel, F. P. Coffin. Combustion, vol. 6, no. 3, Mar. 1922, pp. 129-132, 1 fig. Chemistry of combustion; ash; flames; velocities of fuels; preheating air for combustion; control of furnace temperature. (Excerpt.)

Evaporative Tests. Pulverized Coal (Le Combustible pulvérisé), Charles Baron. Mémoires et Compte rendu des Travaux de la Société des Ingénieurs Civils de France, vol. 74, nos. 7-8-9, July -Sept. 1921, pp. 403-411, 1 fig. Details of evaporation tests carried out at various plants to show efficiency of powdered coal burning.

PUMPING ENGINES

Vertical Triple-Expansion. The Vertical Triple-Expansion Pumping Engine, L. A. Quayle and F. H. Brown. Mech. Eng., vol. 44, no. 3, Mar. 1922, pp. 155-161 and (discussion) pp. 161 and 176, 5 figs. Study of pumping-engine installations at Cleveland, Ohio, during past 65 years. New record performance at Division Ave. pumping station.

PUMPS, CENTRIFUGAL

Water Leakage. On the Leakage of Water through the Clearance Rings in a Centrifugal Pump, Otogorô Miyagi. Technology Reports of Tôkohu Imperial University, vol. 2, no. 3, 1921, pp. 1-16, 3 figs. Notes on pressure difference at clearance rings; quantity of leakage; volumetric efficiency; loss of head due to leakage. Numerical example is given.

PYROMETERS

Maintenance. Some of the Difficulties Experienced in Maintaining a Pyrometer Installation in a Works, Robert S. Whipple. Ceramic Soc. Trans., vol. 21, Part 1, Session 1921-22, pp. 1-23, 7 figs. Chief difficulties experienced with pyrometers and methods by which they can be overcome or avoided. Same article in French, pp. 24-43.

R

RADIODYNAMICS

Control of Automotive Devices. Radio Control, H. H. Germond and W. P. F'ynn. Wisconsin Engr., vol. 26, no. 5, Feb. 1922, p. 87, 1 fig. Discusses development of radiodynamics and describes a radio-controlled cart.

RADIOTELEGRAPHY

Technical Report. Imperial Wireless Telegraphy—A Technical Report. Electrician, vol. 88, no. 2281, Feb. 3, 1922, pp. 130-132. Discusses report of Wireless Telegraphy Commission appointed to make recommendations regarding sites and apparatus for stations of Imperial Wireless Chain. Includes discussion of development of high-power thermionic sets, cost of valve renewals, choice of wave length, transmitting antenna, masts and towers, methods of reception and design of receiving stations.

RAILLESS TRACTION

Rail vs. Trackless Transportation Versus Rail Transportation, Karl A. Simmon. Elec. Ry. Jl., vol. 59, no. 6, Feb. 11, 1922, pp. 233-236, 2 figs. Advantages and disadvantages of trolley, auto bus, and trackless trolley. Draws definite conclusions as to field for which each type of vehicle is most suitable.

RAILS

Failures. French Investigation of Rail Failures. Charles Fremont. Iron Age, vol. 109, no. 8, Feb. 23, 1922, pp. 523-524, 8 figs. Causes of increasing number. Effect of exfoliation. Rapid corrosion of rails. Segregation and poor-quality metal. Translated from Génie Civil, Nov. 19, 1921.

Heads Conditions Affecting. Conditions Which Affect the Head of the Rail, James E. Howard. New York R. R. Club Official Proc., vol. 32, no. 3, Jan. 20, 1922, pp. 6611-6619 and (discussion) 6619-6625. Discusses strains in rails due to cooling; formation of cracks; rail tests; rail failures; etc.

Internal Fracture. The Presence of Internal Fracture in Steel Rails and Their Relation to the Behavior of the Material under Service Stresses, Henry S. Rawdon. Faraday Soc. Trans., vol. 17, part 1, no. 49, Dec. 1921, pp. 110-116, 7 figs. Discusses discontinuities or internal fractures, in some types of steel rails and in other wrought-steel products, evidently serving as "nucleus" or starting point from which larger defects, termed transverse fissures, grow, under stress conditions to which rails are subjected in practice.

Loads, Action of. Action of Rolling Loads on Rails (Etude de l'action des charges roulantes sur les rails), S. Timochenko. Le Génie Civil, vol. 79, no. 26, Dec. 24, 1921, pp. 555-556. Assumes the rail as a bar of infinite length on a continuous elastic base, and develops formulas.

RAILWAY CONSTRUCTION

Reinforced Concrete, Use of. On the Question of Reinforced Concrete (Holland), C. Leemans. Int. Ry. Assn. Bul., vol. 4, no. 2, Feb. 1922, pp. 347-358, 16 figs. Use of ordinary concrete and reinforced concrete on state railways of Java and Sumatra.

RAILWAY ELECTRIFICATION

Chile. Electrification of the Chilean State Railways. Ry. Rev., vol. 70, no. 6, Feb. 11, 1922, pp. 185-188, 5 figs. Application of hydroelectric power; details of electrification; direct current system considered best suited to conditions.

England. London, Brighton & South Coast Railway Electrification, Philip Dawson. Ry. Gaz., vol. 36, no. 6, Feb. 10, 1922, pp. 209-211, 1 fig. Report on proposed substitution of electric for steam operation of suburban, local and main-line passenger and freight services. (Abstract.)

France. The Foremost French Railway Electrification Project, G. de la Rochette. Ry. Rev., vol. 70, no. 5, Feb. 4, 1922, pp. 148-152, 6 figs. Midi Railway is developing water power for local industries and operation of 1850 miles of line. Will generate 396,000 hp. in six big hydroelectric centers.

Improvements Due to. Electrification and Its Relation to Steam Railroads, N. W. Storer. St. Louis Ry. Club Official Proc., vol. 26. no. 9, Jan. 13, 1922, pp. 188-197 and (discussion) 197-208. Discusses improvements due to electrification, and electric locomotives.

RAILWAY MAINTENANCE

Ditching Machines. Railway Ditching Machines and Performance Records. Eng. News-Rec., vol. 88, no. 10, Mar. 9, 1922, pp. 390-393, 5 figs. Wing-type ditchers clear track ditches and dress slopes rapidly and cheaply. Comparative cost of hand, team and machine work.

RAILWAY MANAGEMENT

Freight Loss and Damage. Prevention of Freight Loss and Damage, Joe Marshall. Can. Ry. Club Proc., vol. 21, no. 1, Jan. 1922, pp. 19-36 and (discussion) 36-40. Discusses claim prevention, the various kinds of damages for which claims are made, etc.

RAILWAY MOTOR CARS

Converted AutoT rucks. Making Motor Rail Cars from Auto Trucks, Donald A. Hampson. Ry. Rev., vol. 70, no. 6, Feb. 11, 1922, pp. 191-192, 2 figs. Describes a two-car Reo train, built by J. B. Worchester Co., Middletown, N. Y., for Alabama road, with seating capacity of 24 in. each car, and operating crew of two.

Developments. Recent Developments in the Railcar Field. Automotive Industries, vol. 46, no 10. Mar. 9, 1922, pp. 556-557, 5 figs. Describes car of Indiana Truck Corp. and that of Service Motor Truck Co. Both fitted with regular and special reverse gear-sets which make possible high-speed operation in either direction, and both employ four-wheel leading trucks with live axles running in plain bearings.

Gasoline. Operating Results with Gasoline Motor Cars. Ry. Age, vol. 72, no. 9, Mar. 4, 1922, p. 516. Describes operation of Bowen motor cars by Pittsburgh and Shawmut Company to reduce cost of maintaining passenger service.

RAILWAY OPERATION

Automatic Train Control. Automatic Train Control on the Chesapeake & Ohio Ry. During the Big Snow Storm. Ry. Rev., vol. 70, no. 8, Feb. 25, 1922, pp. 257-258. Report from Calvin W. Hendrich, of Am. Train Control Co., Baltimore, of behavior of his system of automatic train control during recent heavy snow fall.

G. R. S. Company's Auto-Manual Train Control. Ry. Age, vol. 72, no. 9, Mar. 4, 1922, pp. 521-523, 6 figs. Improvements of automatic train-control system of Gen. Ry. Signal Co., Rochester, N.Y.

Train Control Test on Raritan River. Ry. Signal Engr., vol. 15, no. 2, Feb. 1922, pp. 58-60, 2 figs. Describes automatic train control of "M-V All Weather" Train Controller Co. of Newark, N.J., and tests carried out on Central of New Jersey.

Webb Automatic Train Control Tested on the Erie. Ry. Signal Engr., vol. 15, no. 2, Feb. 1922, pp. 65-66, 2 figs. Describes nine tests made on Erie R. R., all of which were satisfactory.

Avoidable Waste. Avoidable Waste in Car and Locomotive Operation, William Elmer. Mech. Eng., vol. 44, no 2, Feb. 1922, pp. 93-97, 2 figs. Outlines procedure for determining whether engines are properly loaded and used. Includes several appendices, one of which gives method of working out most economical tonnage for loading freight engines of any division, based on actual practicable performance in everyday operation. Discusses avoidable waste in operation of cars under three heads: (1) Their utilization in hands of agents, shippers and consignees; (2) handling and dispatchment in yards and on road; and (3) repair and inspection.

RAILWAY SHOPS

Can. Pac., Montreal. A Railroad Shop Organized for Efficiency. Machy. (Lond.), vol. 19, nos. 487 and 488, Jan. 26 and Feb. 2, 1922, pp. 502-504 and 535-537, 8 figs. Describes Angus Shops of Can. Pacific Ry. Co., Montreal, Canada. Jan. 26: General arrangement. Feb. 2: Designs of jigs and fixtures used: outlines some methods that have made it possible to reduce costs.

Machining Operations, Cost of. What is Wrong with the Railroad Shops, Edward K. Hammond. Machy. (N.Y.),vol. 28, no. 7, Mar. 1922, pp. 557-560. Investigation into relative costs of performing machining operations in seven representative railroad shops.

RAILWAY SIGNALING

Automatic-Block. Automatic Block Signaling, J. E. Saunders. Armour Engr., vol. 13, no. 2, Jan. 1922, pp 71-85, 8 figs. Economy of automatic signals; manual versus automatic block; train operation by signal indication; elements of automatic block signaling.

Color-Light. Color Light Signals Ry. Engr., vol. 43, no. 505, Feb. 1922, pp. 65-66 and 74. Report of committee on Light Signals appointed by Minister of Transport. Advocates this type of signal, a color-light type with separate lenses for each color indication.

Federal Audible Signal. The Federal Signal Company's Audible Signal. Ry. Age, vol. 72, no. 9, Mar. 4, 1922, pp. 516-518, 4 figs. Describes experiments on Boston & Albany in Mass. and New York. An audible warning slunded in conjunction with visual indication given by three-position automatic semaphore.

Locking Arrangement. Locking Arrangement for Movable Point Crossing Frogs, F. Parsons. Ry. Signal Engr., vol. 15, no. 2, Feb. 1922, pp. 63-64, 4 figs. Describes system installed on Central of Argentine which insures safety with minimum apparatus. Read before Inst. Ry. Signal Engrs.

Phase Shifter for A. C. Circuits. A Phase Shifter for Adjusting A. C. Track Circuits, W. F. Price. Ry. Signal Engr., vol. 15, no. 2, Feb. 1922, pp. 61-62, 8 figs. Discusses lag of current in wet and dry weather and describes a phase shifter which works equally well on double element vane or galvanometer relays.

Three-Position, Belgium. Weissenbruch Three-Position Signal System as Used in Belgium, T. S. Lascelles. Ry. Signal Engr., vol. 15, no. 2, Feb. 1922, pp. 55-58, 6 figs. Four indications given, clear, caution, attention or stop. Illustrations of the various positions.

RAILWAY STATIONS

Train Indicator Time-Tables. Train Indicator Time-Tables at Railway Stations. Ry. Gaz., vol. 36, no. 5, Feb. 3, 1922, pp. 177-179, 3 figs. Describes Benn & Cronin train indicator time-table.

RAILWAY TIES

Creosoting Timber Bridges and. Creosoting Timber on the Santa Fe Railway System, A. F. Robinson. West. Soc. Engrs. Jl., vol. 27, no. 3, Mar. 1922, pp. 84-90 and (discussion) pp. 90-96. Deals with creosoting timber bridges and track ties.

See also Ry. Maintenance Engr., vol. 18, no. 2, Feb. 1922, pp. 44-46, 1 fig. (Abstract.)

RAILWAY TRACK

Ballast. Report of Committee II—On Ballast. Am. Ry. Eng. Assn. Bul. vol. 23, no. 239, Sept. 1921, pp. 131-158, 6 figs. Application of ballast; ballast tools; specifications for ballast shovels.

Frogs, Reclaiming. Philadelphia & Reading Reclaims Frogs by Unique Methods. Ry. Maintenance Engr., vol. 18, no. 1, Jan. 1922, pp. 13-14, 8 figs. Describes system which it is claimed, is attended with very satisfactory results. Both plain and hard center equipment is repaired.

Maintenance. Track Maintenance by Contract on the Canadian Pacific Ry., H. G. Harton. Eng. News-Rec., vol. 88, no. 10, Mar. 9, 1922, pp. 399-401. Successful results of three years on 400 miles.

Plant Sidings. Trackage for Industrial Plants, Fred F. Hartford. Indus. Management, vol. 63, no. 3, Mar. 1922, pp. 151-154, 5 figs. Factors underlying their profitable installation.

Snow Fences. Snow Fence Design and Location. Elec. Traction, vol. 18, no. 2, Feb. 1922, pp. 144-146, 4 figs. Describes types successfully used by Chicago, North Shore and Milwaukee R. R. ,Rochester & Syracuse R. R., and Quebec Railway, Light, Heat & Power Co.

RAILWAYS

Cost of Transportation. On the Question of Net Cost; Rates (All Countries except America), Henry Gréard. Int. Ry. Assn. Bul., vol. 4, no. 2, Feb. 1922, pp. 331-345. Determination of net cost of carriage (passengers and goods), taking capital charges into consideration. Its relation to rates charged.

Reconstruction, France. Rebuilding Railway Structures in Northern France, M. Pellarin. Eng. News-Rec., vol. 88, no. 10, Mar. 9, 1922, pp. 397-398, 3 figs. Unique operations employed to save as much of damaged structures as possible. Work on Nord and Est railways cited. Translated from Revue Générale des Chemins de fer.

Tests Department, New Haven, R. R. The Department of Tests of the New Haven Railroad, H. P. Hass. New England R. R. Club, Jan. 10, 1922, pp. 235-248 and (discussion) 248-272. Discusses objects of the department, which are, principally, safety and economy of operation, methods used to obtain proper product being, through use of specifications and through use of tested product sheets. Details of the five divisions of department.

REFRACTORIES

American Practice. Notes on American Practice in Refractories, W. J. Rees. Ceramic Soc. Trans., vol. 21, part 1, Session 1921-22, pp. 69-84 and (discussion) 84-88, 19 figs. Outstanding feature of American practice is well-developed organization of plant for maximum production with minimum costs.

Resistance Tests. Resistance Tests on Refractory Products under Load at Different Temperatures, V. Bodin. Ceramic Soc. Trans., vol. 21, Part 1, Session 1921-22, pp. 56-65, 8 figs. Discusses investigations to find method of determining directly crushing strength at different temperatures, and their results. In French, pp. 44-45.

Thermal Conductivity. On the Determination of the Thermal Conductivity, Specific Heat, Density and Thermal Expansion of Different Rocks and Refractory Materials, Yoshiaki Tadokoro. Tohoku Imperial University Sci. Reports, vol. 10, no. 5, Dec. 1921, pp. 339-410, 42 figs. partly on supp. plates. Account of investigation begun four years ago in research laboratory of Imperial Steel Works, Yawata

REFRIGERATING PLANTS

Condenser Cooling-Water Diagram. Cooling Water for Ammonia Condenser, Alex H. Luedicke. Power, vol. 55, no. 8, Feb. 21, 1922, p. 302, 1 fig. Explains easy way to find amount of water required.

Corrosion in Systems. Control of Corrosion in Refrigerating Systems, F. N. Speller. A.S.R.E. Jl., vol. 8, no. 3, Nov. 1921, pp. 216-221 and (discussion) 221-224. Reviews what has been done and discusses possible application of these principles. Methods of protection are divided into two classes, viz.: by rendering water slightly alkaline, usually done by use of lime; and by eliminating free oxygen from solution.

REFRIGERATION

Brine Freezing of Fish. Brine Freezing of Fish, Harden F. Taylor. Refrig. World, vol. 57, no. 1, Jan. 1922, pp. 21-24. Refrigeration promises only solution of problem of distributing fish from sea to distant consumers in first-class condition. Describes brine freezing process. Brine-frozen versus air-frozen fish.

RESEARCH

Mechanical Engineering Advisory Committee. Mechanical Engineering Advisory Committee for Division of Engineering, Alfred D. Finn. Mech. Eng., vol. 44, no. 2, Feb. 1922, pp. 115-116. Describes contemplated program of committee formed within organization of Am. Soc. of Mech. Engrs.

Problems. Research Problems Discussed. Mech. Eng., vol. 44, no. 2, Feb. 1922, pp. 117-118. Discussion of papers by F. A. Wardenburg and A. D. Flinn. Report of A.S.M.E. work in lubrication, by Albert Kingsbury. Progress in steam-table research described.

RESERVOIRS

Waterproofing. Waterproofing a Leaky Reservoir at Nashville, Tenn. Eng. News-Rec., vol. 88, no. 8, Feb. 23, 1922, pp. 310-312, 5 figs. Leakage through masonry walls and old concrete floor necessitated extensive repair and watertight lining.

ROADS, CONCRETE

Construction Mistakes. Six Construction Mistakes in One Concrete Road, George L. Smith. Eng. News-Rec., vol. 88, no. 9, Mar. 2, 1922, pp. 357-358, 3 figs. Experience in building 20-ft. concrete military road disclosed number of errors which carry lessons.

ROLLING MILLS

Engines, Combination Gas and Steam. Development of Rolling Mill Engines, F. J. Denk. Blast Furnace & Steel Plant, vol. 10, no. 2, Feb. 1922, pp. 153-154. Advantages of combination of gas engine with steam engine.

Tables. Roller Bearings Mill Tables, J. M. Kelly. Blast Furnace & Steel Plant, vol. 10, no. 2, Feb. 1922, pp. 139-141, 2 figs. Describes new rolling mill tables in which were installed flexible roller bearings.

RUBBER

Thermal Insulation. Thermal Insulation of Rubber. Rubber Age, vol. 2, no. 12 Feb. 1922, p. 590, Discusses report by Food Investigation Board of experiments made with onazote.

Vulcanized. Determination of True Free Sulfur and True Coefficient of Vulcanization in Vulcanized Rubber, W. J. Kelly. Jl. Indus. & Eng. Chem. vol. 14, no. 3, Mar. 1922, pp. 196-197. Describes methods of analysis by means of which a more complete study of distribution of sulphur between the various ingredients of rubber compound can be made.

S

SCIENTIFIC MANAGEMENT

See Industrial Management.

SEWAGE DISPOSAL

Acid Process. The Miles Acid Process of Sewage Treatment, F. W. Mohlman. Engr.'s Soc. West. Pa. Proc., vol. 37, no. 7, Oct. 1921, pp. 345-364 and (discussion) pp. 365-374, 1 fig. Notes on theory and experimental work on Miles acid process; economic difficulties, and limitations and possibilities. Bibliography.

Colloids in Treatment. Colloid Chemistry and Its Relation to Tank Treatment of Sewage, F. W. Mohlman and Langdon Pearse. Am. Water Works Assn. Jl., vol. 9, no. 2, Mar. 1922, pp. 311-318, 1 fig. It is claimed that as yet in removal of colloids by tank treatment, but little has been accomplished in a practical way by settling alone, or by use of colloidors; use of acids, instead of alkaline precipitants, yields a well clarified effluent, but has not proved applicable except under special conditions. Additional tests and investigations are needed.

Sludge Characteristics. Characteristics of Some Connecticut Sludges, J. Frederick Jackson and Joseph Doman. Boston Soc. Civ. Engrs. Jl., vol. 9, no. 2, Feb. 1922, pp. 37-58, 4 figs. In general it was found that where area is available, air drying and final disposal on spoil land is simplest and most economical method of handling sludges from plain sedimentation, Imhoff tanks, secondary sedimentation tanks and perhaps lime treatment. Wet screenings, when applied to land for fertilizing purposes, gave surprisingly good results. Where a great degree of purification is required, activated sludge or Imhoff sprinkling filter system should be selected.

SHAFTS

Torsional Vibrations. Torsional Vibrations of Shafts (Verdrehungsschwingungen von Wellen), O. Föppl. Schweizerische Bauzeitung, vol. 79, no. 5, Feb. 4, 1922, pp. 56-59, 11 figs. Demonstrates practical applicability of theoretical determination of coefficients of natural vibration of shafts with rotating masses.

SHEARS

Pressure Required for Shearing. Formulas for Pressure Required for Shearing Metal, D. C. Oviatt. Machy. (N. Y.), vol. 28, no. 7, Mar. 1922, p. 528, 1 fig. Presents formulas for shear calculation and explains application.

SHERARDIZING

Experiments. Experiments with Sherardizing, Leon McCulloch. Min. & Metallurgy, no. 182, Feb. 1922, p. 63. Study of effect of iron in zinc dust on sherardizing process and on resulting coatings, giving evidence that no part of a sherardizing coating can contain less than 6 per cent iron. (Abstract.)

SHOVELS

Electric. New Types of Small Electric Shovels. Eng. & Contracting, vol. 57, no. 7, Feb. 15, 1922, pp. 163-164. Describes three new types of small revolving electric shovels developed by Marion Steam Shovel Co., Marion, Ohio, designed for work on street or road construction, in quarries, open mines, lumber reclamation work, etc.

SINE BARS

Uses. The Use of the Sine Bar. Machy. (Lond.), vol. 19, no. 488, Feb. 2, 1922, pp. 529-531, 6 figs. Gives some examples of wide range of angle work covered by it. Is more adaptable than the protractor.

SPRINGS

Handling and Heat-Treating. Methods of Handling and Heat-Treating Springs. Can. Machy., vol. 27, no. 8, Feb. 23, 1922, pp. 21-25, 23 figs. Principles governing uniform heating and cooling; type and arrangement of equipment; stationary and continuous furnaces; utilizing heat in waste gases.

Impact Absorption. Graphic Representation of Absorption of Impact by Springs, Leslie H. Mann. Machy. (N. Y.), vol. 28, no. 7, Mar. 1922, pp. 554-555, 2 figs. Determination of energy absorbed by spring under load based upon assumption that body producing deflection of spring is moving with its center of gravity in line with axis of spring, or in line with point that will cause spring to act most efficiently.

STANDARDIZATION

Advantages. Significance of Standardization to American Industry and the Federal Government. A. A. Stevenson. Mech. Eng., vol. 44, no. 3, Mar. 1922, pp. 185-186 and 203. Advantages of standardization to all, including Government should cooperate with industry. What is being done by Am. Eng. Standards Committee.

Waste Elimination through. Waste Elimination Through Standardization, H. Campbell and Alex. Taub. Am. Mach., vol. 56, no. 10, Mar. 9, 1922, pp. 363-364. Reducing manufacturing costs. How standardization benefits both manufacturer and consumer. Introduction of universal numbering system. Multiplying service by six.

STEAM

Ruth Storage System. The Ruths Steam Accumulators (L'accumulatore di vapore Ruths), E. C. Constam-Gull. Industria, vol. 35, no. 24, Dec. 31, 1921, pp. 521-527, 17 figs. Various examples of application of this system of equalizing pressure loads; savings effected in fuel

STEAM GENERATORS

Electrically Operated. Generation of Steam by Electricity, E. T. Kaelin. Eng. Jl. (Eng. Inst. Can.), vol. 5, no. 3, Mar. 1922, pp. 127-133, 7 figs. Field of use for electric-steam generator, its advantages to consumer from load-factor point of view and to electric supply compapy as outlet for surplus power. Discusses types of electric-steam generators with particular reference to water-resistance type.

STEAM POWER PLANTS

Oil-Burning. Operation of Oil-Burning Steam Plants, C. H. Delany. Iron Age, vol. 109, no. 8, Feb. 23, 1922, pp. 525-527, 4 figs. Discussion of plant characteristic diagram, with particulars regarding its use in establishment of as tandard of performance and in increasing plant efficiency. (Abstract.) Paper presented at joint meeting of Am. Soc. Mech. Engrs. and Am. Inst. Elec. Engrs.

STEAM SHOVELS

Operations. Steam-Shovel Operation by Phelps Dodge Corporation, H. M. Ziesemer and George Mieyr. Min. & Metallurgy, no. 182, Feb. 1922, pp. 44-45. Discusses methods and cost, with brief description of equipment used in operation. (Abstract.)

STEAM TURBINES

Efficiency Tests of 60,000-Kw. Efficiency Tests of a 60,000-Kw. Turbine, Herbert B. Reynolds and Walter F. Hovey. Power, vol. 55, no. 11, Mar. 14, 1922, pp. 411-413, 4 figs. Results of tests on turbine installed in power station of Interborough Rapid Transit Co. (Abstract.) Paper to be read before Am. Soc. Mech. Engrs.

STEEL

Alloy. *See Alloy Steels.*

Basset Direct-Production Process. Direct Production of Steel (La production directe de l'acier), E.-H. Weiss. Nature, no. 2491, Dec. 31, 1921, pp. 423-427, 5 figs. Describes Basset process as applied at Dennemont Works, or producing steel direct from ore.

Cracking. Intercrystalline Cracking of Mild Steel in Salt Solutions, J. A. Jones. Faraday Soc. Trans., vol. 17, part 1, no. 49, Dec. 1921, pp. 102-109, 9 figs. Describes action of various solutions in producing cracking of steel in state of stress.

Failure on Hardening. The Mechanism of the Failure of Steel upon and after Hardening. G. W. Green. Faraday Soc. Trans., vol. 17, part 1, no. 49, Dec. 1921, pp. 139-145, 7 figs. Outlines causes of stressing and subsequent failure.

Fatigue Tests. Endurance of Steel Under Repeated Stresses, D. J. McAdam, Jr. Chem. & Met. Eng., vol. 25, no. 24, Dec. 14, 1921, pp. 1081-1087, 22 figs. Fatigue tests on many commercial and alloy steels develop no evidence of "endurance limit," ultimate tensile strength closely related to endurance stress at 1,000,000,000 cycles; special White-Souther machine and semi-logarithmic graphs used.

Identification and Storage. A New Idea in Steel Identification and Storage. Ry. & Locomotive Eng., vol. 35, no. 2, Feb. 1922, pp. 44-45, 2 figs. Describes method of marking steel bars for identification, and also designing and constructing suitable steel storage racks, employed by Gould & Eberhardt, Newark, N. J.

Literature, 1921. Review of Iron and Steel Literature for 1921, E. H. McClelland. Blast Furnace & Steel Plant, vol. 10, no. 1, Jan. 1922, pp. 4-8. Classified list of the more important books, serials and trade publications during year, with a few of earlier date, not previously announced. Also in Forging and Heat Treating, vol. 8, no. 1, Jan. 1922, pp. 4-8.

Phosphorous, Influence of. Influence of Phosphorous upon the Microstructure and Hardness of Low-Carbon, Open-Hearth Steels, Edward C. Groesbeck, U. S. Bur. of Standards Technologic Papers, no. 203, Nov. 21, 1921, pp. 1-33, 15 figs. Two series of specimens, one of basic and the other of acid open-hearth steel, with phosphorus content in each series varied in four or five steps within limits 0.008 to 0.115 per cent, which mark the ordinary limits of phosphorus content in plain carbon steel, were employed in study of relationship between phosphorus content and microstructure and hardness resulting from series of different heat treatments tried.

Properties in Hardening Range. Properties of Some Steels in the Hardening Range, W. R. Chapin. Am. Soc. for Steel Treating Trans., vol. 2, no. 6, Mar. 1922, pp. 507-514 and (discussion by Zay Jeffries) pp. 514-515, 4 figs. Report [illegible] which when properly quenched, harden throughout mass, and are martensitic when so hardened.

Wire, Low-Carbon Steel. Ghost Lines and Grain Elongations in Hot Rolled and Cold Drawn Low Carbon Steel Wire, N. B. Hoffman. Am. Soc. for Steel Treating Trans., vol. 2, no. 6, Mar. 1922, pp. 516-523 and (discussion) pp. 523-[illegible] Shows [illegible] between ghost lines, bands, and elongated grain structures as found in low-carbon steel wire.

STEEL CASTINGS

Heat Treatment. The Heat Treatment of Steel Castings, Walter H. White. Am. Soc. for Steel Treating Trans., vol. 2, no. 5, Feb. 1922, pp. 437-440. Suggestions for obtaining good results.

STEEL, HEAT TREATMENT OF

Alloy Carbonizing Boxes. Do Alloy Carbonizing Boxes Pay? C. M. Campbell. Am. Soc. for Steel Treating Trans., vol. 2, no. 6, Mar. 1922, pp. 495-499. Considers factors governing life and performance of carbonizing boxes, and reasons why they should not be placed on supply account instead of becoming part of equipment.

Brinell Hardness, Calculating. New Development on the Influence of Mass in Heat Treatment, E. J. Janitzky. Am. Soc. for Steel Treating Trans., vol. 2, no. 5, Feb. 1922, pp. 377-383, 2 figs. Also Iron Age, vol. 109, no. 10, Mar. 9, 1922, pp. 658-659, 2 figs. Suggested formula for calculating Brinell hardness from given data. Applicable to alloy and carbon steels. Paper presented at N.Y. Section of Am. Soc. for Steel Treating.

Carbon Steel. Effect of Heat Treatment on the Mechanical Properties of 1 Per Cent Carbon Steel, H. J. French and W. George Johnson. U. S. Bur. of Standards Technologic Papers, no. 206, Dec. 27, 1921, pp. 93-121, 16 figs. Study of effects of varying time-temperature relations in heat treatment on tensile and impact properties, hardness, and structure of 1 per cent carbon steel, including (a) effect of temperature variations in hardening (b) time at hardening temperatures both above Acm and between the Ac1 and Acm transformations. (c) effects of tempering steel hardened in different ways and effects of "soaking" just under lower critical range, (d) comparison of oil and water hardening for production of definite strengths.

Effect of Heat Treatment on the Mechanical Properties of One Per Cent Carbon Steel, H. J. French and W. George Johnson. Am. Soc. for Steel Treating Trans., vol. 2, no. 6, Mar. 1922, pp. 467-494, 16 figs. Results of tests show that most suitable oil or water quenching temperature for steel which is subsequently to be tempered at relatively high temperatures is slightly above end of Ac_1 transformation.

Cold-Heated Bolts. Cold-Heated Bolts—Their Metallography and Heat Treatment, W. E. Hillman. Am. Soc. for Steel Treating Trans., vol. 2, no. 5, Feb. 1922, pp. 369-376, 20 figs.; also Iron Trade Rev., vol. 70, no. 8, Feb. 23, 1922, pp. 538-541, 18 figs. Various degrees of distortion may be found in same bolt; however, annealing at 1150 deg. Fahr. will remove weakening effect of cold work. Annealing above critical range is preferable.

Fixtures for. Special Fixtures for Heat Treating, E. H. Tingley. Forging & Heat Treating, vol. 8, no. 2, Feb. 1922, pp. 96-99, 7 figs. Describes a number of appliances for heating and quenching small parts as developed form suggestions made by workmen of Delco-Light Co. heat-treating department.

Structural Changes due to Heating Medium. Influence of the Heating Medium on the Structural Changes in Steel, A. E. Bellis. Am. Soc. for Steel Treating Trans., vol. 2, no. 5, Feb. 1922, pp. 398-401 and (discussion) pp. 401-402. Analysis for structural changes as they are influenced by heating and cooling medium.

STEEL PLANTS

Pressed Steel. Description of a Pressed Steel Plant. Blast Furnace & Steel Plant, vol. 10, no. 2, Feb. 1922, pp. 144-147, 4 figs. Brief history of reorganization of Sharon Pressed Steel Co., Sharon, Pa., equipped to manufacture and assemble heavy pressed-steel products. Routing and handling.

STOKERS

Motion Pictures of Operation. Motion Pictures of a Stoker Furnace in Operation, R. Sanford Riley, Mech. Eng., vol. 44, no. 2, Feb. 1922, pp. 103-104, 4 figs. Describes invention of F. H. Daniels and pictures taken at plant of Bird & Son, Inc., East Walpole, Mass., showing operation of a 9-retort extra long Riley underfeed stoker.

STORAGE BATTERIES

Overhauling. Overhauling Storage Batteries, Chester Schenck. Power, vol. 55, no. 9, Feb. 28, 1922, pp. 336-339, 5 figs. Symptons that give warning of need of overhauling. Preparation for work with explicit directions covering two methods of procedure, one to be used when work may be carried along to completion, and other where interruption is probable.

STREET RAILWAYS

Cars, One-Man. One-Man Car Operation with Double-Truck Cars, H. S. Sweet Elec. Ry. Jl., vol. 59, no. 4, Jan. 28, 1922, pp. 156-158, 9 figs. Describes new one-man car in Utica equipped with turnstiles to admit passengers who pay as they leave. (Abstract.) Paper read before N. Y. Elec. Ry. Assn.

Two New Types of Safety Cars for Chicago, Charles Gordon. Elec. Ry Jl., vol. 59, no. 2, Jan. 14, 1922, pp. 65-71, 14 figs. Describes single-truck and double-truck one-man safety cars, both arranged for double-end operation with separate entrance and exit passageways.

STRESSES

Flat Cylinder Heads. Stresses and Deformations in Flat Circular Cylinder Heads, Gilbert Dudley Fish. Mech. Eng., vol. 44, no. 3, Mar. 1922, pp. 165-169 and (discussion) p. 170, 12 figs. Analysis covering [illegible] elastic disks, where form and loading are symmetrical with respect to [illegible] centers, where loading is combination of fluid pressures and of forces acting normally on concentric circles, where thickness is uniform, and where all stresses are within limits of true elasticity. Formulas applicable to all cases considered are developed, and equations are given for constants of integration involved in mathematical analysis.

Thermal. The Thermal Stresses in Spherical Shells Concentrically Heated, Charles H. Lees. Roy. Soc. Proc., vol. 100, no. A 705, Jan. 2, 1922, pp. 379-394, 7 figs. Discusses stresses set up in materials by difference in temperature and its application to blast furnaces and others.

STRUCTURAL STEEL

Tensile Properties. Tensile Properties of Some Structural Alloy Steels at High Temperatures, H. J. French. Am. Soc. for Steel Treating Trans., vol. 2, no. 5, Feb. 1922, pp. 409-422, 8 figs. Account of tests conducted by Bur. of Standards to determine tensile properties of a number of structural alloy steels throughout temperature range of 20 to 550 deg. cent.

STRUCTURES

Steel, Design of. Reminders for the Designer of Steel Structures, R. Fleming. Eng. News-Rec., vol. 88, no. 7, Feb. 16, 1922, pp. 271-273, 4 figs. Cautions as to corrosion, expansion effects, future extension and rough handling.

SUBSTATIONS

Automatic Railway. Automatic Railway Substation Economies, H. G. Hecker. Elec. Traction, vol. 18, no. 2, Feb. 1922, pp. 148-152, 4 figs. Savings resulting from installation of automatic substation equipment. Typical analyses of interurban and city systems.

SUBWAYS

Extension, Paris. The Metropolitan of Paris (Le chemin de fer Métropolitain de Paris), L. Biette. Génie Civil, vol. 80, no. 5, Feb. 4, 1922, pp. 97-103, 20 figs. partly on supp. plate. Describes work in connection with extension of line, including tunnel work.

SURVEYING

Aerial Photography. Winged Surveyors, Sherman M. Fairchild. Sci. Am., vol. 126, no. 3, Mar. 1921, pp. 157-160 and 219, 8 figs. What aerial photography is doing for industry and science.

Cadastral Resurveys. A Review of Important Developments in the Science of Cadastral Resurveys as Executed by the United States Government, with Ethical Discussion Thereof. Am. Soc. Civ. Engrs, Proc., vol. 48, no. 2, Feb. 1922, pp. 369-372. Discussion by W. J. Lightfoot, Clay Tallman and S. V. Proudfit of paper by Howard Richards Farnsworth.

SWAGING

Hot. Hot Swaging, Fred R. Daniels. Machy. (N. Y.), vol. 28, no. 7, Mar. 1922, pp. 521-526, 10 figs. Describes swaging operations, based on practice and recommendations of the Langelier Mfg. Co., Providence, L. I.

T

TELEPHONY

Automatic. Auxiliary Features in Automatic Telephone Systems, W. Aitken. Electrician, vol. 88, no. 2282, Feb. 10, 1922, p. 154, 1 fig. Describes an impulse converter used in Relay Automatic Telephone Co.'s system, which responds to dial, or other impulses, and builds up a circuit to energise a relay associated with called line to complete a connection.

Line Construction. Telephone Line Work in the United States, E. S. Byng. Instn. Elec. Engrs Jl., vol. 60, no. 305, Jan. 1922, pp. 85-110 and (discussion) 110-135, 34 figs. Discusses American practice in line construction work. Notes on pole routes, aerial cables, conduit routes, underground cables, house cabling, block cabling and wiring, drop wiring.

TEMPERATURE CONTROL

Automatic Valve. Temperature Regulation by Automatic Valve, G. A. Wegner. A.S.R.E. Jl., vol. 8, no. 3, Nov. 1921, pp. 203-210, 6 figs. Discusses control of a valve through which vapor pressure is made controlling factor, the object being to assist man in charge in his task and to make desired results more certain.

TEXTILE INDUSTRY

Science in. Science in the Textile Industry. Mech. Eng., vol. 44, no. 3, Mar. 1922, pp. 181-184, 1 fig. Two papers presented before Textile Division of A.S.M.E., Hidden Wastes in Textile Plants, Thayer P. Gates; and Economy in Textile Drying, B. R. Andrews. Discussion.

TIDAL POWER

Utilization. Using Sea Power (Utilisons la "Houille Bleue"), H. Lémonon. La Nature, nos. 2482 and 2484, Oct. 29 and Nov. 12, 1921, pp. 278-283 and 310-316, 19 figs. Oct. 29: Describes systems of tidal power production by Reynolds, Tommasi, Legrand, Praceiq, etc. Nov. 12: Describes systems depending on use of turbines and hydraulic accumulators.

TIMBER

Conservation of Supply. Conservation of Timber Supply. Mech. Eng., vol. 44, no. 3, Mar. 1922, pp. 162-164. Reforestation to Conserve Industrial Investments, by David L. Goodwillie; and Paper and By-Products from Southern Pine Refuse, by Joseph H. Wallace.

Creosoted. Experiences of Santa Fe Ry. with Creosoted Timber, A. F. Robinson. Eng. & Contracting, vol. 57, no. 8, Feb. 22, 1922, pp. 176-177. Notes on piling troubles and the remedies; air seasoning of untreated sleepers; field treatment of piles; rules for handling treated timber. (Abstract.) Paper presented before joint meeting of West. Soc. Engrs. and Am. Wood Preservers' Assn.

TIME STUDY

Bedaux Human Power Measurement. The Bedaux Principle of Human Power Measurement, L. C. Morrow. Am. Mach., vol. 56, no. 7, Feb. 16, 1922, pp. 241-245. Describes system practised by Chas. E. Bedaux Co., Cleveland, Ohio. Application to compensation of labor. Isolation from methods, equipment and piece rates. Simplicity of records.

Motion Study and. Time and Motion Study, Eric Farmer. Eng. & Indus. Management, vol. 7, nos. 3, 4, 5, 8, Jan. 19, 26, Feb. 2, 23, 1922, pp. 70-75, 95-98, 136-139, 221-223. Jan. 19: Review of past works by Taylor and Gilbreth. Jan. 26: New point of view in undertaking time and motion study; reducing unproductive labor. Feb. 2: Correct definition of motion study. Feb. 23: Time study.

TRACTORS

Caterpillar. A New Caterpillar Development, F. Rowlinson. Sci. Am., vol. 126, no. 3, Mar. 1922, pp. 194-195, 8 figs. British efforts to save power and increase speed by means of a track that will yield to local obstacles. Describes new type of caterpillar suspension and its application.

Four-Wheel Drive. A Four-Wheel Drive Tractor from the Pacific Coast. Automotive Industries, vol. 46, no. 10, Mar. 9, 1922, pp. 554-555, 4 figs. Describes the Wizard 4-Pull tractor which transmits power to all four wheels by roller chains and steers by disconnecting power from wheels on one side.

Road-Rail Trucks and. The Stronach Dutton System of Road Rail Traction. Roy. Engrs. Jl., vol. 35, no. 2, Feb. 1922, pp. 93-96, 2 figs. on supp. plates. Principle adopted is to support front axle of a short-wheel base tractor by a four-wheeled bogie running on a Decauville line. A drawbar is carried from bogie pivot to back of tractor for attachment of such trucks as can be hauled. Most recent pattern of tractor hauling train and converting from road to rail or rail to road traction.

Samson. Cooling Capacity Increased in Samson Tractor, P. M. Heldt. Automotive Industries, vol. 46, no. 9, Mar. 2, 1922, pp. 502-505, 4 figs. Technical description. Improvements in lubricating and cooling systems; enlarging of radiator and fan; etc.

Types. Tractor Show Marked by New Designs, P. M. Heldt. Automotive Industries vol. 46, no. 8, Feb. 23, 1922, pp. 451-457, 8 figs. Creeper tractor construction; road-building and maintenance tractors; corn-belt and grain-belt tractor requirements contrasted; new machines and parts described.

TRANSPORTATION

Highway. Highway Transportation. Am. Soc. Civ. Engrs. Proc., vol. 48, no. 2, Feb. 1922, pp. 318-358. Symposium containing following papers: Highway Transportation, Thomas H. MacDonald. Inspection of Highway Construction William G. B. Thompson. Financing and Bonding Highways, John N. Cole. Highway Bonding from the Viewpoint of the Surety Company, E. A. St. John. Financing and Bonding Highway Work, Edward C. Lunt. The Motor Vehicle in Highway Financing, Harry Meixell. The Motor Truck as an Asset to Railroad Operation, R. S. Parsons. Motor Vehicle Control, G. Wythe Munford. Discussion, W. K. Hatt.

Railway. Railroad Transportation Am. Soc Civ. Engrs. Proc, vol. 48, no. 2, Feb. 1922, pp. 288-316. Symposium containing following papers: Railroad Transportation, Howard Elliott. Railroads and Their Employees, W. N. Doak. Railroad Transportation and Owners of Railroad Securities, F. A. Molitor. Discussion, George W. Simmons.

Water. Water Transportation, Am. Soc. Civ. Engrs. Proc., vol. 48, no. 2, Feb. 1922, pp. 266-286. Symposium containing following papers: Water Transportation, R. H. M. Robinson. The American Merchant Marine, Winthrop L. Marvin. The Merchant Marine Problem, Emory R. Johnson, Water Transportation in its Relation to the Railways, Samuel O. Dunn.

TUNNELS

Rock Driving. Driving a Five-Mile Rock Tunnel for Japan Railway. Eng. News-Rec., vol. 88, no. 10, Mar. 9, 1922, pp. 394-397, 7 figs. Tunnel is being driven mainly on the bottom-heading systen, but with the widening operated in two different ways. A side-heading system will be employed when nature of rock makes this advisable.

Second Simplon. Completing the Second Simplon Tunnel (L'achevement du deuxième tunnel du Simplon). Bul. Technique de la Suisse Romande, vol. 48, no. 2, Jan. 21, 1922, pp. 13-16, 6 figs. partly on supp. plate. Tunneling work, supporting work, and facing for good and poor rock, and difficulties encountered.

Ventilation. Research Settles the Problem of Tunnel Ventilation, Robert C. Skerrett. Sci. Am., vol. 126, no. 3, Mar. 1922, pp. 169-170, 4 figs. Determination of best system for supplying fresh air to Hudson River vehicular tunnel tube.

V

VALVES

Gate, Electrically Operated Tests on Motor-Operated Gate Valves for High-Pressure Steam, T. W. Stinson. Power, vol. 55, no. 7, Feb. 14, 1922, pp. 263-265, 5 figs. Emergency-closing tests made on five motor-operated 6-in to 10-in. gate valves, against steam at 225 lb. pressure and 150 deg. Fahr. superheat blowing to atmosphere.

VENTILATION

Effect of CO in Air. The Physiological Principles Governing Ventilation When the Air is Contaminated with Carbon Monoxide, Yandell Henderson and Howard W. Haggard. Jl. Indus. & Eng. Chem., vol. 14, no. 3, Mar. 1922, pp. 229-236, 5 figs. (Abstract.) Report to Chief Engineer of New York & New Jersey Tunnel Commissions.

VENTURI METERS

Air and Gas Measurement. The Metering of Large Volumes of Air and Gas By Means of the Venturi Tube, John L. Hodgson. Instn. Min. Engrs. Trans., vol. 62, Part 3, Jan. 1922, pp. 208-218 and (discussion) 218-220, 9 figs. Account of application of Venturi meter.

VISCOSIMETERS

Conversion Chart. Viscosimeter Conversion Chart, Power, vol. 55, no. 10, Mar. 7, 1922, p. 377, 1 fig. Presents chart for finding viscosity reading of a particular oil on any of standard viscosimeters when its reading on one of viscosimeters has been determined by experiment at same temperature.

VOCATIONAL TRAINING

Seasonal Industries. A Management Problem in Seasonal Industries, D. W. Rockey. Indus. Management, vol. 63, no. 2, Feb. 1922, pp. 77-79, 1 fig. Problem of seasonal industries is to efficiently teach large increases of working forces in minimum of time. Solution of problem is training of largest possible corps of instructors, both as to instructional methods and as to operating procedure and organization

W

WASTE

Causes and Reduction. A Campaign Which Cut Wastes in Half, Peter F. O'Shea, Factory, vol. 28, no. 3, Mar. 1922, p. 281. Tells how nearly 50 per cent of entire yearly waste bill was reduced by Dennison Mfg. Co. by a systematic following up of twelve causes of waste.

Engineering Industries. Waste in the Engineering Industries. Time Eng. Supp. Jan. 21, 1922, pp. 1-5. Views of representative manufacturers on accidental and deliberate waste, routine waste, waste of business, and deficient use of machinery.

WASTE HEAT

Utilization. The Utilization of Waste Heat From Electrical Generating Stations. F. H. Whysall. Practical Engr., vol. 65, no. 1823, Feb. 2, 1922, pp. 69-70. Possibility of locating industrial plants about generating stations to use waste heat, and difficulties arising. Paper read at joint meeting of Instn. Elec. Engrs. and Instn. Heat & Vent. Engrs.

WATER MAINS

Equipment for Constructing Distributing. Mechanical Aids for Distributing Work in Detroit, Michigan, W. Montgomery Mitchell. Am. Water Works Assn. Jl., vol. 9, no. 2, Mar. 1922, pp. 172-185, 8 figs. Lists and describes various types of equipment used in construction of distributing mains for Detroit water works.

WATER METERS

Capacity Tests. Determining by a Single Flow Test the Capacity of a Meter at All pressure Losses, Fred. B. Nelson. Am. Water Works Assn. Jl., vol. 9, no. 2, Mar. 1922, pp. 241-246, 3 figs. Writer describes method of plotting and points out its conveniences and advantages. Home-made apparatus used for test.

WATER PURIFICATION

Colloid Chemistry Applied to. Application of Colloid Chemistry to Study of filter Effluents, Malcolm Pirnie. Am. Water Works Assn. Jl., vol. 9, no. 2, Mar. 1922, pp. 247-273, 6 figs. Selected facts from applied colloid chemistry. Writer compares observed phenomena in water purification with those in colloid chemistry, and suggests explanations of former based on experimental proofs and reasonable assumptions developed in latter.

WATER SUPPLY

Hetch Hetchy, San Francisco. Construction Progress of the Hetch Hetchy Water Supply of San Francisco, California, M. M. O'Shaughnessy. Am. Soc. Civ. Engrs. Proc., vol. 48, no. 2, Feb. 1922, pp. 147-173, 10 figs. Presents comprehensive view of present stage of construction, making only such reference to general scheme and matters of policy as appear necessary. General description of project; construction work completed and in progress; hetch hetchy railroad; lower Cherry power system; hetch hetchy dam; Lake Eleanor dam; aqueduct tunnel. Ecpenditures to present time total about $14,000,000.

Repairing Flood-Destroyed. Reparation of Vancouver's Flood-Destroyed Water System. Contract Rec., vol. 36, no. 8, Feb. 22, 1922, pp. 168-171, 5 figs. Describes methods of restoring intake works and mains, put out of commission by flood in October, 1921. New improvements planned as result of difficulties experienced.

WELDING

Cast Iron. *See Cast Iron, Welding without Studding.*

Frogs and Crossings. Welding Frogs and Crossings with Manganese Steel, H. R. Pennington. Eng. & Contracting, vol. 57, no. 7, Feb. 15, 1922, pp. 152-154, 2 figs. Qualities and methods of use in welding operations. Paper read before Am. Welding Soc.

See also Electric Welding; Electric Welding, Arc.; Oxy-Acetylene Welding.

WIND TUNNELS

Motor Regulator. Langley Field Wind Tunnel Motor Regulator, D. L. Bacon. Aviation, vol. 12, no. 8, Feb. 20, 1922, pp. 226-227, 1 fig. N.A.C.A. develops motor regulator which practically solves problem of constant propeller speed in wind tunnel. N.A.C.A. Technical Note No. 81.

Engineering Index

This Index is prepared by the American Society of Mechanical Engineers.

In this department will be published from month to month the titles of current engineering papers with the authors and source and a brief extract of the more important. It is designed to give the members of The Institute a survey of all important articles relating to every branch of engineering profession.

PHOTOSTATIC PRINTS

Photostatic copies of the articles listed in this section, or others on engineering subjects, may be obtained from the Engineering Societies Library.

Price of each print (up to 11 by 14 in. size) 25 cents, plus postage. Where possible, two pages, up to 7 by 9 in. size, will be photographed on one print. Larger magazines require a print per page. Bills will be mailed with the prints.

The Library is also prepared to translate articles, to compile lists of references on engineering subjects and render assistance in similar ways. Charges are made, sufficient to cover the cost of this work. Correspondence is invited. Information concerning the charge for any specific service will be given those interested. In asking for information please be definite, so that the investigator may understand clearly what is desired.

The Engineering Societies Library is under the management of the United Engineering Society, which administers it as a public reference library of engineering. It is maintained jointly by the American Society of Civil Engineers; the American Institute of Mining and Metallurgical Engineers; the American Society of Mechanical Engineers and the American Institute of Electrical Engineers. It contains 150,000 volumes on engineering and allied subjects, and receives currently most of the important periodicals in its field.

Orders and correspondence should be addressed to

Harrison W. Craver, Director

Engineering Societies Library,

29 West Thirty-ninth Street, New York, N. Y.

A

ACCIDENT PREVENTION

METHODS AND LIMITATIONS. Limitations and New Methods of Accident Prevention (Grenzen und neue Wege der Unfallverhütung), Karl Hartmann. Zeit. des Vereines deutscher Ingenieure, vol. 66 no. 8, Feb. 25, 1922, pp. 186-188. Conditional and unconditional protection. Technical and economic limitations. Development of protective regulations. Necessity of co-operation between machine constructor, manager and workman.

AERIAL PHOTOGRAPHY

FAIRCHILD CAMERA. Aerial Photography, W. L. Hamilton. Aerial Age, vol. 15, nos. 1 and 2, Mar. 13 and 20, 1922, pp. 6-7 and 36-38, 7 figs. Mar. 13: Discusses a map of New York taken from an airplane, and the Fairchild camera with which it was made. Mar. 20: Discusses several examples of successful aerial photography.

AERONAUTICAL INSTRUMENTS

TELECOMPASS. A Solution of the Problem of Determining Position in an Airplane (Une solution du problème de l'orientation en avion). Industrie Electrique, vol. 31, no. 710, Jan. 25, 1922, pp. 15-27, 4 figs. Mechanical and electrical description of the telecompass, and its use.

AIR COMPRESSORS

MODERN. Modern Compressors (Les compresseurs modernes), A. Lambrette. Techinque Modern, vol, 13, nos 11 and 12, Nov. and Dec. 1921, and vol. 14. no. 2, Feb. 1922, pp. 468-474, 502-510 and 59-63, 48 figs. Discusses single-acting, double-acting, monocylindric-two-phase, two-stage, and multiple-stage compressors; inlet and outlet valves; lubrication; play in bearings and connecting rod; etc.

PORTABLE OIL-ENGINE-DRIVEN. A portable Air Compressor for Industrial Use (Groupe motocompresseur transportable pour usages industriels), J.-A. Calmettes. Génie Civil, vol. 80, no. 4 Jan. 28, 1922, pp. 87-88, 2 figs. Describes the Diatto compressor driven by an oil engine, for drilling, boring, etc.

AIR CONDITIONING

GAS-ABSORPTION DEVICE. A New Device for Gas Absorption, H. E. Robertson. Chem. Age (N. Y.), vol. 30, no. 2 Feb. 1922, pp. 59-60, 2 figs. Construction and operation of new air conditioner and purifier adapted to many industrial processes involving handling of gasses.

AIRCRAFT

DESIGNING PARTS. Improved Method for Designing Aircraft Parts, Roy G. Miller and F. E. Seiler, Jr. Aviation, vol. 12, no. 13, Mar. 27, 1922, pp. 366-367, 2 figs. Practical method for determination of elements of irregular structural sections.

FUELS. See [illegible]

RESEARCH. Research from the Designers' Constructors' and Users' Points of View, Fred M. Greeen. Flight, vol., 14, no. 8, Feb. 23, 1922, pp. 121-122. Discusses problems of wing surface, power required, metal construction, calculations of stresses, engine design, fuels, navigation, etc. (Abstract). Paper read before Air Conference, 1922. See also Aerial Age, vol. 15 nos. 1 and 2, Mai. 13 and 27, 1922, pp. 8-9 and 61-62.

SPECIALIZED. Specialized Aircraft, W. D. Beaty. Aeronautical Jl., vol. 26, no. 135, Mar. 1922, pp. 92-101 and (discussion) 101-107. How heavier-than-air aircraft has been developed in England on specialized lines, with special reference to comfort of passenger.

AIRPLANE ENGINES

DEVELOPMENTS. Recent Aircraft Engine Developments, C. Fayette Taylor. Soc. Automotive Engrs. Jl., vol. 10, no. 3, Mar. 1922, pp. 204-206, 5 figs. Outlines most important advances in aircraft engines since signing of armistice. Use of anti-knock compounds; aircraft-engine size and cooling; aircraft powerplant refinement.

AIRPLANES

ALTIMETER AND AIR SPEED INDICATOR. The Dugit Altimeter and Air Speed Indicator, J. H. Blakely. Aviation, vol. 12, no. 13, Mar. 27, 1922, pp. 371-372, 3 figs. Discusses instruments based on application of Archimedean spiral which give increased precision and uniform sensitiveness. Translated from Génie Civil.

FUEL LEVEL INDICATOR. The Smith Petrol Level Indicator. Flight, vol. 14, no. 8, Feb. 23 1922, p. 124, 2 figs. Describes new device by S. Smith & Sons Ltd., Lond., special features of which are simplicity both in construction and operation. Adaptable also for use on reservoirs, storage tanks, etc.

RESEARCH. Research With Full Sized Airplanes, F. H. Norton. Tech. Eng. News, vol. 2, no. 9, Mar. 1922, pp. 240-241, 3 figs. Describes some free flight problems recently investigated by Nat. Advisory Committee for Aeronautics, at Langley Field.

AIRSHIPS

DEVELOPMENT AND POSSIBILITIES. Airships, G. H. Scott. Aerial Age, vol. 14, no. 25, Feb. 27, 1922, pp. 590-593. Airship activities in various countries technical position of modern British airship, including hull, fabric, engines, safety, weather conditions, and mooring mast; value of airships for defense. Paper read before British Air Conference.

MODEL TESTS. Hydrostatic Test of an Airship Model. Nat. Advisory Committee for Aeronautics Technical Notes, no. 87, Mar, 1922, 15 pp., 8 figs. on supp. plates. Airship model made by Goodhear Rubber Co. was filled with water and suspended from beam and deformations of envelope studied under following conditions: both ballonets empty; forward ballonet filled with air; rear ballonet filled with air; and both ballonets filled with air.

R 38 ACCIDENT. British Report on the Loss of Airship R38. Aviation, vol, 12, no. 11, Mar. 13, 1922, pp. 311-312. Findings of Aeronautical Research Committee attribute accident to inaccurate calculations, faulty designs and structural weakness.

SPEED. The Choice of the Speed of an Airship, Max M. Munk. Nat. Advisory Committee for Aeronautics Techincal Notes, no. 89, Mar. 1922, 8 pp., 2 figs. Presents fairly simple rules which it is claimed may be of advantage if reasonable applied.

ALCOHOL

DILUTE SOLUTIONS. The Vapour Pressures of Dilute Alcohol Solutions, R. Thomas. Soc.Chem. Industry Jl.,vol. 41, no. 4, Feb. 28, 1922, pp. 33-34T, 2 figs. Describes rapid method of determining partial pressures of alcohol and water in an aqueous solution of former.

ALLOY STEELS

VIBRAC. Vibrac Steel. Motor Transport, vol. 34, no. 888. Mar. 6, 1922, p. 287, 1 fig. Described properties and tests of new steel produced by Armstrong, Whitworth & Co., which is proof against temper-brittlenes.

ALLOYS

ALUMINUM. *See Aluminum Alloys.*
COPPER. *See Copper Alloys.*

ALUMINUM ALLOYS

FAILURES. Some Cases of Failure in "Aluminum" Alloys, W. Rosenhain. Inst. of Metals Advance Paper for meeting Mar. 9, 1922, 4 pp., 2 figs.; also Engineering, vol. 113. no. 2932, Mar. 10, 1922 p. 308 2 figs. Discusses two examples of failures showing that materials which undergo serious growth, distortion, and disintegration in course of service, are not aluminum alloys in ordinary sense of that term, but materials of essentially different type.

RESEARCH. On Some Alloys of Aluminum, Walter Rosenhain and Sydney L. Archbutt Instn. Mech. Engrs. Proc., no. 7, 1921, pp. 699-725 and (discussions) pp. 727-771. Report to Alloys Research Committee representing result of organized work of practically whole staff of Metallurgical Dept. of Nat. Physical Laboratory. Deals with cast and wrought alloys permanence and constitution of alloys.

ZINC AND ALUMINUM. A Further Study of the Alloys of Aluminum and Zinc, D. Hanson and Marie L. V. Gayler. Inst. of Metals Advance Paper for meeting Mar. 9, 28 pp., 29 figs. Account of investigation. Deals with determination of the solidus; constitution of solid alloys; the constituent beta; age-hardening of constituent beta and gamma. Photomicrographs.

AMMONIA COMPRESSORS

LOSSES. Losses in Ammonia Compressors, S. F. Smith. Refrig. World, vol. 57, no. 3, Mar. 1922, pp. 25-26. The five ways in which losses occur in compression machine and conditions which control same. The two-stage compressor and its field. Paper read before Mountain States Ice Manufacturers Assn.

STARTERLESS INDUCTION MOTORS FOR. Starterless Induction Motors for Ammonia Compressors, J. Lebovici. A.S.R.E. Jl., vol. 8, no. 5, Mar. 1922, pp. 398-402 and (discussion) 402-404, 7 figs. Combines favorable characteristic of squirrel cage and slip ring types, and makes ideal drive for ammonia compressors using up to 150 hp.

ASH HANDLING

HYDRAULIC DISPOSAL SYSTEM. Handling Ashes by Sluicing, C. C Lance. Power, vol. 55, no. 13, Mar. 28, 1922, pp. 503-504, 1 fig. Calumet and Hecla Mining Co. power plant at Lake Linden, Mich., reduces ash-handling costs by hydraulic system of ash disposal.

AUTOMOBILE ENGINES

AIR COOLING. Air Cooling Progress in U. S. A., Harold F. Blanchard. Autocar, vol. 48, no. 1376, Mar. 4, 1922, pp. 355-359, 8 figs. Economy in operation important feature. Discusses air cooling as applied to Franklin, Holmes, 6-cylinder Fox, and twin-three D.A.C. cars, and explains how cooling draught is induced.

CYLINDERS. Some Aspects of Air-Cooled Cylinder Design and Development, S. D. Heron. Soc. Automotive Engrs. Jl., vol. 10, no. 4, Apr. 1922, pp. 231-260, 35 figs. Design and development of modern high-output air-cooled cylinder. Deals primarily with problems of aircraft cylinder of approximately 40 b. hp.

DEVELOPMENT. Aircraft Engine Experience as a Basis for Automobile Engine Development, H. Dechamps. Automotive Industries, vol. 46, no. 11, Mar. 16, 1922, pp. 611-613. Super-compression and over-dimensioning of engines as an aid to fuel economy.

FUEL ECONOMY. Relations Bteween Fluid Friction and Transmission Efficinecy, Neil MacCoull. Soc. Automotive Engrs. Jl., 10, no. 3, Mar. 1922, pp. 193-199, 16 figs. Experiments to determine mechanical losses, including data from E. H. Lockwood's experiments at Yale. Possibilities for increasing fuel economy of a motor vehicle. See also Lubrication, vol. 8, no. 1, Jan. 1922, pp. 1-8, 15 figs.

IGNITION AUTOMATIC. Automatic Ignition Advance. Autocar, vol. 48, no. 1376, Mar. 4, 1922, pp. 362-263, 1 fig. Describes mechanism to provide automatic spark advance by depression in inlet pipe, which is very great when throttle is almost closed, but grows less with increase of engine speed, and mechanical compensation moving with throttle mechanism.

INCREASING POWER OBTAINABLE. The Super-Power Engine G. Funck. Autocar, vol. 48, no. 1377, Mar. 11, 1922, pp. 395-400, 13 figs. Deals with mean of increasing power obtainable from engine of given cubical capacity other than those ordinary employed.

MANIFOLD DESIGN. Manifold Vaporization and Exhaust-Gas Temperatures. O. C. Berry and C. S. Kegerreis. Soc. Automotive Engrs., Jl. vol. 10, no. 3, Mar. 1922, pp. 171-176, 10 figs. Discusses low volatility of fuel for internal-combustion engine as cause of uneconomical utilization of fuel and of engine maintenance troubles. Tests carried out.

TWO-STROKE. An Investigation of Certain Aspects of the Two-Stroke Engine for Automobile Vehicles, F. W. Lanchester and R. H. Pearsall. Automobile Engr., vol. 12, no. 160, Feb. 1922, pp. 55-62, 16 figs. Investigation of principal factors controlling performance of internal-combustion engines functioning on two-stroke cycle, especially small size engines of simplest forms adapted to work at comparatively high revolution-speeds. Paper before Inst. Automobile Engrs.

AUTOMOBILE FUELS

ALCOHOL. The Use of Alchol as Fuel in Exported Vehicles, Herbert Chase. Automotive Industries, vol. 46, no. 14, Apr. 6, 1922, pp. 771-773, 1 fig. Use of alcohol in Spanish-American countries because of less cost, and adaptation of vehicles for use of alcohol. Discusses problems met in its use and suggests remedies.

AUTOMOBILES

BRAKES. Developing a Method for Testing Brake-Linings, S. von Ammon. Soc. Automotive Engrs. Jl., vol.10, no. 3, Mar. 1922, pp. 153-162, 23 figs. Describes equipment developed and methods used for tests; coefficient of friction; endurance tests with cooled drum; severe-service test with uncooled drum; etc.

Passenger-Car Brakes, J. Edward Schipper. Soc. Automotive Engrs. Jl., vol. 10, no. 4, Apr. 1922, pp. 273-289, 29 figs. Comprehensive survey of present braking practice and outline of future requirements and possibilities; design factors; future of brakes..

The Perrot-Hallot Brake (Die Perrot-Hallot-Bremse), Claus Syrlin. Allgemeine Automobit Zeitung, vol. 23, no. 1, Jan. 7, 1922, pp. 33-34, 2 figs. Details and principle of automobile brake developed by Hallot and Perrot, tests with which recently caried out under auspices of Royal English Automobile Club showed excellent results.

GEAR BOXES. Improvements in Gear-box Design, H. F. L. Orcutt. Automotive Industries, vol. 46, nos. 9, 10 and 11, Mar. 2, 9 and 16, 1922, pp. 511-514, 563-565 and 617-621, 5 figs. Mar. 2; Points out some of usual defects and outlines methods of improvement. Mar. 9: Methods employed to carry on special gear-boxe gear tests. Describes new gear-tooth grinding process. Mar. 16: Factors in production of gear boxes, and suggestions for iimprovements in design. Condensed from paper read before Instr. Automobile Engrs.

MINIATURE FOUR-CYLINDER. Miniature "Fours." Autocar. vol. 48, no. 1378, Mar. 18, 1922, pp. 431-435, 9 figs. Description of some of best known of modern four-cylinder engines having piston displacements of less than 1,000 cc.

MODERN PLANT DESIGN. Designing a Modern Automobile Plant, Paul L. Battey. Iron Age, vol 109, nos. 10 and 11, Mar 9 and 16, 1922, pp. 652-656 and 713, 14 figs· What is involved in relation of departments and in many services now demanded. View of future in industrial developments. Providing power, heating water supply and others services Details of plant and manufacturing procedure of the Willys Corp , Elizabeth, N. J. Based on paper presented before Am Soc. Mech. Engrs.

STEAM. A Steam Car That Is Different. Sci. Am., vol. 126, no. 4, Apr. 1922, p. 262, 4 figs. Details of new Coats steam car having gas-car control and finish with steam-car smoothness.

SUSPENSION. A New Suspension System. Auto, vol. 27, no. 7, Feb. 16, 1922, p. 136, 1 fig. Some details of the Gattie device in which helical springs are utilized.

AVIATION

AERIAL TRANSPORTATION. Aerial Transport Today and Tomorrow, W. A. Bristow. Aerial Age, vol. 14, no. 26, Mar. 6, 1922, pp. 616-618 and 627 and vol. 15, no. 2, Mar. 20, 1922, pp. 35 and 38. Also abstract in Flight, Feb. 16, 1922, p. 99. Discusses present situation depending on subsidies of some sort, the building up of merchant air fleets as main reliance for military air fleets, and increased passenger traffic requires.

CIVIL. The Air Conference. Flight, vol. 14, no. 6, Feb. 9, 1922, pp. 83-86, 2 figs. Summary of Lord Gorell's paper on Civil Aviation, discussing factors of successful development, service and civil sides, progress, necessity for more research work, cross-channel services, imperial air services, air mails, policy of subsidization, etc.

AXLES

MILLING ECCENTRIC KEYWAYS IN. . Device for Milling Eccentric Keyways in Axles of Locomotives After the Axles are Pressed Into the Wheels. Ry. and Locomotive Eng., vol. 35, no. 3, Mar. 1922, pp. 58-59, 3 figs. Details of construction and application.

B

BEAMS

BROAD-FLANGED. Broad-Flanged Beams (Breitflanschige Träger). H. Schaper. Eisenbau, vol. 13, no. 2, Feb. 17, 1922, pp. 30-32, 1 fig. Describes improved type manufactured by the Peiner Rolling Mills, Peine, Germany, with parallel flange surfaces, whereas in older types, the inside flange s rfaces had an inclination of 9 per cent. ,

REINFORCED-CONCRETE. Deflection of Reinforced Concrete Beams of Rectangular Cross Section, Frank. P. McKibben. Cement and Eng. News, vol. 34, no. 3, Mar. 1922, pp. 20-22. Presents general formula for vertical deflection. Verification of deflection equations by use of Castigliano's theorem. Application.

TILTING LOAD. The Tilting Load of I-Beams (Die Kipplast des I-Trägers). G. Unold. Eisenbau, vol. 13, no. 2, Feb. 17. 1922, pp. 25-30, 3 figs. Based on work of Timoecenko (Zeit. für Mathematik u. Physik. 1910, p. 360). writer develops a simplified but entirely reliable method of calculating tilting load of I-beams.

BEARINGS, ROLLER

STREET CARS. Roller Bearings in the Municipal Street-Railway Cars of Hagen (Germany) (Rollenlarger im Betriebe der Hagener Strassenbahn), K. Pforte. Verkehrstechnik, vol. 29, no. 7, Feb. 17, 1922, pp. 80-83, 4 figs. Describes Jaeger type of roller bearings adopted by municipal street railway as substitute for uneconomic journal bearing for motors and axle bearings, and points out their value in reducing cost and increasing safety. Advantages over ball bearings.

BELTING

POWER TRANSMISSION BY. Power Transmission by Belting, W. G. Dunkley. Eng. and Indus. Management, vol. 7, no. 10 Mar. 23, 1922, pp. 280-281, 2 figs. Describes common faults which are met with in works, and suggests methods by which they may be satisfactorily overcome. Notes on belt design, stresses and tension.

BENDING MACHINES

BOILER-PLATE. A New Boiler-Plate Bending Machine of Vertical Type with Electric Drive (Eine neune Kesselblechbiegemaschine stechender Anordnung mit elektrischem Antrieb), Hugo Becker. Schiffbau, vol. 23, nos. 22-23, Mar. 1-8, 1922, pp. 690-693, 6 figs. Describes new type of bending press for boiler plate which is claimed to show marked improvements and advantages over older types.

BOILER FEEDWATER

TREATMENT. Advantages of Treating Locomotive Feed Water. Boiler Maker, vol. 22, no. 3, Mar. 1922, pp. 66-68. Quality of boiler water; treatment to prevent scale and plants designed for the purpose; gives questionnaire on water treatment To be presented at 1922 meeting Master Boiler Makers' Assn.

Treated Water Improves Locomotive Performance, W. A. Powanall. Ry. Mech. Engr., vol. 96, no. 4, Apr. 1922, pp. 191-192. Systematic methods of water treatment by soda ash process.

BOILER OPERATION

EFFICIENT. The Expectation of Efficiency of Steam Boiler Operation, Hugh R. Carr. Power Plant Eng., vol. 26, no. 7, Apr. 1, 1922, pp. 357-360, 2 figs. Discusses variables entering into the question, viz.; type of draft, combustion rate, coal, ratio of heating to grate surface, point of maximum heat intensive. Proposes empirical curves for determining efficiency with fair degree of accuracy.

RATING PERCENTAGE. Percentage of Boiler Rating. Power, vol. 55, no. 14, Apr. 4, 1922, pp. 531-532. What it means and how it is figured. Presents table for simplifying computations.

BOILERS

ADAPTATION TO LOW-GRADE FUEL. Reconstruction of Coke Sectional Boilers for the Burning of Substitute Fuels (Umstellung von Koksgliederkesseln auf Ersatsbrennstoffe), H. Pradel. Braunkohle, vol. 20, no. 45, Feb. 11, 1922, pp. 705-711, 12 figs. Details of improvements in boilers by German boilermakers for use of low-grade fuel.

DESIGN AND OPERATION. Steam Boilers, F. W. Dean. N. E. Water Works Assn. Jl., vol. 36, no. 1, Mar. 1922, pp. 115-139 and (discussion) pp. 139-140, 5 figs. Notes on internally and externally fired boilers; fire-tube and water-tube boilers; workmanship; baffles; method of taking steam from boilers; height of boilers; above floor;height of bridge walls; locomotive-type boilers; feedwater regulators; temperature of escaping gases; mechanical and hand stokers; pulverized coal; oil fuel; feeding boilers; etc.

34(

Electrically Heated. Electrically Heated Boilers (Elektrodampfkessel), H. Schneider. Archiv. für Wärmewirtschaft, vol. 3, no. 2, Feb. 1922, pp. 27-28. vol. 3, no. 2, Feb. 1922, pp. 27-28, [illegible] figs. Comparison with steam generation with coal firing. Types of electrically heated boilers.

Heat-Loss Determination. A New Method of Determining Heat Losses by Means of the Combustible Gases in Exhaust Gases of Boilers (Ein neues Verfahren zur Bestimmung der Wärmeverluste durch brennbare Gase in den Abgasen der Kesselfeuer), O. I. Hansen. Zeit. des Bayerischen Revisions-Vereins, vol. 26, nos. 1, 2 and 3, Jan. 15, 31 and Feb. 15, 1922, pp. 3-5, 13-15 and 21-22, 4 figs. Describes method and apparatus with which it is possible to determine heat loss with sufficient accuracy. Account of tests carried out by K. E. Nielsen in Copenhagen, Denmark, gas works.

High-Pressure. The Thermo-Dynamics of Extra High Pressure Steam in Connection with Power and Heat Economics, O. H. Hartmann. Eng. Progress, vol. 3, no. 3, Mar. 1922, pp. 45-48, 7 figs. Describes vertical-tube boiler for pressure of 60 atmos. developed by Wilhelm Schmidt which can generate steam at this atmosphere and up to temperature of 480 deg. cent. Tests with extra-high pressure steam engines, and importance of these engines for heat economics. Possibilities of application of extra-high-pressure steam in connection with combined power and heating installations.

Locomotive. *See Locomotive Boilers.*

BOILERS, WATER-TUBE

Design. Standard Rules Governing The Construction of Water-Tube Boilers. Shipbldg. and Shipg. Rec., vol. 19, no. 11, Mar. 16, 1922, p. 335. Deals with Part V of Standard Conditions for Design and Construction of Marine Boilers and Shafting, prepared by British Marine Engineering Design and Construction Committee.

BOLTS

Tightening by Use of Liquid Air. Experimental Use of Liquid Air and Explosives for tightening Body-Bound Bolts, H. L. Whittemore. Am. Mach., vol. 56, no. 14, Apr. 6, 1922, pp. 524-526. Cylindrical and taper bolts contracted by liquid air and allowed to expand after insertion. Cylindrical bolts expanded in place by explosives.

BRAKES

Freight-Train. Continuous Brake for Long Freight Trains (Le freinage continu des longs trains de marchandises), J. Netter. Le Génie Civil, vol. 79, nos. 26 and 27, Dec. 24 and 31, 1921, pp. 557-561 and 585-590, 28 figs. Dec. 24: Discusses tests in profress by Commission of French Public Works. Describes situation before and after war, also the Westinghouse triple-valve brake. Dec. 31: The Kunze- Knorr and Lipkowski compressed-air brakes and the Clayton-Hardy vacuum brake. Results of tests carried out.

BRASS

Forgings, Manufacture of. The Manufacture of Brass Forgings, C. T. Roder. Iron Age, vol. 109, no. 13, Mar. 30, 1922, pp. 857-858, 2 figs. Called also die pressing or hot forging. Details of process developed in United States during war. Physical and other propertirs.

BREAKWATER

Pile. Curved Pile and Rock Breakwater Built in Deep Water. Eng. News-Rec., vol. 88, no. 13, Mar. 30, 1922, pp. 539, 2 figs. Desvribes building pile breakwater on curves of varying radii in water 15 ft. deep, at Chicago.

BRIDGES, CONCRETE

Deterioration. Concrete Bridges Show Deterioration. Contract Rec., vol. 36, no. 14, Apr. 5, 1922, pp. 301-302. Reinforcement in columns, chords and railings of two concrete truss structures in Nashville, Tenn., found to be badly rusted after 12 years' service. Stability seriously affected.

BRIDGES, HIGHWAY

Concrete Arch. Maryland Street Bridge, Winnipeg, J. F. Greene. Eng. Jl. (Eng. Inst. Can.), vol. 5, no. 4, Apr. 1922, pp. 197-201, 5 figs. Discusses design as affected by local conditions and aesthetic considerations. Describes two-arch concrete bridge, with details of concrete tests, etc. See also, Eng. News-Rec., vol. 88, no. 15, Apr. 13, 1922, pp. 608-611, 1 fig., and Can. Engr., vol. 42, no. 13, Mar. 28, 1922, pp. 339-342. 4 figs.

Steel Rib Reinforcement Used for Concrete Arch Centers. Eng. News-Rec., vol. 88, no. 13, Mar. 30, 1922, pp. 514-519, 10 figs. Monumental concrete bridge across Connecticut River at Springfield, Mass. Saves cost of falsework. How stresses are figured.

BRIDGES, LIFT

Bascule. Chicago Double-Deck Drawbridge with Elevated Railway. Eng. News-Rec., vol. 88, no. 14, Apr. 6, 1922, pp. 567-571, 9 figs. Double-leaf trunnion bascule of 268-ft. span. Operating pinions engage racks in trusses. Massive truss members and supporting girders.

BRIDGES, MOVABLE

Floating. A Design of Floating Bridge on the Suez Canal, Edward A. Smith. Instn. Min. and Metallurgy Bul., no. 209, Feb. 1922, pp. 1-3. Describes bridges erected at Kubri, Shalufa and Kantara with movable span consisting of two 100-ton steel barges strengthened internally by timbering and joined end to end by heavy timber trusses.

BRIDGES, RAILWAY

Calculations. Ministry of Transport New Regulations for the Calculation of Railway Under Bridges, H. W. Hall, Ry. Gaz., vol. 36, no. 11, Mar. 17, 1922, pp. 483-484. How new regulations effect amount of steel required in girders for bridge construction as against amount put in under former methods of calculation.

Centrifugal Forces, Influence of. Influence of Centrifugal Forces in Railway Bridges (Einfluss der Flienhkräfte bei Eisenbahnbrücken), H. Kommerell. Zentralblatt der Bauverwaltung, vol. 42, no. 15, Feb. 18, 1922, pp. 84-88, 5 figs. Formulas are developed for bridges in curves, from which bending moments and shearing forces due to centrifugal force from horizontal wind bracing as well as those to be taken up by the two main girders can be calculated.

BRIDGES, STEEL

Continuous Truss. The Continuous Truss Bridge Over the Ohio River at Sciotoville, Ohio, of the Chesapeake and Ohio Northern Railway, Gustav Lindenthal. Am. Soc. Civ. Engrs. Proc., vol. 48, no. 3, Mar. 1922, pp. 409-452, 26 figs. Distinguishing features of design are: continuous trusses over two long spans: floor beams, acting as inverted arches and braced against tractive forces; erection with minimum of falsework and without extra material in trusses; riveted connections to limit of largest rolling mill and shop facilities.

Reinforcement. Economy in the Reinforcement of Bridges (Kostenersparnisse bei Brückenverstärkungen), Edgar Schmidt. Bauingenieur, vol. 3, no. 3, Feb. 15, 1922, pp. 65-70, 13 figs. Shows saving of material which can be effected in reinforcement of wrought iron bridges with mild steel, by taking into consideration the effect of combining the two different materials.

Strengthening. Strengthening a Bridge Roadway with Minimum Cost (Verstärkung einer Brackenfahrbahn bei geringstem Kostenaufwand), E. Schmidt. Bauingenieur, vol. 3. no. 4, Feb. 28, 1922, pp. 113-116, 8 figs. Describes economical method of reinforcing steel bridges.

BRIDGES, SUSPENSION

Delaware River. The Delaware River Bridge, Ralph Modjeski. Engrs. and Eng. vol. 1, no. 1, Jan. 1922, pp. 1-5 and (discussion) 5-16, 5 figs. Center span will be 750 ft. between towers; two cables supporting it, 30 in. in diameter, each composed of 16,500 individual wires, will cost 128,000,000. Address before Am. Soc. Civil Engrs.

BUILDING CONSTRUCTION

Costs. Relative Cost of Building Construction for Last 9 Years, Halbert P. Gillette. Eng. and Contracting, vol. 57, no. 12, Mar. 22, 1922, pp. 264-266. Gives table of cost indexes compiled by author and others.

BUILDINGS

Cooling Systems. Cooling Systems of Buildings, A. M. Feldman. A. S. R. E. Jl., vol. 8, no. 5, Mar. 1922, pp. 377-389 and (discussion) 389-392, 12 figs. Discusses cooling of rooms in office buildings, auditorium, hotels, hospitals, etc., and describes tests made at Kuhn, Loeb & Co. bank building, N.Y., also cooling arrangements at Mt. Sinai Hospital of New York City.

BUSBARS

Current Distribution in Multi-Conductor. Current Distribution in Multi-Conductor Single-Phase Buses, C. F. Wagner. Elec. World, vol. 79, no. 11, Mar. 18, 1922, pp. 526-529, 7 figs. Study of phenomena involved is necessary to design busbars for generating and distribution systems of large capacity if cost of construction is to be minimized. Simple graphical method is presented.

BUSES

Trolley. The Operation of a Self-Contained Trolley Omnibus System, J. B. Parker. Tramway and Ry. World, vol. 51, no. 13, Mar. 16, 1922, pp. 117-123, 13 figs. Describes operation of system controlled by Tees-side Railless Traction Board, and gives operating costs of new trolley buses.

C

CABLEWAYS

Aerial. Aerial Cableways (Les transporteurs aériens à cables), Cretin. Génie Civil, vol. 80, nos. 4 and 5, Jan. 28 and Feb. 4, 1922, pp. 75-79 and 103-105, 15 figs. Jan. 28: Discusses analytical calculations with examples. Feb. 4: Tension of cableways and calculation of loads.

CAMS

Design. Design of Cams (Einiges über die Nockenscheiben der Motoren), Arthur Balog. Wirtschaftsmotor, no. 12, Dec. 25, 1921, pp. 19-21, 5 figs. It is shown how, for different types of engines (for example, Diesel Engines), a uniform basis can be developed for design of uniform, easily-made cams.

CANAL LOCKS

Boat Lift. The Submersible Boat Lock" as Solution to Problem of Boat Lifts (Die "Tauchbootschleuse", ein Beitrag zur Lösung des Problems der Schiffshebewerke) E. Burkhardt. Schweizerische Bauzeitung, vol. 79, no. 9, Mar. 4, 1922, pp. 113-115, 3 figs. Describes new patented arrangement, based on utilization of buoyancy of water, consisting of cylindrical submersible body which is moved up and down in submersible shaft filled with water.

CAR WHEELS

Chilled-Iron, Manufacture. Car Wheel Manufacture Revolutionized, Gilbert L. Lacher. Iron Age, vol. 109, nos. 13 and 14, Mar. 30 and Apr. 6, 1922, pp. 847-852 and 939-943, 8 figs. Describes practice at plant of Griffin Wheel Co. at Council Bluffs, Iowa. Notes on mechanical molding; charging and handling of cupolas; sand preparation; ore making and baking.

Flange Welding. Getting Wheel Mileage Without a Lathe. Elec. Traction, vol. 18, no. 3, Mar. 1922, pp. 214-215, 6 figs. Utilization of welding and cutting torch instead of wheel-turning lathe by Terre Haute, Indianapolis and Eastern Traction Co.

Machining. Machining and Mounting Wheels and Axles, Charles Petrain. Ry. Mech. Engr., vol. 96, no. 3, Mar. 1922, pp. 148-150, 1 fig. Gaging-worn axles and rolled-steel wheels; welding cast steel wheels (Abstract). Paper read before Car Foremen's Assn. of Chicago.

CARS

Hose Connector, Automatic. Recent Changes in American Hose Connectors. Ry. Mech. Engr., vol. 96, no. 3, Mar. 1922, pp. 141-143, 4 figs. Manufactured by Am. Automatic Connector Co., Cleveland, Ohio. Passenger heads interlocked under pressure; permanently attached freight interchange adapter.

CARS, FREIGHT

INTERCHANGE. On the Question of Interchange of Rolling Stock (all countries except America), M. Charron. Int. Ry. Assn. Bul., vol. 4, no. 3, Mar. 1922, pp. 479-535. Report on interchange of goods rolling stock (freight cars), and penalty charges in case of delay in return of that stock; rules to be adopted in relations between railways themselves; rules to be adopted in relations between railways and consignors and consignees.

CAST IRON

WELDING. The Dependability of Cast Iron Welding, G. O. Carter. Iron Age, vol. 109, no. 14, Apr. 6, 1922, pp. 928-930, 8 figs. Preheating and annealing essential correct preparation of casting. Some results attained commercially. (Abstract.) Paper read before Cleveland section, Am. Welding Soc.

CASTING

CENTRIFUGAL. Producing Centrifugal Castings, H. Cole Estep. Iron Trade Rev., vol. 70, no. 13, Mar. 30, 1922, pp. 887-892, 19 figs. Process employed in England for making gray iron and nonferrous castings. Micrographs show effect of centrifugal force. See also Foundry, vol. 50, no. 6, Mar. 15, 1922, pp. 217-222, 19 figs.

CENTRAL STATIONS

MODERN CONSTRUCTION. Modern Tendencies in Central Station Construction Les tendances modernes dans la construction des centrales), F. Scoumanne. Société Belge des Electriciens, vol. 35, Sept.-Oct. and Nov.-Dec. 1921, pp. 221-224 and 252-257, and vol. 36, Jan.-Feb. 1922, pp. 19-25, Sept.-Oct.: Discusses choice in the power of units, boilers and economizers, steam piping, coal and ash handling, automatic stoking, forced draft, etc. Nov.-Dec.: Deals with machinery room, including turbines, alternators, condensers. Jan.-Feb.: Switchboard arrangements, including bus-bars and distribution of current.

MONTREAL STREET RAILWAY. The Main Plant of the Montreal Street Railway, T. H. Fenner. Power House, vol. 15, no. 6, Mar. 20, 1922, pp. 15-21, 10 figs. Describes Hochelaga power house and its equipment, including 22 water-tube boilers, turbo generators, direct connected reciprocating units of large size, etc.

SUPERPOWER. The Superpower System. Am. Inst. Elec. Engrs., vol. 42, no. 4, Apr. 1922, pp. 287-297. Two articles dealing with essential elements of superpower plant. The first, by Henry Flood, Jr., deals with steam-electric plants proposed by system; and second, by L. E. Imlay, deals with hydroelectric plants, transmission system and superpower system as a whole.

CHAIN DRIVE

INVERTED- AND ROLLER-TOOTH TYPE. Chain Drives, A. Bayliss. Eng. and Indus. Management, vol. 7, no. 10, Mar. 23, 1922, pp. 282-286, 3 figs. Practical notes concerning two main types, viz. (1) inverted tooth and (2) roller tooth type Describes rocker joint chain.

CHROME STEEL

ETCHING MEDIUM FOR TUNGSTEN AND. New Etching Medium for Chromium and Tungsten Steels. Iron Age, vol. 109, no. 11, Mar. 23, 1922, p. 790, 1 fig. Special solution for detecting presence of carbides. Valuable as applied to high-speed steels. Translated from article by K. Daeves in Stahl u. Eisen, Sept. 8, 1921.

CHUCKING MACHINES

AUTOMATIC, FOR RAILWAY SHOPS. An improved Automatic Machine For Railway Shops. Ry. Gas., vol. 36, no. 9, Mar. 3, 1922, pp. 351-352, 2 figs. Describes the Victor automatic chucking machine, made by W. G. Armstrong, Whitworth & Co. Ltd.

CITY PLANNING

ZONING. Proposed Zoning Ordinance for Philadelphia, Joseph C. Wagner and George R. Mackenzie. Engrs. and Eng., vol. 1, no. 2, Feb. 1922, pp. 33-47 and 64, 13 figs. Explains proposed ordinance drafted by Zoning Commission, for establishment of regulations for location, size and use of buildings in city to promote public health, safety, order and general welfare.

COAL

SELECTION. Selection of Most Suitable Coal for a Given Plant Is Engineering Problem Involving Diverse Factors, O. P. Hood, Coal Age, vol. 21, no. 11, Mar. 16, 1922, pp. 443-444. How some purchasing agents buy coal; importance of uniformity in pooling coal; equipment must be adapted to fuel chosen. Based on address before Nat. Assn. Purchasing Agents.

BITUMINOUS, UTILIZATION. The full Utilization of Bituminous Coal. Iron and Coal Trades Rev., vol. 103, no. 2805, Dec. 2, 1921, p. 805, vol. 104, nos. 2810 and 2814, Jan. 6 and Feb. 3, 1922, pp. 4-5 and 162-163. Dec. 2: What constitutes the coking quality of a coal. Factors in coke formation. Jan. 6: Manipulation of coke-forming factors; examination, selection and mixing of coals; process factors; coke handling. Feb. 3: Low-temperature carbonization of coal. See also Gas Jl., vol. 156, no. 3056, Dec. 7, 1921, p. 686, and vol. 157, nos. 3060 and 3065, Jan. 4 and Feb. 8, 1922, pp. 28-30 and 319-321.

BRIQUETTING. Ontario Establishes Another Plant for Briquetting Anthracite Fines with Crude-Oil Residuum, J. B. McGraw. Coal Age, vol. 21, no. 10, Mar. 9, 1922, pp. 403-406, 3 figs. Methods of drying coal, receiving binder and intimately mixing it with coal; new system of cooling briquettes.

A Great Fuel Works. Colliery Guardian, vol. 123, nos. 3190 and 3191, Feb. 17 and Mar. 3, 1922, pp. 405-408 and 531-533, 17 figs. Describes plant and equipment of Rose Patent Fuel Co., Ltd., to convert fines of best Welsh coals into highest class of patent fuel briquettes

COAL-CUTTING BY MACHINERY. The Limitations of Coal Cutting by Machinery. Instn. Min. Engrs. Trans., vol. 62, Part 4, Feb. 1922, pp. 254-272. Discussion covering average cost of coal cutting and machine mining, advantages and disadvantages of coal cutters.

COAL DUST

EXPLOSION. The French Coal Dust Experiments, E. Audibert. Colliery Guardian, vol. 123, no. 3195, and 3196 Mar. 24 and 31 1922, pp. 725-726 and p. 788, 3 figs. Discusses results of experiments by Taffanel at Lievin testing station, including mechanics of dust explosions, propagation in dusty atmosphere, aptitude of dust deposits to propagation, preventive measures, and arresting spread of explosion. From Annales des Mines.

COAL GAS

MANUFACTURE. Coal Gas Manufacture, Jerome J. Morgan. Coal Industry, vol. 5, no. 2, Feb. 1922, pp. 87-91, 3 figs. Processes of manufacture in horizontal inclined and vertical retorts. Trent of gas industry.

COAL HANDLING

AUTOMATIC. Automatic Coal and Ash Handling Plant, E. W. L. Nicol. Chem. Age. (Lond.), vol. 6, no. 141, Feb. 25, 1922, pp. 234-236, 7 figs. Describes rotary truck tippler, the U. link conveyor, and the "sandwich" system of feeding coke and coal.

COAL INDUSTRY

WASTE ELIMINATION. Elimination of Waste in the Coal Industry, Edwin Ludlow. Min. and Metallurgy, no. 183, 'Mar. 1922, pp. 39-40. Deals with waste in bituminous field.

COAL MINES

ELECTRICAL DEVELOPMENTS. Electrical Developments in Coal Mines, M. S. Beddow. Coal Industry, vol. 5, nos. 2 and 3, Feb. and Mar. 1922, pp. 108-112 and 152-153, 4 figs. Feb: Relative merits of various kinds of haulage; advantages of electric haulage; popularity of storage battery loconotive; improvements made in trolley type; care of ball bearings. Mar.: Electric developments from small d.c. steam-driven generator to small central power plant; superpower system of future.

FANS. Modern Mine Fans, David Penman. Min. Mag., vol. 26, nos. 2 and 3, Feb. and Mar. 1922, pp. 73-81 and 146-153, 19 figs. Feb.: Volume of air necessary for adequate ventilation; principle of centrifugal fan; effect of shape of blades; evasee chimney; the Waddle, Walker indestructible, Capell, Sirocco, Keith, brightside, Jeffrey and Turbon fans. Mar.: Methods of driving fan; surface versus underground fans; exhaust versus blowing fans; fans in combination; factors governing increased ventilation.

COKE

BLAST-FURNACE. Blast-Furnace Coke, D. Bagley. Iron & Coal Trades Rev., 104, no. 2815, Feb. 10, 1922, pp. 204-206, 15 figs. Report by Heinrich Koppers to Blast Furnace Committee of German Iron Assn., distinguishing between blast-furnace fuels characterized by relative velocity of combustion and suggesting certain modifications in coking process with object of producing more readily combustible fuel with some diminution in consumption per unit of iron. From Stahl u. Eisen.

COKE MANUFACTURE

PACIFIC NORTHWEST. Review of Coking in the Pacific Northwest, Joseph Daniels. Coal Industry, vol. 5, no. 2, Feb. 1922, pp. 113-114. Coal from Washington mines is badly crushed and much fines made in mining, necessitating coal washing.

COLUMNS

STEEL, FORMULAS FOR. Comparison of Formulas for Steel Columns, N. B. Hunt. Machy. (Lond.), vol. 19, no. 492, Mar. 2, 1922, pp. 661-663, 4 figs. Graphs of a number of the most familiar formulas for an allowable unit stress of 12,000 lb., in accordance with recommendation of special committee on steel columns and struts of Am. Soc. Civ. Engrs.

COMBUSTION

AIR REQUIRED FOR. Air Required for Combustion of Gases in Steel Plants, R. T. Haslam and A. F. Spiehler. Blast Furnace and Steel Plant, vol. 19, no. 3, Mar. 1922, pp. 174-175, 1 fig. Determination of amount of air required for combustion of various gases from B.t.u. content of gas.

CONCRETE

MOISTURE CONTENT. Effect of Moisture Content on Concrete. Eng. and Contracting, vol. 57, no. 12, Mar. 22, 1922, pp. 278-280, 4 figs. Results of studies made in experiment station of University of Illinois to determine effect of moisture content upon expansion and contraction of plain and reinforced concrete. (Abstract). University of Ill. Bul.

CONCRETE, REINFORCED

FIRE RESISTANCE. The Behavior of Concrete and Reinforced Concrete When Exposed to Fire (Beton und Eisenbeton im Feuer), M. Gary. Beton u. Eisen, vol. 21, no. 3, Feb. 10, 1922, pp. 46-48. Review of tests carried out by buildngi material testing bureau in Berlin-Dahlem on concrete and reinforced concrete houses. Recent fires in large buildings in Germany demonstrate excellent fire-resisting properties of reinforced concrete.

CONCRETING

QUEENSTON-CHIPPAWA CANAL. Placing 410,000 Cu. Yd. of Concrete on Ontario's Niagara Power Development, A. C. D. Blanchard and R. B. Young. Eng. News-Rec., vol. 88, nos. 14 and 15, Apr. 6 and 13, 1922, pp. 554-559 and 613-615, 12 figs. Apr. 6; Plant layout for mixing and placing concrete for power house, forebay and lining of 9-mi. Queenston-Chippawa canal. Design and testing of mixtures to meet prescribed strengths. Apr. 13: Source of aggregate, storage of cement and aggregate and testing of cement and concrete.

CONVERTERS

ROTARY. Rotary Converters, with Special Reference to Railway Electrification, F. P. Whitaker. Electrician, vol. 88, no. 2285, Mar. 3, 1922, pp. 258-260, 3 figs. Discusses characteristics that converting apparatus for railway substations should possess. Shows how far modern rotary converter specially developed for more exacting requirements of 1500 V d.c. can fulfil conditions of service even when operating from 50 period systems. (Abstract.) Paper read before Instn. Elec. Engrs.

STREET-RAILWAY-CURRENT. Tram-Current-Converters. Eng. Process, vol. 3. no. 3, Mar. 1922, pp. 61-63, 7 figs. Discusses three types of machines used for conversion of three-phase current, namely, motor generators, cascade converters and single-armature rotary converters.

CONVEYORS

CHEMICAL INDUSTRY. Conveying Machinery in the Chemical Industry, George Frederick Zimmer. Chem. Age (Lond.), vol. 6, no. 141, Feb. 25, 1922, pp. 230-233, 12 figs. Fundamental principles which should underlie economical employment of labor-saving devices; review of most suitable mechanical handling devices for specific purposes of chemical industry.

3-

PORTABLE. Handling with Portable Conveyors, F. J. Tournier. Gas Age-Rec., vol. 49, no. 11, Mar. 18, 1922, pp. 317-323, 18 figs. Discusses development of machinery for moving material, up to most recent designs of apparatus for the purpose.

TYPES. Conveying and Elevating Machinery, Gardner Mitchell, Instn. Mech. Engrs. Proc., vol. 2, no. 8, Dec. 1921, pp. 895-916 and (discussion) pp. 931-969, 16 figs. Deals with different types of conveyors and elevators.

COPPER ALLOYS

CUPRO-NICKEL, COLD WORK IN. The Internal Mechanism of Cold Work and Recrystallisation in Cupro-Nickel, Frank Adcock. Inst. of Metals. Advance Paper for meeting Mar. 8, 1922, 20 pp. 45 figs. Results of experiments on commercial cupro-nickel (copper 80 per cent, nickel 20 per cent.) See also Engineering, vol. 113, nos. 2932 and 2933, Mar. 10 and 17, 1922, pp. 305-308 and 340-342, 45 figs.

COST ACCOUNTING

PAPER-MILL POWER PLANT. Power Costs in Paper Mill Accounting, B. C. Gause. Paper vol. 29, no. 26, Mar. 1, 1922, pp. 7-8. Classification of power expenses; apportionment of costs; overhead charges; elements of cost.

SEWAGE WORKS. Keeping Records and Accounts for a Small Sewage Works, Percy Lamb. Eng. & Contracting, vol. 57, no. 13, Mar. 29, 1922, pp. 294-295, 1 fig. Importance of accounting methods; meteorological records; method of recording results; working costs, fuel, repair, etc. (Abstract.) From 1921 Proc. of Assn. of Mgrs. of Sewage Disposal Works.

CRANES

ELECTRIC CONTROLLERS. Electric Crane Controllers, J. F. Schnable. Am. Inst. Elec. Engrs. Jl., vol. 41, no. 4, Apr. 1922, pp. 313-319, 5 figs. Deals with problems concerning selection of ohmic values for resistors, and connection arrangements and resistance values involved in dynamic braking control of lowering loads.

CUPOLAS

CENTER-BLAST TUYERE. The Bottom or Center-Blast Cupola Tuyere, Geo. O. Vair. Can. Foundryman, vol. 13, no. 3, Mar. 1922, p. 25, 1 fig. Advantages and disadvantages compared with side-blast.

FLAMELESS. Flameless Cupolas with Overgrate Blast (Flammenloser Kupolofen mit Oberwind). Zeit. für die gesamte Giessereipraxis, vol. 43, no. 5, Feb. 4, 1922, pp. 62-64. Suggestions for design and proper care of cupolas.

D

DAMS

HYDRAULIC-FILL. Core Studies in the Hydraulic-Fill Dams of the Miami Conservancy District, Charles H. Paul. Am. Soc. Civ. Engrs. Proc., vol. 48, no. 3, Mar. 1922, pp. 453-473, 11 figs. It is shown that gradation of core material may be controlled during construction, even with borrow-pit materials of widely different character; considerable excess of fines is required in borrow-pit material; reasonably wide core may be obtained with absolute safety; fairly high percentage of extremely fine material in core is not objectionable, provided material is properly graded.

DIESEL ENGINES

1900-HP. HIGH-SPEED. Investigation of a 1900-Hp. High-Speed Diesel Engine in a Cotton Spinning Plant in Augsburg (Germany) (Untersuchung einer 1900 PSe-Schnelläufer-Dieselmaschine in der Baumwollspinnerei am Stadtbach in Augsburg), H. Deinlein. Zeit. des Bayerischen Revisions-Vereins, vol. 26, no. 4, Feb. 28, 1922, pp. 25-27, 2 figs. Results of investigation carried out by Bavarian Revisions-Verein confirmed guaranteed efficiency of engine.

NOBEL 1600-HP. Tests on a 1600-Hp. Nobel Diesel Engine (Untersuchung eines 1600 PSe-Nobel-Dieselmotors). A. Rosburg. Zeit. des Vereines deutscher Ingenieure, vol. 66, no. 6, Feb. 11, 1922, pp. 137-139, 15 figs. Investigation of two-cycle Diesel engine described in same journal (no. 3, 1922) with regard to efficiency, fuel consumption, relation of indicated work to useful work, compressor, scavenging-pump and friction work at different speeds and load conditions. Tests results.

DRIFTS

IRON FOR SUPPORTING. Use of Iron for Supporting Drifts (L'utilisation du fer au soutènement des galeries), A. Clement. Revue de l'Industrie Minérale, no. 27, Feb. 1, 1922, pp. 51-67, 17 figs. Discusses use of mild steel frames which can be adjusted cold in situ, as much more economical than wood.

DRILLING MACHINES

MULTIPLE-SPINDLE DRILL HEADS. Multiple-spindle Drill Heads, George Hey. Machy. (Lond.) vol. 19, nos. 491 and 493, Feb. 23 and Mar. 9, 1922, pp. 621-627 and 702-705, 21 figs. Feb. 23: Discusses shortcomings of multiple-spindle drill heads, and describes design of multiple-spindle adjustible type for drilling of high tensile steels. Mar. 9: Fixed center type of drill head.

DROP FORGING

PERFECTING. Perfecting a Drop Forging, J. H. G. Williams. Forging and Heat Treating, vol. 8, no. 3, Mar. 1922, pp. 152-155, 14 figs. Discusses various defects in drop forging and how to remedy them.

DRYDOCKS

FLOATING. The Machinery of Floating Docks, E. H. Salmon. Instsn. Mech. Engrs. Proc., no. 7, 1921, pp. 777-817 and (discussion) pp. 817-841, 42 figs. Deals with pumping machinery, control gear, auxiliary machinery, and berthing gear.

E

ELECTRICAL MACHINERY

LOSSES, DETERMINATION OF. The Retardation Method of Determining Losses in Electrical Machines, H. Cotton. Beama, vol. 10, no. 2, Feb. 1922, pp. 128-137, 10 figs. Discuses the Routin method; determination of retardation curve and moment of inertia.

ELECTRIC CIRCUITS

MAGNETIC BLOW-OUTS ON. Air Break Magnetic Blow-Outs, J. F. Tritle. Am. Inst. Elec. Engrs. Jl. vol. 41, no. 4, Apr. 1922, pp. 257-265, 28 figs. Tests and data on a.c. and d.c. current-rupturing apparatus and describes fundamental principles for magnetic blow-outs. Tests and experience indicate that limit of alternating voltage or current which may be successfully ruptured repeatedly in air has not yet been approached.

ELECTRIC FURNACES

BASIC-HEARTH. Basic Hearth Electric Furnace for Cast Iron, George K. Elliott. Can. Foundryman, vol. 12, nos. 10 and 11, Oct. and Nov. 1921, pp. 41-42 and 44 and pp. 32-34. Advantages of electricity over other fuel, from the standpoint of clean, sound metal and uniform chemical analysis. Paper read before Inst. British Foundrymen.

SMELTING. Smelting Iron Ore Electrically, R. Durrer. Iron Trade Rev., vol. 70, no. 12, Mar. 23, 1922, pp. 827-828, 1 fig. Comparison of operating conditions in standard and electric blast furnaces. Causes of hot and cold working. Relation of direct and indirect reduction in electric furnaces. Translated from Stahlu. Eisen, June 2, 1921.

TOOL-STEEL MELTING. Electric Tool Steel Melting Practice, W. J. and S. Stuart Green. Three important factors: Acid or basic bottoms: liquid or cold charges and double or single voltage. Electric furnace in other roles.

ELECTRIC LOCOMOTIVES

MONAPHASE. Monophase. Locomotive for Swiss Federal Railway. Ry. Elec. Engr. vol. 13, no. 2, Feb. 1922, pp. 45-50, 8 figs. Detailed description of locomotive designed for both freight and passenger service. (Abstract.) From Bulletin of Brown, Boveri & Co.

REGENERATION CHARACTERISTIC CURVES. Regeneration Characteristic Curves of Direct-Current Locomotives, C. A. Atwell. Elec. Jl., vol. 19, no. 3. Mar. 1922. pp. 113-116, 7 figs. Explains plotting of curves and regeneration characteristics.

ELECTRIC MOTORS

FRACTIONAL HORSEPOWER. The Design of Fractional H. P. Motors, W. J. John. Beama, vol. 10, 2 and 3, Feb. and Mar. 1922, pp. 120-127 and 232-241 4 figs. Feb: Constructional features and principals of design as applied to armature core. Mar. Design of commutator, magnetic circuit, and ¼ b. hp. shunt motor.

STARTERS. Electric Motor Starters, J. Anderson. Electrician vol. 88, no. 2288, Mar. 24, 1922, pp. 242-343, 4 figs. Discusses development of electric motor starter from first principles defining what is meant by starting, accelerating, and using torques. (Abstract). Paper read before Instn. Elec. Engrs.

SYNCHRONOUS. Induction-Type Synchronous Motors, Laurence H. A. Carr. Instn. Elec. Engrs. Jl., vol. 60, no. 306, Fev. 1922, pp. 165-173 and (discussion) 174-195, 21 figs. Compares characteristics and construction with other polyphase motors discusses self-synchronizing features of this type; deduces mathematical expression for limiting conditions beyond which synchronizing is uncertain.

ELECTRIC PLANTS

CONNECTING SMALL. Connecting Up Small Electric Power Stations for Better Utilization of Heads of Water (L'interconnexion des petites usines électriques en vue de la meilleure utilisation des chutes d'eau), Alfred Soulier. Revue Générale de l'Electricité, vol. 11, no. 6, Feb. 11, 1922, pp. 202-203, 1 fig. Discusses parallel running of generators using d.c. on transmission line and a.c. at each center of distribution.

ELECTRIC RAILWAY

BRAKING, REGENERATIVE. Regenerative Braking and Single-Phase Commutator Motors, B. Nordefeldt. Electrician, vol. 88, nos. 2287 and 2288, Mar. 17 and 24, 1922, pp. 312-314 and 340-341, 10 figs. Discusses regenerative braking on electric railways, especially problems arising in single-phase traction, and distinguishes between regenerative braking as a speed check on long down grades, and as required for bringing train to a standstill. Describes methods of single-phase that have been used or suggested and advantages and disadvantages of each. Abstract from Teknisk Tidskrift.

DEVELOPMENT AND EQUIPMENT. Electric Traction for Steam Railroads. Ry. Elec. Engr., vol. 13, no. 2, Feb. 1922, pp. 57-61, 1 fig. Tendencies of practice in United States. Limitations and advantages of equipment used.

TRACKLESS TRANSPORTATION VS. Trackless Transportation and the Electric Railway. Elec. Ry. Jl., vol. 59, no. 9, Mar. 4, 1922, pp. 355-362. Abstracts of papers read at Midyear Meeting of Am. Elec. Ry. Assn. How the Maryland Commission Acts, E. B. Whitman; City Service and British Conditions, C. D. Emmons; Auto Bus and Truck Goods as Interurban Feeders, Harry Reid; and California Situation Regarding Rail and Trackless Transportation, Paul Shoup.

ELECTRIC SWITCHES

DISCONNECTING. The Effect of High Currents on Disconnecting Switches, H. C. Louis and C. T. Sinclair. Am. Inst. Elec. Engrs. Jl., vol., 41, no. 4, Apr. 1922, pp. 267-277, 34 figs. With special reference to mechanical stresses resulting.

ELECTRIC TRANSMISSION LINES

HIGH-VOLTAGE. Safety Features on High Voltage Transmission Lines, C. O. Von Dannenberg. Power Plant Eng., vol. 26, no. 7, Apr. 1, 1922, pp. 373-375, 1 fig. Discusses methods and practices which make for greater protection and safety in high tension work. (Abstract.) Paper read before Am. Soc. Safety Engrs.

INDUCTIVE INTERFERENCE. Inductive Interference is Basically a Technical Problem. Elec. World, vol. 79, no. 12, Mar. 18, 1922, pp. 571-572. Points out that control within power and signal circuits must be developed; cost of control measures an important factor.

INSULATION OF HIGH-VOLTAGE. The Insulation of High Voltage Transmission Lines—Conception of a Million Volt Line, F. W. Peek, Jr. Gen. Elec. Rev., vol. 25, no. 2, Feb. 1922, pp. 111-119, 24 figs. Reviews the various factors affecting insulation of transmission lines.

PIT RIVER, CALIFORNIA. 202 Miles of Transmission Lines to Operate at 220,000 Volts, W. A. Scott. Eng. World, vol. 20. no. 3, Mar. 1922, pp. 151-153, 3 figs. Equipment outline of Pit River development in California.

PROTECTION. Protecting A.C. Transmission Line by the Ferranti Automatic Selective (Protection des réseaux à courants alternatifs par les systèmes sélectifs automatiques Ferranti), Paul Testard. Revue Générale de l'Electricité, vol. 11, no. 9, Mar. 4, 1922, pp. 235-241, 8 figs. Describes Ferranti-Field and Ferranti waters systems of protection by means of special transformers, and their operation.

SAG. Determination of the Sag of High-Tension Wires on Insulator Chains (Bestimmung les Durchhanges von Hochspannungsleitungen an Aspannisolatorenketten). Friedrich Schulze. Elektrotechnische Zeit., vol. 43, no. 7, Feb. 16, 1922, pp. 215-216, 1 fig. Describes simple and calculating method with aid of slide rule, but without use of tables or logarithms.

SWITZERLAND. Construction and Operation of High-Tension Lines in Switzerland (Bau unf Betrieb von Hochspannungsleitungen in der Schewiz), p. Beck. Elektrotechnik u, Maschinenbau, vol. 40, no. 7, Feb. 12, 1922, pp. 75-77. Discussion before the Swiss Electrotechnical Assn., dealing with the insulator problem, radiation phenomena (corona), overvoltage protection, inspection of high-tension lines and characteristic properties of electric-plant equipment. (Abstract.)

SYNCHRONIZING EFFECT OF PARALLEL. Synchronous Operation of Alternators Through Capacitance, T. Nishi. Gen. Elec. Rev., vol. 25. no. 3, Mar. 192, 1922, pp. 146-150, 13 figs. Synchronizing effect of two parallel transmission lines.

SYNCHRONOUS-MOTOR-EFFECT ON HIGH-TESBION. A Method for Determining the Synchronous Motor Effect on Tension Control of High Tension Lines (En Metode til Bestemmelse af den synkeone Motoreffekt til Spaendingsregulerin af Höjspaendingslinier), W. Rung. Teknisk Tidskrift (Elektroteknikeren, vol, 18, no, 3, Feb, 8, 1922, pp. 23-27, 2 figs. Makes a calculations and gives examples.

ELECTROLYSIS

WATER MAINS. Electrolysis Damages Main at Remote Point, G. Gale Dixon. Fire and Water Eng., vol. 71, no. 14, Apr. 5, 1922, pp. 565-566 and 584-585, 2 figs. Additional data on Akron strel force main, treated from standpoint of water-works engineer. Effects of corrosion on coated and unprotected pipes. (Abstract.) Paper read before N. E. Water Works Assn.

ELECTROMAGNETS

COILS. CALCULATION OF. Calculation of Coils for Electromagnets (Calcul du bobinage des constructions électromagnétiques) M. Mathieu. Arts et Metiers, vol. 74, no. 15, Dec. 1921, pp. 362-364, 3 figs. Divides electromagnets into those with and those without air gap. and gives examples of calculations.

EMPLOYEES, TRAINING OF

EXTENSION WORK IN FACTORY. Taking University Training to the Factory, Paul M. Atkins. Indus. Management, vol. 63, no. 4, Apr. 1922, pp. 239-242. Describes plan consisting of university extension work in individual plant.

MANUFACTURE. The Training of Workers in Manufacture, J. V. L. Motris. Am. Mach., vol. 56, no. 11, Mar. 16, 1922, pp. 400-402. Co-operative employment of engineering students. Length of shop period. Courses on technical subjects. Advanced shop and school instructions.

ENGINEERING

HUMAN ACTIVITY. Engineering as a Human Activity, H. E. Riggs. Eng. News-Rec., vol. 86, no. 11, Mar. 16, 1922, p. 435. Deals with some of non-techincal sides of engineering. Jobs and how to get them; fees and how to maintain them; etc. (Abstract). Paper before Mich. Eng. Soc.

ENGINEERS

CODE OF ETHICS. A Code of Ethics for Engineers. Min. & Metallurgy, no. 183, Mar. 1922, p. 46. Presents code and method of interpreting and administering it recommended by Joint Committee on Code of Ethics.

LICENSING. Advantages and disadvantages of Licensing Engineers, B. B. Gottsberger. Min. & Metallurgy, no. 183, Mar. 1922, pp. 47-50. Arguments for and against licensing.

PRACTISING. How Practising Engineers May Sell. Their Services. Eng. News-Rec., vol. 88, no. 13, Mar. 30, 1922, pp. 523-524. Methods of securing clientele and increasing business. Abstract of two papers at Conference of Practising Engrs. under auspices of Am. Assn. Engrs.

F

FACTORIES

SIZE AND EFFICIENCY. Considerations on Factory Size and Efficiency, Henry Baker. Engineer, vol. 133, no. 3455, Mar. 17, 1922, pp. 292-294, 2 figs. Writer concludes that factory just large enough to be well under control of one man probably represents most efficient size at present time. Future of large factory depends on overcoming difficulties of management.

FACTORY MANAGEMENT

See Industrial Management.

FOREMEN

TEACHING ABILITY, DEVELOPING. Building Up Teaching Ability in Foremen, D. J. MacDonald. Am. Mach., vol. 56, nos. 10 and 11, Mar. 9 and 16, 1922, pp. 360-361 and 406-408. Explains why average foreman is not a good teacher, and points out importance of planning teaching work, and what constitutes good teaching

TRAINING. As Foreman Is, So Is the Plant, C. R. Hook, E. A. Holbrook and Arthur Notman. Iron Trade Rev., vol. 70, no. 12, Mar. 23, 1922, pp. 820-822. Deals with training of foremen. Report of subcommittee on education of Am. Inst. Min. and Met. Engrs.

TRAINING. Foremanship Training, E. T. Teece. Indus. Management, vol. 63, no. 4, Apr 1922, pp 216-217. Notes on questions to be answered. Suggested outline of preliminary course.

FOUNDATIONS

BEARING VALUE OF SOILS. Progress Report of the Special Committee to Codify present Practice on the Bearing Value od Soils for Foundations, etc. Am. Soc. Civ. Engrs. Proc., vol. 48, no. 3, Mar. 1922, pp. 523-580, 17 figs. Contain report on settlement; review of present methods; colloidal state of clay; progress report of tests on undisturbed clays; report of work of Bur. of Pub. Roads in investigation of soils.

FOUNDRIES

CUPOLAS. *See Cupolas.*

FREIGHT HANDLING

PACKAGE. Organization and Modern Handling of Package Freight through Freight Houses. G. Marks. N. E. R. R. Club, Feb. 14, 1922, pp. 278-289 and (discussion) pp. 289-314. Author outlines facts and methods, based on results of personal observation and operation, in handling large volumes of freight in all sorts of places under varying conditions.

FUELS

See Oil Fuels: Pulverized coal.

FURNACES, FORGING

TYPES. Discussion of Forge Furnaces, Charles Longenecker. Blast Furnace and Steel Plant, vol. 10, no. 3, Mar. 1922, pp. 194-196. Discusses soaking pits, regenerative and non-regenerative types, and furnaces of small hearth area, pointing out possibilities for saving and increased efficiency with various classes of fuel.

G

GALVANOMETERS

BALLISTIC. On the Sensitivity of Ballistic Galvanometers, Ernest Wilson. Physical Soc. of Lond., vol. 34, no. 192, Feb. 15, 1922, pp. pp. 55-64 and (discussion) 64-65, 4 figs. Discusses method whereby effects due to excessive damping in moving coil galvanometers are largely diminished. Results of experiments.

VIBRATING. On the Determination of the Damping Decrement of a Tuning Fork. Physical Soc. of Lond., vol. 34, no. 1922, Feb. 15, 1922, pp. 66-70. Discusses motion of vibrating galvanometer, evaluates e.m.f. induces in circuit by fork, and indicates its harmonic components and their decrements.

GAS DISTRIBUTION

HIGH-PRESSURE TRANSMISSION. High Pressure Gas Transmission, Floyd W. Parson. Gas Age-Rec., vol. 49, no. 10, Mar. 11, 1922, pp. 287-290, 6 figs. Possibilities for improvement in present methods of gas transmission and distribution; advantages resulting from pipe welding.

STANDARD INSTALLATIONS. Gas Distribution, A. W. H. Griepe. Am. Gas, Jl., vol. 116, no. 7, Feb. 18, 1922, pp. 155-158, 13 figs. Suggestions for standard installations.

GAS ENGINES

WORKING FLUIDS, PROPERTIES OF. Some Properties of the Working Fluid of Gas Engines, W. T. David. Engineering, vol. 113, no. 2932, Mar. 10, 1922, pp. 281-284, 2 figs. Notes on pressures developed on explosion; after-burning in gas engines; internal energy of working fluid; factors governing heat loss during explosion-expansion stroke. Results of experiments made by author.

GAS MANUFACTURE

ELECTRICAL PROCESS. The Electric Gasification of Fuels (Die Aussichten der elektrischen Vergasung von Brennstoffen), Alois Helfenstein. Zeit für angewandte Chemie, vol. 35, no. 13, Feb. 14, 1922, pp. 73-76. Describes new process of making gas from coal by aid of electricity. Advantages of electrical process.

GEAR CUTTING

MACHINE. Commercial Gear-cutting Practice Franklin D. Jones, Machy. (N. Y.) vol. 28, no. 6, Feb. 1922, pp. 437-446, 20 figs. Cutting of spur gears on automatic machines of formed-cutter type. See also Machy. (Lond.), vol. 19, no. 495, Mar. 23, 1922, pp. 749-757, 20 figs.

SHAPERS. Cutting Spur Gears on Gear Shapers. Machy. (N. Y.), vol. 28, no. 8, Apr. 1922, pp. 645-650, 14 figs. Use of machine operating with planing or shaping action and forming gear teeth by generating and formed-cutter process.

GEARS

AUTOMOBILE, WEAR IN. Wear on Various Automobile Gear Steels, E. R. Ross. Am. Mach., vol. 56, no. 14, Apr. 6, 1922, pp. 515-519, 6 figs. Results of tests showing various factors which affect wear in driving gears. A tooth-profile indicator.

AUTO-PITCH. A New Form of Gear, W. Rees Darling. Machy. (Lond.), vol. 19, no. 492, Mar. 2, 1922, pp. 664-667, 17 figs. Describes auto-pitch gear obtained by roller flow, resulting from studies of requirements of a perfect gear. (Abstract.) Read before Instn. Engrs. and Shipbuilders in Scotland.

SPIRAL BEVEL. The Spiral Bevel Gear. Machy. (Lond.), vol. 19, no. 492, Mar. 2, 1922, pp. 653-654, 2 figs. Comparison between arcs of action of spiral and helical teeth and straight teeth.

TOOTH-ROLLING MACHINE. Rolling the Teeth in Hot Gear Blanks, Frederick E. Walker, Jr. Am. Mach., vol. 56, no. 11, Mar. 16, 1922, pp. 409-412, 6 figs. Process eliminates cutting gear teeth. Rolling bevel gears in 15 seconds, and saving 20 to 40 per cent of metal.

PRODUCTION BY ROLLING PROCESS. Production of Gears by the Rolling Process. Can. Machy., vol. 27, no. 9, Mar. 2, 1922, pp. 46-47, 7 figs. Pressure required; forming of teeth; redressing die rolls; etc.

GEOLOGY

COMPUTATION OF STRATA. Graphical and Mechanical Computation of Thickness of Strata and Distance to a Stratum, J. B. Mertie, Jr. U.S. Geol. Survey Professional Paper, no. 129-C, Mar. 14, 1922, pp. 39-52, 12 figs. Graphic and numerical solution of problems. Construction of two five-variable alignment charts; of chart for solution of right triangle, to be used in conjunction with two charts above mentioned; and trigonometric computer for solution of all trigonometric formulas used in geologic field work.

ORE-HUNTING. Experiment in Ore-Hunting Geology, Augustus Locke. Min. and Metallurgy, no. 184, Apr. 1922, pp. 27-29, 1 fig. Deals with three matters related to ore-hunting: paucity of special writings applying to it; failure of scientists to concern themselves importantly with it; and resting on these conditions, certain possible activities for economic geologists.

GIRDERS

DOUBLE-LATTICE. Calculation of Double Lattice Girders (Calcul des poutres à treillis double), Léon Légens. Génie Civil, vol. 80, no. 6, Feb. 11, 1922, pp. 125-129, 14 figs. Calculation for girders with parallel chords and vertical rods to all connecting points.

GOLD MINES

Canada. Canada as a Gold Producer, Alexander Gray. Eng. and Min. Jl. Press, vol. 113, no. 4, Apr. 8, 1922, pp. 578-579. Increased capacity planned at Porcupine. Elbow Lake and other districts said to be promising.

Cariboo, B.C. Operations in the Cariboo, British Columbia, Donald D. Fraser. Eng. and Min. Jl., vol. 113, no. 12, Mar. 25, 1922, pp. 490-491. Reviews activities generally.

GOVERNORS

Steam Haulage Engines. The Governing of Steam Haulage Engines (Die Fahrtregler der Dampffördermaschinen), H. Hoffmann. Zeit. des Vereines deutscher Ingenieure, vol. 66, nos. 8, 9 and 10, Feb. 25, Mar. 4 and 11, 1922, pp. 173-177, 207-210 and 226-229, 29 figs. Uses and development of governors, and regulation of speed obtainable therewith. Astatic and static regulation. Nature and strength of static centrifugal governors; changing from one direction to the other; regulation of start, Examples of modern governors.

GRAIN ELEVATORS

Automatic Box-Car Unloader. Automatic Box Car Unloading in Grain Elevators, C. D. Howe. Can. Ry. & Mar. World, no. 290, Apr. 1922, pp. 169-172, 6 figs. partly on p. 173. Describes automatic box-car unloader developed for use in reconstruction of Can. Nat. Rys. elevators at Port Arthur, Ont. which has storage capacity of over 8,500,000 bush. of grain.

Pneumatic. Discharge of Grain Cargoes in the Port of London by Pneumatic Elevators, R. E. Knight. Instn. Mech. Engrs. Proc., vol. 2, no. 8, Dec. 1921, pp. 917-931 and (discussion) pp. 931-969, 10 figs. Deals with pneumatic discharge of grain from ships.

GRINDING MACHINES

Centerless. Centerless Grinding Efficiency, H. J. Swanson. Abrasive Industry, vol. 3, no. 3, Mar. 1922, pp. 75-76, 1 fig. Rapid production is possible as wheel cuts continuously; results of practical tests are given and inspection methods are described.

Chilled Iron Rolls. Large Grinding Machine for Chilled Iron Rolls. Engineer, vol. 133, no. 3455, Mar. 17, 1922, pp. 306, 2 figs. on p. 307. Describes heavy roll machine with capacity for work up to 36 in. diam. by 18 ft. between centers.

Tool and Cutter. An Imoroved Tool and Cutter Grinder. Eng. Production, vol. 4, no. 75, Mar. 9, 1922, pp. 225-226, 5 figs. Details of Improved pattern of universal machine by Alfred Herbert, Ltd., Coventry, one of distinctive features of which is provision made for wet grinding.

H

HAMMERS

Electric. The Electric Hammer, P. Trombetta. Am. Inst. Elec. Engrs., vol. 42, no. 4, Apr. 1922, pp. 297-305, 9 figs. Electric hammer has been studied and developed by writer to point where it seems to show superiority to present-used hammers, in simplicity, safety, running expenses, cost of installation and upkeep, and in many cases in original cost. Development shown is of induction motor type.

HEAT TRANSMISSION

Building Materials. A Study in Heat Transmission with Special Reference to Building Materials, F. C. Houghten. Am. Soc. Heating and Vent. Engrs. Jl., vol. 28, no. 2, Mar. 1922, pp. 151-172, 13 figs. Notes on theory of heat flow; methods of determining heat transmission. Discussion of research work on heat transmission through building and allied materials by various investigations Work of research laboratory.

onduction and Convection. Heat Transfer by Conduction and Convection, W. K. Lewis, W. H. McAdams and T. H. Frost. Am. Soc. Heating and Vent. Engs., Jl., vol. 28, no. 2, Mar. 1922, pp. 97-106, 2 figs. Points out that mass velocity, viscosity and thermal conductivity are major factors in determining coefficient of heat transfer from gases or liquids to solids, and that, for accuracy, heat transfers must be calculated by use of film coefficients, one on each side of heating surface.

HEATING, ELECTRIC

ouses. Limits of Electric House Heating, E. A. Loew. Elec. World, vol. 79, no. 13, Apr. 1, 1922, pp. 623-625, 6 figs. Large scale heating of residences, stores and other establishments in Tacoma shows limits within which electric heating may compete with other heat in mild climates. (Abstract.) University of Wash. Eng. Experiment Station, Bul. no. 15.

HEATING, STEAM

ntral Stations. Mechanical Use of Power in Low-Pressure Steam to Improve the Position of Central Heating Stations (Utilisation mécanique de l'énergie contenue dans la vapeur à très basse pression pour l'amélioration des installations de chauffage central), André Nessi. Bul. de la Société d'Encouragement pour l'Industrie Nationale, vol. 133, no. 10, Dec. 1921, pp. 1322-1366, 31 figs. Use of steam for improving circulation of hot water and hot air, for fans, pumps, etc.

HOUSING

oblem. The National Housing Problem. Am. Soc. Civ. Engrs. Proc. vol. 48, no. 3, Mar. 1922, pp. 476-503, 4 figs. Symposium containing following articles: Property Improvement and Landscaping, Charles W. Leavitt, House Design, Andrew J. Thomas. Certain Aspects of the National Housing Problem: Planning and Zoning, Morris Knowles. Transportation as it Relates to the National Housing Problem, Ernest P. Goodrich. Discussion.

HYDRAULIC TURBINES

iciency Tests. Efficiency Tests of a New Turbine at the Boise Works (Note sur les essais de rendement d'une des nouvelles turbines de l'usine du Bois Noir). A. de Montmollin. Bul. Technique de la Suisse Romande, vol. 48, no. 4, Feb. 18, 1922, pp. 37-40, 2 figs. Results of tests of horizontal axis Francis turbines for Lausanne Electricity Works, showing nearly 90 per cent efficiency at full charge as against 81 per cent guaranteed.

ector, Moody. The Moody Ejector Turbine, S. Logan Kerr. Mech. Eng., vol. 44, no. 4, Apr. 1922, pp. 243-247, 15 figs. Particulars of a turbine for low-head installations which delivers rated horse-power at maximum efficiency when head is a maximum, and also maintains output when head is reduced at flood periods.

HYDROELECTRIC DEVELOPMENTS

Niagara Falls. Increasing Niagara Falls Power Development By 200,000 Hp., G. W. Morrison. Compressed Air Mag., vol. 27, no. 3, Mar. 1922, pp. 65-69, 12 figs. - New Project under construction by Niagara Falls Power Co., requiring driving of a 32-ft. tunnel, a distance of 4,500 ft.

HYDROELECTRIC PLANTS

Caribou, California. High Head Impulse Wheels at New Feather River Plant. Eng. News-Rec., vol. 88, no. 12, Mar. 23, 1922, pp. 472-477, 7 figs. Caribou hydro-electric plant in California has two 30,000-hp. impulse turbines under 1008-ft. head. Water if brought from headwater reservoir by tunnel, river and pipe. Includes article entitled General Features of Design of the Caribou Plant, by Albert A. Northrop; and article on transportation problem in plant construction.

Sand Box. Design of Sand Box for Kern River Hydro-Electric Plant, H. L. Doolittle. Eng. News-Rec., vol. 88, no. 15, Apr. 13, 1922, pp. 616-617, 4 figs. Operation of high-head reaction turbines demands clear water. Test shows 400-ft. tank settles particles passing 200-mesh sieve.

Shawinigan Falls, Canada. Extension to Shawinigan Hydro-Electric Plant, Julian C. Smith. Can. Engr., vol. 42, no. 11, Mar. 14, 1922, pp. 299-306, 15 figs. New 41,000-hp. unit has world's largest steel casing and biggest valve ever built. Foundation stab is 12-ft, thick, 52-ft. space. Paper read before Eng. Inst. Can.

Test Code, A.S.M.E. Test Code for Hydraulic Power Plants and Their Equipment. Mech. Eng., vol. 44 no. 4, Apr. 1922, pp. 248-258, 13 figs. Preliminary draft of the sixth in series of 19 test codes being formulated by A.S.M.E. committee on power test codes.

I

ICE MANUFACTURE

Center-Freeze System. Ice Making by the Center-Freeze System, A. G. Solomon. Power Plant Eng., vol. 26, no. 5, Mar. 1, 1922, pp. 279-281. Five-ton blocks are produced in 30 hr. from raw water.

IMPACT TESTING

Mild Steel. New Tests With Repeated Impact (Nouvelles expériences de chocs répétés), Léon Guillet. Revue de Métallurgie, vol. 18, no. 12, Dec. 1921, pp. 755-757, 1 fig. Describes experiments with various mild steel test bars, showing especially effect of cold working.

INDICATORS

Steam-Engine, Diagram. Why Complete Compression Is Not Economical. Power, vol. 55, no. 13, Mar. 28, 1922, pp. 496-499, 11 figs. Discusses compression line on indicator diagram, showing that compression to initial pressure is not efficient. Describes graphical method of finding proper compression for any given cutoff.

INDUSTRIAL MANAGEMENT

Overhead Distribution. Distributing Overhead to Allow Lower Sales Prices, Walter N. Polakov. Factory, vol. 28, no. 4, Apr. 1922, pp. 400-402, 4 figs. Outlines plan for decreasing costly item of idle machines and men until business comes back.

Production Control. Watching Production from the Office, A. W. Hinkel. Factory, vol. 28, no. 4, Apr. 1922, pp. 416-418, 5 figs. Describes planning department that actually controls production and makes it possible to guarantee date of completion.

Production Costs, Cutting. Cutting Production Coats by Combining Manufacturing Operations, C. B. Barlett. Indus. Management, vol. 63, no. 4, Apr. 1922, pp. 198-200. Account of experience of large company which found that combining manufacturing operations helped materially to eliminate wasted production time.

Production Methods. Modern Production Methods, W. R. Basset. Am. Mach. vol. 56, no. 12, Mar. 23, 1922, pp. 443-445. Administrative methods. Advantages of functional organization; periodical reports save conference time.

Production Planning and Control. The Planning and Control of Production, R. O. Herford. Indus. Administration Jl., vol. 1, no. 9, Jan. 1922, pp. 259-261 (includes discussion). Discusses date, maximum output from a given plant, maximum output from limited capital, maximum output at minimum cost, as factors in control of production; etc.

Routing. How to Study the Routing of Work, Edward H. Tingley. Management Eng., vol. 2, no. 4, Apr. 1922, pp. 209-214, 9 figs. Such analysis is said to be particularly helpful in older plants and those which have expanded rapidly.

Sales Records. Keeping Track of Sales and Distributors, A. H. Tuechter. Am. Mach., vol. 56, no. 15, Apr. 13, 1922, pp. 541-543, 9 figs. Cards and forms for recording sales and shipping data in shop and office. Records to show activities of agents.

INDUSTRIAL RELATIONS

Antagonism of Capital and Labor. The Inevitable Antagonism Between Employers and Employees. Management Eng., vol. 2, no. 4, Apr. 1922, pp. 233-236. Discussion of C. E. Knoeppel's article in March issue of same journal.

INJECTORS

Principle and Application. Practical Information About Injectors, Terrell Croft. Power, vol. 55, no. 12, Mar. 21, 1922, pp. 460-463, 11 figs. How different types work; advantages and disadvantages; applications; testing; selection; how to overcome operating troubles.

INSULATING MATERIALS

Electric Strength, Heat Effect on. The Effect of Heat on the Electric Strength of Some Commercial Insulating Materials, W. S. Flight. Instn. Elec. Engrs. Jl., vol. 60, no. 306, Feb. 1922, pp. 218-235, 26 figs. Results of investigation to ascertain variation in electric strength between temperatures of 30 and 100 deg. Cent. of many of the solid insulating materials at present employed in manufacture of electrical machinery.

Solid Dielectric Strength of. The Dielectric Strength of Solid Insulating Materials, W. S. Flight, Elec. Rev. (Lond.), vol. 90, nos. 2303 and 2304, Jan. 13 and 20, 1922, pp. 39-41 and 76-79, 21 figs. Factors which influence dielectric strength. Discusses advisability of formulating standard sets of rules for conducting dielectric strength tests, and makes recommendations.

COMBINED COMPRESSED-AIR AND. Possibilities of Combined Internal-Combustion and Compressed Air Engines, R. W. Robinson. Practical Engr., vol. 65, no. 1828, Mar. 9, 1922, pp. 148-149. Describes design of prime mover which will combine outstanding advantages of steam engine with those of internal-combustion engine and, as far as possible, eliminate disadvantages of both, to produce engine of greater thermal efficiency than present internal-combustion engine. From paper read before Inst. Mar. Engrs.

EFFICIENCY. Efficiency of Internal-Combustion Engines (Rendement organique des moteurs à combustion interne), André Planiol. Comptes Rendus des Séances de l'Académie des Sciences, vol. 174, no. 10, Mar. 6, 1922, pp. 663-666. Discusses losses by friction as a criterion by which to judge mechanical quality of engine and describes new method of measuring friction losses.

ELASTIC. Elastic Internal-Combustion Engines (Elastische Verbrennungsmotoren), Aurel Persu. Motor-wagen, vol. 25, no. 8, Mar. 20, 1922, pp. 153-158, 8 figs. Deals with increasing limit of elasticity of engines without changing volume of cylinder that is, for ordinary engines with constant stroke.

See also Airplane Engines; Automobile Engines; Diesel Engines; Gas Engines, Marine Engines, Still; Oil Engines.]

IRON

ELECTROLYTIC. Commercial Pure Iron and the "Direct Process", Bradley Stoughton. Chem. Age (N.Y.), vol. 30, no. 3, Mar. 1922, pp. 131-133, 4 figs. Discusses electrolytic iron, its production, and properties.

IRON CASTINGS

GRAY. The Problem of Grey Iron Castings, H. J. Young. Foundry Trade Jl., vol. 24, nos. 279 and 280, Dec. 22 and 29, 1921, pp. 497-501 and 511-514, 19 figs. Composition of pig iron; possibilities of standard castings; turbine castings; duplexing; importance of graphite; test-bars; influence of phosphorus; sulphur-manganese balance versus silicon control; absence of standard composition in internal-combustion engines. Paper read before Inst. Min. Engrs.

IRON ORE

EUROPE. Iron-Ore Resources of Europe, Max. Roesler. Iron & Coal Trades Rev., vol. 104, no. 2817, Feb. 24, 1922, pp. 266-268, 3 figs. Geologic distribution; production and consumption; comparison of continents. From U.S. Geological Survey, Bul. 706.

MAGNETIC CONCENTRATION. Magnetic Roasting of Iron Ores, W. W. Davis. Iron Trade Rev., vol. 70, no. 14, Apr. 6, 1922, pp. 968-973, 5 figs. Notes on what has been and can be done on commercial scale, in converting hematite to magnetite for magnetic separation, and probable cost of process. (Abstract.) Bul. University of Minnesota.

TITANIFEROUS. A Method of Smelting Titaniferous Iron Ore, W. M. Goodwin. Honorary Advisory Council for Sci. and Indus. Research, Dominion of Can. Report no. 8, 1921, 25 pp., 4 figs. Describes attempt being made to provide economic use for iron ore present in abundance in central Canada and in other parts of world, and now of no industrial importance.

IRON, PIG

SYNTHETIC. Producing Synthetic Pig Irons, Charles-Albert Keller. Iron Trade Rev., vol. 70, no. 15, Apr. 13, 1922, pp. 1044-1045. By properly selecting scrap and manipulating furnace a wide range of steelmaking and foundry irons can be made. Large furnaces are recommended. Chemical control essential. (Abstract.) Paper presented at foundry congress at Liege, Belgium.

IRRIGATION

CONCRETE-LINED CANALS. Thin Concrete Lining Successful in Irrigation Canals, R. C. E. Weber. Eng. News-Rec., vol. 88, no. 11, Mar. 16, 1922, pp. 436-437, 3 figs. Canal lining, 1½ in. thick, placed on 64 mi. of main distribution system of Orland Project of U.S. Reclamation Service at cost of 39 cts. per sq. yd., saves 60 per cent in maintenance and permits less seepage than earth construction.

STRUCTURE DESIGN, ACTUARIAL FACTORS IN. Actuarial Factors in the Design of Irrigation Structures, H. B. Muckleston. Eng. Jl. (Eng. Inst. Can.), vol. 5, no. 4, Apr. 1922, pp. 193-197. Economics and storage works; value of storage, available storage, capacity in relation to dam height and cost, storage capacity.

J

JIGS

STANDARDIZATION OF FIXTURES AND. Standardization of Jig and Fixture Design. Machy. (N.Y.), vol. 28, no. 8, Apr. 1922, pp. 610-613, 5 figs. Discusses use of standardized parts, such as shoulder screws fixture keys, shoulder drill bushings, binder handles, etc.

L

LATHES

TURRET. The Herbert No. 11 Bar Turret Lathe. Machy. (Lond.), vol. 19, no. 491, Feb. 23, 1922, pp. 637-638, 3 figs. Describes lathe by Alfred Herbert, Ltd., Coventry, in which possibilities of danger, damage and wear have been reduced to a minimum.

LIFTING MAGNETS

APPLICATIONS. The Use of Electromagnets for the Lifting of Loads (Der Elektromagnet als zeitgemässes Hilfsmittel beim Heben von Lasten), H. Wintermeyer. Fordertechnik u. Frachtverkehr, vol. 15, no. 6, Mar. 17, 1922, pp. 81-84, 7 figs. Examples of various possible applications of lifting magnets. Special constructions of coil and magnet case. Transmission of current to magnet.

LIGHTING

COMMITTEE REPORT. Illumination Items. Am. Inst. Elec. Engrs. Jl., vol. 41, no. 4, Apr. 1922, pp. 278-280, 3 figs. Report of Lighting and Illumination Committee on highway lighting, textile-mill lihgting standards, elixit devices, and color temperature and its relation to quality of light.

INDUSTRIAL PLANTS, CODE FOR. Tentative Lighting Code. Textile World, vol. 41, no. 13, Apr. 1, 1922, pp. 79, 115 and 117. Rules and regulations made by Mass. Dept. of Labor and Industries for lighting industrial establishments.

LIGHTNING ARRESTERS

TYPES. Lightning Arresters, V. E. Johnson. Power Plant Eng., vol. 25, nos. 21 and 23, Nov. 1 and Dec. 1, 1921, pp. 1053-1058 and 1148-1152, 33 figs. Discussion of operating characteristics of various types of lightning arresters and considerations which govern their selection.

LIGNITE

BRIQUETTING PLANT. The Lignite Briquetting Plant, Bienfait, Sask., E. R. Woodward, Jr., Eng. Jl. (Eng. Inst. Can.), vol. 5, no. 4, Apr. 1922, pp., 185-192, 5 figs. Importance of developing lignite as commercial fuel in Western Canada; research work by Lignite Board; details of experimental work.

LOCKS

MOVABLE DAMS AND. Some Notes on the Location and Construction of Locks and Movable Dams on the Ohio River, with Particular Reference to Ohio River Dam No. 18, Thomas P. Roberts. Am. Soc. Civ. Engrs. Proc., vol. 48, no. 3, Mar. 1921, pp. 731-736. Discussion of paper by William M. Hall published in Proceedings, Jan. 1922.

LOCOMOTIVE BOILERS

SEAMS, CALCULATING EFFICIENCY OF. Calculating the Efficiency of Boiler Seams, R. J. Finch. Ry. Mech. Engr., vol. 96, no. 4, Apr. 1922, pp. 193-196, 5 figs. Explains use of two tables which facilitate work and reduce chance for error; places where failure is likely to occur.

TUBES. Installing and Maintaining Charcoal Iron Lcoomotive Boiler Tubes, G. H. Woodroffe and C. E. Lester. Boiler Maker, vol. 22, no. 3, Mar. 1922, pp. 61-65, 20 figs. Makes recommendations regarding application of body tubes, superheater flues, and arch tubes. See also Ry. Mach. Engr., vol. 96, no. 4, Apr. 1922, pp. 221-225, 20 figs.

WELDING. Expert Report on Locomotive Boiler Welding — Details of Approved Methods of Selecting Material and Perfecting Repairs. Ry. & Locomotive Eng., vol. 35, no. 3, Mar. 1922, pp. 62-64, 19 figs.

LOCOMOTIVES

BRITISH AND AMERICAN DESIGN. British and American Locomotive Design and Practice, P. C. Dewhurst. Engineering, vol. 113, nos. 2934 and 2935, Mar. 24 and 31, 1922, pp. 373-377 and 405-408, 11 figs. Some comparative comments thereon from practical experience. Paper read before British Instn. Mech. Eng.

COUNTERBALANCING RECIPROCATING MASSES. The Development of Counterbalancing in British Locomotive Practice, F. W. Brewer. Engineer, vol. 133, no. 3455, Mar. 17, 1922, pp. 298 and 300. History of development down to present-day practice.

DIESEL-ENGINES. Possibilities of the Diesel Locomotive. Ry. Mech. Engr., vol. 96, no. 3, Mar. 1922, pp. 120-121. Editorial note. Disadvantages of Diesel engine for locomotive service.

ELECTRIC. *See Electric Locomotives.*

4-8-2 AND 2-10-2- TYPES. New Mountain Type and Santa Fe Type Locomotives for the Manila Railroad. Ry. & Locomotive Eng., vol. 35, no. 3, Mar. 1922, pp. 55-56, 2 figs. Describes 4-8-2 type, with tractive effort of 28,600 lb., for passenger service, and 2-10-2 type, with tractive effort of 35,700 lb., for freight service.

LUBRICANTS

PARAFFIN SERIES. Boundary Lubrication — The Paraffin Series, W. B. Hardy and Ida Doubleday. Royal Soc. Proc., vol. 100, no. A 707, Mar. 1, 1922, pp. 550-574, 5 figs. Results of experiments, and theory. Lubricating qualities of normal paraffins and their related acids and alcohols; influence of quantity of lubricant; solid lubricants; influence of chemical constitution.

TESTING APPARATUS. A Proposed Method for Solving Some Problems in Lubrication. William Stone. Commonwealth Engr., vol. 9, nos. 4 and 5, Nov. 1 and Dec. 1, 1921, pp. 115-122 and 139-149, 13 figs. Describes method of testing and construction of apparatus employed to determine conditions of formation and stability of lubricating film and effect of variations of viscosity in different parts of film due to varying temperatures. Results of tests carried out.

LUBRICATING OILS

AUTOMOTIVE-ENGINE, DILUTION OF. The Dilution of Lubricating Oil in the Present Automotive Engine, William F. Parish. Sci. Lubrication, vol. 2, no. 1, Jan. 1922, pp. 5-7 and 21. Dilution through decomposition of oil; leakages of raw gasoline; leakages during compression stroke; extent to which dilution exists; results of dilution; wear; etc. Paper read before combined meeting of Am. Petroleum Inst., Soc. Automotive Engrs., and Nat. Automobile Chamber of Commerce.

COMPOUNDING. Compounding of Lubricating Oils, W. F. Osborne. Power, vol. 55, no. 14, Apr. 4, 1922, pp. 535-536. Points out that for steam-engine cylinders and marine-engine lubrication compounding is essential. On other hand, a pure mineral oil should be used where there is any danger of water causing emulsion.

EMULSIONS. The Cause of Emulsions in Lubricating Oils, W. F. Osborne. Power vol. 55, no. 13, Mar. 28, 1922, pp. 502-503. Notes on separation of water and oil; impurities in oil; effect of compounding.

STEAM CYLINDERS. Compounded Cylinder Oil for Superheated Steam Conditions. Lubrication, vol. 8, no. 1, Jan. 1922, p. 9. Recommends use of medium-heavy viscosity cylinder oil, having about 4 or 5 per cent of animal oil.

STEAM-TURBINE. Keeping Steam Turbine Lubricating Oil in Good Condition, Charles H. Bromley. Sci. Lubrication, vol. 1, no. 12, Dec. 1921, pp. 5-11, 7 figs. Lubrication trend in turbine practice; turbine oil circulating systems; formation of emulsion and sludge; acidity; continuous by-pass system; requirements of efficient oil filter for purifying steam turbine oil; etc. Reprinted from Gen. Elec. Rev.

SUBSTITUTES. Lubricants and Their Substitutes (Ueber Schmiermittel und deren Ersatzstoffe), Bruno Simmersbach. Wärme- u. Kälte-Technik, vol. 24, no. 5, Mar. 1, 1922, pp. 53-56. Experience in Germany with substitute oils.

LUBRICATION

LUBRICANTS AND. Lubrication and Lubricants. Sibley Jl. of Eng., vol. 36, no. 2 Feb. 1922, pp. 18-29 and 37, 7 figs. Discusses loss of friction, viscosity of lubricants, laws of lubrication, etc.

THEORY. Theory of Lubrication, William F. Parish. Sci. Lubrication, vol. 1, no. 11, Nov. 1921, pp. 15-19. Discusses the two functions of a lubricant, keeping surfaces apart, and conveying heat from surfaces that is caused by friction.

M

MACHINE SHOPS

High-Speed Production. Examples of Modern High Speed Production, H. A. Wilson. Can. Machy., vol. 27, no. 7, Feb. 16, 1922, pp. 27-30, 11 figs. Methods adopted at Ford motor plant.

MACHINE TOOLS

Bearings, Adjustments of. The Adjustment of Machine Tool Bearings, Fred Horner. Machinery (Lond.), vol. 19, nos. 484 and 483, Dec. 22 and 29, 1921, pp. 342-347, 385-387, 53 figs. Discusses divided, solid, and tapered bearings, and gives a number of examples of their adjustments, contraction of parallel bushings; capped bearings; end adjustments.

MAGNETIC FLUX

Distribution in Transformers. Magnetic Flux Distribution in Transformers, Paul B. McEachron. Am. Inst. Elec. Engrs. Jl., vol. 41, no. 4, Apr. 1922, pp. 281-287, 10 figs. Data are secured concerning magnitudes and phase positions of fluxes in different sections of core. Results show that leakage fluxes do not exist as separate fluxes in core.

MALLEABLE IRON

Manufacture. Progress in Manufacture of Malleable Iron, Enrique Touxeda. Can. Foundryman, vol. 13, no. 3, Mar. 1922, pp. 32-34. Air-furnace thermal efficiency; proportioning air supply; use of waste-heat boilers; design of double-hearth furnaces; use of coke-oven gas; etc.

MEASURING INSTRUMENTS

Accuracy. The Accuracy of Measuring Instruments (Genauigkeiten der Messzeuge), R. P. Schröder. Betrieb, vol. 4, no. 9, Feb. 11, 1922, pp. 269-274. Notes on gage blocks, initial comparative, trial and working gages. Measurement of workpieces.

Optical Equipment. Optical Auxiliary Equipment for Measuring Instruments (Optische Hilfsmittel an Messgeräten), Walter Block. Betrieb, vol. 4, no. 9, Feb. 11, 1922, pp. 285-289, 6 figs. Discusses optical media for measuring instruments of all kinds, but especially those used in machine construction, for purpose of manipulating them with greater ease and accuracy.

METALS

Grain Growth and Recrystallization. Grain Growth and Recrystallization in Metals, Zay Jeffries and R. S. Archer. Chem. & Met. Eng., vol. 26, nos. 8, 9 and 10, Feb. 22, Mar. 1 and 8, 1922, pp. 343-345, 402-410 and 449-457, 30 figs. Feb. 22: Technical definition of recrystallization, and list of recrystallization temperatures for common metals. Methods for measuring grain size, shape and volume. Mar. 1: Effect of time and temperature of heating, degree of cold-work, original grain size and obstructing impurities on grain growth of metals and solid solution alloys. Mar. 8; Possible causes of grain growth; recrystallization is grain growth of fragmented crystals; germination ; formation of nuclei.

Mechanical Properties of. Variation of Mechanical Properties in Metals and Alloys at Low Temperatures (Sur la variation des propriétés mécaniques des métaux at alliages aux basses températures), Léon Guillet and Jean Cournot. Comptes rendus des Séances de l'Académie des Sciences, vol. 174, no. 6, Feb. 6, 1922, pp. 384-386. Experiments with a number of metals; table of Brinell hardness and resiliency of these at + 20 deg., — 20 deg.,—80 deg. and liquid-air temperatures.

Strength and Fatigue. Calculation of a Non-circular Cylindrical Envelope (Méthode générale de calcul des enveloppes cylindriques à section non circulaire), P. Cayere. Houille Blanche, vol. 20, nso. 59-60, Nov.-Dec., 1921, pp. 213-216, 5 figs. Discusses interior pressure, fatigue of metals, etc.

Tensile Strength of Plastic. Tensile Strength (Verfestigung und Zugfestigkeit), Freidrick Körber, Stahl u. Eisen, vol. 42, no. 10, Mar. 9, 1922, pp. 365-370, 8 figs. The mechanics of tensile test of plastic metals. Notes on calculation of tensile strength from curve of true stresses. Theory that slip and rotation of crystal elements takes place is confirmed.

METEOROLOGY

Wind, Velocity of. Variation of Velocity of Wind With Altitude (La variation de la vitesse du vent avec l'altitude), Ch. Maurain. Revue Générale des Sciences, vol. 33, no. 3, Feb. 15, 1922, pp. 76-80, 5 figs. Discusses results obtained by means of recording balloons and gives comparative curves.

MILLING MACHINES

Vertical. The "Relmil" Vertical Milling Attachment. Machinery (Lond.), vol. 19, no. 493, Mar. 9, 1922, p. 699, 2 figs. Distinguishing feature is that it does not clamp or fix on lathe saddle. Is secured to back of lathe bed and also to chip tray by means of two substantial cast-iron brackets.

MINES

Power-Distributing System. Power Distributing System for Deep Metal Mines, C. D. Woodward. Am. Inst. Min. & Met. Engrs. Trans., no. 1121-M, Feb. 1922, 10 pp. 10 figs. Purchased power is delivered, over duplicate feeders, in form of 60 cycle, 2400 volt, three-phase current, to five compressor plants, where most of energy is used for driving air compressors.

MOLDING

Plastic and Powdered Substances. Moulding Plastic and Powdered Substances (including Casting Substances other than Metals and Presses, Mechanical). Abridgments of Specifications, class 87 (ii), 1922, 379 pp. Patent's for nventions for period 1909-15.

MOLDING METHODS

Boxes. A New System in Moulding-Boxes. Mech. World, vol. 71, no. 1835, Mar. 3, 1922, p. 161. Describes box having separate ends and sides, secured by a pin and two wedges, of opposed bevel, at each joint. System has proved very satisfactory in sizes from 16 in. sq. to 80 in. sq. Translated from Giesserei-Zeitung.

MOLYBDENUM

Production Processes. The Recovery, Treatment and Utilization of Molybdenum Ore and the Production of Ferro-Molybdenum (Die Gewinnung, Verarbeitung and Verwertung des Molybdänglanzes, sowie die Herstellung des Ferromolybdäns), H. Mehren Edel-Erden u.-Erze, vol. 3, nos. 5-6 and 7-8, Dec. 1921 and Jan. 1922, pp. 25-26 and 39-40. Review of foreign and domestic processes.

MONEL METAL

Water Works, Suitability for. Monel Metal and Its Suitability for Water-Works Use, H. S. Arnold. N. E. Water Works Assn. Jl., vol. 36, no. 1, Mar. 1922, pp. 86-93 and (discussion) pp. 93-94. Describes source of supply and method of manufacture. Physical properties and uses.

MOTION-PICTURE PHOTOGRAPHY

Technical Applications. The Application of Photography in Engineering. (Die Anwendung der Photographie in der Technik), R. Thun. Betrieb, vol. 4, no. 8, Jan. 28, 1922, pp. 252-257, 12 figs. Examples of use of photography and motion-picture photography for observation, research and measuring.

MOTORSHIPS

Single- and Twin-Screw. Comparison Between Single and Twin-Screw Motor Ships, H. Blache. Shipbldg. & Shipg. Rec., vol. 18, nos. 19 and 20, Nov. 10 and 17, 1921, pp. 607-609 and 639-641, 4 figs. Nov. 10: Discusses different problems in connection with Diesel engines for ships, especially those of Burmeister & Wain's make. Heavy and light oil fuel; working reliability; ratio of cylinder diameter and stroke; trial data. Nov. 17: Propeller efficiency; trial results; new thrust bolck; cargo space; deciding factors.

3,000-hp. Single-Screw. 3,000 Horsepower Single Screw Motorship. Mar. Eng., vol. 27, no. 4, Apr. 1922, pp. 237-239, 3 figs. Describes the Dominion Miller, built for Furness, Withy & Co.; Doxford engines; 9,400 tons deadweight; boiler oil proposed as fuel.

MOTOR-TRUCK TRANSPORTATION

Graphical Control. A Graphical Control of Motor Truck Transportation. Howell B. May. Factory, vol. 28, no. 4, Apr. 1922, pp. 410-412, 3 figs. Describes graphical planning and recording system which it is claimed, makes it possible to realize greatest number of productive minutes out of total 480 that struck is out of garage.

MOTOR TRUCKS

Tipping Gear. Gravity-Type Tipping Gear for Motor Wagons. Engineering, vol. 113, no. 2934, Mar. 24, 1922, p. 358, 3 figs. With described gear center of gravity of load during tipping operation moves along a straight line, with slight downward slope towards rear end of wagon.

O

OIL ENGINES

Combustion. Combustion Progress in Oil Engines (Der Verbrennungsvorgang im Oelmotor), Constantin Redzich. Wärme-u. Kälte-Technik, vol. 24, no. 2, Jan. 15, 1922, pp. 17-18. Review and discussion of scientific investigations.

OIL FUELS

Boilers for. Liquid Fuel For Steam Boilers (L'Emploi des combustibles liquides pour le chauffage des foyers industriels et particulièrement des chaudières à vapeur), Louis Cauchois. Bul. des Associations Françaises de Propriétaires d'Appareils à Vapeur, no. 2, Oct. 1920, pp. 37-68, 6 figs. Properties of combustible liquids and precautions necessary in handling, including petroleum and its derivations, shale oil, alcohol, etc. Burners of various types.

Heavy, in Carburetor. The Use of Heavy Oil Fuels in Carburetors (Zur Frage der Verwendung schwerer Brennstoffe in der Vergasermaschine), J. Plünzke. Motorwagen, vol. 25, no. 7, Mar. 10, 1922, pp. 125- 127, 5 figs. Determination of boiling curve for two fuels, naphthalene and anthracene, during suction and compression.

Internal-Combustion-Engine. Interna-Combustion Engine Fuels, C. A. Norman. Soc. Automotive Engrs. Jl., vol. 10, no. 3, Mar. 1922, pp. 187-192 and (discussion 192 and 203. Discusses use of kerosene and gasoline, and substitute fuels, including shale oils.

Steam Power. Fuel Oil For Steam Power, A. D. White, Combustion, vol. 6, no. 4, Apr. 1922, pp. 175-176, 1 fig. Advantages of fuel oil over coal; conditions for efficiency; controlling steam supply; preheating of oil.

OIL SHALES

Activities, 1921. Oil Shale — A Resume for 1921, Victor C. Alderson. Petroleum Times, vol. 7, no. 164, Feb. 25, 1922, pp. 259-261. Reviews activities in Utah, Colorado, Canada, Kentucky, Esthonia, Tasmania, and other places.

Destructive Distillation. Some Factors Affecting the Products of the Destructive Distillation of Oil Shales, Lewis C. Karrick. Chem. Age. (N.Y.), vol. 30, no. 3, Mar. 1922, pp. 112-114, 1 fig. Structure of oil shale and its influence on distillation products; effect of temperature lag; and rate of heat supply. Based on data obtained by investigations of U.S. Bur. Mines.

Treating Method. New Method of Treating Oil Shales. Petroleum Times, vol. 7, no. 164, Feb. 25, 1922, p. 262. Describes recent British patent granted to S. H. Dolbear of San Francisco, object of which is the separation of valuable organic compounds in shale from waste or gangue which produces no oil.

OPEN-HEARTH FURNACES

Design. Design of Open-Hearth Furnaces, A. D. Williams. Iron Age, vol. 109, nos. 13 and 17, Mar. 16 and 30, 1922, pp. 717-719, 1 fig. and 853-855, 2 figs. Mar. 16: Regenerator computations for volume and weight of checker work required. Temperature changes based on time reversals. Mar. 30: Regenerator and flue calculations for frictional resistance to passage of air and gases. Summation of losses.

Fluorspar, Use of. Fluorspar in Open-Hearth Practice. Iron Age, vol. 109, no. 11, Mar. 23, 1922, pp. 783-784. Effective agent in removing sulphur from steel. Action on slag and furnace lining. Old ideas altered. Translated from article by S. Schleicher in Stahl u. Eisen, Mar. 17, 1921.

German. Arrangement of Open-Hearths in Germany, Hubert Hermanns. Blast Furnace & Steel Plant, vol. 10, no. 3, Mar. 1922, pp. 192-194, 3 figs. Steelmakers of Germany have not adopted water-cooled parts, but use detachable posts; arrangement of gas and air chambers is of special interest.

ORES

VALUATION. Notes on the Valuation of Ores, Concentrates and Smelter Products, L. C. Stuckey. Instn. Min. and Metallurgy Bul., no. 210, Mar. 1922, pp. 1-34, 2 figs. Notes on valuation of gold, copper, lead, zinc and tin ores, aluminum and bauxite and ores used for iron and steel. Bibliography.

ORE DRESSING

BALL MILLS. The Power-Load Curves of Ball Mills, A. O. Gates. Eng. & Min. Jl., vol. 113, no. 12, Mar. 25, 1922, pp. 485-487, 2 figs. Describes simple laboratory apparatus for experimental work and discusses power consumption.

TUBE MILLING. Artificial Pebbles For Tube-Milling, A. W. Allen. Min. & Sci. Press, vol. 124, no. 12, Mar. 25, 1922, pp. 405-409, 6 figs. Tests as to hardness, toughness, and abrasion; preparation of rock for tube-milling purposes.

OVERVOLTAGES

CAUSES. The Compensation Phenomena Occurring with Disconnection of Inductivities (Especially by Means of Oil-Break Switches) (Ueber Ausgleichsvorgänge beim Abschalten von Induktivitäten (insbesonders vermittelst Oelschalter), Paul Hammerschmidt. Archiv för Elektrotechnik, vol. 10, no. 12, Mar. 6, 1922, pp. 431-455, 58 figs. Investigation to determine causes of overvoltages occurring with the switching off of asynchronous motors and transformers running on no load.

OXY-ACETYLENE CUTTING

CAST IRON. Cutting Cast Iron With the Oxyacetylene Torch, Alfred S. Kensey. Stevens Indicator, vol. 38, no. 4, Oct. 1921, pp. 28[illegible]296, 5 figs. Reviews progress made with oxyacetylene torch; how to cut cast iron; effects of oxyacetylene cutting on cast iron; advantages; theory of cutting of metals by gas.

OXY-ACETYLENE WELDING

INSTRUCTION SHEET. Proposals for New Factory Instruction Sheets (Entwürfe neuer Betriebsblätter). Betrieb, vol. 3, no. 11, Mar. 4, 1922, pp. 39-40. Proposals of Works Dept. of German Federation of Technical and Scientific Societies for care and manipulation of gas-welding equipment.

RODS FOR. Choosing Rods for Welding Work, J. R. Dawson. Iron Trade Rev., vol. 70, no. 15, Apr. 13, 1922, pp. 1033-1036 and 1043, 10 figs. Selection of welding rod for oxy-acetylene process depends on service requirements of finished weld. Inspection of rods and tests of welds aid in determining choice of materials. (Abstract.) Paper delivered before Int. Acetylene Assn.

SAFETY IN. Safety Engineering as Applied to Oxy-Acetylene Cutting and Welding Apparatus, F. J. Napolitan. Am. Welding Soc. Jl., Vol. 1, no. 2. Feb. 1922, pp. 13-30, 3 figs. Writer emphasizes safety of modern acetylene generators. Discusses acetylene and its generation; explosive mixtures; portable acetylene cylinders and oxygen cylinders; high-pressure gages; torches and tips; flashbacks; etc.

P

PAPER MANUFACTURE

TAR PAPER. Tar Paper (Le carton bitumé), J. Tricard. Arts et métiers, vol. 74, no. 10, July 1921, pp. 216-218, 7 figs. Discusses manufacture which has been developed during the war, to supply quick and cheap protection in inclement weather.

PLASTIC MATERIALS

PLASTIC WOOD. Plastic Wood, Engineer, vol. 133, no. 3453, Mar. 3, 1922, pp. 230-231. Describes material like soft wood, but without grain having cellulose nitrate as a base, chief raw material being cotton. It has consistency of dough used in pastry making and can be molded into any conceivable form; it can be used for patching up patterns and rounding off fillets and in molding process for making small articles. Process of manufacture.

PLATINUM

OCCURRENCE IN QUARTZ VEINS. Platinum in Quartz Veins, Henry W. Turner. Eng. and Min. Jl., vol. 113, no. 12, Mar. 25, 1922. pp. 488-489. Occurrences noted in California, Brazil, British Columbia, New Zealand, Ural. Mts., and Colombia.

POLES, CONCRETE

TRANSMISSION LINE. An Electric Transmission Line Supported by Reinforced Concrete Poles in Sweden. (Eine Kraftleitung auf Stahlbewehrten Betonschleudermasten in Schweden), M. Foerster. Bauingenieur, vol. 3, no. 4, Feb. 28, 1922, pp. 104-107, 9 figs. Describes poles delivered by German firm, and method of transportation.

PORCELAIN

ELECTRICAL, RESEARCH. Electrical Porcelain Research, M. H. Hunt. Elec. Jl., vol. 19, no. 3, Mar. 1922, pp. 94-96, 6 figs. Describes porcelain laboratory equipped with apparatus necessary for forming, drying, glazing and firing of test pieces, and full size insulators. Discusses ingredients of porcelain composition; etc.

POWER PLANTS

BRITISH PRACTICE. Notes on British Power Plant Practice, C. H. S. Tupholme. Power Plant Eng., vol. 26, no. 6, Mar. 15, 1922, pp. 315-319. Efforts directed by engineers toward securing higher fuel economy, due to continued high prices of fuel.

DESIGN. Developments in Power Station Design. Engineer, vol. 133, no. 3455, Mar. 17, 1922, pp. 290-292, 10 figs. partly on p. 302. Describes cooling towers Powell Duffryn Steam Coal Co. built by Davenport Engineering Co., each designed to reduce temperature of 216,000 gal. of water per hr. from 100 deg. Fahr. under average atmospheric conditions: turbine-driven feed pump; coal and ash-handling plant; etc.

POWER TRANSMISSION

OIL VARIABLE GEAR. Power Transmission by Oil (Elaulic Gear), H. S. Hele-Shaw. Instn. Mech. Engrs. Proc., no. 7, 1921, pp. 843-873, 16 figs. Author discusses power transmission when it is accompanied with its transformation, and where oil is employed as working agent. Design and applications of oil variable gear, or elaulic gear.

PRESSES

FORGING, STEAM-HYDRAULIC. Steam-Hydraulic Forging Presses (Les presses vapohydrauliques à forger). Outillage, vol. 249, no. 9, Mar. 4, 1922, pp. 271-273, 6 figs. Describes hydraulic presses in which high-water pressure is produced by steam compressor.

PRESSURE VESSELS

MECHANICALLY WELDED. The Strength of Mechanically Welded Pressure Containers, R. J. Roark. Mech. Eng., vol. 44, no. 4, Apr. 1922, pp. 225-230, 18 figs. Describes pressure tests made on electrically welded, gas-welded, and riveted pressure containers, and tension and shear tests made on specimens of welded metal, carried out for purpose of demonstrating strength and uniformity of construction in which electric weld is employed.

PRODUCER GAS

CLEANING WITHOUT WASHING. Cleaning Producer Gas Without Washing, James H. Matheson. Iron Age, vol. 109, no. 14, Apr. 6, 1922, pp. 916-917, 4 figs. Gas equalizer and soot collector developed to treat gas from bituminous coal.

FURNACE WORK. Producer Gas for Furnace Work. Engineering, vol. 113, no. 2934, Mar. 24, 1922, pp. 347-351, 34 figs. partly on supp. plate. Describes low-temperature rotary carbonization plant devised by Harald Nielsen, consisting essentially of combination of ordinary producer with low-temperature carbonizing retort, in which partial distillation of raw coal is effected by sensible heat of producer gas. Designed to improve efficiency of manufacture of producer gas, and permit recovery of valuable by-products.

PULVERIZED COAL

SYSTEMS OF BURNING. Burning Pulverized Fuel—V, F. P. Coffin. Combustion, vol. 6, no. 4, Apr. 1922, pp. 181-184, 2 figs. Discusses conditions of efficient combustion, tube slag, effect of furnace temperature on ash, baffling of horizontal water-tube boilers, and describes some recent installations. Excerpts from author's contribution on "The Utilization of Coal on a Multiple-Product Basis" to Bacon and Hamor's "American Fuels".

PUMPING PLANTS

DIESEL-DRIVEN. Diesel-Driven Pumping Plant for Trinidad. Engineer, vol. 133, no. 3453, Mar. 3, 1922, p. 248, 3 figs. partly on p. 242. Describes treble-ram pump for Trinidad, with capacity of 76,000 gal. per hr. when running at 44 r.p.m. and with head of 350 ft. Pump is driven by means of 200-hp. Diesel engine of four-cylinder, four-cycle pattern.

PUMPS

COAL MINES. Pumping Systems for Coal Mining, M. C. Benedict. Coal Industry, vol. 5, no. 2, Feb. 1922, pp. 106-108. Drainage ditches in place of pumps; best types of pumps for various classes of work.

HIGH-LIFT TURBINE. High Lift Turbine Pumps, A. M. Attack. So. African Instn. Engrs. Jl., vol. 20, no. 7, Feb. 1922, pp. 130-145 and (discussion) 145-146, 19 figs. Discusses some of the more important features upon which a successful design will depend, including multi-stage and centrifugal pumps, pumps in series, axial thrust, pumps driven by synchronous motors, sinking pumps, impellers, diffuser, etc.

JETS, IMPACT LOSSES OF. Impact Losses of Jets, J. B. Burnell. Engineering, vol. 113, no. 2935, Mar. 31, 1922, pp. 404-405, 4 figs. Account of experiments made by author to determine loss of kinetic energy in jet due to varying deviation, and friction losses in bends. (Abstract.) Paper read before Melbourne Division of Instn. Engrs., Australia.

PIPE EFFICIENCY. Pipe Friction and Pump Efficiency, William Brazenall. Colliery Guardian, vol. 123, no. 3191, Feb. 24, 1922, pp. 472-473. Results of experiments carried out with turbine, three-throw ram, and differential ram pumps. (Abstract.) Paper read before Min. Inst. of Scotland.

PUMPS CENTRIFUGAL

TYPES AND OPERATION. Centrifugal Pumps, J. W. Rogers. Eng. Rev., vol. 35, nos. 8 and 9, Feb. and Mar. 1922, pp. 259-262 and 296-301, 12 figs. Feb.: Advantages, principles, operating characteristics, efficiency and regulation, power requirement, electric motors. Mar.: Describes some modern types.

Q

QUAYS

DEEP-WATER. Deep-Water Quays, Ernest Latham. Engineering, vol. 113, no. 2935, Mar. 31, 1922, pp. 380-384, 9 figs. Deals with reinforced-concrete and timber jetties and wharves in the Thames. Based on experience, writer has formed conclusion that, under post-war conditions, reinforced concrete is not always most suitable type of construction for deep-water tidal berths.

R

RADIOACTIVITY

DEVELOPMENT. Radio-Activity, Ernest Rutherford. Engineering, vol. 113, nos. 2932, 2933, 2934 and 2935, Mar. 10, 17, 24 and 31, 1922, pp. 299-300, 331-332, 365-366 and 386-387, 25 figs. Review of development; resting of radium, its characteristics and uses. Behavior of radioactive elements. Radium emanation; origin of radium. Abstracts of four lectures delivered before British Roy. Instn.

RADIOTELEGRAPHY

HIGH-SPEED. High-Speed Wireless Telegraphy. Instn. Elec. Engrs. Jl., vol. 60, no. 306, Feb. 1922, pp. 245-255 and (discussion) 255-262, 16 figs. Discusses experimental progress directed towards mechanicalization of wireless telegraphy in as simple and portable a form as possible.

POULSEN ARC. Some Improvements in the Poulsen Arc—I, P. O. Pedersen. Inst. Radio Engrs. Proc., vol. 9, no. 5, Oct. 1921, pp. 434-441, 6 figs. Shows operation of Poulsen arc with only one voltage peak per period is desirable. Describes suitable cathode cooling shoe for one-peak operation.

RAILS

HEAD, CONDITIONS AFFECTING. Conditions Affecting the Head of a Rail, James E. Howard. Eng. & Contracting, vol. 57, no. 11, Mar. 15, 1922, pp. 252-253. Review of destructive influences. Paper presented before N. Y. R. R. Club.

RAILWAY CONSTRUCTION

SPECIFICATIONS. American Railway Engineering Convention. Eng. News-Rec., vol. 88, no. 12, Mar. 23, 1922, pp. 498-501, 1 fig. Rail committee presents experimental rail specification based on quiet-setting steel. Engineers and labour economics. Analysis of warehouse and freighthouse design. Specifications for moveable bridges adopted.

RAILWAY ELECTRIFICATION

ECONOMIES DUE TO. The Future of Railroading is Electrification, W. R. Steinmetz. Can. Ry. Club Official Proc., vol. 20, no. 8, 1921, pp. 16-30 (includes discussion). Discusses electrification generally in various countries, and enumerates economies due to it.

HOLLAND. Electrification of Railways in Holland (Electrificatie van de spoorwegen in Nederland), J. J. W. Van Loenen Martinet. Ingenieur, vol. 37, no. 9, Mar. 1922, pp. 151-162, 8 figs. Discusses report of commission appointed to study the question, which is review of electrification practice in various countries; also Amsterdam-Rotterdam electrification.

INDUCTION INTERFERENCE AND ELECTROLYSIS. Effects of Electric Power Used for Traction, Chas. F. Scott. Ry. Age, vol. 72, no. 11, Mar. 18, 1922, pp. 727-729, 1 fig. Inductive interference and electrolysis as related to railroad electrification.

SUPERPOWER SURVEY. Superpower Survey, Gen. Elec. Rev., vol. 25, no. 2, Feb. 1922, pp. 72-94, 15 figs. Articles on The Superpower System as an Answer to a National Power Policy by W. S. Murray; What the Superpower Survey Means to the United States, by H. Goodwin, Jr.; and Abstract of "Appendix C" of Superpower Report on the Electrification of Railroads by, W. D. Bearce.

RAILWAY MOTOR CARS

GASOLINE. Gasoline Motor Cars with Four-Wheel Drive. Ry. Age, vol. 72, no. 11, Mar. 18, 1922, 749-759, 4 figs. For passenger, freight and light switching; manufactured by Four-Wheel Drive Auto Co., Clintonville, Wis.; has three speeds; four-cylinder engine; 42 hp. by S. A. E. rules, but develops 68 hp. on a brake test.

NEW HAVEN BRANCH LINES. Motor Cars Used on New Haven Branch Lines. Ry. Mech. Engr., vol. 96, no. 3, Mar. 1922, pp. 139-141, 3 figs. Describes the Mack rail car used in local passenger service. Important advantages are flexibility and low-operating cost.

RAILWAY OPERATION

AUTOMATIC TRAIN CONTROL. The Hearing on Train Control. Ry. Rev., vol. 70, nos. 12 and 13, Mar. 25 and Apr. 1, 1922, pp. 421-424 and 455-460. Gives summary of argument of 40 American railroads represented by Am.Ry. Assn. against recent order of Interstate Commerce Commission requiring installation of automatic train control.

TONNAGE RATING. Practical Points on Dynamometer Car Tonnage Test, O. O. Carr. Ry. Rev., vol. 70, no. 13, Apr. 1, 1922, pp. 451-455. Observations on Illinois Central show inaccuracy of office ratings and false economy of reducing tonnage to increase train speed.

RAILWAY TIES

LIFE. A Means of Determining the Average Life of Ties, V. K. Hendricks. Ry. Age, vol. 72, no. 12, Mar. 25, 1922, pp. 779-783, 2 figs. Explanation of fluctuations in reqiurements on new lines and method of anticipating them.

RENEWAL COST CALCULATION. Diagram for Calculating Annual Cost of Cross Ties, E. R. Cary. Eng. & Contracting, vol. 57, no. 11, Mar. 15 1922, pp. 245-246, 2 figs. Description of making nomograph or alignment diagram.

RAILWAY TRACK

CURVES. Railway Curves: Superelevation and Maintenance, E. E. R. Tratman. Eng. News-Rec., vol. 88, nos. 11 and 12. Mar. 16 and 23, 1922, pp. 446-449 and 489-492, 2 figs. Shows variations in practice and opinion. Influence of modern locomotives relations of curvature to gage and grades; checking and marking.

RAILWAYS

ALASKA. Completing the Government Railroad in Alaska. Ry. Age. vol. 72, no. 13, April 1, 1922, pp. 813-817, 8 figs. Describes Alaska railroad opened between Seward, on Resurrection Bay, and Fairbanks, in interior, on Feb. 5, 1922, a distance of 467 miles.

REFRIGERATING MACHINES

COMPRESSION. The Compression Refrigerating Machine, Gardner T. Voorhees. Ice and Refrigeration vol. 62, no. 3, Mar. 1922, pp. 223-226, 1 fig. Study of floating heat question and clearance effect. (Continuation of serial.)

REFRIGERATION

BRINE SPRAY. Brine Spray Refrigeration S. C. Vloom. A. S.R.E. Jl., vol. 8, no. 4, Jan. 1922, pp. 308-321 (includes discussion) 10 figs. Describes experiments carried out with Webster nozzles and overhead spray systems.

RESEARCH

INDUSTRIAL. A plan for the Development of Industrial Research in Canada S. F. Ruttan. Honorary Advisory Council for Sci. and Indus. Research, Dominion of Can., Bul. no. 10. 1921, 8 pp. (Abstract.) Address before Chem. Congress, New York.

RHEOSTATS

LIQUID. Some Notes on the Design of Liquid Rheostats, W. Wilson. Inst. Elec. Engrs. Jl.,vol. 60, no. 326, Feb. 1922, pp. 196-211 and(discussion)211-217, 20 figs. Discusses the more definite determination of constants of liquid rheostat and the more exact prediction of its performance.

RIVETS

MANUFACTURE AND TYPES. Riveting (Etude sur le rivetege). Ouvrier Moderne, vol. 4, no. 11. Feb. 1922, pp. 443-447, 12 figs. Metal used; manufacture of rivets standard types of rivets; etc.

ROADS, CONCRETE

CALCIUM CHLORIDE, USE OF. The Use of Calcium Chloride in Concrete Highway Construction. B. H. Piepmeier and H. F. Clemmer. Eng. and Contracting, vol. 5, no. 14, Apr. 5, 1922, pp. 323-324, 2 figs. Points out that during past year actual practice and laboratory experiments demonstrated value of calcium chloride in highway construction to such an extent that Division of Highways of Illinois not only allowed its usage to accelerate setting of concrete in cold weather construction, but also advocates it as simple and practical method of curing. See also Highway Engr. and Contractor, vol. 6, no. 4, Apr. 1922, pp. 33-36, 5 figs.

ROADS, GRAVEL

SURFACE TREATMENT WITH TAR. Surface Treatment of Gravel Roads with Tar. Paul D. Sargent. Eng. and Contracting, vol. 57, no. 14, Apr. 5, 1922, pp. 325-327. Experiences of Maine State Highway Commission. Paper presented at Conference on Highway Engineering, at Ann Harbor, Mich.

ROLLING MILLS

DRIVES. Factors which Influence the Size of Rolling-Mill Drives, L. Rothera. Iron and Coal Trades Rev., vol. 104, no. 2818, Mar. 3, 1922, pp. 306-308, 8 figs. Choice of sections to be rolled; output required; methods of rolling; drafting of rolls; number of passes taken. From English Elec. Jl.

SHEET STEEL ROLLING. The Possilility of Improved Methods of Rolling Sheet Steel Summer B. Ely. Blast Furnace and Steel Plant, vol. 10, no. 3, Mar. 1922, pp. 175-178. Author does not think that a continuous sheet mill is impossible; believe extensive scientific experiments on the problem should be conducted. (Abstract,) Paper read before Engrs. Soc. Western, Pa.

ROPE DRIVE

CONTINUOUS AND MULTIPLE SYSTEMS. Power Transmission by Ropes. Eng. and Indus. Management, vol. 7, no. 10, Mar. 23, 1922, pp. 287-289, 3 figs. Questions of cost and efficiency construction of rope pulley drives; relative merits of continuous and multiple systems.

S

SAFETY

ORGANIZATION IN INDUSTRIAL PLANT. Safety Organization, Harry A. Schults. Safety, vol. 9, no. 3, Mar. 1922, pp. 56-74, 8 figs. Discusses in detail safety organization of an industrial plant, duties of safety committees and safety engineers, educational activities, first aid and rescue, etc.

SAND, MOLDING

HANDLING EQUIPMENT. Solving Sand Problem in a Steel Foundry, Edwin F. Cone. Iron Age. vol. 109, no. 15, Apr. 13, 1922, pp. 985-988, 6 figs. Mechanical equipment shakes out casting and prepares old and new sand with minimum of labor. Other features,

USES AND ABUSES. Uses and Abuses of Molding Sands, Eugene W. Smith. Iron Age, vol. 109, no. 13, Mar. 30, 1922, pp. 860-861. Typical American sands and their composition; sand for various metals. Discussion. Paper read before Chicago Foundrymen's Club.

SCHOOLS, TECHNICAL

OTTAWA. Wide Range of Instruction is Being Given, W. W. Nichol. Can. Machy., vol. 27, no. 11, Mar. 16, 1922, pp. 28-49, 4 figs. Activities of Ottawa Technical School, and its equipment. Subjects cover machine-shop practice, automobile mechanics, welding and cutting structural and mechanical drafting, etc.

TORONTO. This School Shows Remarkable Progress. Can. Machy., vol. 27, no. 11, Mar. 16, 1922, pp. 35-39, 8 figs. Describes the Technical High School, Toronto and its facilities and equipment.

SCIENTIFIC MANAGEMENT

See Industrial Management.

SCREW THREADS

COMPARATOR. Screw-Thread Measuring Comparators (Gewinde-Messkomparator), C. Büttner. Betrieb, vol. 4, no. 9, Feb. 11, 1922, pp. 289-292, 11 figs. Describe construction and function of a new optical screw-thread measuring machine for maximum accuracy, with which all dimensions can be determined in coefficients of measure.

SEWAGE

ODOR, ELIMINATION OF. Elimination of Odor in Sewage Gases by Burning, C. E. Leonard. Eng. News-Rec., vol. 88, no. 14, Apr. 6, 1922, pp. 565-566, 5 figs. Odors from raw sewage and treatment plant at Austin Tex., are eliminated by passing them through furnace in which fuel is the gas from digestion tanks. Plant generates its own purifying fuel.

SEWAGE DISPOSAL

CLARIFICATION AND ACTIVATION, INDIANAPOLIS. Clarification and Activation for Indianapolis Sewage,C.H. Hurd. Eng. News. Rec.,vol. 88, no. 12,Mar. 23, 1922, pp. 484-488, 5 figs. Three revolving cylindrical screens, removing 30 per cent of solids, considered sufficient for six months. Activated-sludge process added for remainder of year.

GRIT CHAMBERS. How Grit Chambers Work at the Worcester Sewage Plant, Ray S. Lamphear. Eng. News-Rec., vol. 88, no. 13, Mar. 30. 1922, pp. 519-520. Deals with velocity of flow, operation, deposition of material, quantity and character of deposit. Points out that grit may be used for dikes or roads.

SHAFTS

Torsional Vibration. Torsional Vibrations in Shafts and the Nazzaro Damper (Le vibrazioni torsionali negli alberi delle distribuzioni e lo smorzatore "Nazzaro"), Pasquale Borracci. Industria, vol. 36, no. 2, Jan. 31, 1922, pp. 26-28, 5 figs. Explains origin of torsional vibrations and describes the Nazzaro device for controlling them.

SHAFT SINKING

Freezing Process. The Latest Improvements in the Freezing Process (Das Gefrierverfahrm und seine neuesten Fortschritte), W. Landgräber. Mettall u. Erz., vol. 18, no. 19, Oct. 8, 1921, pp. 486-489. Describes methods employed in sinking a shaft through water-bearing and quisksand layers to depth of 560 m. by use of freezing process.

SHERARDIZING

Experiments. Experiments With Sherardizing Leon McCulloch. Metal Industry (N. Y.), vol. 20, no. 3, Mar. 1922, pp. 97-98. Formation of coating with special reference to amount and effect of iron in coating.

SHIP CONSTRUCTION

Reinforced-Concrete. The Present Development of Reinforced concrete Shipbuilding, W. Teubert. Shipbuilder, vol. 26, no. 139, Mar. 1922, pp. 217-220, 5 figs. Reviews development in all countries concerned with particular reference to German activities. Application of concrete by spraying process; steel coaming; etc. (Abstract) Paper communicated to Schiffbautedhnische Gesellschaft.

SHIPS, CONCRETE

Developments and Prospects. The Development of Reinforced-Concrete Ship Construction and its Prospects. (Die Entwicklung des Eisenbetonschiffbaues und seine Aussichten), Carl Commentz. Fördertechnik, u. Frachtverkerr, vol. 15, no. 5, Mar. 3, 1922, pp. 65-67, 7 figs. Review of development during war, and description of most important types. Importance of weight problem, and possibilities of reducing weight. Cost of reinforced-concrete ships.

SILVER ORE

Ontario, Canada. The Occurrence of Silver Ores in South Lorrain, Ontario, Canada, J. Mackintosh. Instn. Min. and Mettallurgy Bul., no. 209, Feb. 1922, pp. 1-17, 3 figs. General geology; vein system; character of vein material; position of ore-shoots; origin of deposits; metallurgical practice.

SMOKE ABATEMENT

Problems. The Smoke Problem, O. P. Hood. U. S. Bur. of Mines Reports of Investigation, serial no. 2323, Feb. 1922, 5 pp. Brief summary of problems. Smoke problem in England, and list of publications of Bur. of Mines dealing with problem.

SOOT BLOWERS

Steam Saving with. Steam Saving with Soot Blowers, Robert June. Textile World, vol. 41, no. 13, Apr. 1, 1922, pp. 75-76, 4 figs. Charts showing economy of improved equipment and extent of loss from excessive blowing.

SPECIFIC HEAT

Air, Steam and CO_2. The Specific Heats of Air, Steam and Carbon Dioxide, W. D. Womersley. Roy. Soc. Proc., vol. 100, no. A 706, Feb. 1. 1922, pp. 483-498, 10 figs. Describes experiments with improved Hopkinson calorimeter and gives results of hydrogen-air and carbon-monoxide experiments.

STACKS

Venturi. Venturi Stacks, A. W. H. Griepe. Combustion, vol. 6, no. 4, Apr. 1922, pp. 166-175, 18 figs. Describes Venturi-Evase-Prat-Stacks and their functioning, advantages and disadvantages, and compares different systems.

STANDARDIZATION

Norway. Standardization in Norway (Standardiseringssporsmaalet i Norge). Teknisk Ukeblad, vol. 69, no. 8, Feb. 24, 1922, pp. 69-73. Report of committee to Norwegian Society of Industrials giving review of standardization work in countries abroad.

Progress. Progress in Engineering Standardization, C. W. Ham. Am. Mach., vol. 56, no. 13, Mar. 30, 1922, pp. 465-466. Advantage of simplified designs and adoption of uniform methods. Shop operation simplified, number of jigs reduced stocking of parts in large quantities becomes possible. Work of American Engineering Standards Committee in establishing national and international standards.

Society Automotive Engrs. Work of. S. A. E's Recent Standardization Work. Automotive Industries. vol. 46, no. 14, Apr. 6, 1922, pp. 768-770, 2 figs. Revision in ball-bearing standards; Bessemer steel and wire spring stock; distributor, magneto and bumper mounting; motor-boat controls; passenger-car frames.

STEAM ENGINES

Back Pressure, Reducing. Using Exhaust Velocity To Reduce Back Pressure in Steam Engine. Power, vol. 55, no. 14. Apr, 4, 1922, p. 542, 3 figs. Prof. Stumpf and his associates in designing a unaflow locomotive, have been able, by modification of exhaust ports and piping to reduce back pressure on cylinder.

STEAM GENERATORS

Efficient. Modern Steam Generators for the Efficient Utilization of Gaseous Fuels and the Efficient Recovery of Waste Heat, P. St. G. Kirke. West of Scotland Iron and Steel Inst. Jl. vol. 29, Part 3, Dec., Session 1921-1922, pp. 28-34 and (discussion) 34-36, 9 figs. on supp. plates. Discusses boiler development, including the Hopwood Spencer Hopwood, Bonecourt, Kirke and other types.

STEAM POWER PLANTS

Fuel Conservation. Fuel Conservation in Industrial Power Plants, David Moffat Myers. Gen. Elec. Rev., vol. 25, no. 2, Feb. 1922, pp. 95-98. Effecting economies in steam plants by proper equipment of recording instruments selected to suit local conditions.

Heat Balance and Steam Distribution. Heat Balance and Steam Distribution in a Large Service Plant, S. D. Kutner. Power, vol. 55, no. 13, Mar. 28, 1922, pp. 488-491, 1 fig. Tells how steam, hot water and power are charged to different departments in large building supplied from an isolated power plant.

STEAM TURBINES

Modern Installation. A Modern Steam-Turbine Installation in Spitzbergen), Eine moderne Dampfturbinen-Anlage auf Spitzbergen), A. C. Gogstad. Schweizerische Bauzeitung, vol. 79, no. 12, Mar. 25, 1922, pp. 149-151, 4 figs. Describes central station and equipment delivered by Oerlikon Machine Works, Switzerland.

STEEL

Alloy. *See Alloy Steels.*

Stainless, Cutlery of. Making Steel Cutlery R.G. Hall. Iron Trade Rev., vol. 70, no. 13, Mar. 30, 1922, pp. 896-897. Carbon content of 0.30 to 0.45 per cent and chromium 13 to 15 per cent is recommended. Roll scale must be eliminated and working tools kept sharp to prevent cause for oxidation. Stainless tests. See also (abstract) in Iron Age, vol. 109, no. 13, Mar, 30, 1922, pp. 855-856.

STEEL, HEAT TREATMENT OF

Structural Parts. Heat Treating Steel For Structural Parts, Horace C. Knerr. Blast Furnace and Steel Plant, vol. 10, no. 3, Mar. 1922, pp. 178-183, 10 figs. Means of estimating carbon from microstructure after annealing; comparison of effects of heat treatment on various steels from mild to tool steel.

Principles. Theory of the Heat Treatment of Steel, Walter M. Mitchell. Forging and Heat Treating, vol. 8, nos. 1, 2 and 3, Jan., Feb. and Mar. 1922, pp. 52-56, 114-118 and 162-166, 20 figs. Jan.: Critical temperatures; constitution of slowly cooling steel. Feb.: Constituents of suddenly cooled steels; practice in heat treatment. Mar.: Discusses hardening and tempering and deduces schedule of heat treatment.

STEEL MANUFACTURE

Basset Process. Steel Direct from Ore by Basset Process, Fritz Wuest. Iron Age, vol. 109, no. 15, Apr. 13, 1922, pp. 989-991, 2 figs. Its chief features and advantatages. Critical discussion of claims for French process by German engineer. Cost of plant. Translated from Stahl u. Eisen Dec. 22, 1921.

High-Speed and Tungsten. Notes on the Manufacture of High-Speed and Tungsten Steels, J. W. Weitzenkorn. Chem. and Met. Eng., vol. 26, no. 11, Mar. 15, 1922, pp. 504-508, 14 figs. Steps taken in studying segregation in high-speed and tungsten steel. Structural disposition of carbides after various heat treatments, with or without previous mechanical work.

Losses, Reducing. Reducing Losses in Steelmaking, F. G. Cutler. Iron Trade Rev., vol. 70, no. 15, Apr. 13, 1922, pp. 1040-1042, 2 figs. Method of comparing total combustion efficiency of iron and steel plant from time to time is proposed. Economic use of blast-furnace and coke-oven gas. (Abstract.) Paper to be presented before Am. Soc. Mech. Engrs.

STEEL WORKS

Calcutta, India. New Plant of the Indian Iron and Steel Company, Limited. Iron and Coal Trades Rev., vol. 104, no. 2815, Feb. 10, 1922, p. 198, 3 figs. Describes design and equipment.

Electric Power in. The Application of Electric Power in the Iron and Steel Industry, W. S. Hall. Iron and Steel Elec. Engrs. Assn., vol. 4, no. 3, Mar. 1922, pp. 127-140 and (discussion) pp. 140-151. Brief analysis of sources of waste fuel in iron and steel manufacture; determining whether expenditure for recovering waste fuel is desirable. Problems of power generation and transmission.

Power-Plant Management. Steel Works Power Plant Management, Robert June. Blast Furnace and Steel Plant, vol. 10, no. 3, Mar. 1922, pp. 197-201, 3 figs. Fixed charges and maintenance; manner of figuring depreciation of powerhouse equipment.

STOKERS

Underfeed. A New Type of Underfeed Stoker. Steam, vol. 29, no. 3, Mar. 1922, pp. 75-77, 7 figs. Describes stoker built by Detroit Stoker Co., Detroit, Mich., made in two designs, one a single retort, side cleaning stoker for boilers up to three or four hundred horsepower, and the other a multiple retort end cleaning type for large installations.

STORAGE BATTERIES

Lead-Hydrate. The Lead Hydrate Storage Battery. Elec. Rev. (Lond.).vol. 90, no. 2313, Mar, 24, 1922, pp. 402-404, 8 figs. Describes lead-hydrate battery made by Siebe, Gorman & Co., Ltd., Lond., which, it is claimed, has 300 to 800 per cent greater capacity than any other battery has hitherto attained.

STREET RAILWAYS

Cars, Safety. Recent Developments in Car Design, H. H. Adams. Elec. Ry. Jl., vol. 59, no. 12, Mar. 25, 1922, pp. 520-522, 7 figs. Describes automatic treadle-operated exit door of new double door Chicago safety car. (Abstract). Paper read before Ill. Elec. Rys. Assn.

Shallow-Conduit Construction. Installing Shallow-Conduit Construction in Washington, D. E. Dunn. Elec. Ry. Jl., vol. 59, no. 11, Mar. 18, 1922, pp. 449-452, 14 figs. Describes replacing old type of deep tube cable construction with new shallow tubes by Traction Co.

Toronto. Toronto Takes Over Street Railways. Elec. Ry. Jl. vol. 59, no. 12, Mar 25, 1922, pp. 505-511, 12 figs. Principal features of franchise; statistics of Toronto traffic; municipal operating organization; financial arrangement; etc

Manufacturing Machinery, Hawaii. Progress in Hawaii in the Design of Sugar Manufacturing Machinery. Int. Sugar Jl., vol. 24, no. 278, Feb. 1922, pp. 81-85, 7 figs. Summary of report of Committee on Manufacturing Machinery, appointed by Hawaiian Sugar Planters' Assn. [illegible] Heaters Kopke clarifier; Daniel's centrifugal discharge, revolving cane cutting knives.

SUPERPOWER PLANT

Advantages and Prospects. The Superpower System, Henry Flood, Jr. Steam, vol. 29, no. 2, Feb. 1922, pp. 37-40. Summarizes advantages of superpower and immediate outlook for its realization.

SURVEYING

Photographic. Developments in Photographic Surveying, M. P. Bridgland. Can. Engr., vol. 42, no. 14, Apr. 4, 1922, pp. 359-363, 7 figs. States that camera can be used to best advantages in high mountain ranges. Describes apparatus used. How photographs are taken and plotted. More work in office than in field.

T

TELEPHONY

Automatic. Automatic Telephone System of the Siemens & Halske Corp. (Selbsttätige Fernsprechvermietelung für Privatbetriebe), G. Quaink. Dinglers polytechnischer Jl., vol. 337, no. 4, Feb. 25, 1922, pp. 31-33, 5 figs. Details of system, advantages of which are quick service in connecting and disconnecting, elimination of operators, and privacy of conversation.

TESTING MACHINES

Bearings. Testing Machine to Show Relative Merits of Bearings, R. W. Sellow. Belting, vol. 20, no. 3, Mar. 1922, pp. 51-53, 4 figs. Describes machine which shows relative difference in power consumption of various types of bearings; by its method of driving bearing shafts and of applying load to bearings it is adaptable to any reasonable conditions of test.

Hardness. A New Impact Hardness Testing Machine. (Schlaghärteprüfer nach Prof. Rich. Baumann, Stuttgart). Allgemeine Automobil-Zeitung, vol. 22, no. 43, Oct. 22, 1921, pp. 31-32, 5 figs. Describes new apparatus designed by Richard Baumann, head of material-testing bureau of Technical Academy, Stuttgart. Its cost is said to be about one-fifth that of Brinell testing machine, it is light in weight and easily handled.

THERMOCOUPLES

Platinum : Platinum-Rhodium. Life Tests of Platinum: Platinum-Rhodium Thermocouples, C. O. Fairchild and H. M. Schmidtt. Metal Industry (Lond.), vol. 20, no. 11, Mar. 17, 1922, pp. 245-246. Discusses deterioration at high temperatures, requiring frequent replacement or recalibration. Published by permission of Bur. of Standards.

TOOLS

Manufacture of Machinists. Machinists' Tools and Their Manufacture. Engineering, vol. 113, no. 2932, Mar. 10, 1922, pp. 290-292, 7 figs. Particulars of tools and manufacturing methods adopted for their production in works of C. A. Vandervell & Co., Ltd., London. Deals with production of calipers and dividers, vee blocks and clamps, scribing bolcks, etc.

TRACTORS

Chain-Track. The New Transport. Motor Transport, vol. 34, no. 890, Mar. 29, 1922, pp. 341-345, 12 figs. Describes chain-track tractors which embodies principles introduced into 25-mile-an-hour tanks that appeared after war.

Standards in Manufacture. The Value of Standards in Tractor Manufacture, P. M. Heldt. Soc. Automotive Engrs. Jl., vol. 10, no. 4, Apr. 1922, pp. 270-272. Outlines history of systematic introduction of standards in mechanical manufacture. Discusses steel and other standards, such as tractor hitches, belt speeds, connections between parts or machines made in different plants, screw sizes, lug attachment, etc.

Two-Wheeled, Stability of. Stability of Two-Wheeled Tractors, P. M. Heldt. Automotive Industries, vol. 46, no. 11, Mar. 10, 1922, pp. 614-616, 4 figs. Principles and calculation of torque, pressure, drawbar-pull, etc.

TRANSFORMERS

1,000,000-Volt Testing. A Million Volt Testing Transformer, J. F. Peters. Elec. Jl., vol. 19, no. 3, Mar. 1922, pp. 97-99, 5 figs. Details of construction.

Operation on Temperature Basis. Operating Distribution Transformers on a Temperature Basis, L. L. Elden. Elec. World, vol. 79, no. 13, Apr. 1, 1922, pp. 623-630, 7 figs. Diversity factor is said to be unreliable index of service requirements. Use of indicating equipment enables operation at higher temperature to be safely continued with marked economic advantages. Includes list of 21 observations and conclusions regarding transformer operation on temperature basis.

TRANSPORTATION

Highway. Highway Transportation. Am. Soc. Civ. Engrs. Proc., vol. 48, no. 3, Mar. 1922, pp. 506-522. Symposium containing following articles: Highway Inspection, H. E. Hilts. Financing and Bonding, Frederick S. Greene and Herbert S. Sisson. Discussion.

TUBES

Billet-Piercing Machine for Making. An Improved Billet Piercing Machine for Solid Drawn Tube Making. Metal Industry (Lond.), vol. 20 no.11, Mar. 17, 1922, p. 255, 1 fig. Describes machine made by Fisher, Humphries & Co., for piercing copper billets as well as steel billets.

Seamless. The Manufacture of Seamless Tubing, Philip Davidson. Raw Material, vol. 5, no. 2, Mar. 1922, pp. 46-52, 27 figs. Describes operations at Scoville Mfg. Co.'s works, Waterbury, Conn.

TUBING

Seamless Steel. Experiments With Weldless Steel Tubing As Used in Construction W. W. Hackett. Practical Engr., vol. 65, nos. 1820 and 1821, Jan. 12 and 19, 1922, pp. 21-22 and 43-44, 4 figs. Short review of seamless tubes; describes tests made on front forks, plain tubes held in a loose socket, and on tubes brazed 1 in. into thick lugs results of alternating stress tests, showing effects of cut, with sharp corners, in high and medium-carbon steels. (Abstract.) Paper read before Instn. Automobile Engrs.

TUNGSTEN

Manufacture of Metallic. The Manufacture of Metallic Tungsten. Chem. Trade Jl. & Chem. Engr., vol. 70, no. 1813, Feb. 17, 1922, pp. 190-200. Production of red tungstate; crystallization of sodium tungstate; washing tungstic acid; purification of tungstic acid; reduction; etc.

Working of. The Working of Tungsten. So. African Instn. Engrs. Jl., vol. 20, no. 7, Feb. 1922, pp. 121-129, (includes discussion). Describes installation in England of factory for making tungsten metal, based on American practice, and how the various problems were solved.

TUNNELLING

Hard-Rock. Modern Practice in Driving Western Hard-Rock Tunnels, R. C. Starr. Eng. News-Rec., vol. 88, no. 15, Apr. 13, 1922, pp. 598-601, 5 figs. Discusses factors affecting size, progress and cost in large power tunnels; depth and relation of drill holes, heading and mucking methods.

TUNNELS

Vehicular. Specification Details of Hudson River Vehicle Tunnel. Eng. News-Rec., vol. 88, no. 14, Apr. 6, 1922, pp. 574-575, 2 figs. Largest subaqueous tunnels in United States to be built by compressed-air shield method. Some contract provisions.

V

VACUUM TUBES

Thermionic Valves. The Manufacture of the Mullard Valve. Electrician, vol. 88, no. 2287, Mar. 17, 1922, pp. 317-319, 5 figs. Made by Mullard Radio Valve Co., Ltd. Notes on the grid, filament construction and mounting, testing arrangements, advantages of silica. etc.

VALVES

Automatic Control. Automatic Control Valve for Hydraulic Presses. Engineer, vol. 133, no. 3455, Mar. 17, 1922, p. 308, 10 figs. Describes Barton- Carr patented control valve which is entirely automatic in its action from first operation onward until point of maximum high pressure is reached.

Manganese Bronze for Stems. Manganese Bronze for Valve Stems, William R. Conrad. N. E. Water Works Assn. Jl., vol. 36, no. 1, Mar. 1922, pp. 32-36 and (discussion) pp. 37-39. Deals with valves as used for water-works purposes.

VENTILATION

Electric. Electric Ventilating, Wm. T. Reace and Geo. C. Breidert. Elec. Jl., vol. 19, no. 3, Mar. 1922, pp. 119-123, 8 figs. Use in the home, retail stores, industrial plants, restaurants, and for farmers. Right and wrong way to install ventilating fans. Unit heaters.

Temperature, Humidity and Air-Motion Effects. Temperature, Humidity and Air Motion Effects in Ventilation, O. W. Armspach and Margaret Ingels. Am. Soc. Heating & Vent. Engrs. Jl., vol. 28, no. 2, Mar. 1922, pp. 173-190, 17 figs. Consideration of fundamental laws underlying loss of heat from human body and resulting feelings of comfort or discomfort in air under various conditions of temperature. humidity and rate of air movement.

VOCATIONAL TRAINING

Blind. Blind Efficiently Operate Machine Tools., Hubert Hermanns. Iron Age, vol. 109, no. 11, Mar. 16, 1922, p. 733, 5 figs. Siemens-Schuckert Works in Berlin conduct series of experiments to determine proper training methods.

W

WASTE ELIMINATION

Economic Fundamentals. Elimination of Waste and Improvement of Efficiency. What are the Economic Fundamentals? W. R. Ingalls. Min. & Metallurgy, no. 183, Mar. 1922, pp. 33-37. Writer points out that miscalculations in industry will decrease along with increase in transparency in industry, meaning acquisition of knowledge about it and thereby ability to see through it and ahead.

Factories. Searching Out the Invisible Wastes, C. J. Morrison. Indus. Management, vol. 63, no. 4, Apr. 1922, pp. 196-197. Calls attention to persistent and prevalent sources of loss found in every factory, which can generally be eliminated.

WATER GAS

Production, Continuous Process. Continuous Oil-Water-Gas Process, Joseph D. Baucus. Gas Age-Rec., vol. 49, no. 9, Mar. 4, 1922, pp. 267-269. Describes the Van Steenbergh continuous process for production of water gas, and report made as to its operation and cost.

WATER POWER

Mechanical Storage. The Mechanical Storage of Water Power. Elec. Rev. (Lond.), vol. 90, no. 3211. Mar. 10, 1922, pp. 327-330, 9 figs. Describes Walkeburn hydroelectric scheme. Low-pressure turbines consist of two large double-runner, horizontal Francis turbines, 110 hp. each, running at speed of 200 r.p.m., the Pelton wheel runs at 1,000 r.p.m. and is coupled direct to 155-kw. generator; arrangement of generator pumps and gearing.

Mechanical Storage of Water Power as a Factor in Textile Production. Electrician, vol. 88, no. 2284, Feb. 24, 1922, pp. 229-233, 6 figs. Describes hydro-electric installation at Henry Ballantyne & Sons' Tweedvale and Tweedholm mills, special feature of which is method adopted for water storage during non-working hours.

RESOURCES, CANADA. Water Power Resources of Canada, J. T. Johnston. Can. Engr., vol. 42, no. 13, Mar. 28, 1922, pp. 343-346. Review of hydroelectric development; power utilized in central station and pulp and paper industries. Many water powers not yet developed.

UNITED STATES. Developed and Potential Water Powers of the United States. Elec. World, vol. 79, no. 11, Mar. 18, 1922, pp. 531-532, 1 fig. Government compilation indicates that capacity of water-wheels installed in plants of 100 hp. or more is 7,852, 948 hp. Almost 80 per cent in public-utility generating plants.

WATER PURIFICATION

METHODS. Purification of Water Supplies, James O. Meadows. Contract Rec., vol. 36, no. 13, Mar. 29, 1922, pp. 285-287. Refinements in composition of filtration equipment. Value of chlorine disinfection. Purifying water for industrial. Paper before Montreal Section of Soc. Chem. Research.

WATER SUPPLY

STORAGE PROJECTS, NEW JERSEY. Huge Water Storage Projects for New Jersey District. Eng. News-Rec., vol. 88, no. 11, Mar. 16, 1922, pp. 430-435, 5 figs. Details of four plans by Allen Hazen, any one of which would give supply for several decades. Combinations of reservoirs and Delaware River flow would yield three times 1970 needs.

WELDING

BOILER. Boiler Welding, Edward H. Heidel. Acetylene Jl., vol. 23, no. 9, Mar. 1922, pp. 431-435 and 470, 15 figs. Gives restrictions placed on loconotives boiler welding known as A.R.A. restrictions. Directions for autogenous, electric and gas welding of boiler parts.

HYDE PROCESS. Hyde Welding Process, D. Richardson. Welding Engr., vol. 7, no. 3, Mar. 1922, pp. 32-34. Describes method of uniting iron and steel which partakes of nature of both welding and brazing, consisting of uniting surfaces by means of molten copper, the copper impregnating mass of metal to be joined.

[*See also Boilers, Welding; Cast Iron, Welding; Electric Welding; Electric Welding, Arc; Locomotive Boilers, Welding; Oxy-Acetylene Welding; Railway Shops, Welding Practice*]

WIND PRESSURE

HIGH ELEVATIONS, AT. Wind Pressures at High Elevations and Their Application to Radio Towers, R. Fleming. Eng. News-Rec., vol. 88, no. 11, Mar. 16, 1922, pp. 438-442. Review of practice and theory. Observations showing that wind velocity increases with height. Recommended leads and stresses for design of high towers.

WIND TUNNELS

MASSACHUSETTS INSTITUTE OF TECHNOLOGY. The Aerodynamical Laboratory of the M.I.T., Edward P. Warner. Aviation, vol. 12, no. 11, Mar. 13, 1922, pp. 308-310, 3 figs. Recent additions of two new wind tunnels greatly increase operating capcity of America's oldest research establishment. Constructional details.

WOOD PRESERVATION

THEORY. Theory on the Mechanism of Protection of Wood by Preservatives, Ernest Bateman. Wisconsin Engr., vol. 26, no. 5, Feb. 1922, pp. 79-94 and 98, 5 figs. Experimental work of obtaining a non-toxic or "barren" oil from coal-tar creosote; a mathematical treatment to point out existence of a solubility partition. Presented before Am. Wood-Preservers' Assn. (Concluded.)

Z

ZINC

ELECTROLYTIC. Effects of Impurities on Electrolytic Zinc, Guilfore Darby Scholl. Chem. & Met. Eng., vol. 26, no. 13, Mar. 29, 1922, pp. 595-602, 39 figs. Photographs of cathodes made in commercial cells after addition to electrolyte of one or two parts per million of arsenic, antimony, cobalt, copper, nickel and glue; severe action commences several hours after addition.

RESEARCH. Research Work on Zinc and Zinc Allors, Wallace Dent Williams. Can. Foundryman, vol. 13, no. 3, Mar. 1922, pp. 26-27 and 30, 8 figs. Discusses alloys with high percentage of zinc replacing brass with favourable results.

ZINC METALLURGY

BLUE POWDER IN SMELTING. Blue Powder in Zinc Smelting, W. R. Ingalls. Min. and Metallurgy, no. 184, Apr. 1922, pp. 13'14. It is shown that blue powder product bears large proportion to ore originally charged into retorts; that large proportion of retort capacity is devoted to redistillation of blue powder; and that of spelter product of furnace about 30 per cent is derived from blue powder.

ZINC ORE

HYDRO-METALLURGY OF LOW-GRADE. Hydro-Metallurgy of Low-Grade Zinc Ores, Motohiro Namba. Min. and Sci. Press, vol. 124, no. 9, Mar. 4, 1922, pp. 301-306. Abstracted from Jl. Soc. Chem. Ind., vol. 40, no. 23.

3

Engineering Index

This Index is prepared by the American Society of Mechanical Engineers.

In this department will be published from month to month the titles of current engineering papers with the authors and source and a brief extract of the more important. It is designed to give the members of The Institute a survey of all important articles relating to every branch of engineering profession.

PHOTOSTATIC PRINTS

Photostatic copies of the articles listed in this section, or others on engineering subjects, may be obtained from the Engineering Societies Library.

Price of each print (up to 11 by 14 in. size) 25 cents, plus postage. Where possible, two pages, up to 7 by 9 in. size, will be photographed on one print. Larger magazines require a print per page. Bills will be mailed with the prints.

The Library is also prepared to translate articles, to compile lists of references on engineering subjects and render assistance in similar ways. Charges are made, sufficient to cover the cost of this work. Correspondence is invited. Information concerning the charge for any specific service will be given those interested. In asking for information please be definite, so that the investigator may understand clearly what is desired

The Engineering Societies Library is under the management of the United Engineering Society, which administers it as a public reference library of engineering. It is maintained jointly by the American Society of Civil Engineers; the American Institute of Mining and Metallurgical Engineers; the American Society of Mechanical Engineers and the American Institute of Electrical Engineers. It contains 150,000 volumes on engineering and allied subjects, and receives currently most of the important periodicals in its field.

Orders and correspondence should be addressed to

Harrison W. Craver, Director

Engineering Societies Library,

29 West Thirty-ninth Street, New York, N. Y.

A

ACETYLENE

HIGH-PRESSURE APPARATUS. High-Pressure Acetylene Apparatus (Hochdruck-Acetylenapparate), K. Matzinger. Autogene Metallbearbeitung, vol. 15, no. 6, Mar. 15, 1922, pp. 80-82, 4 figs. Describes apparatus used for Schoop's metal-spraying process built by Continental Light & Apparatus Construction Co., in Zurich-Dūbendorf.

AERIAL PHOTOGRAPHY

CAMERAS. Practical Uses of Aerial Photography. Aviation, vol. 12, no. 15, Apr. 10, 1922, pp. 424-426, 5 figs. Describes Fairchild camera used for producting aerial map of New York City

AIRCRAFT

RESEARCH. The Progress of Research, R. K. Bagnall-Wild. Aerial Age, vol. 15, nos. 4 and 5, Apr. 3 and 10, 1922, pp. 78-79 and 103-104. Aero engine research; navigation; machines; materials. See also Flight, vol. 14, no. 8, Feb. 23, 1922, pp. 122-124.

AIR COMPRESSORS

NEW EFFICIENT TYPE. A New Air Compressor. Oil Eng. & Finance, vol. 1, no. 2, Mar. 25, 1922, pp. 378-380, 2 figs. Designed by A. H. Sproule which overcomes some of previous losses

ROTARY. The Planche Rotary Compressor (Compresseur rotatif, système R. Planche) Lucien Fournier, Génie Civil, vol. 80, no. 12, Mar. 25, 1922, pp. 275-277, 10 figs. Describes rotary air compressor based on principle of conchoidal motion of a disk-piston, and gives results of tests

AIRPLANE ENGINES

LIGHT-WEIGHT. Special Light-Weight Aero Engine, A. E. L. Chorlton. Aeronautical Jl., vol. 26, no. 136, Apr. 1922, pp. 137-148, 1 fig. Discusses the more important types of engines and gives principal characteristics in tables.
STARTING AT LOW TEMPERATURE. Starting Aircraft Engines at Low Temperatures. Aviation, vol. 12, no. 18, May 1, 1922, p. 505. Abstract from technical memorandum no. 29, Canadian Air Board, by Prof. Robb at Edmonton, Alberta.

AIRPLANES

AIR-SPEED RECORDER. Manometer For Recording Air Speed, C. Wieselberger. Aerial Age, vol. 15, no. 6, Apr. 17, 1922, pp. 131-132, 3 figs. Describes instrument made at Gottingen aerodynamic laboratory, answering following conditions: (1) Must respond quickly so that all speed variations will be correctly recorded. (2) Must not be affected by rectilinear or curvilinear accelerations. Hence, movable parts must be counterbalanced. Translated from Zeit, für Flugtechnik u. Motorluftschiffahrt.
HANDLEY PAGE W. 8B. The Handley Page W. 8b. Aeroplane, vol. 22, no. 16, Apr. 19, 1922, pp. 280-281, 12 figs. Description of design to be used on Handley Page service, modification of well-known W.S.
SUSPENDED WING FOR TEST. Aeroplane Will Carry Suspended Wing in Teet. Aerial Age Weekly, vol. 15, no. 7, Apr. 14, 1922, p. 151. Full size wing to be tested for first time at Langley Field Laboratory of Nat. Advisory Com. for Aeronautics. Inverted and supported from plane by three wires.
THEORY OF STABILITY. A Theory and its Proof, G. A. Spratt. Aviation, vol. 12, no. 18, May 1, 1922, pp. 510-511, 2 figs. Some theoretical consideration in the design of gliding and soaring aircraft, especially low-power sport airplanes.

AIRSHIPS

SURFACE AREA. Determination of Surface Area for Airships, Edward P. Warner. Aviation, vol. 12, no. 16, Apr. 17, 1922, pp. 450-451, 1 fig. Discusses use of Lieutenant Diehl's formula.
TESTING MODELS. Hydrostatic Test of an Airship Model. Aerial Age Weekly, vol. 15, no. 7, Apr. 24, 1922, pp. 154-155, 158, 166, 4 figs. Goodyear Rubber Co. model studies with both ballonets empty, forward ballonet filled with air, rear ballonet filled with air, and both ballonets filled with air.

ALLOYS

ALUMINUM. *See aluminum alloys.*
CALITE. Calite—A New Heat Resisting Alloy. Automotive Industries, vol. 46, no. 18, May 4, 1922, p. 955. New Heat-resisting alloy containing aluminum, nickel and iron which resists oxidization up to 2,200 deg. Fahr.
COBALT-TUNGSTEN. Cobalt-Tungsten Alloys (Kobalt-Wolframlegierungen), Karl Kreitz. Metall u. Erz. vol. 19, no. 6, Mar. 22, 1922, pp. 137-140, 1 fig. A diagram of state for cobalt-tungsten alloys is plotted and conditions for obtaining a faultless casting are determined.
ELECTROCHEMISTRY. The Electrochemistry of Metal Alloys (Die Elektrochemie der Metallegierungen) R. Kremann. Metall, no. 5, Mar. 10, 1922, pp.. 53-55. Effect of precipitation on behavior and composition of alloys.
NICKEL. *See nickel alloys.*
ZINC. *See zinc alloys.*

ALUMINUM

CERIUM, INFLUENCE OF. Influence of Cerium on Aluminum and Other Light Metal Alloys, Josef Schulte. Metal Industry (N.Y.), vol. 20, no. 4, Apr. 1922, pp. 142-144, 1 fig. Describes experiments carried out with view to improving, melting and soldering of light metals. Translated from Metall und Erz, May 22, 1921.
PLATE, DECOMPOSITION. Decomposition of Aluminum Plate (Zersetzungserscheinungen an Aluminiumblechen), H. Kropf. Metall-Technik, vol. 48, nos. 8-9, Feb. 25, 1922, pp. 68-69. Gives results of investigations carried out by Prof. Heyn and Bauer on three different kinds of aluminum plate showing signs of decomposition.

ALUMINUM ALLOYS

ALUMINUM-SILICON. Aluminum-Silicon Alloys, Zay Jeffries. Chem. & Met. Eng., vol. 26, no. 16, Apr. 19, 1922, pp. 750-754, 15 figs. Coming into use because of superior casting qualities; history, technical properties, and characteristics.
BRONZES. Aluminum Bronze, An Alloy of Strength, Wallam Dint Williams. Raw material, vol. 5, No. 3, Apr. 1922, pp. 105-109, 15 figs. Discusses an alloy, of 90 per cent Cu and 10 per cent Al, its properties, macrographic examination, casting, etc. Taken from Revue de Métallurgie.
FAILURE, CASES OF. Some Cases of Failure in "Aluminum" Alloys, W. Rosenthain Metal Industry (N.Y.) vol. 20, No. 4, Apr. 1922, p. 140, 2 figs. Shows that many of aluminum alloys which fail are not really aluminum alloys. Read before British Inst. Metals.
HIGH STRENGTH OF. New Aluminum Alloys of High Strength. Chem. & Met. Eng., vol. 26, no. 15, Apr. 12, 1922, pp. 689-694, 5 figs. Digest of eleventh report of Alloys Research Committee of British Instn. Mech. Engrs. Properties of some alloys; permanence and constitution of alloys; age-hardening with magnesium and silicon.
SILICON, WITH. Alloys of Aluminum with Silicon, H. Sutton. Metal Industry (Lond.), vol. 20, no. 16, Apr. 21, 1922, pp. 365-366, 2 figs. Some investigations of ternary and more complex alloys.
"Y ALLOY." Y Alloy (Aluminum-Copper-Nickel-Magnesium), Chem. & Met. Eng., vol. 26, no. 17, Apr. 26, 1922, pp. 785-787, 6 figs. A light aluminum alloy having strength of soft steel and good ductility; easy to cast and roll; retains its desirable properties in gas-engine parts working at 250 deg. Cent.; immune from season cracking and corrosion.

AMMONIA

BY-PRODUCT AND SYNTHETIC. By-Product and Synthetic Ammonia, Gas. Engr. vol. 38, no. 549, Jan. 16, 1922, pp. 8-10. Value of ammonia for soil fertilization and relative merits of two systems of obtaining it.

REFRIGERATING CAPACITY OF. A Pound of Ammonia, John E. Starr. Refrig. World, vol. 57, no. 4, Apr. 1922, pp. 11-12. Method by which amount of refrigeration can be computed directly from weight of ammonia boiled per hour.

AMMONIA COMPRESSORS

Dry and Wet Methods. Operating Ammonia Compressors, W. S. Doan. Refrig. World, vol. 57, no. 4, Apr. 1922, pp. 17-18, 3 figs. Relative merits of two methods of compression.

ANILINE

Catalytic Preparation. Catalytic Preparation of Aniline, O. W. Brown and C. O. Henke. Jl. Physical Chem., vol. 26, no. 3, Mar. 1922, pp. 272-287, 4 figs. Results of studies on effect of different catalysts on reduction of nitrobenzene to aniline by hydrogen in presence on nickel, and copper catalysts.

ANTIMONY

Uses. Modern Uses of Antimony (Les usages modernes de l'antimoine), Albert Hutin. Nature, no. 2502, Mar. 18, 1922, pp. 172-174. Briefly describes deposits in various countries, and metallurgy, including alloys.

APPRENTICES, TRAINING OF

New Plan. A Constructive Apprenticeship Movement. Sheet Metal Worker, vol. 13, no. 5, Mar. 31, 1922, pp. 153 and 161. Discusses new plan approved by employer, in operation in New York, and recommended by New York Building Congress.

ASBESTOS

Utilization of Waste. The Utilization of Asbestos Waste. India-Rubber Jl., vol. 63, no. 15, Apr. 15, 1922, pp. 15-16, 1 fig. Difference of asbestos from other organic fiber makes this special problem. Suggestions of various uses for same.

ASPHALT

Concrete Mixes, Control of. Control of Asphaltic Concrete Mixes, Ellis R. Dutton. Mun. and County Eng. vol. 62, no. 4, Apr. 1922, pp. 121-122, 2 figs. Method of selecting proper proportions of various ingredients.

Trinidad's Pitch Lake. Trinidad's Famous Pitch Lake, Col. H. A. Judd. Petroleum Times, vol. 7, no. 171, Apr. 15, 1922, pp. 501-502, 4 figs. Description giving some idea of its value as a source of supply.

ATOMS

Artificial. Artificial Disintegration of the Elements, Ernest Rutherford. Chem. Soc. Jl., vol. 121-122, no. 713, Mar, 1922, pp. 400-415, 4 figs. Concludes that atoms are such stable structures and nuclei are held together by such powerful forces that only most concentrated source of energy like the a-particle is likely to be effective in an attack.

AUTOGENOUS WELDING

Preheating. Preheating in Autogenous Welding (Uber das Vorwarmen bei der autogenen Schweissung), Theo Kautny. Autogene Metallbearbeitung, vol. 15, no. 3, Feb. 1, 1922, pp. 35-39, 8 figs. Advantages of preheating; describes Acme preheater, built by Lausanne Machine Co.

AUTOMOBILE ENGINES

Heavy-Oil. A Heavy-Oil Automobile Engine (Un moteur d'automobile à huile lourde). Nature, no. 2499, Feb. 25, 1922, pp. 115-120, 4 figs. Describes the Peugeot engine which operates on kerosene, mazout or vegetable oils and has smaller fuel consumption in addition.

Oil-Cooled. British Oil-Cooled Car Engines, M. W. Bourdon. Automotive Industries, vol. 46, no. 16, Apr. 20, 1922, pp. 849-851, 2 figs. Description of oil-cooled engines developed by G. M. Bradshaw, English airplane engine expert. Claimed to have all advantages of air-cooled engine and none of drawbacks.

Stutz. New Stutz Engine More Powerful; Higher Maximum Car Speed. Motor Age, vol. 41, no. 15, Apr. 13, 1922, pp. 16-17, 5 figs. Better handling of fuel, lighter and shorter pistons, better water circulation.

AUTOMOBILE FUELS

Alcohol and Gasoline Mixtures. Using Mixtures of Alcohol and Gasoline in Engines (Note sur l'utilisation, dans les moteurs des mélanges d'alcool et d'essence), Nicolardot. Technique Automobile et Aérienne, vol. 12, no. 115, 1921 and vol. 13, no. 116, 1922, pp. 116-124 and 18-21, 9 figs. No. 115: Discusses solubility of alcohol in gasoline and experiments made for French war office. No. 116: Fives curve diagrams for solubility limits of alcohol, gasoline, benzol, and explains their application.

Detonation. Detonation—A Consideration of Its Causes, Stanwood W. Sparrow. Automotive Industries, vol. 46, no. 18, May 4, 1922, pp. 951-955, 5 figs. Consideration of tendency of fuel to detonate. Effect of explosion pressure, spark advance and other related factors.

Naphtalene. Hydrated Naphthalene as Automobile Fuel (Hydriertes Naphthalin als Betriebstoff fur Automobile), J. Formánek. Allgemeine Automobil-Zeitung, vol. 23, no. 10, Mar. 11, 1922, pp. 27-29. Describes experiments made which show that tetraline and decaline mixed with benzol and benzene can be used to advantage; tetraline, is superior to benzene or benzol.

AUTOMOBILES

Automatic Chassis Lubrication. An Automatic Chassis Lubricating System. Automotive Industries, vol. 46, no. 18, May 4, 1922, pp. 950, 1 fig. New Chalco [illegible], with oil and grease cups on chassis.

Differential-Compensating. A New Type of Compensating Differential. Automotive Industries, vol. 46, no. 16, Apr. 20, 1922, pp. 857-858, 3 figs. Description of Krohn differential, which allows maximum differential action [illegible] resistance at greater r.p.m.

[illegible] Rear Wheel. Rear Wheel Dynamometer Tests and Their Significance to the Engineer, Herbert Chase. Automotive Industries, vol. 46, no. 16, Apr. 20, 1922, pp. 859-868, 27 figs. Description and data from apparatus in Mason Laboratory, Sheffield Sci. School, Yale Univ. Includes comments on rolling friction, wind resistance, tractive effort, and fuel economy.

Gear Ratio 1914-1922. Rear Axle Gear Ratios of Passenger Cars from 1914 to 1922. Motor Age, vol. 41, no. 18, May 4, 1922, pp. 48-51, 1 fig. Tables of gear ratios [illegible]

M[illegible] Standard for Motor Car Maintenance, P. L. Dumas. Motor Age, vol. 41, no. 14, Apr. 6, 1922, pp. 30-36, 11 figs. [illegible] rigid inspection. Serious consequences of trivial omissions. Function of log book, tolerance sheet and timing [illegible]

Transmission Production. An Efficient Method of Transmission Production, J. Edward Schipper. Automotive Industries, vol. 46, no. 16, Apr. 20, 1922, pp. 869-872, 13 figs. Methods employed in Hudson and Essex Transmission Dept. Drilling of cases and machining of gear blanks accomplished by labor-saving methods. Gears matched for best mesh by special testing device.

AVIATION

Aerial Navigation. The Basic Principles of Aerial Navigation (Ueber die Grundlagen der Nautik des Luftmeeres), Conrad Harmsen. Schiffbau, vol. 23, nos. 14, 15, 17 and 18, Jan. 4, 11, 25 and Feb. 1, 1922, pp. 403-408, 435-439, 495-501 and 533-538, 10 figs. Study based on author's experiences during war. Comparison of general nautical and aeraunotical principles. Discussion and graphic solution of three most important problems of aerial navigation.

Maps and Navigation. Maps and Navigation Methods, A. Duval. Aerial Age Weekly, vol. 15, no. 9, May 8, 1922, pp. 198-199. International agreement as to maps and merits of flying by compass rather than landmarks. From Preimer Congrès International de la Navigation Aérienne, Nov. 1921.

B

BATTERIES

Copper Oxide Cell. New Type of the Copper Oxide Cell (Nouveau modèle de pile regénérable à l'oxyde de cuivre) Maurice Leblanc. Bul. de la Société Française des Electriciens, vol. 1, no. 10, Dec. 1921, pp. 427-434, 2 figs. Compares it with manganese dioxide cell, and concludes that it may replace latter especially when a constant tension or a great voltage intensity is required.

BAUXITE

Adriatic. Eastern Adriatic Bauxites (Beitrag zur Kenntnis der ostadriaticshen Bauxite) Fritz Kerner-Marilaun. Berg.-und Hüttenmännischles Jahrbuch vol. 69-70, no. 1, 1921-22, pp. 73-78, 2 figs. Discusses the various types of bauxites, the Sedramic, Domanovic, Kalun, Medvid, Imotski, Blizanzi and Grislic, their geology and extent of occurrence.

BEAMS

Continuous. Method for Calculating Lines of Influence of Bending Moments of Continuous Beams (Verfahren zur Ermittlung von Einflusslinien der Biegungsmomente durchlaufender Träger), H. Kayser. Beton u. Eisen, vol. 21, no. 4, Feb. 23, 1922, pp. 56-60, 12 figs. Describes simple method of calculating lines of influence for beams with unsymmetrical opening having no particular ratio to one another and for varying moments of inertia.

T-Shaped Cross-Sections. Method for Measuring T-Shaped Cross-Sections (Bermessungsverfahren für T-förmigen Querschnitt), Franz Kardos. Beton u. Eisen, vol. 21, no. 4, Feb. 23, 1922, pp. 62-65, 4 figs. Presents chart for measurement of t-shaped cross-sections and describes its applications.

BEARING METALS

Babbitt, Pouring Temperature for. Definite Temperature Control Nesessary in Babbitt Pouring. Karl F. Smith. Elec. World, vol. 79, no. 18, May 6, 1922, pp. 886-887. Challenge of article on "Suggestions on Rebabitting Bearings," by M. M. Brown, p. 434 of Elec. World, Mar. 4.

BEARINGS

Frictional Resistance of Lubricated. The Synthetic Calculation of Frictional Resistance of Lubricated Bearings (Die synthetische Berechnung der Reibungswiderstände geschmierter Lager, Etc.), W. v. Dallwitz-Wegner. Zeit. für technische Physik, vol. 3, no. 1, 1922, pp. 21-28, 8 figs. Calculation to determine properties of lubricating oil, based on internal friction or lubricating oil and capillary properties of oil and bearing metal.

Unsymmetrical. Pressures in Unsymmetrical Bearings, A. W. Knight. Machy. (Lond.), vol. 19, no. 496, Mar. 30, 1922, pp. 789-790, 2 figs. Makes calculations from which it is concluded that it is bad practice to use unsymmetrical bearings of whatever proportions.

BELTING

Care and Splicing. Splicing and Care of Leather, Rubber and Canvas Belts, G. H. Radebaugh. Coal Age, vol. 21, no. 17, Apr. 27, 1922, pp. 687-690, 25 figs. Oak-tanned leather preferable for power transmission; why short-lap belt is recommended; tallow and cod-liver oil make good dressing; cement, wire and raw hide fastenings.

Leather. Leather Belt Research Conclusions, J. Edgar Rhoads. Can. Mfr., vol. 42. no. 4, Apr. 1922, pp. 25-26. Manufacturers have conducted investigations into various phases of uses of leather belting, results of which are outlined.

V-Type. New Belt That May Revolutionize Drives to Light Machinery, Roger Fison. Belting, vol. 20, no. 4, Apr. 1922, pp. 26-28, 1 fig. Due to greater friction surface and flexibility this type can transmit much greater power under less tension than round belt. Hints on other sizes.

Widths, Relative Capacity. Relative Capacity of Leather Belts of Different Widths, Belting, vol. 20, no. 4, Apr. 1922, pp. 36-38, 1 fig. Experiments by R. S. Jones of Leather Belting Exchange Foundation, Cornell Univ. Power transmitted increased from 22 at end of 9 hr. to 57 at end of 47½ hr. Capacity apparently varies directly with width.

BLAST-FURNACE GAS

Cleaning. Economy of Modern Blast-Furnace-Gas Cleaning Processes in the Rhur and Minette Districts (Wirtschaftlichkeit neuzeitlicher Hochofengasreinigungen im Rhur- und Minettebezirk), Max Schlipköter. Stahl u. Eisen, vol. 42, nos. 8 and 11, Feb. 23 and Mar. 16, 1922, pp. 285-290 and 408-422, 4 figs. 1 on supp. plate. Advantages of use of finely purified gases in air heating. Influence of water content of gases. Requirements of blast-furnace gas for economical operation. Determination of operating costs of cleaned gases based on practical examples with different cleaning processes. Advantages of dry filter process.

BLAST FURNACES

Oxygen Admixture to Air. The Admixture of Oxygen to Blast in Blast-Furnace Plants (Verwendungsmoglichkeiten der Lindeluft in Hochofenbetrieben), Theodor Wagner. Stahl u. Eisen, vol. 42, no. 12, Mar. 23, 1922, pp. 456-460. Notes on earlier opinions and experiments; changed conditions in blast-furnace practice since war; reduction of coke charge and introduction of producer gas

or pulverized coal through tuyeres [illegible] blast furnaces with pulverized coal heating.

BOILER FEEDWATER

Preheating. Preheating of Locomotive Feedwater (Les réchauffeurs de eau d'alimentation des locomotives). Génie Civil, vol. 80, no. 14, Apr. 8, 1922, pp. 320-324, 8 figs. Compares open and closed types and discusses American practice.

Regulator, Automatic. Hydraulic Feed-Water Automatic Regulator. Mar. Engr. and Naval Architect, vol. 45, no. [illegible], Apr. 1922, pp. [illegible]. Some features of new Aster-Anthony hydraulic feed-water regulator.

Self-Cleaning Evaporator Coils. Self Cleaning Evaporator Coils. Am. Mar. Engr., vol. 17, no. 5, May 1922, p. 33. Reilly evaporator, submerged type, self-cleaning coil solved problem of accumulation of salt scale.

BOILER FIRING

Brown Coal. Boiler Firing with Brown Coal (Feuerungsanlagen fur Rohbraunkohlen), O. Binder. Wärme- u. Kalte-Technik, vol. 24, no. 6, Mar. 15, 1922, pp. 65-67, 4 figs. Suitable firebox and grate arrangements; mechanical stoking; etc.

Peat. Pure and Mixed Peat Fuel for Boiler Firing (Reine und gemischte Torffeuerung in Dampfkesselfeuerungen). Rauch u. Staub, vol. 12, no. 6, Mar. 1922, pp. 53-56. Adaptation of firebox conditions to burning of peat, and advantages of peat in firing with brown coal and other low-grade fuels.

Peat. Firing Peat Under Boilers With Inclined Grate and Automatic Stoking (Die Verfeuerung von Torf in einer Schrägrost-Beschickung unter Luftabschluss), W. Ledler. Wärme, vol. 45, no. 10, Mar. 10, 1922, pp. 121-124, 2 figs. Describes furnace built by Varel Iron Wks., near Oldenburg, and gives results of number of evaporation tests.

BOILER OPERATION

Load Indicators. Indicating Station Load in the Boiler Room, [illegible]. Power, vol. 55, no. 15, Apr. 11, 1922, pp. 579-580, 4 figs. Automatic load indicator is described which has made it possible to hold steam pressures within prescribed limits under fluctuation loads and practically to prevent safety valves popping off.

BOILERS

Cleaning. Cleaning Boilers by Means of Sand-Blast Apparatus (Reinigung von Dampfkesseln durch Sandstrahlgebläse), W. Kaempfer. Technische Blätter, vol. 12, no. 15, Apr. 14, 1922, pp. 153-154, 6 figs. Describes various experiences, especially with cleaning locomotive boilers; process requires about 200 kg. of sand per hr.

Furnace. *See Furnaces, Boiler.*

Locomotive. *See Locomotive Boilers.*

Treatment of Water. Boiler Water, C. E. Joos and A. W. Binns. Power Plant Eng., vol. 26, nos. 9 and 10, May 1 and 15, 1922, pp. 456-460 and 511-514, 23 figs. May 1: Up-to-date methods of eliminating impurities which cause trouble in boilers. May 15: Priming, its causes and their relative importance; continuous determination of steam quality.

Upkeep of Idle. Upkeep of Idle Boilers (La conservation des chaudières en chômage), V. Kammerer. Bul. des Associations Françaises de Propriétaires d'Appareils à Vapeur, no. 3, Jan. 1921, pp. 133-138. Precautionary measures to keep out rust, contact with air or water, etc.

BRASS

Cold Strip Rolling. American Practice in Cold Rolling Brass Strip, C. E. Davies. Metal Industry (Lond.), vol. 20, no. 13, Mar. 31, 1922, pp. 293-297, 2 figs. Points out that main points of difference in American from English practice are (1) machining or overhauling cast ingot before rolling; (2) increased rolling speeds; and (3) improved methods and appliances for handling and cleaning metal.

BRICK

Sand-Lime. The Manufacture of Lime Sand Bricks, C. Naske. Eng. Progress, vol. 3, no. 4, Apr., 1922, pp. 81-84, 5 figs. Manufacturing process from sand and lime to finished brick.

BRICKMAKING

Burning Shale Brick. Burning Shale Brick, L. B. Rainey, Brick & Clay Rec., vol. 60, no. 9, May 2, 1922, pp. 693-695, 5 fig. Discusses various stages of burning, production of colours, reduction of scum, value of pyrometer and cones and speeding up kiln turnover. Paper read before Eastern Red Div. of Am. Face Brick Assoc.

BRIDGES

Maximum Load for Materials. Admissible Loads on Bridge Materials (Zulässige Inanspruchnahme der Brukenbaustoffe), Wilhelm Hauser. Zeit. des Osterr. Ingenieur- und Architekten-Vereines, vol. 74, no. 13-14, Mar. 31, 1922, pp. 63-64. Calculation of maximum load; gives table of value.

Concrete. Highway Bridges Over Spillways of Dams of Miami Conservancy District. Eng. and Contracting, vol. 57, no. 17, Apr. 26, 1922, pp. 393-394, 3 figs. Deck girder type concrete bridges which span all five dams.

BRIDGES, CONCRETE

Arch. Design Features of Concrete Arch Bridge at Winnipeg. Eng. and Contracting, vol. 57, no. 17, Apr. 26, 1922, pp. 398-401, 2 figs. Proportion of parts forming an harmonious whole and mental process involved makes this bridge of unusual interest.

Pressure, Distribution in Girders. Distribution of Pressure in the Separate Girders of Concrete Bridges. (Die Druckverteilung auf die einzelnen Träger der Betonbrücken), Maximilian Thullie. Beton u. Eisen, vol. 21, no. 4, Feb. 23, 1922, pp. 67-70, 6 figs. Describes graphic method of calculation pressures developed by author which, though only approximate, is said to be sufficiently accurate and much simpler than Kögler's numerical method.

BRIDGES, HIGHWAY

Concrete. Concrte Used in Larger Highway Bridges. Eng. World vol. 20, no. 5, May 1922, pp. 292-294, 3 figs. Practical and ornamental advantages of this type of structure.

Prairie du Sac, Wis. Constructing Prairie du Sac Highway Bridge. Pub. Works, vol. 52, no. 18, May 6, 1922, pp. 311-313, 3 figs. Cofferdam construction of piers and erection of steel by derick-car and traveler for 18 plate girder spans. Concrete plant for substructure traveled on long trestle falsework.

BRIDGES, LIFT

Bascule. An Electrically Controlled Bascule Bridge. Electrician, vol. 88, no. 2292, Apr. 21, 1922, pp. 471-472, 2 figs. Description of installation at King GEORGE V dock, N. Woolwich, by Port of London Authority.

BRIDGES, RAILWAY

Loading and Maximum Stresses. The Work of the Indian Railway Bridge Committee, Ry. Engr., 42 and 43, nos. 503, 504, 505, 507, Dec. 1921, Jan., Feb. and Apr. 1922, pp. 446-447, 11-12, 71-74 and 138-139, 9 figs. Report of committee appointed to revise standards bridge rules as to loading and maximum stresses. Dec.: Indian Ry. loading tables. Jan.: Question of working stresses. Feb. Question of Impact and vibration. Apr.: Transmission of pressure through earth.

BROACHES

Full. The Design of Full Broaches. Machy. (Lond.), vol. 20, no. 497, Apr. 6, 1922, pp. 13-15, 4 figs. Depth of cut; pitch of teeth; length; shape of teeth; methods of attaching broaches to machines.

BRONZES

Cast, Analysis of. Notes on the Analysis of Cast Bronze, G. E. F. Lundell and J. A. Scherrer. Jl. of Indus. & Eng. Chem., vol. 14, no. 5, May 1922, pp. 426-429. Desirable procedures and precautions often ignores. Based on work done at Bur. of Stand. and by co-operating analysts.

C

CABLES

Laying Method. The Mangnall-Irving Thrust-Borer. Elec. Rev. (Lond.), vol. 90, no. 2317, Apr. 21, 1922, pp. 545-516, 5 figs. Describes machine whose object it is to eliminate trenching and tunnelling when laying pipes, cables, etc. Method employed is to bore horizontal holes through ground below surface, between pits sunk at required distance apart.

CAISSONS

Reinforced-Concrete. Reinforced- Concrete Caissons for Compressed Air Foundation Work (Caissons en beton armé, pour fondations à l'air comprimé), J. Eugenio Ribera. Génie Civil, vol. 80, no. 14, Apr. 8, 1922, pp. 318-320, 9 figs. Discusses advantages over metal caisson and describes some recent applications.

CALORIMETRY

Bomb Corrosion. The Effect of Bomb Corrosion on the Accuracy of Calorimetric Determinations, H. L. Olin and R. E. Wilkin. Chem. & Met. Eng., vol. 26, no. 15, Apr. 12, 1922, pp. 694-696. Describes experiments made with nickel-lined bombs.

CALORIMETERS

Continuous-Flow. A Continuous-Flow Calorimeter, and the Determination of the Heat of Neutralization of a Solution of Hydrochloric Acid by one of Sodium Hydroxide, Frederick G. Keyes, Louis J. Gillespie and Shinroku Mitsukuri. Am. Chem. Soc. Jl., vol. 44, no. 4, Apr. 1922, pp. 707-717, 3 figs. Describes experiments carried out and apparatus used.

CAMS

Calculation. Calculation of Cams (Calcul des cames), Octave Lepersonne. Technique Automobile et Aérienne, vol. 12, nos. 113 and 114, 1921, pp. 33-42 and 68-71, 15 figs. No. 113: Discusses theory, determination of geometric form, application of straight line and arc profiles. No. 114: Graphic calculation and numerical examples.

CANALS

St. Lawrence Project. The St. Lawrence Seaway, W. L. Saunders, Am. Inst. Elec. Engrs. Jl., vol. 41, no. 5, May 1922, pp. 379-382. Many arguments in favour including quotations from recognized sources.

CARS

Design Problems. Springs, Draft Gears and Other Problems in Car Design, Louis E. Endsley. Ry. Rev., vol. 70, no. 17, Apr. 29, 1922, pp. 591-594, 3 figs. Shorter spring travel and longer draft gear travel suggested as solution to most serious problem. Address before Virginia Section of A.S.M.E.

CAST IRON

Early History. The Early History of Iron with Special Reference to Cast Iron, J. Newton Friend. Foundry Trade Jl., vol. 25, nos. 290-291 and 292, Mar. 9, 16 and 23, 1922, pp. 182-183, 193-194 and 216-218, 9 figs. Discusses iron in Egypt and Palestine, Mesopotamia, Europe, Great Britain and Central Africa; direct reduction of iron ores; reduction of iron in Africa; discovery of cast iron; 18th century developments.

Mechanical Tests. Mechanical Tests of Cast Iron (Considérations générales sur les essais mécaniques des fontes), M. Portevin, Revue Universelle des Mines, vol. 12, no. 6, Mar. 15, 1922, pp. 507-511. Discusses the various tests available and shows that some, such as the impact test, are of no value. Recommends tensile strength and Brinell tests.

CEMENT

Canadian Specifications. New Cement Specifications, Canadian Engineering Standards Association. Can. Engr., vol. 42, no. 17, Apr. 25, 1922, pp. 428-429. Résumé of new report from Can. Standards Assn. based also on specifications of Eng. Inst. of Canada, Am. Soc. for Testing Matls., and Brit. Standards for Portland Cement.

Fused. Fused Cement (Le ciment fondu). Vie Technique et Industrielle, vol. 3, no. 30, Mar. 1922, pp. 503-506, 4 figs. Discusses French process for making cement containing 10 per cent silica, 40 alumina, 10 iron oxide, 40 lime, raised to temperature of complete fusion, and its properties and characteristics.

HARDENING. Experiments on the Effect of Low Temperatures on the Hardening of Cement (Versuche über die Einwirkung von niedrigen Temperaturen auf das Erhärten des Zements), H. Kreüger. Beton u. Eisen, vol. 21, no. 5, Mar. 18, 1922, pp. 74-78, 4 figs. Discusses tests with cement cubes to show effect of freezing temperature and draws number of conclusions.

CEMENT MILLS

JAPANESE. A Modern Japanese Cement Plant. Rock Products, vol. 25, nos. 8 and 9, Apr. 22, and May 6, 1922, pp. 38-43, and 36-39 25 figs. Description of 5,000 barrel capacity per day plant of Assano Co. at Kawasaki, Japan.

CENTRAL STATIONS

HEATING AND POWER. Investigating the Efficiency of a Central Heating and Power Station (Wirtschaftliche Untersuchungen an einem Fern-Wärmekraftwerk), M. A. Nüscheler. Gesundheits-Ingenieur, vol. 45, no. 13, Apr. 1, 1922, pp. 169-177, 5 figs. Author's experience in construction and operation of steam piping for central heating stations, either in connection with central power stations or without it.

INSTALLED GENERATOR RATING, U.S. Rating of Generators in Central Stations Totals 14,466,915 Kw. Elec. World, vol. 79, no. 14, Apr. 8, 1922, pp. 670-679, 1 fig. Analysis of centra-station development indicates total of 5532 electric generating plants, of which almost 65 per cent are privately owned. Hydroelectric plants total 1421.

SUPER-POWER. Super-Power System for Japan, C. A. Powel. Elec. Rec., vol. 31, no. 5, May 1922, pp. 357-359, 1 fig. Program for furnishing electricity over large area between Tokio and Osaka.

SUPER-POWER PROJECT. Hoover Sees Super-Power Project as Possible Stabilizer of Coal Industry. Min. Congress Jl., vol. 8, no. 5, May 1922, pp. 729-730. Theory that project in Atlantic Coast region between Washington, D.C. and Portland, Me., night stabilize coal industry.

CERAMIC INDUSTRY

FELDSPAR INDUSTRY. Conditions in the Feldspar Industry, Raymond B. Ladoo. Raw Material, vol. 5, no. 4, May 1922, pp. 150-154, 10 figs. This important non-metallic mineral, main ingredient in enamel and largely used as flux in abrasive manufacture.

CHEMICAL PLANTS

FOG DISSIPATION. Fog Dissipation Plants for Chemical Factories (Entnebelungsanlagen in chemischen Fabriken), P. Martell. Chemiker-Zeitung, vol. 46, no. 44, Apr. 13, 1922, pp. 333-334, 3 figs. Describes device consisting of a heating apparatus and a low-pressure centrifugal fan which can be driven by electric motor or from a shaft.

CHIMNEYS

HEAT LOSSES IN. The Relation Between CO_2 and Stack Losses. Power Plant Eng., vol. 26, no. 8, Apr. 15, 1922, pp. 429-431, 3 figs. Discusses various factors governing chimney loss, and shows that the magnitude of chimney loss bears definite relation to percentage of CO_2 in flue gases.

CHLORIDIZING

VOLATILIZATION. Heat Requirements of Chloridizing Volatilization, Oliver C. Ralston. Eng. and Min. Jl.-Press, vol. 113, no. 15, Apr. 15, 1922, pp. 614-615. Criticism of statements made by the late Harai R. Layng.

CLUTCHES

MAGNETIC. Magnetic Clutches in the Cement Industry, W. H. Costello. Am. Inst. Elec. Engrs. Jl., vol. 41, no. 5, May 1922, pp. 361-363, 2 figs. Clutch requirements and description of magnetic type which meets them.

COAL

ANALYSIS. Coal Analysis May Be Misleading Because of Crude and Insufficient Sampling, O. P. Hood. Coal Age, vol. 21, no. 12, Mar, 23, 1922, pp. 484-486. Advises averaging of numerous samples taken over long period to get representative value. Based on address before Nat. Assn. Purchasing Agents.

COKING PROPENSITIES. The Coking Propensities of Coals, W. A. Bone, A. R. Pearson, E. Sinkinson, W. E. Stockings, Gas World, vol. 76, no. 1967, Apr. 4, 1922, pp. 16-20, 1 fig. Results of experimental investigations into resinic constituents of bituminous coals and their supposed determining influence upon coking propensities of coals. (Abstract). Paper read before Royal Soc.

COMBUSTION. Combustion of Coal, R. B. MacMullin. Combustion, vol. 6, no. 3, Mar. 1922, pp 118-123, 5 figs. Composition and classification of coal; oxidation of carbon.

COAL GAS

ECONOMICAL USE. Economical Use of Illuminating Gas (L'emploi économique du gaz d'éclairage), R. Villers. Nature, no. 2500, Mar. 4, 1922, pp. 134-138, 7 figs. Various uses of the gas; types of burners; proper mixing with air; compressing

COAL HANDLING

BUNKERING CRANES. Recent Developments in Bunkering Cranes, Cargo, Coal Loading Equipment and Shipbuilding Cranes, Justin Griess. World Ports, vol. 10, no. 6, Apr. 1922, pp. 47-55. Describes methods for bunkering coal at various harbours.

EQUIPMENT. Coal and Ash-Handling Equipment, Harry R. Westcott, Steam, vol. 29, no. 4, Apr. 1922, pp. 93-100. Description of various units from yard storage through traveling bridges, feeders, chain elevators and conveyors to ash hoppers.

COAL MINES

SHAFT-BOTTOM RELINING. Relining a Shaft-Bottom with Reinforced Concrete, T. Crosby. Iron and Coal Trades Rev., vol. 104, no. 2821, Mar. 24, 1922, pp. 413. Describes operation in detail; adoption of reinforced-concrete justified by prohibitive price of best brick. From paper read before Yorkshire County Colliery Under-Mgrs'. Assn.

COAL STORAGE

METHODS. Coal Storage (La Conservation des charbons), E. Schmidt. Bul. des Associations Françaises de Propriétaires d'Appareils à Vapeur, no. 4, Apr. 1921, pp. 165-181. Discusses change in coal exposed to air, spontaneous combustion, storage under water, coal piles, etc.

COKE BREEZE

STEAM GENERATION. The Utilization of Coke Breeze for the Generation of Steam, W. Francis Goodrich. Gas Engr., vol. 38, no. 550, Feb. 15, 1922, pp. 44-46. Features of this fuel which make it of real value.

COMPRESSED AIR

MINES. Determining the Drop in Pressure in Compressed Air Piping in Mines (Ermittlung des Druckabfalls in Pressluftleitungen untertage), W. Reinhard. Glückauf, vol. 58, no. 15, Apr. 15, 1922, pp. 433-436, 1 fig. Discusses drop due to pipe resistance, and gives chart from which average loss of head can be calculated.

CONCRETE

REINFORCED AND NON-REINFORCED. Reinforced and Non-Reinforced Concrete (Gewapend- en ongewapend beton in de versterkingskunst), J. H. de Man. Ingenieur, vol. 37, no. 12, Mar. 25, 1922, pp. 210-231, 44 figs. Discusses concrete work with and without reinforcing for military defensive purposes, effect of heavy shells, etc., and gives examples of various forts.

CONCRETE CONSTRUCTION, REINFORCED

MONOLITHIC STRUCTURES. Secondary Stresses in Monolithic Structures and How to Calculate Them, R. J. Harrington Hudson. Indian Eng., vol. 71, no. 9, Mar. 4, 1922, pp. 122-124, 12 figs. on supp. plate. Discusses new method of investigating stresses in monolithic reinforced-concrete structures.

CONDENSERS

STEAM. Season Cracking in Condenser Tubes. Power Plant Eng., vol. 26, no. 9, May 1, 1922, pp. 461-462, 6 figs. Cracking of tubes. Study of costs and suggestions toward elimination.

CONDENSERS, ELECTRIC

POWER FACTOR, FOR INCREASING. Increasing the Power Factor by Means of Condensers (Le relèvement du facteur de puissance par les condensateurs), Catulle-Cambier. Electricien, vol. 52, no. 1286, Oct. 15, 1921, and vol. 53, nos. 1922 and 1293, Jan. 15 and Feb. 1, 1922, pp. 457-461, 25-29 and 58-66, 19 figs. Oct. 15: Calculation of capacity of condensers for various cases. Jan. 15: Discusses influence exerted by condensers in the various elements. Feb. 1: Discusses direct influence of capacity on power factor, and gives chart for finding it; connecting batteries; short circuits; etc.

CONDUITS

BUILT-IN-PLACE GUNITE. Built-in-Place Gunite Water Conduit. Contract Rec., vol. 63, no. 18, May 3, 1922, pp. 398-402. Unusual design and cement gun construction produce economical low head conduit details, costs and solutions of special problems.

CONVEYORS

BELT. Biggest Belt-Conveyor System in the World, D. R. Egbert. Belting, vol. 20, no. 4, Apr. 1922, pp. 17-25, 5 figs. Parcel-post station in Chicago to be completed June 1922, will have 8 miles canvas-stitched belting. Description of installation, largest in world.

MONORAIL. Monorail Conveyors on Clay Plants. Brick and Clay Rec., vol. 60, no. 8, Apr. 18, 1922, pp. 613-615, 9 figs. This type desirable for clay plants. Description of installations at R. Thomas & Sons, East Liverpool, Ohio, and Brooklyn (Ind.) Brick Co.

STEEL-BELT. Steel-Band Conveyors. Eng. Process, vol. 3, no. 5, May 1922, pp. 109-110, 13 figs. Application and advantages of steel-band conveyors of Sandviken type.

STEEL-BELT. Flexible Steel Belt Conveyors, Harry Carlson. Gas Age-Rec., vol. 49, no. 13, Apr. 1, 1922, pp. 383-385, 6 figs. Describes steel belt made by Sandviken Steel Works, Sweden, and gives particulars as to strength, corrosion, loading width, etc.

TELPHERS VS. Telphers vs. Conveyors for Gas Works Purposes, Herbert Blyth. Gas Engr., vol. 38, no. 549, Jan. 16, 1922, pp. 6-7, 2 figs. Features of gas manufacturing plant and conparative advantages of overhead and conveyor systems.

COPPER METALLURGY

PECHEY LEACHING PROCESS. Hydro-Metallurgy of Copper-The Pechey Leaching Process, J. D. Audley Smith, Chem. Eng. & Min. Rev. vol. 14, no. 162, Mar. 5, 1922, pp. 177-181, 5 figs. Description of this process which was first employed at Girilambone copper mine, New South Wales, by G. A. Pechey.

COPPER ORE

CHUQUICAMATA, SOUTH AMERICA. The Chuquicamata Ore Body (El mineral de Chuquicamata). Ingenieria Internacional, vol. 7, no. 5, May 1922, pp. 295-300, 8 figs. Reviews history of this copper deposit and methods employed in extracting low-grade ores.

ROASTING SEMI-OXIDIZED. Sulphatizing Roasting of Semi-Oxidized Copper Ores. PercyR Middleton. Eng. &Min. Jl.Press, vol.113, no.15, Apr.15,1922,pp.529-631, 4 figs. Process so conducted as to produce maximum content of water-soluble copper; close temperature regulation necessary.

TREATMENT OF POOR. Treatment According to the Wet Process of Copper-Poor Oxide Ores Rich in Lime and Magnesia (Die Verarbeitung kupferarmer, kalk- und magnesishaltiger, oxydischer Erze auf nassem Wege), Alfred S Schott. Metall u Erz, vol 19, nos. 4, 5 and 6, Feb. 22, Mar 8, and 22, 1922, pp 85-92, 112-119 and 140-152, 13 figs. Review of tests and results obtained with ammonia lixiviation. Cyanide of potassium as lixiviating medium for copper ores.

CORROSION

COLLOIDS, INFLUENCE OF PROTECTIVE. The Influence of Protective Colloids on the Corrosion of Metals and on the Velocity of Chemical and Physical Change, John A. N. Friend and Reece H. Vallance. Chem. Soc. Jl., vol. 121-122, no. 713, Mar. 1922, pp. 466-474, 2 figs. Concludes that after a general law protective colloids tend to retard velocity of such reactions as involve change of state from solid to liquid, or vice versa, in one or more of the components.

FERROUS METALS. Corrosion of Ferrous Metals, Robert Abbott Hadfield. Metal Industry (Lond.), vol. 20, no. 16, Apr. 21, 1922, pp. 381-382. Preparation of various ferrous metals used in corrosion research of Inst. Civil Engrs. together with their physical and mechanical properties and some general considerations on subject of corrosion. (Abstract). Paper read before Inst Civil Engrs

Rust Prevention. The Prevention of Rust. Motor [illegible], vol. 34, no. [illegible], May 1, 1922, p. 529, 1 fig. Notes on [illegible] process for protecting certain parts of motor vehicles [illegible].

Oxidization Prevention. Calorizing and [illegible], H. H. [illegible] and C. R. Brophy. Gen. Elec. Rev., vol. 25, no. 5, May 1922, pp. [illegible], [illegible] figs. Description of process developed in Schenectady Research Laboratory to prevent corrosion.

COST ACCOUNTING

Depreciation and Retirement of Property. Depreciation and Retirement of Property, William H. Bell. Jl. of Accountancy, vol. 33, no. 4, Apr. 1922, pp. 253-258. Shows that where average rate of depreciation is used, if a unit of property is retired in advance of average estimated life, all contents less entire cost of unit retired should be charged to reserve for depreciation.

Engineering Methods applied to. Engineering Methods Applied to Cost Finding, Robert S. Denham. Indus. Management, vol. 63, nos. 2, 3, 4 and 5, Feb., Mar., Apr. and May, 1922, pp. 67-73, 161-166, 218-220, and 310-312, 4 figs. Feb.; Effect upon profit margin of traditional and misleading cost methods. Mar.: General principles underlying application of expense items. Apr.: Six fundamental principles of cost engineering. May: Definite procedure for surveying the requirements of production.

New Plan. Cost Accounting, Guy Foote Wetzel. Armour Engr., vol. 13, no. 3, Mar. 1922, pp. 163-174. Discusses cost accounting plan with some new features by A. W. Torbet, installed in large manufacturing plant, and compares with usual methods.

Scientific, Necessity for. Costing in Industry. Eng. & Indus. Management, vol. 7, no. 12, Apr. 20, 1922, pp. 357-360. First part of special report of Costing Conference held in Lond., covering cost accountant's position, works expenditure, periodical comparisons, and productive labor.

CRANES

Classification. Classification of Hoisting Machines Particularly Cranes (Einteilung der Hebe- und Transportmaschinen, insbesondere der Krane), R. Dub. Fördertechnik u. Frachtverkehr, vol. 15, nos. 1 and 2, Jan. 6 and 20, 1922, pp. 1-4 and 22-26, 59 figs. Classification of the various types of cranes into groups according to their kinematic characteristics, assuming that load is always concentrated at center of gravity.

Floating. A 60-ton Floating Crane, W. Fox. Mech. World, vol. 71, nos. 1837 and 1838 Mar. 17 and 24, 1922, pp. 207-209 and 224-226, 10 figs. Describes in retail revolving jib type floating crane, built by Werf Gusto (Firma A. F. Smulders), Schiedan, Holland.

Inspection. Things that the Crane Inspector Looks for and Some of the Hows and Whys, A. L. Gear. Elec. Rev. & Indus. Engr., vol. 80, no. 3, Mar. 1922, pp. 111-118, 152, 14 figs. Inspection report forms and things looked for in making inspection.

CRANKSHAFTS

Steel for. Steel for Crankshafts: Its Heat Treatment, H. C. Loudenbeck. Forging and Heat Treating, vol. 8, no. 4, Apr. 1922, pp. 181-183. Grades of steel that are being used for this purpose, and their heat treatment and physical properties to secure best results.

CUPOLAS

Charging Elevator, Combined with. An Improved Foundry Melting Plant. Engineer, vol. 133, no. 2457, Mar. 31, 1922, pp. 365-366, 3 figs. Describes plant designed by J. E. Hurst for regular production of high-grade cast iron for use in manufacture of castings by centrifugal-casting process. Consists of a cupola an elevator charging arrangement and an oil-fired receiver.

Design and Operation. Iron and Foundry Cupola Management, J. J. McClelland. Foundry Trade Jl., vol. 25, no. 292, Mar. 23, 1922, pp. 209-213, 5 figs. Author's experience in cupola practice; describes lay-out of plant, construction of cupola, linings, charging, fans or blowers, etc. Paper read before Inst. British Foundrymen.

Iron Melting. Cupola Practice, J. Wood. Foundry Trade Jl., vol. 25, nos. 296 and 297, Apr. 20 and 27, 1922, pp. 288-290 and 204-306, 3 figs. Some difficulties that have to be overcome in melting iron by cupola process which, for quickness and cheapness, is not excelled by any other furnace. Details of lining and tuyeres. Paper read before Instn. British Foundrymen.

D

DAMS

Artificial Lakes. Cloudbursts and Artificial Lakes (Nubifragi e Laghi artificiali), Vittorio Montanari. Annali del Consiglio Superiore delle Acque, vol. 3, no. 2, 1921, pp. 73-77. Calculates stresses for a dam at maximum water level and above, especially for disastrous cloudbursts.

Construction Kettle Creek, St. Thomas. Construction of Kettle Creek Dam, St. Thomas, W. C. Miller and G. H. Chalmers. Can. Engr., vol. 42, no. 18, May 2, 1922, pp. 444-447, 6 figs. Further development of Kettle Creek for water supply for St. Thomas, Ont. Scheme proposed by engineer. Exhaustive inquiry into rain fall and run-off conditions. 400,000,000-gallon capacity dam.

Gilboa Construction. Gilboa Construction. Gilboa Dam Construction. Pub. Works, vol. 52, nos. 12, 17, 18, Mar. 25, Apr. 29 and May 6, 1922, pp. 205-208, 295-297 and 319-321, 6 figs. Mar. 25: Exploration boring pressure tests, river diversion, foundations excavations and installation of contractor's plant. Apr. 29: Quarries, sand pits, washings and screenings, concrete mixing and placing. May 6: Steenkill dike and appurtenances; foundation, excavation, controll channell, steam shovel and belt conveyor work for large embankment. bypass pipes and flume, repairing culvert and paving slope.

Multiple-Arch. Multiple Arch Dams for Artificial Lakes (Laghi artificiali e dighe ad archi multipli), L. Kambo. Annali del Consiglio Superiore delle Acque Pubbliche, Ministero dei Lavori Pubblici, vol. 3, no. 2, 1921, pp. 31-69, 35 figs. partly on supp. plate. Discusses construction with in river Tirso in Sardinia, including dam, calculation of arches, temperature differences, etc.

Overfall Segments, Influence of. The Influence of Overfall Segments on the Dimensions of Dams (Der Einfluss von Ueberfallausschnitten auf die Abmessungen von Sperren), Leo Hauska. Zeit. des Oesterr. Ingenieur- u. Architekten-Vereines, vol. 74, nos. 5-6 and 7-8, Feb. 3 and 17, 1922, pp. 31-33 and 37-38, 4 figs. Investigation to determine proper dimension and economy of torrent-control structures.

DIESEL ENGINES

Flexibility. Diesel Engine Flexibility, W. S. Burn, Steamship, vol. 33, no. 394, Apr. 1922, pp. 320-331, 9 figs. Investigation with view to its application to direct-driven Diesel locomotive. It is shown that principles governing flexibility are practically identical with those governing economy. Read before Graduate Section of North-East Coast Instn. Engrs. & Shipbuilders.

Heavy and Low-Grade Oil. Using Heavy and Low Grade Oil in Motors of the Diesel Type (Minerta y Petroleo),, Benigno Benigni. Ingenieria, vol. 26, no. 3, Mar. 1922, pp. 133-135, 1 fig. Some experiments with Ansaldo San Giorgio engines running on cotton-seed and palm oils.

Lighter. Use Diesel Unit for Lighter. Mar. Rev., vol. 52, no. 5, May 1922, pp. 215-217, 3 figs. Installation of unit on derrick lighter Worthington, owned by Worthington, Pump & Machy. Corp. develops 300 b. hp. at 275 r.p.m.

Locomotive. Industrial, and Scientific Progress. Beama, vol. 10, no. 4, Apr. 1922, pp. 295-298. Description of air auxiliary cylinders with Diesel engine which give sufficient flexibility for use on locomotives; designed by W. S. Burn who presented paper on subject before N. E. Coast Instn. Engrs. and Shipbuilders.

DOCKS

Concrete. Concrete Docks Defy Teredo. Eng. World, vol. 20, no. 4, Apr. 1922, pp. 213-214, 5 figs. Describes new concrete structures in Pierce County, Washington, which have been found very satisfactory. First cost is about three times that of wooden pile structure.

DRAFT

Equalized. The Significance of Equalized Draft (Wesen und Bedeutung des ausgeglichenen Zuges), Hch. Doevenspeck. Wärme, vol. 45, no. 9, Mar. 3, 1922, pp. 111-113, 2 figs. Discusses natural and forced draft and advantages of equalized draft.

DRILLING MACHINES

Pneumatic. Pneumatic Drilling Machines and Hammers in Mining and Related Industries (Druckluft-Bohrmaschinen und -Hammer im Bergbau und in den verwandten Betrieben), R. Goetze. Zeit. des Vereines deutscher Ingenieure, vol. 66, nos. 11 and 12, Mar. 18 and 25, 1922, pp. 245-251 and 278-280, 42 figs. History of development and description of most important modern types of drilling machines, hammers and picks. Prospects of future development.

DRYDOCKS

Floating. A New Type of One-Sided Floating Dock Without Land Security. (Der neur Typ eines Seitenschwimmdocks ohne Landfesten des Hamburger Dockbau-Büros von Matthiessen & Muller). Schiffbau, vol. 23, no. 28, Apr. 12, 1922, pp. 857-859, 10 figs. Describes new type of dock patented by Mathiessen & Müller, Hamburg, which is said to bombine advantages of U- and L- shaped floating dock without disadvantages of L-docks. It consists of four pontoons, the center being longer than end pontoons.

Building Floating Drydocks, David W. Barnes. Pacific Mar. Rev., vol. 19, no. 4, Apr. 1922, pp. 238-240, 4 figs. Describes some dock construction work by Sun Shipbldg. Co. and Federal Shipbldg. Co., for docks of 8000 or 10,000 tons capacity.

DRYING

Wood. Note on Drying (Note sur le séchage), P. Villain. Revue de l'Industrie Minérale, no. 31, Apr. 1, 1922, pp. 155-170, 10 figs. General principles of drying methods as applied in mining and metallurgy, especially of woods.

DURALUMIN

Properties and Commercial Possibilities. Duraluminum Properties and Commercial Possibilities. Brass World, vol. 18, no. 4, Apr. 1922, pp. 129-130. Characteristics of this material, one-third the weight of cold-rolled steel though with same approximate strength.

Welding. Welding Duralumin — Some Experimental Work and Its Results, Horace C. Knerr. Automotive Industries, vol. 46, no. 18, May 4, 1922, pp. 964-968, 10 figs. Account of experimental work done at Naval Aircraft Factory and results attained from this work and from weld made by private firm. Details of tensile and corrosion tests made on different types of welds.

E

EDUCATION, INDUSTRIAL

Electricians. Practical Training and Professional Courses in the Electric Industries (Rôle de l'Ecole pratique et des Cours professionnels dans les industries électriques), E. Labbé. Revue Générale de l'Electricité, vol. 11, nos. 10 and 11, Mar. 11, and 18, 1922, pp. 367-372 and 405-414, 10 figs. Mar. 11: Kind of training best for practical industrial schools to train skilled electricians. Mar. 18: Machinery and apparatus necessary for instruction, and their practical operation.

ELECTRICAL MACHINERY

Synchronous Machines. Working of Synchronous Machines in Parallel (Das Arbeiten von Synchronmaschinen in Parallelbetrieb), H. Ossanna. Zeit. des Bayerischen Revisions-Vereins, vol. 26, no. 6, and 7 Mar. 31, and Apr. 15, 1922, pp. 41-44, and 49-51, 11 figs. Mar. 31. Discusses the mechanical problem, number of revolutions, and mechanical transmission, Apr 15: Discusses the electrical problem, dependence of performances on rotation characteristic, and their independence of voltage conditions in system.

ELECTRICAL MEASUREMENTS

High Frequency Generator. A Simple Generator of High Frequency Current for Measurement Purposes. Electrician, vol. 88, no. 2291, Apr. 14, 1922, pp. 436-438, 7 figs. Postulating importance of high frequency measurements in modern radio researches. Requirements of generator of high frequency current for this class of work and description of apparatus used for purpose. Examples of measurements given

Remote Power Indicating. Indicating the Total Power from Several Generating Stations, H. P. Sparkes. Elec. Jl., vol. 19, no. 4, Apr. 1922, pp. 142-146, 4 fih. Potentiometer system whereby load dispatcher has indicators showing immediate accurate loads at different stations without recourse to old telephone method.

ELECTRIC CIRCUITS

PROTECTIVE GEAR. The Use of Time-Lags. Major Kenelm Edgcumbe. Beama, Vol. 10, no. 4, April 1922, pp. 308-311, 4 fig. Relative advantages of instantaneous or delayed operation for protective gear.

ELECTRIC CURRENTS

SHORT CIRCUIT, TEMPERATURE STRESSES. Temperature Stresses Under Short-Circuit Currents, H. S. Holbrook. Elec. Rev. (Lond.) vol. 90, no. 2316, Apr. 14, 1922, pp. 512-513, 5 figs. Considered under temperature and current densities, short-circuit currents, and minimum size of current transformers.

ELECTRIC DRIVE

CHANGING FROM STEAM. Changing From Steam to Electric Drive. Wood-Worker, vol. 41, no. 2, Apr. 1922, pp. 38-39, 1 fig. In case cited herewith a large plant changes from steam to electric drive, but instead of scrapping old power-transmission equipment, latter is retained in sections which now constitute motor-driven group drives.

ELECTRIC FURNACES

ALUMINUM MELTING. Melts Aluminun in Electric Furnace, H. E. Diller. Foundry, vol. 50, no. 9, May 1, 1922, pp. 345-357, 10 figs. Daily and monthly operating reports indicate power required and other data. Core sand all reused; sand-driers prove economical; pattens fitted in wooden matches.

OPERATION. Changes in the Working of an Electric Furnace (Remarques au sujet des changements d'allure dans les hauts-fourneaux électriques), J. Seigle. Revue de Métallurgie, vol. 19, no. 2, Feb. 1922, pp. 86-89. Difference in blast and electric furnaces in reduction of oxides by carbon and formation of CO and CO_2.

ELECTRIC GENERATORS, A.C.

EXCITATION CURRENT. Experimental Determination of the Excitation Current of Alternators by the Potier Method (Prédétermination expérimentale du courant d'excitation des alternateurs par la méthode de Potier.), Omer de Bast. Assn. des Ingénieurs Electriciens Sortis de l'Institut Electrotechnique Montefiore Bul., vol. 1, no. 1, Jan-Feb. 1922, pp. 34-42, 5 figs. A simple and sufficiently exact method recommended in recently proposed French standards for electric material.

ELECTRIC LOCOMOTIVES

CHILE FREIGHT SERVICE. Electric Freight Locomotives for Chile. Ry. Age, vol 72, no. 17, Apr. 29, 1922, pp. 1005-1006, 2 figs. Work on fifteen for Chilean State Rys. nearing completion. Operated at 3000 volts d.c.; maximum speed, 40 m.p.h.; estimated weight, 226,000 lb.

SINGLE-PHASE, FRANCE. Single-Phase Electric Traction on the system of the Camargue R. R. Co. (Application de la traction électrique par courant monophasé sur le réseau de la Compagnie des Chemins de fer de la Camargue), J. Reyval. Revue Générale de l'Electricité, vol. 11, no. 10, Mar. 11, 1922, pp. 351-359, 12 figs. Discusses recently electrified lines Nîmes-Arles Trinquetaille and Nimes-Saint Gilles, and advantages derived; 6,600 volts, 25 cycle.

ELECTRIC MOTORS

STARTING PANEL. Solenoid Type Motor Starting Panel. Machy. (Lond.), vol 20, no. 500, Apr. 27, 1922, pp. 120-121, 2 figs. Description of new type of automatic control of electric motors, expecially in connection with machine-tool drives.

ELECTRIC PLANTS

ACCIDENT AT ONTARIO POWER CO. Accidents Cripple 159,000 Hp. of Ontario Hydro Units. Elec. World, vol 79, no 18, May 6, 1922, pp 895-896. Result of several million dollars loss from accident at Niagara Falls on Apr. 20. Preliminary theories as to cause.

HELL GATE STATION. Hell Gate—A Station of Many Features. Elec. World, vol. 79, no. 17, Apr. 29, 1922, pp. 821-827, 11 figs. Unusual features are turbine room next to river, phase isolation of all electrical equipment, alternating-current driven auxiliaries.

HUMANIZED. A Humanized Plant, R. C. Denny. Combustion, vol. 6, no. 5, May 1922, pp. 218-220, 4 figs. Cannon St. plant of New Bedford Gas & Edison Light Co. designed for best performance of man power and mechanical equipment and operating at 1.7 lb. of 14,000 B.t.u. New River Coal to the kw.

WINNIPEG RIVER. The Next Big Western Power Scheme. Contract Rec., vol. 63, no. 17, Apr. 26, 1922, pp. 372-375, 6 figs. Manitoban Power Co. actively developing Great Falls, Winnipeg River. Contracts let for two complete 28,000 hp. units. Complete capital cost will be less than $80 per hp.

ELECTRIC POWER

SCIENTIFIC APPLICATION TO FACTORY PROBLEMS. Applying Electricity Scientifically to Factory Problems, Louis F. Leurey. Jl. Electricity and West. Industry, vol. 48, no. 9, May 1, 1922, pp. 343-345, 3 figs. Example of what can be done in adapting electricity to special needs of a factory as illustrated by modern equipment and carefully planned layout of California and Hawaiian sugar plant.

ELECTRIC RAILWAYS

TRACK AND WIRING ON BRIDGE. Track and Wiring on Large Bridge. Elec. Ry. Jl., vol. 59, no. 14, Apr. 8, 1922, pp. 587-591, 11 figs. Describes overhead wire and track construction on new bridge across Housatonic River, which has just been completed by Connecticut Co.

ELECTRIC SWITCHES

CONCRETE CELL STRUCTURES. The Development of Concrete Cell Structures for Oil Circuit Breakers, Bus-Bars and Disconnecting Switches, A. F. MacCallum. Elec. Jl., vol. 19, no. 4, Apr. 1922, pp. 166-170, 5 figs. Latest features in protection of human life and electric equipment.

ELECTRIC TRANSMISSION LINES

CURRENT RELAY FOR PARALLEL LINES. A Current Relay for Parallel Line Protection, H. P. Sleeper. Elec. Jl., vol. 19, no. 4, Apr. 1922, pp. 153-155, 11 figs. New means for disconnecting a defective line without interrupting service. Known as type CD and works on induction principle.

MECHANICAL STRESSES. Mechanical Stresses in Transmission Lines, E. Maerker. Can. Engr. vol. 42, no. 17, Apr. 25, 1922, pp. 417-420, 7 figs. Chart developed [illegible] temperature for horizontal spans [illegible] to 1,500 ft. and supports at same or different elevations.

ELECTRODES

ZINC. The Effect of Changing Hydrogen-Ion Concentration on the Potential of the Zinc Electrode, Theodore W. Richards and Theodore Dunham, Jr. Am. Chem. Soc. Jl., vol. 44, no. 4, Apr. 1922, pp. 678-684, 1 fig. Studies effect of adding acid to salt solution around a typical easily and exactly reproducible metal electrode, in order to demonstrate experimentally sign and magnitude of potential difference thus caused.

ELECTROLYSIS

ANALYSIS BY. Electrolytic Analysis in Works Practice. Metal Industry, (Lond.) vol. 20, no. 14, Apr. 7, 1922, pp. 317-320, 4 fig. Methods by which metal contents can be determined.

EMPLOYEES' REPRESENTATION

WORKS COUNCILS. Industrial Representation and the Fair Deal. George H. Shepard. Indus. Management, vol. 63, nos. 2, 3, Feb. Mar., 1922, pp. 81-85, 185-188. Deals with fundamentals of contact with employees to stimulate production. Co-operation by managers and employees through works councils.

EXECUTIVES

FUNCTIONS AND METHODS OF CHIEF. A Technique for the Chief Executive, John H. Williams. Taylor Soc. Bul. vol. 7, no. 2, Apr. 1922, pp. 47-68. Notes on responsibilities and duties of chief executive and a method through which he might function effectively.

PROBLEM OF CHIEF. The Problem of the Chief Executive, Henry P. Kendall. Taylor Soc. Bul., vol. 7, no. 2, Apr. 1922, pp. 39-46. From point of view of medium-sized enterprise.

EXPLOSIVES

PLANT. A New Explosives Plant. Can. Min. Jl., vol. 43, no. 17, Apr. 28, 1922, pp. 252-254. Some details of Northern Explosives Ltd. at Dragon, Que.

F

FEEDWATER HEATERS

LOCOMOTIVE. Locomotive Feed Water Heaters, H. B. Oatley. Southern and Southwestern Ry. Club, vol. 16, no. 7, Jan. 19, 1922, pp. 14-37 and (discussion) pp. 37-45, 19 figs. General discussion of development and prospects, with suggestions as to operation.

FIRE PREVENTION

AUTOMATIC DEVICES. Automatic Devices for Preventing Fires in Buildings (Dispositifs automatiques de protection des édifices contre l'incendie), Jacques Michaut. Génie Civil, vol. 80, no. 13, Apr. 1, 1922, pp. 295-299, 8 figs. Deals with sprinkler systems such as Grinnell type, automatic fire alarms, etc.

WATER SUPPLY, RELATION OF. Fire Service as it Relates to Water Supply, Dow R. Gwinn. Mun. and County Eng., vol. 62, no. 4, Apr. 1922, pp. 148-154. Several features of water problem in this field.

FLOW OF WATER

WEIRS. Experiments With Flow Over Weirs With End Contractions (Expériences sur des déservoirs à nappe libre avec contraction latérale.), V.-M. Hegly. Annales des Ponts et Chaussées, vol. 6, Nov.-Dec. 1921, pp. 290-389, 43 figs. Gives results of measurements of flow for triangular, semicircular, multiple, and other discharges in connection with Marne-Saône canal.

FOUNDRIES

CASTINGS, COST OF. System Keeps Tab on Foundry Costs, H. C. Keller. Foundry vol. 50, no. 8, Apr. 15, 1922, pp. 308-310 and 315, 9 figs. Outlines simplified method for finding costs of castings; suitable for small shops.

HANDLING PRODUCTS. Heavy Tonnage from a small Floor. Foundry, vol. 50, no. 8, Apr. 15, 1922, pp. 301-307, 10 figs. Discusses co-ordination of supply of materials and sequence of operation as essential to molding and pouring of castings.

HEATING UNITS, MANUFACTURE OF. Heater Sections Made in Quantity. Foundry, vol. 60, no. 7, Apr. 1, 1922, pp. 267-274, 12 figs. System of providing large and continuous vents in cores automatically removes most dangerous factor in producing castings of this character.

FUELS

AUTOMOBILE. *See automobile fuels.*

HOGGED. Hogged Fuel, Emery A. Morrison. Power Plant Eng., vol. 26, no. 8, Apr. 15, 1922, pp. 407-410, 4 figs. Its heat-producing value; design and adaptability of furnace; means and method of handling fuel to furnace grates. From paper read before Western Section of Am. Soc. Mech. Engrs.

LOW-GRADE. Contributions to the Improvement of German Fuel Economy (Beiträge zur Verbesserung der deutschen Brennstoffwirtschaft), Otto Brandt. Wärme (formerly Zeit. für Dampfkessel u. Maschinenbetrieb), vol. 45, nos. 4, 5 and 6, Jan. 27, Feb. 3, and 10, 1922, pp. 53-55, 68-71 and 81-83. Discusses use of peat, lignite and other low-grade fuels and design of furnaces for their use; distribution and efficient exploitation of high-grade fuels; utilization of German crude oil; water-power utilization, etc. Future prospects.

PRE-CARBONIZATION. Pre-carbonization of Fuels (La carbonisation préalable des combustibles). Outillage, vol. 253, no. 13, Apr. 1, 1922, pp. 377-380, 4 figs. Low-temperature carbonization; tar distillation; low-grade fuels, etc.

See also coal; gas, liquids; oil fuels; pulverized coal.

FURNACES, BOILER

OIL. New Oil Furnaces (Neue Oelfeuerungen), H. Pradel. Wärme (Zeit. für Dampfkessel u. Maschinbetrieb), vol. 45, no. 1, Jan. 6, 1922, pp. 10-12, 9 figs. Details of various types constructed by Körting Bros., Ind., near Hannover, Germany, including steam-jet centrifugal oil furnaces, low-pressure burners, etc.

FURNACES, FORGING

HEATING ARRANGEMENTS. The Need for Better Heating in Forging and Forming Practice. Forging and Heat Treating, vol. 8, no. 4, Apr. 1922, pp. 202-204, 2 figs. Typical arrangements of chambers and working openings in forging and heating furnaces to meet nature of process and material to be heated.

FURNACES, METALLURGICAL

GAS FIRING. Modern Gas Firing (Neuzeitliche Gasfeuerungen), M. Schimpf. Glückauf, vol. 58, no. 15, Apr. 15, 1922, pp. 424-428, 5 figs. Discusses question of using surplus gas in mining districts, and describes experiments with Lackworth and Rodberg burners for burning [illegible] gas.

OIL-FIRING. Oil Firing of Open-hearth Furnaces in Steel Foundries (Le Chauffage à l'Huile des Fours Martin), P. Jolly. Fonderie Moderne, no. 3, Mar. 1922, pp. 78-79. Discusses advantages of oil, such as absence of sulphur, regulation of temperature, intermittent operation, etc.

TEMPERATURE CALCULATION. Calculation of Working Temperatures in Metallurgical Furnaces (Errechnung der Arbeitstemperaturen in metallurgischen Öfen), Hugo Bansen. Stahl u. Eisen, vol. 42, nos. 7, 8, 10 and 11, Feb. 16, 23, Mar. 9 and 16, 1922, pp. 245-253, 291-297, 370-375 and 423-426, 17 figs. Notes on drop in temperature as calculated and actually reached; pyrometric evaluation of fuels; dynamic conditions for flame formation; required workpiece temperatures; temperature pressure between workpiece and flame; heat transmission. Determination of most suitable fuel.

FURNACES, OPEN-HEARTH

REGENERATIVE. Control of Heat Economy in Regenerative Furnaces (Ueberwachung der Wärmewirtschaft bei Regenerativefeuerungen), H. Berger. Wärme (Zeit. für Dampfkessel u. Maschinenbetrieb), vol. 45, no. 1, Jan. 6, 1922, pp. 12-14. Includes heat balance of regenerative furnace and auxiliary generator. Notes on sources and prevention of losses.

G

GAS

B.T.U. CALCULATION. New Graphic B.t.u. Calculator, Minor C. K. Jones. Gas Age-Rec., vol. 49, no. 13, Apr. 1, 1922, pp. 392-394, 1 fig. Discusses use of chart for calculation of heating value in B.t.u. per cubic foot of a gas, by which lengthy and laborious calculations are avoided.

SUSPENDED IMPURITIES, DETERMINATION OF. Determination of Suspended Impurities in Gases, Wilfred W. Scott. Jl. of Indus. and Eng. Chem., vol. 14, no. 5, May 1922, pp. 432-433, 4 figs. Beam test; determination of solid and liquid impurities; sulphuric acid mist in gas, arsenic in gas; deternination of chlorine.

FUEL, FUTURE USE. Gas—the Fuel of the Future, Thomson King. Am. Gas Jl., vol., 116, no. 14, Apr. 8, 1922, pp. 321-322 and 332-335. Deals with near future which can be plainly discerned and more distant future which must be dealt with in more general terms.

GAS MANUFACTURE

LIQUID PURIFICATION. Liquid Purification of Coal Gas, F. W. Sperr Gas World, vol. 76, no. 1970, Apr. 22, 1922, pp. 334-336, 5 figs. Removal of sulphuretted hydrogen by sodium carbonate. From Am. Gas Assn. Monthly.

PROPER UTILIZATION. Proper Utilization of Gas Important, Andrew M. Rowley. Oil and Gas Jl., vol. 20, no. 48, Apr. 27, 1922, p. 12, 1 fig. Domestic consumers waste 150 billion ft. annually, hastening depletion of supply and bringing closer day of costly substitutes.

RELATIVE USEFULNESS OF. Relative Usefulness of Gases, Floyd W. Parsons. Gas Age-Rec., vol. 49, no. 16, Apr. 22, 1922, pp. 483-484, 506. Results of investigation of different gases by U.S. Bur. of Standards. Proper burning conditions of air to gas and most economic heating value standards for gas.

GAS PRODUCERS

OUTSIDE. Outside Producers at Racine, H. R. Broker. Am. Gas. Jl., vol. 116, no. 14, Apr. 8, 1922, pp. 325-328, 4 figs. Notes on installation of producer plant consisting of two high-pressure producers which can easily at least one-half braize and one-half small or nut coke, and each of which is rated to gasify 25 tons of fuel per day. Saving effected in labor and fuel.

REINFORCED-CONCRETE. Reinforced Concrete Gas Producer. Engineer, vol. 133, no. 3457, Mar. 31, 1922, p. 364, 2 figs. Experimental producer built in Italy in accordance with patents of O. R. Verity. It is claimed that reinforced-concrete construction allows of economy in first cost of over 50 per cent, as compared with metal construction, and there is also economy in maintenance.

SOFT COAL BENCH FIRING. Soft Coal Producer Bench Firing, P. Gartner. Gas Age-Rec., vol. 49, no. 18, May 6, 1922, pp. 563-564, 1 fig. Describes a Bröcker bench installation and devices originated in operating it. From Monthly Bul. of Swiss Assn. of Gas and Water Engrs.

TRANSFORMING SOLID FUEL INTO GAS, FOR. Gas Generator Fusing Ash Type (Le gazogène à fusion des cendres), A. Fichet. Mémoires et Compte-Rendu des Travaux de la Société des Ingénieurs Civils de France, vol. 74, no. 10-12, Oct. Dec. 1921. pp. 595-638, 8 figs. Development of Ebelmen gas producer for transforming solid fuel into gas and using this in metallurgical furnaces.

TYPES. Gas Producers (Les Gazogènes), Louis Garand. Chaleur et Industrie, vol. 3, no. 24, Apr. 1922, pp. 1187-1192, 3 figs. Reviews development and describes most recent types made in France.

GAS TURBINES

THYSSEN-HOLZWARTH OIL AND. Thyssen-Holzwarth Oil and Gas Turbines, W. Schule. Motorship, vol. 7, no. 5, May 1922, pp. 351-355, 9 figs. Describes unique internal-combustion engine invented by Hans Holzwarth, and gives results of tests. (Extract.) Translated from German.

GASES

COMBUSTION OF MIXTURES. The Combustion of Complex Gaseous Mixtures. William Payman and Richard Vernon Wheeler. Chem. Soc. Jl., vol. 121-122, no. 713, Mar. 1922, pp. 363-379. Concludes that during propagation of flmae in mixture of several inflammable gases with air at given speed, gas which will monopolize most oxygen in that which when burning alone with same speed of flame is associated with most air.

GASOLINE

SUBSTITUTES. Gasoline Substitutes and Synthetic Products, Ernest Owen. Oil Trade Jl., vol. 13, no. 4, Apr. 1922, pp. 13-14 and 92. Development of cracking processes; methods designed to conserve fuel; using catalysts; oil shale projects, and principal shale sources; alcohol a promising source.

GEAR CUTTING

COMMERCIAL. Commercial Gear-Cutting Practice. Machy. (Lond.), vol. 20, no. 500, Apr. 27, 1922, pp. 109-112, 6 figs. Describes automatic spur gear cutter by John Holroyd & Co., Ltd.

COMMERCIAL PRACTICE. Commercial Gear-Cutting Practice. Machy. (Lond.), vol. 20, no. 498, Apr. 13, 1922, pp. 33-36, 20 figs. Spur gear-cutting machines of rotary-cutter type.

MULTIPLE SHAPERS. Stevenson Multiple Gear Shaper. Machy. (Lond.), vol. 19, no. 496, Mar. 30, 1922, pp. 791-793, 5 figs. Describe new 6-A down-stroke model.

GEAR DRIVE

NODAL ARRANGEMENTS OF. Nodal Arrangements of Geared Drives, J. H. Smith. Shipbldg. and Shipg. Rec., vol. 19, no. 15, Apr. 13, 1922, pp. 455-456. Illustration of violent effects of faulty arrangement on teeth of gear wheels.

GEARS

HYDRAULIC-POWER TRANSMISSION. Hydraulic Power Trapsmission Gears, M. H. Sabine. Practical Engr., vol. 65, nos. 1828, 1831, 1832 and 1833, Mar. 9, 30 Apr. 6, and 13, 1922, pp. 151-154, 205-206, 221-222 and 235-236, 8 figs. Mar. 9: Discusses variable power transmission by oil in which a prime mover revolving in one direction at constant speed is coupled direct to a variable delivery pump which delivers oil to a fluid motor, usually of fixed capcity. Mar. 30: Working of gear and features of Carey pump. Apr. 6 and 13: Carey pump cylinder action; pulsations and vibration: success of Hele-Shaw gear.

INVOLUTE. The Involute Gear Tooth—XII, A. Fisher. Machy. (Lond.), vol. 20, no. 498, Apr. 13, 1922, pp. 55-58, 8 figs. Generation by pinions.

LATEST PRACTICE. Gear Makers' Convention of Much Technical Interest, P. M. Heldt. Automotive Industries, vol. 46, no. 17, Apr. 27, 1922, pp. 901-906, 5 figs. Papers presented on good hob practice, use of projection comparator in testing gear teeth, proportion of industrial gears, the grinding of gear teeth and new system of bevel gears.

ONE-TOOTH PINION. A NoVel One-Tooth Pinion. Eng. Production, vol. 4, no. 82, Apr. 27, 1922, p. 396, 4 figs. Details of an interesting high-ratio gear.

TEETH REPAIRING. Repairing Broken Gear Wheel Teeth, G. H. Radebaufh. Brick and Clay Rec., vol. 60, no. 8, Apr. 18, 1922, pp. 617-620, 14 figs. Various styles of gears, four methods of repairing cast teeth, description of stud method which does not require commercial repair shop.

WORM-REDUCTION. Worm Reduction and Change speed Gearing. Engineer, vol. 133, no. 3457, Mar. 31, 1922, pp. 352-354, 4 figs. Describes new invention the novelty of which consists of entire absence of usual spur wheels and use instead of worms and worm wheels.

GIRDERS

TRANSVERSE VIBRATIONS OF BAR-SHAPED. The Bending Vibrations of Bar-Shaped Girders (Ueber Biegungsschwingungen stabförmiger Träger), W. Kauffman. Zeit. für angewandte Mathematik u. Mechanik, vol. 2, no. 1, Feb. 1922, pp. 34-35, 8 figs. Calculation of bending or transversal vibrations.

GRAVEL

COLUMBUS, OHIO. Producing Gravel with Few Men, Stephen Stepanian. Rock Products, vol. 25, no. 8, Apr. 22, 1922, pp. 31-35, 23 figs. Method of accomplishing larged production with small labour.

GYROSCOPES

VECTOR REPRESENTATION OF PROCESSION. A New Gyroscosic Construction in Simple Vectors, Will C. Baker. Physical Rev., vol. 19, no. 4, Apr. 1922, pp. 323-328, 4 figs. Means of deriving graphically the quadratic for steady precession and variation of same at constant angle with change of applied couple.

H

HANDLING MATERIALS

ELECTRICAL PLANTS. ModernElectrical Handling Plant, H. R. Broughton. Beama, vol. 10, nos. 3 and 4, Mar. and Apr. 1922, pp. 210-216, 8 figs. pp. 325-332, 4 figs. Mar.: Gives examples of various types of cranes and bridges transporters and discusses grain handling. Apr.: Canadian and South African grain handling installations. Data on use of grabs to increase unloading of ore into Great Britain. Buying cargo cranes.

WAGON TIPPING IN FACTORY YARDS. Modern Appliances for Tipping Wagons in Factory Yards. E. Krahnen. Eng. Process, vol. 3, no. 5, May 1922, pp. 111-113, 6 figs. Electrically operated tippers with toothed segments or traction ropes; double-end tippers; swinging tippers.

HEAT

ECONOMICAL USE. Economical Use of Heat (Sparsame Temperaturwirtschaft), K. Schreber. Dinglers Polytechnisches Journal, vol. 337, nos. 6 and 7, Mar. 25 and Apr. 8, 1922, pp. 51-54 and 61-65, 4 figs. Discusses relation of value of unit of work and value of unit of heat, and gives various illustrations of boilers.

CONSERVATION. Control of Heat Consumption (Ergebnisse der wärmetechnischen Betriebsüberwachung), H. Berner. Wärme (Zeit. für Dampfkessel u. Maschinenbetriebe), vol. 45, nos. 1 and 2, Jan. 6 and 13, 1922, pp. 6-9 and 30. Fundamentals of control; operating tests; measuring devices; loss and utilization of waste heat; the heat pump; waste energy; furnace and other losses; savings effected through control.

HEAT TRANSMISSION

BUILDING MATERIALS. Temperature Study in a Wall of Undefined Thickness Whose Faces are Subject to a Uniform Periodical Variation of Temperature (Etude du Régime des températures dans l'épaisseur d'un mur indéfini dont les deux faces sont soumises à une même variation périodique de la température), J. Seigle. Revue de l'Industrie Minérale, no. 30, Mar. 15, 1922, pp. 135-145, 11 figs. Mathematical paper on heat transmission and heat conductivity of materials such as brick.

HEAT TREATING

GAS FIRING. Gas Wins Out for Heat Treating, J. P. Lafore. Gas Age-Rec., vol. 49, no. 15, Apr. 15, 1922, pp. 451-452 and 456, 3 figs. Describes gas equipment of eastern metallurgical plant which was installed after considerable experience with coal, electricity, óil and gas.

MEDIUMS. Fuels, Burners, and Quenching Mediums for Heat-treatment, S. P. Rockwell. Machy. (Lond.), vol. 20, no. 500, Apr. 27, 1922, pp. 100-103, 3 figs. Advantages and disadvantages of different kinds of fuel, types of burners, and description of results obtained by various quenching baths.

HEATING

Flue-Gas Utilization for. The Heating of Factory Rooms and Halls Through Utilization of Flue Gas (Neuzeitliche Grossraumheizung mittels Raunchgasausnutzung), Otto Brandt. Wärme (Zeit, für Dampfkessel u. Maschinenbetrieb), vol. 45, no. 1, Jan. 6, 1922, pp. 4-6, 6 figs. Describes two systems and points out their advantages and economy.

HEATING AND VENTILATING

Fan Furnace System. Fan Furnace Heating of a Theatre. Sheet Metal Worker, vol. 13, no. 6, Apr. 14, 1922, pp. 171-173, 5 figs. Describes heating and ventilating system of Rialto Moving Picture Theatre, Hamilton, Ohio, in which vertical sectional furnaces are used as air heaters, and fan is used to insure positive distribution and proper ventilation.

Leader, Sizes, Figuring. Simplified Scientific Method of Figuring Leader Sizes, P. J. Dougherty. Sheet Metal Worker, vol. 13, no. 7, Apr. 28, 1922, pp. 209, 215. Two rules by which to determine heat losses from building as well as leader pipe sizes.

HEATING, ELECTRIC

Losses. The Determination of Heat Loss, Walter W. Nobbs. Beama, vol. 10, no. 4, Apr. 1922, pp. 312-320, 2 figs. Fallacies in past heating determination in the formulas in coefficients and tables. Heating computations.

Residences, Tacoma, Wash. Electric Heating of Residences in Tacoma. Heat. and Vent. Mag., vol. 19, no. 4, Apr. 1922, pp. 41-45, 6 figs. Interesting features of installations in 795 residences, 54 apartments and 76 business and other buildings.

HEATING, STEAM

Central Stations. The Neukoelln Municipal Central Station for Distance Heating. Eng. Process, vol. 2, no. 4, Apr. 1922, pp. 77-78, 2 figs. At present 14 individual buildings or groups of buildings in a Berlin suburb are supplied with heat from this common source. Heating plant was designed and executed by Körting Bros., Berlin Branch. Required heat supply amounts to 5,800,000 kg. cal. per hr., and it is intended to enlarge station to max. heat output of 15,000,000 kg. cal. per hr.

HIGHWAYS

Transportation Economics. Traffic Facts Shown by Highway Transportation Surveys. Automotive Industries, vol. 46, no. 17, Apr. 27, 1922, pp. 917-919, 1 fig. Overloading is prevalent in hauling all commodities. Trucks handle large percentage of manufactured products carried over route covered by surveys; 3.2 passengers per car is average determined; 2-ton trucks form 16 per cent of total. Census example of needed transport studies.

Research. Highway Research and What the Results Indicate, A. T. Goldbeck. Good Roads, vol. 62, no. 16 and 17, April 19 and 26, pp. 223-226, 228-230 and 233-238, 19 figs. Technical consideration of loads, impact and moisture.

Soil Moisture. The Effect of Soil Moisture on Highway Design, J. L. Harrison. Mun. & County Eng., vol. 62, no. 4, Apr. 1922, pp. 123-125. Consideration of moisture of difference kinds and best treatment in view of same.

HYDRAULIC MACHINERY

Engines. A New Hydraulic Engine (Eineneue Wasserkraftmaschine "Aquapulsor"), E. Winkel-Glasers Annalen, vol. 90, no. 6, Mar. 15, 1922, pp. 92-97, 21 figs. Describes new type known as aquapulsor, and its use for irrigation and drainage, and for filling and emptying of navigation locks.

HYDRAULIC TURBINES

Large Installations. Some Large Turbine Installations in Austria and Other Countries (Einige grössere Turbinenanlagen in Oesterreich und im Ausland), W. Hahn. Elektrotechnik u. Maschinenbau, vol. 40, nos. 12 and 13, Mar. 19 and 26, 1922, pp. 133-139 and 147-149, 12 figs. History of development and examples of large turbine installations in America, Scandinavia, Japan, Germany, etc.

Molding 50-Ton Runner. Molding a 50-Ton Turbine Runner. Foundry, vol. 50, no. 8, Apr. 15, 1922, pp. 318-321, 6 figs. Set of cores forming mold was assembled on an iron plate divided in two for convenience in setting last of vane cores.

HYDRODYNAMICS

Equations. Ambiguous Solutions of the Hydrodynamic Equations (Ueber Mehrdeutige Losungen der hydrodynamischen Gleichungen), George Jaffé. Physikalische Zeit., vol. 23, no. 6, Mar. 15, 1922, pp. 129-133, 4 figs. Presents example, similar to Villat example, of two-directional flow against a hollow space, thus forming a dead-water area of indeterminate size in the space.

HYDROELECTRIC DEVELOPMENTS

Belgium. Utilization of Belgian Hydroelectric Resources (Avant-Projet de captation des énergies hydrauliques Belges), Herman Chauvin. Revue Universelle des Mines, vol. 11, nos. 1, 3, 4, 5, 6, Oct. 1, Nov. 1, 15, Dec. 1, 15, 1921, pp. 1-28, 261-277, 509-523, 629-644, 15 figs. on supp. plates. Oct. 1: Discusses general questions of river water supply and control for power purposes; and barrage work carried out in various rivers. Nov. 1, 15, Dec. 1 and 15: Describe work carried out on the Sambre and Meuse rivers.

Chippawa-Queenston. First 50,000 hp. Unit of Chippawa-Queenston Power Scheme. Elec. News, vol. 31, nos. 4, 5, 6, 7 and 9, Feb. 15, Mar. 1, 15, Apr. 1 and May 1, 1922, pp. 29-34, 28-33, 30-34, 27-34 and 32-35, 35 figs. Feb. 15: Series of articles describing work in connection with location of intake, canal and power house; also general design. Mar. 1: Details of hydraulic installation. Mar. 15: Excavation methods for moving 17,000,000 cubic yards of material and cutting through rock and earth; lining of canal; etc. Apr. 1: Design of power plant and specifications and installation of major apparatus May 1: Description of generators nos. 4 and 5 being completed by Can. Gen. [illegible]

I

ICE MANUFACTURE

Raw Water Can System. Modern Systems for Manufacture of Raw Water Can [illegible] Ice and Refrigeration, vol. 62, no. 4, Apr. 1922, pp. 287-288. Some details of method of obtaining clear ice by means [illegible]

ICE PLANTS

Electrically Operated. The Electrically Operated Ice Plant, H. J. Macintire. Ice and Refrigeration, vol. 62, no. 4, Apr. 1922, pp. 273-277. Some results of advance in use of electricity in last five years.

INDICATORS

Planimetric. Planimetric Indicator (Planiketrierender Indikator), L. Gümbei. Zeit. des Vereines deutscher Ingenieure, vol. 66, no. 13, Apr. 1, 1922, pp. 298-299, 6 figs. Describes indicator developed by author, consisting of an indicator cylinder of usual dimensions with outside spring and without writing device. The gear is so arranged that the indicator records progressively.

INDUSTRIAL MANAGEMENT

Antagonism. The Inevitable Antagonism Between Employers and Employees Management Eng., vol. 2, nos. 4 and 5, Apr. and May 1922, pp. 246-247, 308-309. Discussion by various authors of article by C. E. Knoeppel in March issue.

Charting, Authority and Responsibility. Charting Authority and Responsibility to Show Complex Management Relationships, Boyd Fisher. Management Eng., vol. 2, no. 5, May 1922, pp. 281-284, 2 figs. Lack of value of familiar organization charts and suggestions for an samples of worthwhile ones.

Cost Control Committee. The Organization and Operation of the Cost Control Committee Plan, John H. Van Deventer. Indus. Management, vol. 63, no. 5, May 1922, pp. 267-272. Machinery of plant for building economic morale to re-establish profit margins.

Cost Predetermination. The Determination of Costs, J. McD. Cronin. Indus. Management, vol. 63, no. 4, Apr. 1922, pp. 221-224. A system which will reveal true costs in time to control them.

Executive Ability. Measuring Executive Ability, William E. Dunn. Indus. Management, vol. 63, no. 5, May 1922, pp. 292-295. Suggesting measure of value and deducing factors that compose it.

Foremen, Training. Foremen Training as a Factor in Cost Reduction, B. M. Nussbaum. Indus. Management, vol. 63, nos. 4 and 5, Apr. 1922, pp. 229-233, 297-302. Apr.: Analysis of lecture-class method, conference-discussion method and standard-group study course, and advantages and disadvantages of each. Means of getting and holding the foremen's interest.

Production Cost Cutting. Cutting Production Costs by Combining Manufacturing Operations, C. B. Bartlett. Indus. Management, vol. 63, no. 4, Apr. 1922, pp. 198-200, 2 figs. Operations which can be combined, substantially decreasing costs as well as reducing hazards.

Profits, Re-Establishing for Small Factory. Re-Establishing the Profits of the Small Factory, Ernest Cordeal. Indus. Management, vol. 63, no. 4, Apr. 1922, pp. 251-254. Importance of vesting authority to hire and discharge employees in special department.

University Training in Factory. Taking University Training to the Factory, Paul M. Atkins. Indus. Management, vol. 63, no. 4, Apr. 1922, pp. 239-242, 1 fig. Plan to increase receptivity of working force to new ideas, train employees for advancement and discover those best fitted for promotion.

Wastes. Searching Out the Invisible Wastes, C. J. Morrison. Indus. Management, vol. 63, no. 4, Apr. 1922, pp. 196-197. Some prominent points of attack for cost cutting campaign.

See also Executive; Safety Engineering; Time Study; Waste.

INDUSTRIAL TRUCKS

Electric. Electric Vehicles. Gen. Elec. Rev., vol. 25, no. 4, Apr. 1922, pp. 200-259, 62 figs. Special issue containing articles by various authors on the battery vehicle in England; electric trucks in express service and in automotive field; electric passenger vehicle; operation; design and application of motors; controllers and resistances for storage-battery-driven vehicles; charging systems; advantages of gasoline and electric trucks with interchangeable parts; etc.

INSPECTION

Methods. Inspection Methods that have Proved Successful, H. Alton. Can. Machy., vol. 27, no. 17, Apr. 27, 1922, pp. 17-19 and 21. See that specifications are correct. Incoming material should be carefully inspected before going into stores. Where gaging is most effective. Co-operation of departments.

INSULATION, HEAT

Thermoconductivity of. Heat Insulators. Refrig. World, vol. 57, no. 4, Apr. 1922, pp. 21-22. Abstract of special report of Food Investigation Board of G. B. on thermal conductivity of insulating materials usually employed.

INSULATORS, ELECTRIC

Suspension. Practical Safety Factors for Suspension Insulators of Various Types (Quelques coefficients de sécurité pratiques au sujet des isolateurs suspendus de différents modèles), Paul Testard. Revue Générale de l'Électricité, vol. 11, no. 11, Mar. 18, 1922, pp. 393-398, 4 figs. How to choose an insulator; mechanical resistance of porcelain; explains safety factor in various insulators.

INTERNAL-COMBUSTION ENGINES

Alcohol for Fuel. Alcohol for Motor Fuel. Soc. Automotive Engrs. Jl., vol. 10, no. 5, May 1922, pp. 364-365. Possibilities of more general use and points in favour of and against it.

Combustion Process. Combustion Process in Explosion Engines (Forbraendingsprosesser i eksplosjonsmotorer), W. Holwech. Teknisk Ukeblad, vol. 69, nos. 9, 10 and 12, Mar. 3, 10 and 24, 1922, pp. 78-80, 87-91 and 116-118, 12 figs. Mar. 3: Mixing of gases; compression; ignition; combustion; expansion Mar. 10: Discusses velocity of propagation of combustion, limits of explosions and gives curves for various combustibles, such as methane, ethane, water-gas, acetylene, etc. Mar. 24: Discusses results of new investigation, including heat of combustion and heat balance.

Design. Modern Tendencies in Internal-Combustion Engine Construction (Tendances modernes dans l'étude et la construction des moteurs), Edmond Bruet Outillage, Tomes 251, 252 and 253, nos. 11, 12 and 13, Mar. 18, 25 and Apr. 1 1922, pp. 326-328, 353-356 and 374-377, 23 figs. Mar. 18: Combustion of gaseous mixtures; propagation of flame. Mar. 25: Korosene, in internal-combustion engines (Bellem and other engines). Apr. 1: Deals with Diesel Engines. Construction and operation of Sulzer two-stroke engine, the Ruston hig-pressure engine, and compound Diesel engine.

Friction Losses. Friction Losses in Internal-Combustion Engines (Étude des pertes par frottement dans les moteurs à combustion interne), André Planiol Comptes Rendus des Séances de l'Académie des Sciences, vol. 174, no. 13

Mar. 27, 1922, pp. 560-563. Gives results of experiments with four-stroke single-cylinder engine running on town [illegible] graphs for [illegible]

Fuel-Introduction Systems. Fuel Introduction Systems for Internal Combustion Engines. Pacific Mar. Rev., vol. 19, no. [illegible] May 1922, pp. 285-286, 9 figs. Description of high pressure system developed for use with engines using accumulated type of fuel injection.

Research. Recent Research Work on the Internal Combustion Engine, Harry R. Ricardo. Soc. Automotive Engrs. Jl., vol. 10, no. 5, May 1922, pp. 305-328 and discussion 328-336 and 347, 12 figs. [illegible] of fuel [illegible] to [illegible] volatility, detonation, turbulence, stratification, and comment on benefits of weak fuel mixtures.

Still System. The Still System of Internal Combustion, J. Leigh Martineau. Can. Shipg. & Mar. Eng. News, vol. 12, no. 4, Apr. 1922, pp. 17-19. Shows that Still system can be applied to any type of internal-combustion engine without any radical alteration. Mechanical features are dealt with.

See also Automobile Engines, Diesel Engines, Marine Engines, Semi-Diesel Engines.

IRON AND STEEL

Gases in. Determination of Gases in Iron and Steel (Bestimmung der Gase in Eisen und Stahl), A. Vita and Eduard Maurer. Stahl u. Eisen, vol. 42, no. 12, Mar. 23, 1922, pp. 445-452 and discussion, pp. 452-456, 3 figs. Two reports from Chemical Committee of Assn. German Iron Met. Engrs. on process for determination of gases by means of chemical changes; and comparison of results with those obtained in extraction process by physical means.

Properties and Uses. Iron and Steel Classified for Designers, Wm. J. Merten. Blast Furnace & Steel Plant, vol. 10, no. 4, Apr. 1922, pp. 230-234, 12 figs. Survey of wrought iron, malleable iron, cast iron, and semi-steel, with special reference to physical properties, characteristics, uses and heat treatment.

IRON CASTINGS

Engines. Engine Castings Requirements Rigid, H. J. Young. Foundry, vol. 50, no. 8, Apr. 15, 1922, pp. 311-314, 18 figs. Micrographs show variation in iron in same castings; heat tends to cause Diesel-engine cylinder liners and pistons to grow; study of requirements urged. (Abstract.) Paper read before Inst. Mar. Engrs.

Liquid Fracture in. Liquid Fracture in Iron Castings, S. C. Smith. Foundry Trade Jl., vol. 25, no. 296, Apr. 20, 1922, pp. 283-285, 7 figs. An occurrence which takes place in a casting before whole of casting has become solidified, sometimes being only microscopic and sometimes so large that it separates casting in two pieces.

IRON, PIG

Casting Methods. Questions Pig Iron Casting Methods, Robert E. Newcomb. Foundry, vol. 50, no. 8, Apr. 15, 1922, pp. 316-317. Advantages and disadvantages for foundry use of sand-cast pig iron, compared with those of pig iron made by machine casting process.

L

LAPPING

Hand and Machine. Hand and Machine-lapped Surfaces as seen through a Microscope. Machy. (Lond.), vol. 20, no. 500, Apr. 27, 1922, pp. 113-114, 6 figs. Comparison of two types of finish magnified 220 times.

LIGHTHOUSES

Aerial. Powerful Lighthouses in Aerial Navigation (Les phares à grande portée en navigation aérienne), A. Volmerange. Aéronautique, vol. 4, no. 34, Mar. 1922, pp. 67-74, 7 figs. Development of marine lights and lenses; principles of new powerful aerial lights, such as Barbier-Bénard and Sautter-Harlevisibility of light; etc.

LIGNITE

Burning on Chain Grates. Burning Canadian Lignite on Chain Grates. Power House, vol. 15, no. 8, Apr. 20, 1922, pp. 27-28, 2 figs. Mention of several installation of Saskatchewan and Manitoba districts in which satisfactory results have been obtained. Describes typical furnace arrangement.

Deposits and Industries. Lignites and Brown Coals and Their Importance to the Empire, William Arthur Bone. Royal Soc. Arts Jl., vol. 70, no. 3619, Mar. 31, 1922, pp. 342-355 and (discussion) 355-359, 1 fig. Origin and classification, characteristics and properties; geographical distribution; brown-coal industries in various countries.

Drying. Drying of Brown Coal for Boilers and Furnaces (Rohbraunkohletrocknung für Dampfkesselfeuerungen und industrielle Oefen), W. Viebahn. Braunkohle, vol. 20, no. 51, Mar. 25, 1922, pp. 801-805, 1 fig. Discusses heat loss due to water content in brown coal and preheating of brown coal to deprive it of its water.

Gasification. Past Efforts and Future Prospects in Lignite Gasification for the Heating of Open-Hearth Furnaces (Die bisherigen Bestrebungen und die zukünftigen Aussichten der Braunkohlenvergasung für die Beheizung von Siemens-Martinöfen), Hubert Hermann. Braunkohle, vol. 20, nos. 22 and 23, Sept. 3 and 10, 1921, pp. 337-341 and 358-362, 8 figs. Economic and technical aspects of lignite gasification.

LOCOMOTIVE BOILERS

Design. Designing Locomotive Boilers for Maximum Efficiency, J. T. Anthony. Boiler Maker, vol. 22, no. 4, Apr. 1922, pp. 107-108. Air and gas areas and ratio of tube length to diameter important factors to be considered.

Standard for 2-8-0 Type. Standard Boiler for 2-8-0 Type Mixed Traffic Locomotives, Great Western Railway. Ry. Gaz., vol. 36, no. 14, Apr. 7, 1922, pp. 600-601, 3 figs. Has coupled wheels 5 ft. 8 in. in diam.; boiler is No. 7 Swinton type; barrel tapers from 6 ft. diam. outside at throat plate to 5 ft. 6 in. diam. outside at smokebox; length of barrel, 14 ft. 10 in.

Tubes. Installing and Maintaining Charcoal Iron Locomotive Tubes, G. H. Woodroffe and C. E. Lester. Boiler Maker, vol. 22, no. 4, Apr. 1922, pp. 102-106, 13 figs. Use of welding in tube work and proper methods to be followed in maintenance and repair.

LOCOMOTIVES

British and American Practice. British and American Locomotive Practice. Ry. Engr., vol. 43, no. 507, Apr. 1922, pp. 126-127. Abstract of paper presented at recent meeting of I.M.E. by P. C. Dewhurst, Loco., Carriage, and Wagon Supt. of Jamaica Govt. Rys. Closely reasoned comparisons and criticisms well worth considering.

Design. Modern Tendencies in Locomotive Design, James Partington. Ry. Age, vol. 71, no. 15, Apr. 15, 1922, pp. 909-910 (includes discussion). Need of increased economy in use and production of steam; possibility of turbine and internal-combustion locomotives. (Abstract.) Paper presented at Newport News meeting of Am. Soc. Mech. Engrs.

Gasoline. A Gasoline Locomotive (Une locomotive à essence), Ach. Delamarre. Outillage, vol. 252, no. 12, Mar. 25, 1922, pp. 359-360, 2 figs. Describes new Renault locomotive for shunting and similar purposes in factories.

Lentz Hydraulic Transmission. "Lentz" Hydraulic Transmission for Crude-Oil Locomotives, Wittfeld. Eng. Progress, vol. 3, no. 5, May 1922, pp. 105-108, 4 figs. Internal-combustion engine burning heavy crude oil is to be adapted for locomotive service by means of Lentz hydraulic transmission. First crude-oil locomotive on this system has just been put in commission. Results of trials with this locomotive.

Steam-Electric Condensing-Turbine. New Development in Locomotive Practice. Ry. Gaz., vol. 36, no. 13, Mar. 31, 1922, pp. 557 and 564, 4 figs. partly on p. 558. Describes Ramsay condensing-turbine electric locomotive, built by Armstrong, Whitworth & Co., Ltd., tractive force, 22,000 lb.

LUBRICATING OILS

Crankcase Oil Dilution. Crankcase Oil Dilution Problem and Its Solution, William F. Parish. Eng. World, vol. 20, no. 5, May 1922, pp. 307-314, 11 figs. Effect upon viscosity of lubricant; viscosity limits for lubricating oils established; relation between viscosity of lubricant and efficiency of engine shown graphically in tabular form. See also Oil News, vol. 10, no. 9, May 5, 1922, pp. 33-34 and 44-46, 1 fig.

Reconditioning Crankcase. Reconditioning Crankcase Lubricating Oil by a New Method. Automotive Industry, vol. 46, no. 17, Apr. 27, 1922, pp. 910-911, 3 figs. Fuel diluent and water automatically removed from crankcase lubricating oil by simple refiner which also filters out sediment.

LUBRICATION

Uniflow Engine. Lubrication of the Uniflow Engine. Power Plant Eng., vol. 26, no. 9, May 1, 1922, pp. 477-479. Some of features which make lubrication different for this type of engine and suggestions for proper solution. (Abstract.) Lubrication, pub. by Texas Co.

M

MACHINE SHOP

Field Shop. A Field Shop in the Oil District, Frank A. Stanley. Western Machy. World, vol. 13, no. 4, Apr. 1922, pp. 120-122, 8 figs. Description of well-equipped shops maintained in Signal Hill Oil fields by Shell Co.

MACHINE TOOLS

Chain Drive. The Chain Drive and Machine Tools, Hubert Bentley. Mech. World, vol. 71, nos. 1838 and 1839, Mar. 24 and 31, 1922, p. 215 and pp. 235-236, 3 figs. Mar. 24: Compares chain with belt and gear drives; advantages of chain drive. Mar. 31: Types of chains and wheels; chain driving and installation and maintenance of chain drives.

MAGNESIUM

Heat of Formation of Compounds. Heat of Formation of Compounds of Metallic Magnesium with Metallic Zinc, Cadimum, Aluminum and Calcium (Die Bildungswärmen der Verbindungen von metallischen Magnesium mit metallischem Zink, Cadmium, Aluminium und Calcium), Wilhelm Biltz and Georg Hogorst. Zeit. für amorganische und allgemeine Chemie, vol. 121, no. 1, Mar. 14, 1921, pp. 1-21, 2 figs. Determine heat of formation as difference of heats of solutions of metallic compounds and of individual metals in nitric acid; describes calorimeter used, metals and metallic compounds used, and results of measurements.

MALLEABLE IRON

Structure. Structure of White-Heart Malleable, Rudolph Stotz. Foundry, vol. 50, no. 7, Apr. 1, 1922, pp. 286-290, 25 figs. Principal characteristics shown by micrographs which indicate over or under annealing; carbon contents determine structure of unannealed iron.

MATCH MANUFACTURING

Moisture-Proof. Matches Unaffected by Humidity (Les allumettes inaltérables à l'humidité), R. Villers. Nature, no. 2494, Jan. 21, 1922, p. 43. New French matches "Naïdes" which contain bakelite as agglutinant, rendering them insensible to moisture.

MATTER

Molecules, Space between. The Space Between Molecules (Ueber den Abstand der Molekeln), Richard Gans. Physikalische Zeit., vol. 23, no. 5, Mar. 1, 1922, pp. 108-113, 4 figs. Derivation of equations for determining average space between molecules.

METALLURGY

Spectrographic Analysis. Spectrographic Analysis in Metallurgy (Sur l'emploi de l'analyse spectrographique en métallurgie), A. de Gramont. Revue de Métallurgie, vol. 19, no. 2, Feb. 1922, pp. 90-100, 9 figs. partly on supp. plates. Dissociation spectra in special steels; their preparation and application in identification of steels.

METAL SPRAYING

Schoop Process. Metal Spraying, An Anti-Rust Prophylactic. Raw Material, vol. 5, no. 4, May 1922, pp. 147-149, 4 figs. By Schoop process iron, steel, and non-metallic materials are given non-ferrous metal coatings through device resembling machine gun that bombards objective surface with minute plastic particles of metal.

METALS

Protection from Air and Heat. Protecting Metal From Air and Heat—Calorizing (La protection des métaux contre les agents atmosphériques et la chaleur—La calorisation ou protection par l'aluminium), R. Levatel. Outillage, vol. 254, no. 14, Apr. 8, 1922, pp. 412-413. Reviews the Bower-Barff, Gesner, Lohman, Schoop and sherardizing processes. Bibliography.

The Tempering Phenomena and Their Generalization (Les phénomènes de trempe et leur généralisation), De Perdiguier. Chimie et Industrie, vol. 7, no. 2, Feb. 1922, pp. 211-243, 32 figs. Discusses critical points in temperature diagrams, including the cases of, eutectoids, line of transformation, separating zone of one constituent from zone of two constituents, and zone of two constituents with two irregular lateral boundaries.

Tempering Phenomena and Their Generalization (Les phénomènes de trempe et leur généralisation), Léon Guillet. Revue de Métallurgie, vol. 19, no. 3, Mar. 1922, pp. 162-168, 13 figs. On basis of diagram discusses the three cases of (1) eutectoid, (2) line of transformation separating zone of one constituent from zone of two constituents, and (3) zone of two constituents bounded laterally by two irregular lines.

MICA

Uses in 1922. Properties and Uses of Micas. Beama, vol. 10, no. 4, Apr. 1922, pp. 321-324. Classification and identification tests and comparisons with other insulating materials. Report of the British Elec. and Allied Industries Research Assn.

MILLING MACHINES

Vertical, Economy of. Examples Where Vertical Milling Saved Money, J. H. Moore. Can. Machy., vol. 27, no. 16, Apr. 20, 1922, pp. 17-18, 46, 5 figs. Suitable fixtures facilitate production; multi-tooth cutters replace single point tool; particularly adapted to die-sinking; special attachments for continuous milling.

MINERAL INDUSTRY

Non-Metallic. Non-Metallic Mineral-Filler Industry of the South, W. M. Weigel. Cement, Mill & Quarry, vol. 20, no. 8, Apr. 20, 1922, pp. 37-39. Consideration of mica, talc, whiting, ocher, silica, slate flour; need for investigation; great opportunity for development of industry.

MINERALS

Nickel-Copper Deposits. The Shebandowan Nickel-Copper Deposits, J. G. Cross. Can. Min. Jl., vol. 43, no. 18, May 5, 1922, pp. 270-271. Interesting account of nickel, copper, cobalt, and an unidentified mineral carrying comparatively high values in precious metals, 70 miles west of Port Arthur, Ont.

MINING

Opencast or Stripping Method. Some observations on Mining by the Opencast or Stripping Method, R. E. Palmer. Queensland Govt. Min. Jl., vol. 23, no. 262, Mar. 1922, pp. 100-104, 10 figs. Paper submitted to Inst. of Min. & Metallurgy, pointing out advantages of this method where possible.

MOLDING MACHINES

Portable Hand-Operated. Exhibits a German Molding Machine. Foundry, vol. 50, no. 8, Apr. 15, 1922, pp. 324-325, 5 figs. Describes portable, hand-operated machine of Vereinigte Schmirgel & Maschinenfabriken, A. G., recently exhibited at Liege, Belgium.

MOLDING METHODS

Production. Fittings Made on Production Basis. Foundry, vol. 50, no. 9, May 1, 1922, pp. 359-365, 9 figs. Adoption of simple and precautionary molding devices in shape of lifting plates and core prints reduce molding costs and insure more uniform product.

MOLYBDENUM STEEL

Automotive Industry. Use of Molybdenum Steel in the Automotive Industry, John D. Cutter. Soc. Automotive Engrs. Jl., vol. 10, no. 5, May 1922, pp. 340-342 and (discussion) 342-344 and 347, 2 figs. Advantages in connection with light-weight car including reports and statements of metallurgists and manufacturers.

MONEL METAL

Properties and Uses. Monel Metal, a Natural Nonferrous Alloy, Morris A. Hall. Brass World, vol. 18, nos. 3 and 4, Mar. and Apr. 1922, pp. 76-79, 107-111, 18 figs. Appearance and properties; proper methods of melting and casting; uses and advantages.

MOTOR BUSES

Trolley. Some Details of the "Rail-less" Car. Bus Transportation, vol. 1, no. 5, May 1922, pp. 268-269, 5 figs. Two-motor trolley bus with series-parallel control, seating capacity is thirty persons, with provision for liberal space and conveniences for several standees.

Trolley Bus Line Material and Current Collectors, G. W. Bower. Bus Transportation, vol. 1, no. 5, May 1922, pp. 281-282, 6 figs. Result of experience shows that design of suspension and collectors must co-ordinate.

MOTOR TRUCKS

Gas Producers. The Cazes Gas Producer for Motor Trucks (Le gazogène "Cazes" pour camion automobile), E. Weiss. Nature, no. 2501, Mar. 11, 1922, pp. 145-147, 3 figs. Describes producer-gas generator of 30-40 hp. consuming [illegible] charcoal per hp. and pulling trucks of nearly 12 tons.

N

NATURAL GAS

[illegible] Tests. Natural Gas Combustion Tests, I. V. Brumbaugh and G. W. [illegible] vol. 49, no. 16, Apr. 22, 1922, pp. 495-498, 3 figs. [illegible] Asst. Chemist of U. S. Bur. of Standards give, with permission, advance information on their tests of natural gas used in domestic gas burners.

NAVAL ENGINEERING

[illegible] Waves. Shipbldg. & Shipg. Rec., vol. 19, no. 17, Apr. 27, 1922, pp. 547-548. Results of experiments carried out by Mr. [illegible] progress of ship models of various [illegible]

NICKEL ALLOYS

Cooperite. Cooperite, a High-Speed Cutting Material. Raw Material, vol. 5, no. 3, Apr. 1922, pp. 110-112, 4 figs. Discusses properties of and tests made with cooperite, a non-ferrous alloy containing nickel as basic metal with various amounts of zirconium, aluminum, silicon, tungsten and molybdenum.

Nickel-Silver. Some Mechanical Properties of the Nickel-Silvers, F. C. Thompson and Elwin Whitehead. Metal Industry (Lond.), vol. 20, nos. 11 and 12, Mar. 17 and 24, 1922, pp. 249-254 and pp. 276-277 and (discussion) p. 280, 17 figs. Effect of conditions of annealing on tensile properties of hard-rolled alloys; temperature of heating and rate of cooling of three alloys containing 10, 15 and 20 per cent of nickel; results of tests. Paper read before Inst. Metals.

NOTCHED-BAR TESTS

Investigation of. The Notched-Bar Test (Die unerforschte Kerbschlagprobe), R. Stribeck. Stahl u. Eisen, vol. 42, no. 11, Mar. 16, 1922, pp. 405-408, 1 fig. Desiderata for new development. Notched-bar test for testing of workshop material. Author advises precaution in judging materials tested in this manner. Suggestions for a new regulation.

O

OIL FUEL

Laundry Power Plant. Oil Burning in Laundry Power Plant, Charles L. Hubbard. Nat. Engr., vol. 26, no. 5, May 1922, pp. 192-196, 9 figs. Oil substituted for coal and shows decided advantages; equipment details.

Naphtha, Calorific Power of. Indirect Determination of Calorific Power of Naphtha as a Fuel (Determinazione indiretta del potere cal orifico della nafta per uso di combustibile), Giulio Morpurgo. Giornale di Chimica Industriale ed Applicata, vol. 4, no. 1, Jan. 1922, pp. 15-17. Discusses new method for analyzing liquid fues, which requires no complicated apparatus, and gives rational basis for evaluating naphtha.

Pools, Beds, or Streams. Pools or Beds, Streams of Oil? J. von Gal Scale. Petroleum Times, vol. 7, no. 172, Apr. 22, 1922, p. 560. Pointing out misleading character of term pool.

OIL INDUSTRY

Bergin Treatment. The Bergin Treatment of Mineral Oils and Coal, F. Bergin. Petroleum Times, vol. 7, no. 172, Apr. 22, 1922, p. 546. Description of process by which mineral oils and coal can be converted into benzine, motor spirit, and fuel oil. Presented at Assn. of German Chemists' recent meeting.

OILS

Specifications for Fats and. Oils, Fats, Lubricants, Candles, and Soaps. Abridgments of Specifications, Period 1909-15, Class 91, 1922, 151 pp. Patents for inventions.

OIL SHALES

Australian Industry. Australian Oil-Shale Industry Now in Commercial Operation, Douglas A. Fell. Nat. Petroleum News, vol. 14, no. 18, May 3, 1922, pp. 89-90, 93, 1 fig. Oil-shale a going industry in Scotland, France and Australia. Some details of Australian development.

Fractionating Retort. The Brown Fractionating Shale Oil Retort, Frank E. Shepard. Eng. World, vol. 20, no. 5, May 1922, p. 315. Retort developed by Index Shale Oil Co. of Denver which will treat 250 to 300 tons of oil shale rock in 24 hrs.

OPEN-HEARTH FURNACES

Operation. Efficient Arrangement of Open Hearth Labor, P. S. Young. Blast Furnace & Steel Plant, vol. 10, no. 4, Apr. 1922, pp. 215-219. Reduction of forces by better distribution of men and occupations in operating modern open-hearth shop.

Valves, Reversing. New Reversing Valves for Open Hearth Furnaces, Hubert Hermanns. Blast Furnace & Steel Plant, vol. 10, no. 4, Apr. 1922, pp. 228-229, 4 figs. Describes new bell valve, consisting of two parts which are separated by water-cooled partition wall.

ORE CONCENTRATION

Iron, Magnetic Log Washers. Magnetic Log Washers in Iron-Ore Concentration, H. D. Wade. Eng. & Min. Jl.-Press, vol. 113, no. 18, May 6, 1922, pp. 769-771, 7 figs. Development of satisfactory device for concentrating low-grade magnetic iron ores. Washers of rake type receive overflow from classifiers, and discharge is into machines of spiral type of Babbitt plant.

ORES

Locating Device. Ore Locating Device. Min. & Oil Bul., vol. 8, no. 4, Apr. 1922, pp. 201-202. Facts about electric device developed by Ariz. Bur. Mines.

ORE TREATMENT

New Developments, Rand. The New Developments in Ore Treatment on the Rand, G. A. and H. S. Denny. Min. Jl., vol. 136, nos. 4515, 4517, 4518 and 4519, Mar. 4, 18, 25 and Apr. 1, 1922, pp. 170-171, 206-207, 232-233 and p. 242, 1 fig. Discusses methods of mining and methods of calculating and expressing mining returns. Advantages and disadvantages of resuing or undermining system of working; tabular statement of companies' results of mining and milling large quantities of mixed reef and waste rock, showing return from clean reef.

OXY-ACETYLENE WELDING

Railway Shops, in. The Oxy-Acetylene Process in Railway Shops, F. S. Tinder. Car Foremen's Assn. of Chicago. Official Proc., vol. 17, no. 6, Mar. 1922, pp. 16-39 and (discussion) pp. 40-57, 2 figs. Notes on properties of acetylene and oxygen; development of process. Experience in welding on Virginian railway.

Safe Handling. Gas Welding and Cutting. Am. Gas Jl., vol. 116, no. 14, Apr. 8, 1922, pp. 328-330 and 336-338. Rules for safe handling of apparatus.

P

PAINTS

PROTECTION FOR WOOD. Paint Protection for Wood, Clarence R. Myers. Soc. Automotive Engrs. Jl., vol. 10, no. 5, May 1922, pp. 348-350, 2 figs. Report of investigation resulting from complete lack of paint in protection of wood against moisture.

PAPER MANUFACTURE

DEODORIZING DIGESTER BLOW. Removal of Odors from Digester Blow in Sulphate Mills, Gustaf F. Enderlein. Paper Mill, vol. 45, no. 16, Apr. 29, 1922, pp. 4, 1 fig. Suggestions as to means of avoiding polluting atmosphere by condensing odoriferous steam.

DEVELOPMENTS. Recent Developments in Paper-making, J. D. Nuttall. Paper, vol. 30, no. 6, Apr. 12, 1922, pp. 7-11 and 16. Forming sheet and felting fibers on high speed machines of great width. From Proc. Technical Section of Papermakers' Assn. Great Britain and Ireland.

PARAFFIN

WAX, COMPOSITION. The Composition of Paraffin Wax, Francis Francis. Chem. Soc. Jl., vol. 121-122, no. 713, Mar. 1922, pp. 496-513. Action of air and Oxygen on paraffin wax; products of air oxidation; products of oxidation with oxygen in presence of turpentine; classification of acids formed in oxidation process; unoxidized hydrocarbons; etc.

PATTERNS

FOUNDRY, DESIGN. Pattern Design Presents Problems, Joseph Horner. Foundry, vol. 50, nos. 7 and 8, Apr. 1 and 15, 1922, pp. 275-278 and 326-328, 25 figs. Apr. 1: Co-operation between heads of manufacturing enterprise will prevent annoying and costly mistakes. Apr. 15: Pattern construction costs from pattern-shop viewpoint and from foundry and machine-shop viewpoint.

PAVEMENTS

CONSTRUCTION, DEVELOPMENTS. Development in Pavement Construction, Charles M. Upham. Can. Engr., vol. 42, no. 17, Apr. 25, 1922, pp. 424-425. Improvements in detail including curing concrete base; treating gravel and sand-clay surfaces.

PAVEMENTS, BRICK

CONSTRUCTION. Developments in Methods of Constructing Brick Pavements, Arthur H. Blanchard. Good Roads, vol. 62, no. 18, May 3, 1922, pp. 257-259. Suggestions brought about by Nat. Paving Brick Mfrs. Assn. for development of simple and efficient method of construction.

PEAT

HYDRAULIC EXCAVATION, FINLAND. Hydraulic Excavation of Peat in Finland (Das Hydrotorfverfahren in Finnland). Rauch u. Staub, vol. 12, no. 6, Mar. 1922, pp. 50-53. Discusses production of peat for boiler firing by hydraulic excavation, and subsequent drying producing 80 tons of fuel per 24 hr. with 10 workmen.

PIPE

THREADING AND CUTTING MACHINE. The Landis Twelve-Inch Pipe Threading and Cutting Machine. Ry. & Locomotive Eng., vol. 35, no. 4, Apr. 1922, pp. 83-85, 6 figs. Length of machine is 11 ft., its extreme width, 5 ft. and it weighs 13,000 lb.; it has single-pulley drive, and variations in speed, which are eight in number, are obtained by means of speed box, located beneath main spindle.

PIPING

LOSSES, CALCULATION OF. Calculating Losses in Air and Steam Conduits According to New Research on the Coefficient of Resistance to Flow (Calcul des pertes de charge dans les conduites d'air, de vapeur et d'eau d'après de nouvelles recherches sur le coefficient de résistance à l'écoulement), V. Leveau. Revue Universelle des Mines, vol. 12, no. 4, Feb. 15, 1922, pp. 301-327, 10 fihs. partly on supp. plate. Reviews literature on subject, calculates pressure losses, classifies pipe by roughness, and gives examples of applying new formulas.

PIPE LINES

WOOD PULP DEPOSITS, CLEANING OF. A Simple Method of Cleaning Long Pipe Lines of Deposits Made by Wood Pulp, Howard L. Ropes. Paper Mill, vol. 45, no. 17, May 6, 1922, pp. 10 and 12. Description of wood stave wire bound pipe of Sherman Paper Co. and methods of keeping it clean.

PISTONS

ALUMINIUM ALLOYS FOR MOTOR. Some Experiences of Aluminium and Its Alloys for Motor Pistons. Metal Industry (Lond.), vol. 20, no. 14, Apr. 7, 1922, p. 321. Advantages obtained from pistons of this type and analyses of more suitable combinations.

CAST IRON, PRODUCTION. Methods Used in Specialized Production of Cast Iron Pistons, J. Edward Schipper. Automotive Industries, vol. 46, no. 17, Apr. 27, 1922, pp. 914-916, 6 figs. Some original processes. Foundry cores are machine-made. Description of aging process, machining and inspection methods. Claimed that pistons are held to tolerance of plus or minus 0.0005 in.

PLASTER

GYPSUM. Making Prepared Gypsum Plaster. Rock Products, vol. 25, no. 9, May 6, 1922, pp. 30-33, 9 figs. Describes compact, effective plant for manufacturing this product.

PLATES

DEFLECTION. The Deflection of Continuous Plates and the Rectangular Plate with Free Edges (Ueber die Biegung durchlaufender Platten und der rechteckigen Platte mit freien Rändern), A. Nádai. Zeit. für angewandte Mathematik u. Mechanik, vol. 2, no. 1, Feb. 1922, pp. 1-26, 24 figs. Calculations to determine singularities of plate deflection.

POLARIZATION

APPARATUS AND POLARIZED LIGHT. Polarized Light and Polarization Apparatus (Polarisiertes Licht und Polarisationsapparate), Hans Schulz. Zeit. für technische Physik, vol. 3, no. 2, 1922, pp. 49-57, 11 figs. Methods for generation of polarized light; apparatus for determination of rotation polarization; and for determination of accidental double refraction.

POWER FACTOR

ECONOMIC LOSSES DUE TO. Analysis of Economic Loss Due to Power Factor—Basic Meterable Factors, J. E. Doran, J. B. Hodtum and R. C. Fryer. Nat. Elec. Light Assc. Bul., vol. 9, no. 5, May 1922, pp. 311-320, 8 figs. Two forms of loss due to out-of-phase-current and potential and suggestions for adjusting changes to them.

POWER PLANTS

BRITISH PRACTICE. Notes on British Power Plant Practice, C. H. S. Tupholme. Power Plant Eng., vol. 26, no. 8, Apr. 15, 1922, pp. 416-418. Experiments with peat; discussion of methods of improving internal-combustion engine efficiency.

CONSTRUCTION, FAR EAST. Dredge and Power-Plant Construction in the Far East, P. R. Parker. Eng. & Min. J.-Press, vol. 113, no. 119, May 13, 1922, pp. 807-812, 7 figs. Equipment purchased in U. S., modeled on California gold practice, a success in dredging for steam tin in Malay states; difficulties of transportation and installation solved.

COST CUTTING IN INDUSTRIAL. Cost Cutting for Industrial Power Plants, David Moffat Myers. Indus. Management, vol. 63, nos. 3, 4 and 5, Mar. Apr. and, May 1922, pp. 140-142 and 170, 234-237, 304-309, 4 figs. Mar.: How to discover and correct boiler plant wastes. Apr.: Determining present results and possible improvements. May: Methods of improving performance.

FIVE PACIFIC COAST PROJECTS. Five Pacific Coast Water-Power Projects Licensed by Commission. Elec. World, vol. 79, no. 17, Apr. 29, 1922, p. 850. Plants at Kaweah River outside Sequoia Nat. Park, on San Joaquin River in Fresno and Madora Counties, on Snow Creek, Riverside County, at Delta, Cal., and on Clackamas River, Clackamas County, Oregon, to be developed.

INDUSTRIAL, LAYOUT FOR. Laying Out a Power and Heating System for an Industrial Plant, Chas. L. Hubbard, Southern Engr., vol. 37, no. 3, May, 1922, pp. 47-51, 7 figs. Piping layout from boiler to engine and pumps, heating system, supply and return, and fire protection.

OPERATION. Higher Steam Pressures or Pulverized Coal? Frederick A. Scheffler. Am. Inst. Elec. Engrs. Jl., vol. 41, no. 5, May 1922, pp. 346-350, 1 fig. Assumes a hypothetical power or public service steam plant of 100,000-kw. nominal capacity and compares cost of operation of such a plant on basis of 250 lb. pressure and 600 deg. fahr. total steam temperature, and 400 lb. pressure and 700 deg. fahr. total steam temperature, when fired by stokers and pulverized coal.

STATION WIRING, FIREPROOFING. Station Wiring Adequately Protected by Fireproofing Liquid, S. C. Lindsay. Elec. World, vol. 79, no. 17, Apr. 29, 1922, pp. 835, 2 figs. Report of series of tests made by Puget Sound Power and Light Co. on number of sample cables to which a fireproofing had been applied.

UTICA STATE HOSPITAL. Power and Heating Plant of Utica State Hospital. Power Plant Eng., vol. 26, no. 9, May 1, 1922, pp. 449-456, 12 figs. Description of central installation to supply heat, light, water, and power for institution approaching proportions of a city.

POWER TRANSMISSION

OIL. Power Transmission by Oil (Elaulic Gear), H. S. Hele-Shaw. Oil Eng. & Finance, vol. 1, no. 1, Jan. 14, 1922, pp. 59-68, 16 figs. Description of oil-variable-gear which is newest of special type.

ROPE DRIVE. Power Transmission by Rope Drive, A. D. Welkinson. Southern Engr., vol. 37, no. 3, May 1922, pp. 35-37, 5 figs. Many textile mills are driven by means of rope-drive system. Multiple drive is dealt with in this article.

TYPES OF DRIVES. Progress and Problems in Mechanical Transformation of Energy (Fortschritte und Probleme der mechanischen Energie-Umformung), K. Kutzbach. Zeit. des Vereines deutscher Ingenieure, vol. 66, nos. 7 and 8, Feb. 18 and 25, 1922, pp. 154-159 and 183-185, 26 figs. Deals with indirect converter types. Status of belt and rope drive for long-distance conversion; increasing use of stretching pulleys for safe control of external tensions; problem of slip and friction, durability and bending losses. The Föttinger and the Lentz converters and their use for all kinds of vehicles.

WATER-TUBE TYPE ARRESTER. Water-Tube Type of Arrester Compares Favorably with Others, George H. Middlemiss. Electrical World, vol. 79, no. 17, Apr. 28, 1922, p. 838, 1 fig. Results of tests made by Ala. Power Co. comparing electric-valve and water-tube type of arrester.

PRECIPITATION

COTTRELL PROCESS. Electric Precipitation of Fumes by the Cottrell Process (Note sur la condensation électrique des fumées), M. Biver. Mémoires et Compte Rendu des Travaux de la Société des Ingénieurs Civils de France, vol. 74, nos. 10-12, Oct.-Dec. 1921, pp. 542-546, 1 fig. Describes installation at works of Société Nouvelle des Mines de la Lucette, for precipitation of dust from antimony ore roasting.

PRESSES

INCLINABLE. The Use of Inclinable Power Presses. Machy. (Lond.), vol. 19, no. 496, Mar. 30, 1922, pp. 787-788, 3 figs. Inclination of presses; classes of work readily performed on inclinable presses.

PULLEYS

DRIVING FOR HYDRO-EXTRACTOR. Driving Pulley for Hydro-Extractor. Textile World, vol. 61, no. 16, Apr. 22, 1922, p. 41, 3 figs. Centrifugal clutch pulley which does not put load on motor until it has attained good speed.

PULVERIZED COAL

COMBUSTION. The Carrying of Dust by a Current of Air (Étude de l'entraînement de poussière par un courant d'air), E. Audibert. Annales des Mines, vol. 1, no. 3, Mar. 1922, pp. 153-191, 3 figs. Discusses question of pulverized coal, especially arrangement of combustion chamber so as to assure complete combustion of dust.

OFFICE-BUILDING HEATING. Powdered Fuel. Nat. Engr., vol. 26, no. 5, May 1922, pp. 219-221, 1 fig. Results from installation in 42-story L. C. Smith building, Seattle, Wash.

STEAM BOILERS, FOR. Powdered Coal under Steam Boilers, H. D. Savage. Coal Trade Jl., vol. 52, nos. 36, 37, 38, 39, 40 and 41, Sept. 7, 14, 21, 28, Oct. 5 and 12, 1921, pp. 1003-1004, 1028-1029, 1049-1051, 1074, 1094-1095 and 1116-1117, 5 figs. Progress made in making powdered coal for steam production thoroughly reliable and efficient, and economic possibilities of this method of combustion.

TREATMENT AND USE. A New Pulverized Fuel Plant. Iron & Coal Trades Rev., vol. 104, no. 2821, Mar. 24, 1922, pp. 418-419, 2 figs. Describes coal dryer, conveyance and distribution of pulverized fuel, hopper and controller system.

PUMPS

SEMI-SOLID HANDLING. A Pump that Handles Semi-Solids. Elec. News, vol. 31, no. 9, May 1, 1922, p. 51, 2 figs. Particularly designed to pass unscreened sewage; rags, cotton waste, fibre and all kinds of pulp and trade effluent from textile works in general. Made in England.

PUMPS, CENTRIFUGAL

BALANCING, AUTOMATIC METHOD. Centrifugal Pumps, E. T. Keenan. Southern Engr., vol. 37, no. 3, May 1922, pp. 40-43, 7 figs. Automatic method of balancing; efficiency and losses.

PYROMETERS

NON-FERROUS FOUNDRY. Pyrometry in the Non-Ferrous Foundry. Eng. Production, vol. 4, no. 81, Apr. 20, 1922, p. 365, 1 fig. Notes on thermo-electric, resistance, radiation and optical pyrometers.

R

RADIO TELEPHONY

APPLICATION OVER POWER CIRCUITS. High Frequency Telephone as applied to High Tension Power Stations, A. S. Runciman. Eng. Jl., vol. 5, no. 5, May 1922, pp. 243-247, 5 figs. Experience of Shawinigan Water & Power Co. in applying methods to telephony over power circuits.

CENTRAL STATION, APPLICATION TO. Possibilities in Radio for the Central Station Company, J. C. Martin. Elec. World, vol. 79, no. 14, Apr. 8, 1922, pp. 673-676, 6 figs. Radiotelephone broadcasting apparatus on commercial basis. Difficulties which must be faced. Problems of regulation.

RAILS

DEFORMATION, MEASURING. Measuring Rail Deformation by Moving Picture Photography. Ry. Rev., vol. 70, no. 14, Apr. 8, 1922, pp. 483-484, 6 figs. partly on p. 485. Describes method for making observations of rail depression under a moving load by means of moving picture camera, and gives results of series of tests made on St. Louis-San Francisco Ry.

STEEL, ROLLED MANGANESE. Rolled Manganese Steel Rails. Ry. Gaz., vol. 36, no. 14, Apr. 7, 1922, pp. 597 and 601, 2 figs. Advantages claimed for built-up railway track work. Discusses lay-out of "Imperial" patent rolled manganese steel rails of Waterloo Station, Lond. & South Western Ry.

RAILWAY ELECTRIFICATION

INDUCTIVE INTERFERENCE AND ELECTROLYSIS. The Question of Inductive Interference and Electrolysis Relating to Railroad Electrification, Chas. F. Scott. Elec. Jl., vol. 19, no. 4, Apr. 1922, pp. 146-149. Consideration of various ways in which telephone service has been interfered with and pipe lines corroded, and means of overcoming difficulties.

ITALY. Electrification of the Italian Railways (L'Elettrificazione delle Ferrovie Italiane), C. Vita-Finzi. Elettricista, vol. 4, nos. 5 and 6, Mar. 1 and 15, 1922, pp. 37-38 and 44-46, 1 fig. Discusses electric traction, and necessity for Italy to electrify; new law for electrification of railroads. Gives list of trunk lines already electrified and list of lines to be electrified.

SINGLE-PHASE OVERHEAD SYSTEM. The Lancaster-Morecambe-Heysahm Electric Railway. Electrician, vol. 88, nos. 2281 and 2282, Feb. 3 and 10, 1922, pp. 124-129 and 155-156, 8 figs. Experiences of 14 years' working with single-phase overhead system. Failures and modifications which have been necessary in various parts of apparatus during the 14 years.

RAILWAY MOTOR CARS

NEW FEATURES. New Features in Service Railway Motor Coach. Ry. Age, vol. 72, no. 18, May 6, 1922, pp. 1069-1070, 3 figs. Service Motor Truck Co., Wabash, Ind., produces coach in which power plant and transmission follow regular motor truck practice but running gear is unique.

OPERATING COSTS. Motor Trucks Operate on Rails in City and Interurban Passenger Service. Mun. & County Eng., vol. 62, no. 4, Apr. 1922, pp. 18-22, 1 fig. City and Interurban Ry. Co., Manhattan, Kansas, has recently scrapped heavy electric cars and now operate four FWD railway cars.

RAILWAY OPERATION

AUXILIARY TRAIN CONTROL. The Sprague System of Auxiliary Train Control. Ry. Age, vol. 72, no. 16, Apr. 22, 1922, pp. 963-967, 9 figs. Apparatus undergoing daily test on section of New York Central operates on normal danger plan and leaves engineer practically undisturbed while on duty.

REVERSIBLE STEAM TRAIN. "Reversible" Steam Train, London & North Western Railway. Ry. Gaz., vol. 36, no. 17, Apr. 28, 1922, pp. 697-699, 5 figs. Describes push-and-pull train which has been working satisfactorily on local service in England.

RAILWAY TRACK

CONSTRUCTION. Adjusting Track Construction to the Lightweight Car, R. G. Taber. Elec. Ry. Jl., vol. 59, no. 18, May 6, 1922, pp. 755-756, 1 fig. Account of two track jobs recently completed in Fort Worth, in which advantage was taken of light weight of Birney cars operated there in cheapening construction. (Abstract.) Paper read before Southwestern Elec. & Gas Assn.

CURVES. The Design of Transition Curves for Railway Tracks (Zur Konstruktion des Uebergangsbogens für Eisenbahngleise), K. Lachmann and R. Rothe. Zeit. für angewandte Mathematik u. Mechanik, vol. 2, no. 1, Feb. 1922, pp. 45-78, 8 figs. It is claimed that methods of practical mathematics permit accurate solution of problem, not only for flat curves, but for transition curves for any given differences in direction.

RACK TYPE. Rack Wheel and Branch Lines (Zahnradanschlussbahnen), A. Wichert. Schweiz. Elektrotechnischer Verein Bul., vol. 13, no. 3, Mar. 1922, pp. 98-106, 6 figs. Describes cog wheel electric locomotive of Oker Metal and Color Works, in Harz Mountains, and loading and unloading arrangements at works with a difference in levels of 24 meters.

SHIFTING MACHINE. Track Shifting Machine, Friedr. Hübener. Eng. Progress, vol. 3, no. 4, Apr. 1922, p. 87, 2 figs. Describes Arbenz-Kammerer type, consisting essentially of portable bridge resting on two bogies; center of bridge carries frame which may be shifted over laterally.

RECTIFIERS

THERMIONIC TRIODE AS. The Thermionic Triode as Rectifier, E. B. Moullin and L. B. Turner. Electrician, vol. 88, no. 2291, Apr. 14, 1922, pp. 442-443 and (discussion) 443-444, 3 figs. Investigation of triode rectifier for signals of various strength with or without superposed local heterodyne oscillation.

REFRACTORIES

SOFTENING TEMPERATURE, DETERMINING. A New Device for Determination of the Softening Temperature of Refractory Materials under Load (Eine neue Vorrichtung zur Bestimmung der Erweichungstemperatur von feuerfesten Materialen unter Belastung), W. Steger. Berichte der Deutschen Keramischen Gesellschaft, vol. 3, no. 1, Feb. 1922, pp. 1-4, 1 fig. Describes press and heating device developed by author for use in Chemical-Technical Experimental Station of the State Porcelain Mfg. Works, Berlin-Charlottenburg.

REFRIGERATING PLANTS

AMMONIA FITTINGS, STANDARDIZATION OF. Standardization of Ammonia Fittings Necessary, Erwin Bunzel. Power, vol. 55, no. 15, Apr. 11, 1922, p. 581. Pointing out necessity of early adoption of code covering standardization of flanges for refrigerating systems.

RESERVOIRS

CONCRETE. Methods and Costs of Building 10 Million Gallon, Reinforced Concrete Reservoir for the Indianapolis Water Co., William Curtis Mabee. Mun. & County Eng., vol. 62, no. 4, Apr. 1922, pp. 141-145, 1 fig. Essentials of design and construction and cost thereof.

RIVERS

TERMINALS AND WATER DEPTHS. River Terminals and Water Depths, H. McL. Harding. Eng. World, vol. 20, no. 4, Apr. 1922, pp. 211-212. Discusses question of minimum depth of a waterway that will be a commercial success. European practice.

ROAD CONSTRUCTION

RESEARCH. Making Road Building an Exact Science Through Research Work, A. T. Goldbeck. Contract Rec., vol. 63, no. 16, Apr. 19, 1922, pp. 355-360. Experimental investigations are being carried out to provide basis for sound engineering design of highways; effect of impact, moisture, drainage and soil conditions.

ROADS

SUB-DRAINAGE. Comparison of Sub-Drainage by Deep Sode Ditches and Tile Drains, C. M. Upham. Good Roads, vol. 62, no. 18, May 3, 1922, pp. 247-250. Importance of eliminating moisture in road bed and means of accomplishing it.

ROADS, GRAVEL

SURFACE TREATMENT. Surface Treatment of Gravel Roads, Paul D. Sargent. Contract Rec., vol. 63, no. 18, May 3, 1922, pp. 391-394. Experiences of Maine State Highway Commission described in paper presented at annual conference on highway engineering, Ann Arbor, Mich.

ROCK CRUSHING

PLANTS. Capacity of Coast Plant About 12,000 Cars per Year, W. A. Scott. Cement Mill & Quarry, vol. 20, no. 8, Apr. 20, 1922, pp. 23-26, 7 figs. Grant Rock & Gravel Co. operations. Supplies large part of San Joaquin Valley. Gold is recovered by rifle system.

ROLLING MILLS

ELECTRIC DRIVE TROUBLES. Where to Look for Things that Cause Trouble in Reversing-Roll Electric Drives, Arthur J. Whitcomb. Elec. Rev. & Indus. Engr., vol. 80, no. 2, Feb. 1922, pp. 63-66, 103, 8 figs. Maintenance practice in reversing roll electric drives.

RUBBER

MAGNESIUM CARBONATE, COMPOUNDED WITH. Some Physical Properties of Rubber Compounded with Light Magnesium Carbonate, H. W. Greider. Jl. o Indus. & Eng. Chem., vol. 14, no. 5, May 1922, pp. 385-395, 22 figs. Dat showing increase in tensile strength, hardness and resilint energy and prob ability of eliminating principle disadvantages by compounding filler in amor phous form.

TRANSPARENT. Rubber Glass—A New Product of Great Interest. India Rubbe World, vol. 66, no. 2, May 1, 1922, pp. 538-539. Description of inventio of Fordyce Jones giving its advantages and limitations.

S

SAFETY ENGINEERING

GRAPHIC CHARTS. Obtaining and Presenting Safety Statistics for the Busy Executiv A. M. Underhill. Safety Eng., vol. 43, nos. 4 and 5, Apr. and May 192 pp. 131-134, 199-204, 7 figs. Apr.: Methods of presenting statistics for determ ining what steps may be taken to prevent repetition of accidents in such form that they become intelligible to executives not familiar with work. May Use of logarithmic paper for curve charts clearly shows accident increas or decrease.

PLANTS AND METHODS. Sand Blasting, E. L. Samson. Foundry Trade Jl., vo 25, nos. 287 and 288, Feb. 16 and 23, 1922, pp. 115-118 and 143-144, 19 fig High versus low-pressure plants; abrasive power considerations; cost of san blasting; sand-blast rooms, cabinets and tumbling barrels; sand-blast convey ors; dust collecting; etc. Paper read before Instn. British Foundrymen.

SAND, MOLDING

DRESSING. The Dressing of Moulding Sand, Heinz Kalpers. Eng. Progress, vo 3, no. 4, Apr. 1922, pp. 79-81, 5 figs. Notes on dressing of fresh sand, use sand and coal dross; drying furnaces for fresh sand; shaking sieves; sand-crush ing mills with magnetic rollers, automatic dressing plants.

PREPARATION. Sand Offers Field for Improvement, Eugene W. Smith. Foundry vol. 60, no. 7, Apr. 1, 1922, pp. 264-265. Factors besides physical cha acteristics and chemical analysis entering into preparation, classificatin and grading of sand used in preparation of molds into which metal is poure From paper read before Chicago Foundrymen's club.

SCRAP

DE-LEADING. De-leading of Scrap Metals (Das Entbleien von Altmetallen). Meta —Technik, vol. 48, no. 10, Mar. 4, 1922, pp. 92-93. Discusses wet and dr methods and describes operations.

METAL, DE-ZINCIFICATION. De-zincing of Scrap Metal (Das Entzinken von Al metallen), B. Haas. Zeit. für die gesamte Giessereipraxis, vol. 43, no. 1 Mar. 25, 1922, p. 154. Thermal and chemical processes used. Conclud that de-zincification is more reliable and simpler than de-leading.

SEMI-DIESEL ENGINES

TWO-CYLINDER MARINE. New Two-Cylinder Semi-Diesel Marine Oil Engine. Eng. & Finance, vol. 1, no. 2, Mar. 25, 1922, pp. 369-370, 1 fig. Design f small commercial vessels two-cycle hot-bulb developing 30 b.hp. at 425 r.p.

SEWAGE DISPOSAL

COLLOIDS. Colloids and Sewage Disposal, F. W. Mohlman and Langdon Pear Eng. World, vol. 20, no. 5, May 1922, pp. 301-303. Relation of colloid che istry to tank treatment of sewage; method of study; determination of collo and results of processes for their removal.

CONNECTICUT SLUDGES. Characteristics of Some Connecticut Sludges, J. Frederi Jackson and Joseph Doman. Surveyor, vol. 61, no. 1580, Apr. 28, 19 p. 357. Describes experiments with samples from grit chambers, screeni chambers, Imhoff tanks, Mile's acid tanks, lime tanks and activated tan (Abstract.) Paper published in Jl. Boston Soc. of Civil Engrs.

Imhoff Tank. Imhoff Tank Results, [illegible] R. [illegible] Eng. Works, vol. 52, no. 17, Apr. 29, 1922, pp. 304-305. [illegible] of Imhoff tank and extent to which they are justified by results.

Sludge Handling. Treatment of Sludge in the Plants of the [illegible] Association (Die Schlammbehandlung in den Anlagen der [illegible]), [illegible] Prüss. Glückauf, vol. 58, no. 11, Mar. 18, 1922, pp. [illegible], [illegible] figs. Treatment of sludge from septic tanks, pumping arrangements, drying of sludge.

Small Municipalities. Sewage Disposal for Small Municipalities. Can. Engr., vol. 42, no. 17, Apr. 25, 1922, pp. 421-423. Report of Committee on Sewage and Sanitation Presented at Convention of Am. Soc. for Municipal Improvement, Baltimore.

Treatment. Sulphur Dioxide for Sewage Treatment. Chem. Age (Lond.), vol. 6, no. 149, Apr. 22, 1922, pp. 508-509. In recent paper before Engrs. Soc. of Western Pa. F. W. Mohlman points out that sulphur dioxide has certain advantages over sulphuric acid in this field.

SEWER CONSTRUCTION

Kansas City, Mo. Constructing the Turkey Creek Sewer in Kansas City, Missouri, Paul A. Hartung. Mun. & County Eng., vol. 62, no. 4, Apr. 1922, pp. 125-128, 3 figs. Installation which will provide against flood water menace in vast terminal and industrial section of Kansas City.

SHERARDIZING

Factors Influencing Process. Factors Influencing the Process of Sherardizing, Leon McCulloch. Elec. Jl., vol. 19, no. 4, Apr. 1922, pp. 156-160, 4 figs. Experiments in features not hitherto definitely known. Growth of coating, effect of iron in zinc dust, effect of other metals in zinc dust, composition of coatings.

SHIP DESIGN

Transverse Sections. The Influence of Shape of Transverse Sections Upon the Resistance of Vessels of Moderate Speed, Herbert C. Sadler and E. M. Bragg. Mar. Eng., vol. 27, no. 5, May 1922, pp. 320-324, 10 figs. Results of experiments showing that no hard and fast rule can be laid down as to best type of bow and stern sections for all ships at all speeds, and that best type of section will depend upon speed-length ratio, fullness of vessel, distribution of displacement longitudinally, and ratio of breadth to draft. Paper read before Soc. Naval Architects & Mar. Engrs.

SIDEWALKS

Concrete Slabs, Tests. Tests on Concrete Slabs for Sidewalks (Essais de dalles en aggloméré de ciment pour trottoirs), A. Grebel. Génie Civil, vol. 80, no. 15, Apr. 15, 1922, pp. 339-342, 4 figs. Slabs are divided into squares on surface. Results of breaking, compression and hardness tests of various kinds of slabs. Mechanical tests as to wear.

SILVER DEPOSITS

Cobalt. Cobalt—Its Past and Future, Cyril W. Knight. Eng. & Min. Jl.-Press, vol. 113, no. 18, May 6, 1922, pp. 761-768, 4 figs. Study of geology of district in light of recent survey; principles worked out by miller proved correct, important structures revealed by operations of past decade; years of silver mining probably remain.

SMOKE ABATEMENT

Water-grates. Abating a Smoke Nuisance, R. R. Hillman. Power Plant Eng., vol. 26, no. 9, May 1, 1922, pp. 463-465, 3 figs. Treatment of an unique case in department store in Buffalo where water-grates also increased circulation of boiler water.

SOOT BLOWERS

Steam Consumption. Steam Used for Soot Blowing, Robert June. Power Plant Eng., vol. 26, no. 38, Apr. 15, 1922, pp. 414-415, 4 figs. Method of calculating steam consumption when time valve is open is known. See also Power House, vol. 15, no. , Apr. 5, 1922, pp. 30-31, 4 figs.

SPECIFIC HEAT

Gas. The Specific Heats of Gas From the Point of View of Their Industrial Application (Sur les chaleurs spécifiques des gaz envisagés au point de vue de leur application aux problèmes industriels), Emilio Damour and D. Wolkowitsch. Revue de Métallurgie, vol. 19, no. 3, Mar. 1922, pp. 145-161, 2 figs. Reviews in detail literature on subject, and shows that there is no agreement between the various authorities.

SPRINGS

Impact, Absorption of. Graphic Representation of Absorption of Impact by Springs. Machy. (Lond.), vol. 20, no. 499, Apr. 20, 1922, pp. 93-94, 2 figs. Description of graphic method to determine energy absorbed under certain simple conditions.

STACKS

Venturi. New Stack Type, A. W. H. Griepe. Am. Gas Jl., vol. 116, no. 15, Apr. 15, 1922, pp. 343-346, 18 figs. New type similar in shape to a Venturi tube combined with blower has advantage of flexibility of operation, and low cost of installation and maintenance.

STANDARDIZATION

Reducing Cost. Reducing the Cost of Standardization, W. O. Lichtner. Management Eng., vol. 2, no. 5, May 1922, pp. 275-280. Need and possibilities of handbook of times for performing manufacturing operations including charts and tables showing elementary operations analyzed to simplest items.

STEAM

High-Pressure. Higher Steam Pressures, Joseph Jares. Combustion, vol. 6, no. 5, May 1922, pp. 221-223, 1 fig. Consensus of opinion of most writers favors higher pressures and temperatures. Advantages. Letters from C. J. Stover, Sec'y of Magnesia Assoc. of Am., and W. S. Lockwood of Johns-Manville, Inc.

The Properties of Steam under High Operating Pressures (Bemerkungen zu den Eigenschaften des Wasserdampfes bei hohen Betriebsdrücken), G. Eichelberg. Zeit. des Vereines deutscher Ingenieure, vol. 66, no. 12, Mar. 25, 1922, pp. 275-277, 6 figs. Differences in the values for heat of evaporation obtained by Schule and Eichelberg. Possibility of indirect measurement of specific heat of saturated steam based on relation between exponent of the adiabatic curve, heat of evaporation and specific heat.

Metering of. The Metering of Steam, John L. Hodgson. Shipbldg. & Shipg. Rec., vol. 19, no. 15, Apr. 13, 1922, pp. 466-468, 5 figs. Steam meters developed by author and his firm, Geo. Kent, Ltd., during last twelve years.

Specific Heat of Superheated. The Specific Heat of Superheated Steam for Pressures of 20 to 30 Atmos. (Die spezifische Wärme des überhitzten Wasserdampfes fur Drucke von 20 bis 30 at.), Osc. Knoblauch. Zeit. für technische Physik, vol. 3, no. 2, 1922, pp. 39-40. Results of tests carried out in conjunction with E. Raisch.

STEAM ENGINES

Heat Economy. Using the Heat of Piston Steam Engines to Best Advantage (Die Wärmeausnutzung der Kolbendampfmaschine), W. Schmidt and R. Wolf. Zeit. des Vereines deutscher Ingenieure, vol. 66, no. 14, Apr. 8, 1922, pp. 345-350, 4 figs. Discusses increase of pressure from 18 to 55 atmos., increase in expansion of steam, intermediate superheating, etc. on basis of latest experiments by W. Schmidt and R. Wolf.

1

Indicator Diagrams. Indicator Diagrams. Power, vol. 55, no. 15, Apr. 11, 1922, pp. 574-576, 28 figs. Contains diagrams from Corliss, uniflow and non-releasing gear valve engines.

STEAM PIPES

High Pressure. Safety in High-Pressure Piping of Steam Power Plants (Die Sicherheit beim Betrieb von Hochdruckrohrleitungen in Dampfkraftanlagen), H. Melk. Wärme, vol. 45, no. 4, Jan. 27, 1922, pp. 56-59, 11 figs. Discusses measures and devices employed for increasing safety in use of such pipes.

STEEL

Defective Points, X-Ray Examination. Fundamentals for Determination of Defective Points in Steel by Means of X-Rays (Grundlagen für die Feststellung von Fehlstellen in Stahl mittels Röntgenstrahlen), E. H. Schulz. Stahl u. Eisen, vol. 42, no. 13, Mar. 30, 1922, pp. 492-496, 19 figs. Describes apparatus for examination with X-rays, and results obtained; depth of irradiation; investigation of welding points.

Molybdenum. *See Molybdenum Steel.*

Structural. *See Structural Steel.*

STEEL, HEAT TREATMENT OF

Ball Bearings, for. Ball Bearing Steel and its Heat Treatment, Carl T. Hewitt. Forging & Heat Treating, vol. 8, no. 4, Apr. 1922, pp. 196-198, 4 figs. Use of steels of from 0.60 to 1.50 per cent chromium content to meet extreme service demands. Methods of annealing and of hardening.

Hardening in Tempering Furnace. The Hardening of Steel Parts in Tempering Furnace (Das Härten von Eisenteilen im Härteofen). Zeit. für die gesamte Giessereipraxis, vol. 43, nos. 10 and 11, Mar. 11 and 18, 1922, pp. 129-131 and 142-144. Notes on proper design of furnace and methods of hardening.

Problems. Heat Treatment Problems II, Leslie Aitchison. Metal Industry (Lond.), vol. 20, no. 5, Feb. 3, 1922, pp. 113-115, 3 figs. Deals with problems of cooling.

Tests. Relation of Time for Heating Round Sections to Surface per lb. of Steel Exposed, E. J. Janitzky. Forging & Heat Treating, vol. 8, no. 4, Apr. 1922, pp. 179-181, 2 figs. Discusses experiments carried on by M. E. Leeds, results having been presented in paper, "Some Neglected Phenomena in the Heat Treatment of Steel," before Am. Soc. for Testing Mtls. and published in A.S.T.M. Proc., vol. 15, 1915.

STEEL MANUFACTURE

Basset Process. Blast Furnace Eliminated from Steel Making. Indian Industries & Power, vol. 19, no. 7, Mar. 1922, pp. 235-236. Some unsubstantiated reports of process discovered by Basset for producing steel direct from ore. Being tried out in Sheffield.

STEEL WORKS

British. Famous British Works. Eng. Production, vol. 4, nos. 77 and 78, Mar. 23 and 30, 1922, pp. 266-268 and 290-292, 9 figs. Describes works of Armstrong, Whitworth & Co., Ltd., shipbuilders and manufacturers of locomotives, marine engines, brass and non-ferrous metals, steel products, pneumatic tools, etc. Mar. 23: The Openshaw works devoted chiefly to manufacture of steel, armor plate, machine tools, etc. Mar. 30: The North Street works, representing later extensions to Openshaw works, and including large steel departments.

Electric, Southern Pacific Shops. Electric Steel Plant at the Southern Pacific Shops, Larry J. Barton. Chem. & Met. Eng., vol. 26, no. 18, May 3, 1922, pp. 838-840, 2 figs. Six-ton Heroult furnace produces all steel castings for large Western railways as a side line. For a year it produced rivet steel from miscellaneous scraps, and now is working on order for 1,900,000 tie plates.

Power Plant. Power Plant Designed for Steel Mill Conditions. Power, vol. 55, no. 15, Apr. 11, 1922, pp. 566-570, 7 figs. Describes Inland Steel Co.'s plant no. 2, Indiana Harbor. Boilers are equipped with underfeed and forced-draft chain-grate stokers. Coke braize, coal and coke-oven and blast-furnace gas used as fuel. Combination of four feedwater heaters operated in parallel.

Controlling Excavations in Roadbed. Controlling Excavations Through Right-of-Way, R. B. Genest. Elec. Ry. Jl., vol. 5, no. 17, Apr. 29, 1922, pp. 703-707, 17 figs. Montreal, Que., system wherein railway sanctions digging operations affecting its track and is compensated for expense therewith.

France. Present State of the Tramway Industry (État actual de l'Industrie des Tramways), Roger Vente. Revue Industrielle, vol. 52, no. 6, Apr. 1922, pp. 183-189, 13 figs. Describes present practice in Paris: construction of tracks, rails, rolling stock, first and second class cars.

Track. Expediting Track Construction in Toronto. Elec. Ry. Jl., vol. 59, no. 13, Apr. 1, 1922, pp. 551-558, 31 figs. Describes work in connection with relaying of tracks; gives standards of Toronto Transportation Commission.

STRUCTURAL STEEL

Wheels from I Beams. Fabrication of First Structural Steel Wheel, W. R. Ward. Forging & Heat Treating, vol. 8, no. 4, Apr. 1922, pp. 184-188, 13 figs. Difficulties encountered and problems solved in early experimental stage of construction of I-beam structural steel wheel.

STOKERS

Correcting Troubles in. Draft, Joseph G. Worker. Combustion, vol. 6, no. 5, May 1922, pp. 232-234, 240, 4 figs. Main points from forthcoming book, Mechanical Stoker, by J. G. Worker and T. A. Peebles. Draft one of most important features in correcting stoker troubles.

Mechanical. The Principal Types of Mechanical Stokers. Power House, vol. 15, no. 8, Apr. 20, 1922, pp. 19-21, 6 figs. Discusses chain grate, underfeed, and overfeed stokers. Choice of stokers.

Multiple Underfeed. A New Type of Multiple Underfeed Stoker, Robert June. Power House, vol. 15, no. 8, Apr. 20, 1922, pp. 35-37, 7 figs. Many advantages described and curves of both calculated and actual performance given.

Sprinkler. Sprinkler Stokers in a Mill Power Plant. Power House, vol. 15, no. 8, Apr. 20, 1922, pp. 24-25, 2 figs. Small type requiring practically no special brick work, readily applied to any style boiler without structural alterations.

SUBSTATIONS

Automatic. The Economics of Direct Current Railway Distribution with Particular Reference to the Automatic Substation, Lawrence P. Crecelius and Victor B. Phillips. Am. Inst. Elec. Engrs. Jl., vol. 41, no. 5, May 1922, pp. 363-378, 9 figs. Comments on automatic sub-station in connection with general economics of current distribution.

Fire Prevention in Electric. Equipping Electrical Substations for Fire Prevention and Safety. Safety Eng., vol. 43, no. 4, Apr. 1922, pp. 136. Features of design and installation that should not be neglected.

Outdoor. Safe, Simple and Compact Construction, M. M. Samuels. Elec. World, vol. 79, no. 14, Apr. 8, 1922, pp. 681-682, 12 figs. Construction features of outdoor substation serving Rock Point, L.I., radio station.

SURVEYING

PHOTO-TOPOGRAPHICAL. The "Canadian" Photo-Topographical Method of Survey, E O Wheeler Royal Engrs Jl, vol 35, no. 4, Apr. 1922, pp. 177-185, 5 figs. Describes Canadian method in which axis must be truly horizontal, i e, a true perspective of country to be mapped is used, while airplane photographs are taken with optical axis pointing vertically downwards.

STADIA DISTANCE TABLE. Stadia Distance Table, Ray S Owen. Wisconsin Engr., vol 26, no 7, Apr 1922, pp 129-130 Method of determining constants in well-known formulas and preference over graduating rod to fit stadia wires.

SWITCHBOARDS

TELEPHONE INFORMATION. Information Switchboard for the Paris Telephone System (Les tables de renseignements du réseau téléphonique de Paris). Annales des Postes, Télégraphes et Téléphones, vol. 11, no 1, Jan.-Feb 1922, pp 183-196, 4 figs. Describes facilities for telephone operators to get in touch with subscribers in case of interrupted communication; etc.

T

TANKS

REINFORCED-CONCRETE. Reinforced-Concrete Storage Tanks (Réservoirs en Béton Armé), G Ollivier Arts et Métiers, vol 75, no 17, Feb. 1922, pp. 36-38, 9 figs Calculation of various types, square section, rectangular, great and small height, large and small bottom surfaces, etc.

TELEPHONY

AUTOMATIC. Calculation of Blocking Factors of Automatic Exchanges, Ragnar Holm P O Elec Engrs Jl., vol 15, pt. 1, Apr. 1922, pp. 22-38, 8 figs. Study of ratio of number of calls not effectuated to total number of calls during given time.

DIALLING-IN OVER CABLES. Dialling-In Over Long Superposed Cables, G. M. B. Shepherd P O Elec. Engrs Jl, vol 15, pt 1, Apr 1922, pp 17-22, 3 figs. Some laboratory experiments on transmission of dial signals over phantomed and repeatered cables.

RECEIVERS. Telephone Receiver with Increased Sound Intensity (Ein Fernhorer mit erhohter Lautstarke), Georg Seibt Elektrotechnische Zeit, vol 43, no 9, Mar 2, 1922, pp 269-270, 5 figs. It was found possible to increase sound intensity of telephone receiver by laminating pole pieces above poles of permanent magnet and by introducing magnetic shunt just below coils. Tests with such receivers show increase of sound intensity of from 2 to 2 4 times that of old model. It is already being made on large scale.

TEMPERATURE MEASUREMENT

THERMOPHONE. The Thermophone, Edward C. Wente Physical Rev., vol 19, no 4, Apr 1922, pp. 333-345, 6 figs. Acoustic efficiency of thermophones of heated foil or wire type Methods of calibrating acoustical transmitters and of measuring thermal conductivity of gas by using thermophone.

TESTING MACHINES

METAL RESISTANCE OF. New Method of Testing Wear in Metals (Nouvelle méthode d'essai des métaux à l'usure), L. Jannin Revue de Métallurgie, vol. 19, no. 2, Feb 1922, pp 109-116, 11 figs. Describes machine for testing resistance of axle and bearing metals to wear. Pages 117-119, article by Léon Guillet on some friction tests carried out with the Jannin wear-testing machine.

MODULUS OF ELASTICITY, FOR. A New Testing Machine Giving the Elastic Limit and the Modulus of Elasticity (Nouvelle machine de traction donnant la limite élastique et le module d'élasticité), R. Guillery. Revue de Métallurgie, vol 19, no 2, Feb. 1922, pp. 101-108, 7 figs. Describes apparatus and its operation.

TESTS AND TESTING

TURBINES. Equipment for Testing Turbines and Generators, C. O. Schooley. Elec Jl, vol 19, no 4, Apr 1922, pp. 163-166, 4 figs Description of what is said to be model test floor for both steam and electrical equipment at S. Phila plant of Westinghouse Elec & Mfg Co.

TIDAL POWER

EXPERIMENTAL STATION. Project of an Experimental Tidal Power Station (Idées générales et pratiques pour l'établissement d'un avant-projet de station marémotrice avec usine régulatrice), M Bare. Annales des Ponts et Chaussées, vol 6, Nov.-Dec 1921, pp 252-289, 15 figs. Discusses proposed station at Aber-Wrac'h, near Brest; design and calculation of works, power control, etc.

TIMBER

TREATMENT. Treated Bridge Timbers Have Long Life, A. F. Robinson. Contract Rec, vol 63, no 17, Apr. 26, 1922, pp 379-380. Experience with creosoted wood on Sante Fe System Forty year life seems possible. Troubles with treated timber and methods of overcoming them.

TIME STUDY

MOTION STUDY AND. Time and Motion Study VI, Eric Farmer. Eng & Indus Management, vol. 7, no 12, Apr. 20, 1922, pp 361-365, 7 figs. Experiments in bottling sweets and covering and packing chocolates. (Concluded)

TOOL STEEL

SELECTION AND HEAT TREATMENT. Selection and Heat Treatment of Tool Steel, S C Spaulding. Blast Furnace & Steel Plant, vol 10, no 4, Apr 1922, pp 224-227 Discusses the various factors to be considered in selection of proper steel for a tool.

TOOLS

FINE. Engineers' Fine Tools .Machy. (Lond), vol 20, no 497, Apr 6, 1922, pp. 1-7, 21 figs Methods and equipment used in quantity production by C A Vandervell & Co, Ltd, including various types of calipers, V-blocks, and clamps.

MANUFACTURE OF SMALL. A Small Tools Factory. Eng. Production, vol. 4, no. 78, Mar 30, 1922, pp. 307-311, 14 figs. Describes equipment in works of C A Vandervell & Co, Ltd.

TRANSFORMERS

HIGH-VOLTAGE. Westinghouse Builds Highest-Voltage Single Transformer. Elec Rev, vol 81 no 5, May 1922, pp 338, 1 fig. Description of Westinghouse Elec Mfg Co unit capable of delivering one million volts above ground.

TRANSPORTATION

[illegible] CAR AND AUTOMOBILE. What the Trolley Car Has to Learn from the [illegible] H L Andrews Gen Elec Rev., vol 25, no 5, May 1922, pp 2[illegible]-284, 3 figs Analysis of preference of public for automobile over [illegible] and suggestions for reclaiming of patronage by latter.

TUBES

AUTOMATIC SEAM WELDING. Automatic Seam Welding and the Manufacture of Tubes, [illegible] Anderson Acetylene Jl, vol 23, no 10, Apr 1922, pp 183-188, 13 figs. Describes process of manufacturing welded tubing which, it is claimed, makes possible production of thin-walled tubing at fraction of cost of seamless steel tubing.

TUNGSTEN

BRIGHTNESS OF. Brightness of Tungsten, W. E Forsythe Physical Rev., vol 19, no 4, Apr 1922, pp 436-457. Three methods of measurement for wide-range temperature.

TUNNELLING

METHOD IN WET GROUND. Methods of Tunnelling in Wet Ground, W. G. Cameron. Contract Rec, vol 63, no 17, Apr. 26, 1922, pp 365-368, 8 figs. Survey of most approved practice in sewer construction under various underground conditions. Types of timbering. Compressed air installation.

V

VALVES

ENGINE, SETTING. Setting Valves by Elliptical Diagram, Arthur O. Gates. Power Plant Eng., vol 26, no. 8, Apr. 15, 1922, pp 410-413, 1 fig. New method employed on marine engine when time for shutdown was limited.

VENTILATION

AUTOMATIC. Recent Tests on Automatic Ventilators, A. J Mack and C J Bradley. Heat & Vent Mag, vol 19, no. 4, Apr. 1922, pp 36-38, 1 fig. Results of tests at Eng Experiment Station, Kan. State Agri College.

PRESENT-DAY PRACTICE. Where We Are At in Present-Day Ventilating Practice, Nelson S. Thompson. Heat & Vent Mag, vol. 19, no 4, Apr 1922, pp. 27-32, 1 fig Comments on conditions how sought through installation and operation of properly designed air-supply system.

VIADUCTS

REINFORCED-CONCRETE. The Broad Street Viaduct, J D. Tuller. Cornell Civil Engr., vol. 30, no 7, Apr. 1922, pp. 99-102 and 105, 1 fig. Discusses methods used and problems encountered in construction of viaduct across Bronx River, connecting Mt. Vernon and Yonkers, NY.

W

WASTE

INDUSTRIAL, MEASURING. Measuring Waste in Industry, C. E. Knoeppel Taylor Soc Bul, vol. 7, no 2, Apr 1922, pp 69-76 and (discussion) pp 76-80 Examination of method employed by Committee on Elimination of Waste in Industry of Federated Am Eng. Societies

WATER FILTRATION

RESEARCH. The Circulation of Water in Artificial and Natural Filters and in the Ground (Étude de la circulation de l'eau dans les filtres artificiels ou naturel et dans les terrains meubles), P Questienne Annales de la Société Geologiqu de Belgique, vol 44, no 2, Jan 31, 1922, pp M57-M120, 66 figs Mathematic paper discussing vertical, inclined or horizontal filters, and applying same reasoning to underground water.

RESIDUAL ALUM. Some Facts About Residual Alum in Filtered Water, A. M. Buswell & G. P. Edwards. Chem. & Metal Eng., vol 26, no 18, May 3, 1922, pp 826-829, 2 figs. Graphic representation of chemistry of alum coagulation process emphasizes interdependence of various equilibria and importance of hydrogen-ion concentration Use in explaining discrepancies in data on alkalinity changes and residual alum.

WATER PIPES

METAL, CORROSION OF. The Corrosion of Metal Water Pipes (Die Korrosion metallener Wasserleitungsrohren), Hugo Kühl. Gas- u. Wasserfach, vol 65, no 7, Feb. 18, 1922, pp 99-102. Discusses corrosion of lead, copper, zinc and iron pipe, its injurious effects, and preventive measures.

WATER POWER

CANADA. Installed Water Wheel Capacity in Canada Totals 2,763,000 hp. Contract Rec., vol. 63, no 16, Apr. 19, 1922, pp. 341-346. Résumé of water power resources of Dominion, brought up to date by Water Power Branch, Dept. of Interior, shows 300,000 hp. added during 1921.

CANADIAN RESOURCES. Water Power Resources of Canada. Eng. World, vol 20, no. 5, May 1922, pp. 284-285. Installed water wheel capacity now totals 2,763,000 hp. and many further enterprises are in prospect.

CHEMICAL INDUSTRY, DEVELOPMENT. Water Power Development and Progress in the Chemical Industries (Le développement de la houille blanche et le progrès des industries chimiques), Georges Kimpflin. Vie Technique et Industrielle, vol. 3, no. 30, Mar. 1922, pp. 479-486, 18 figs. Discusses hydroelectric plant of Cie d'Électricité Industrielle, with a head of 95 m. water storage; pressure conduits; electric equipment; 120,000 volt transmission; cyanamide, calcium carbide etc. manufacture.

WATER SUPPLY

CATSKILL AQUEDUCT. New York Catskill Mountain Water Supply, A. A. Northrop. Stone & Webster Jl, vol. 30, no. 4, Apr. 1922, pp 305-318, 11 figs Outstanding features of construction and capacity of New York water supply system as plan proposed twenty-five years ago near completion.

WATER WORKS

RICHMOND HILL, ONT. Water Works System at Richmond Hill, Ont, G H Baker Can Engr, vol. 42, no. 18, May 2, 1922, pp 437-439, 5 figs. Eight million gallon capacity reservoir; old earth dam rebuilt with concrete core wall, filters and pumps in one building with coagulation basin adjoining and clear water reservoir under pump house.

WATTMETERS

ALTERNATING CURRENT. The Electrostatic Wattmeter, G. L. Addenbrooke Electrician, vol 88, no 2292, Apr. 21, 1922, pp. 466-469, 1 fig. Application of quadrant electrometer to measurement of alternating currents and dielectric losses.

WELDING

AUTOGENOUS. *See Autogenous Welding.*

NON-FERROUS AND DISSIMILAR METALS. Welding Non-Ferrous and Dissimilar Metals, Fred E. Rogers. Can. Machy., vol. 27, no. 10, Mar. 9, 1922, pp. 26-28, 2 figs. Welding of aluminum and aluminum containers; welding of copper; brass and bronze; nickel; monel metal; etc.

OXY-ACETALINE. *See Oxy-Acetalene Welding.*

PIPE CONSTRUCTION. Possibilities of the Art of Welding in Pipe Construction, Frederick K. Davis. Heat. & Vent. Mag., vol. 19, no. 4, Apr. 1922, pp. 33-36, 12 figs. Few of typical methods including autogenous or local fusion by which manufacture has been greatly simplified.

WIRE DRAWING

PROCESS. Fascinating Romance of Wire Drawing, John Kimberly Mumford. Raw Material, vol. 5, no 3, Apr 1922, pp. 91-94, 4 figs. Discusses wire drawing methods of J. A Roebling's Sons Co. and R. L. Stillson Co.

Z

ZINC

EXTRACTION. New Methods for Extracting Zinc From Its Ores (Nuovi processi di estrazione dello zinco dai suoi minerali), Gaetano Castelli. Rassegna Numeraria Metallurgica e Chimica, vol. 56, no. 2, Feb. 28, 1922, pp. 21-24, 3 figs. Discusses new method using a reverberatory furnace and an improved sulphate method, and gives diagrams of operations

ZINC ALLOYS

RESEARCH. Research Work on Zinc and Zinc Alloys, Wallace Dent Williams. Can. Foundryman, vol 13, no 4, Apr 1922, pp 24-26, 9 figs. Influence of copper, aluminum and iron additions; influence of temperature upon defects of castings, etc.

Engineering Index

This Index is prepared by the American Society of Mechanical Engineers.

In this department will be published from month to month the titles of current engineering papers with the authors and source and a brief extract of the more important. It is designed to give the members of The Institute a survey of all important articles relating to every branch of engineering profession.

PHOTOSTATIC PRINTS

Photostatic copies of the articles listed in this section, or others on engineering subjects, may be obtained from the Engineering Societies Library.

Price of each print (up to 11 by 14 in. size) 25 cents, plus postage. Where possible, two pages, up to 7 by 9 in. size, will be photographed on one print. Larger magazines require a print per page. Bills will be mailed with the prints.

The Library is also prepared to translate articles, to compile lists of references on engineering subjects and render assistance in similar ways. Charges are made, sufficient to cover the cost of this work. Correspondence is invited. Information concerning the charge for any specific service will be given those interested. In asking for information please be definite, so that the investigator may understand clearly what is desired.

The Engineering Societies Library is under the management of the United Engineering Society, which administers it as a public reference library of engineering. It is maintained jointly by the American Society of Civil Engineers; the American Institute of Mining and Metallurgical Engineers; the American Society of Mechanical Engineers and the American Institute of Electrical Engineers. It contains 150,000 volumes on engineering and allied subjects, and receives currently most of the important periodicals in its field.

Orders and correspondence should be addressed to

Harrison W. Craver, Director

Engineering Societies Library,

29 West Thirty-ninth Street, New York, N. Y.

A

ACCIDENT PREVENTION

MINES. An Inventory of Results of Accident Prevention, C. A. Allen. Trans. Amer Inst. Min & Met Engrs. issued with Min. & Metallurgy, May 1922, no 1155 M. 9 pp., 8 figs. Facts and figures in effort to reduce fatalities in Utah.

ACETYLENE

GENERATING PLANT. Acetylene Generator, Messer & Co. Type (Oberflur-Azetylenentwickler, Bauart Messer & Co.). Zeit. fur komprimierte u flussige Gase, vol. 22, no. 2, 1922, pp. 17-21, 3 figs. Detailed description. Freedom from risk, automatic charging of carbide, its complete gasification.

AERONAUTICAL INSTRUMENTS

OPERATION RECORDERS. Showing An Aviator How He Flies. Aviation, vol 12, no. 23, June 5, 1922, pp. 658, 659, 2 figs. Three special instruments developed by N.A.C.A. for accurately recording aviator's operations and performances of aeroplane in flight. See also Aerial Age, vol. 15, no. 11, May 22, 1922, p. 249.

AERONAUTICS

AERIAL LAWS AND SAFETY SURVEY. Aerial Laws and Survey of Safety in Flight Urged by Aeronautical Chamber of Commerce. Aerial Age Weekly, vol. 15, no. 11, May 22, 1922, pp. 246-247. Report of Aeronautical Chamber of Commerce points out meager capital, insufficient terminal facilities, popular doubt as to reliability, and need of aerial code, as hindrances to development.

AIR COMPRESSORS

FOUNDRY. The Compressor for Foundry Purposes. Compressed Air Mag., vol. 27, no. 6, June 1922, pp. 159-161, 5 figs. Lubricating system, method of regulation, air receiver and aftercooler have much influence upon operation of pneumatic devices.

AIR FILTERS

VISCO. A New Form of Air Filter. Engineer, vol. 133, no. 3456, Mar. 24, 1922, pp. 339-340, 2 figs. Describes Visco air filter, in which filtering medium consists of an innumerable mass of short rings cut from very thin copper-red steel tubing, coated with film of mineral oil termed Viscinol. See also Elec. Rev., vol. 90, no. 2321, May 19, 1922, p. 717.

AIR PUMPS

"DELAS" AIR EXTRACTOR. Tests of a "Delas" Air Extractor. Elec. Ry. & Tramway Jl., vol. 46, no. 1130, May 12, 1922, pp. 205, 207-208, 3 figs. Results of test on Delas Air Extractor manufactured by Société Condenseurs Delas with regard to its use in reducing steam consumption.

AIRCRAFT

PERFORMANCE TESTING. Performance Testing of Aircraft, T. M. Barlow. Aeronautical Jl., vol. 26, no. 137, May 1922, pp. 152-176, 21 figs. Outline of method carried out in England with special reference to routine at R.A.F. Aeroplane Experimental Establishment, Martlesham Heath.

AIRPLANE ENGINES

DESIGN. Aeronautical Engines, Their Evolution and Actual Tendencies (Les moteurs d'aviation, évolution, tendances actuelles), Martinot-Lagarde. Bul. de la Société d'Encouragement pour l'Industrie Nationale, vol. 134, no. 3, Mar. 1922, pp. 187-222, 23 figs. Commercial and military engines; characteristics of aeronautical engines, their mechanical construction, efficiency; engines for high altitudes; supercharging; etc.

ESTIMATING PERFORMANCES IN FLIGHT. Method for Estimating Power and Fuel Consumption of Normal Compression Aviation Engines in Flight at Various Altitudes. Air Service Information Circular, vol. 4, no. 317, Mar. 15, 1922, 6 pp. Object of report is to furnish standard method for estimating performance.

AIRPLANES

FUEL TANKS, SAFETY. Safety Fuel Tanks for Aeroplanes. India-Rubber Jl., vol. 63, no. 18, May 6, 1922, pp. 17-19, 5 figs. Air Ministry prize of r-1400 in official competition for petrol tanks used in aircraft won by I.R.G.P. Co. with an interesting rubber covered tank. Describes tests and the successful Silvertown tank. See also Aeroplane, vol. 22, no. 19, May 10, 1922, pp. 336 and 338.

TIRES AND WHEELS. Discussion of Airplane Tires and Wheels. Air Service Information Circular, vol. 4, no. 303, Feb. 15, 1922, 11 pp. 8 figs. Notes on wheel designs, rims, wheel facing, hub attachment, tires, physical tests of wheels and of tires, designers' ilmitations, etc. Presents charts showing load deflection for airplane tires of standard sizes.

WING SPARS. The Design of Wing Spar Sections, E. P. Warner. Aviation, vol. 12, no. 22, May 29, 1922, pp. 626-627, 2 figs. Develops formulas and gives curves.

ALIGNMENT CHARTS

D. C. MACHINES. Nomographic Methods for the Predetermination of D.C. Machines (Eine nomographische Methode zur Voraus-berechnung von Gleichstrommaschinen), Peter Frhr. von Stritzl. Archiv für Elektrotechnik, vol. 11, no. 1, Apr. 15, 1922, pp. 21-40, 12 figs. Construction of monograms and how to use them

ALLOYS

See Aluminum Alloys, Copper Alloys, Ferronickel, Magnesium Alloys, Phosphor-Bronze..

ALUMINUM

SOLDERS FOR. Investigation of Some Solders for Aluminum. Air service Information Circular, vol. 3, no. 298, Feb. 15, 1922, 1 fig. Determination of effect of small additions of aluminum, copper, magnesium, on alloys of tin-zinc base used for aluminum soldering.

USES. Aluminum and Its Utilization (Die Verwendungsgebiete des Aluminiums), J. Czohralski. Zeit. für Metallkunde, vol. 14, no. 1, Jan. 1922, pp. 1-7, 8 figs. Chemical and mechanical properties of aluminum and aluminum alloys and selection of alloys for particular purposes.

ALUMINUM ALLOYS

ALUMINUM-SILICON. New Aluminum-Silicon Alloys, R. E. Search. Metal Industry (N.Y.), vol. 20, no. 5, May 1922, pp. 183-185. Description of "Aladar," "Aludar" and "Silumin". all alloys of aluminum and silicon, and their origin.

PROPERTIES. Properties of Aluminum Alloys. Am. Mach., vol. 56, no. 22, June 1, 1922, pp. 805-806. Why these alloys make good castings; saving in cost shown in relative weights; advantages of melting range, thermal conductivity, rigidity, and shrinkage.

AMMONIA

PRESSURE-TOTAL HEAT DIAGRAM. The Pressure-Total Heat Diagram for Ammonia. H. J. Macintire and G. H. Bohn. Ice & Refrigeration, vol. 62, no. 5, May 1922, pp. 392-394, 2 figs. Simple graphical representation of properties of saturated and superheated ammonia, based upon Bur. of Standards and Goodenough Mosher data, illustrating various refrigeration cycles, etc.

SYNTHETIC. The Haber Process (Procédé Haber), Ma Patart. Memoires et Comptes Rendus des travaux de la Société des Ingénieurs Civils de France, no. 7, Apr. 7, 1922, pp. 156-165. General description of Haber process for manufacture of Ammonia by combining nitrogen from air with hydrogen from water; cost of production; relative and intrinsic value of process.

AMMONIA COMPRESSORS

COMPOUND. Compound Ammonia Compression, G. A. Horne, A.S.R.E. Jl., vol. 8, no. 6, May 1922, pp. 455-487, 3 figs. Methods of intercooling. Cylinder ratios for compound ammonia compression. Horsepower curves.

CYLINDER DESIGN. Compressor Cylinder Design, J. H. H. Voss. Refrig. World, vol. 57, no. 5, May 1922, pp. 11-15, 11 figs. Importance of providing effective valve area in order to prevent waste of power through excess cylinder pressure. Table for calculating correct valve area.

VALVES FOR HIGH-SPEED Valves for High-Speed Ammonia Compressors, J H H. Van Loosen, vol 57, no 16, Apr 18, 1922 pp. 619-621, 8 figs Summarizes desirable points of construction that should be incorporated in design of every light plate valve it used on ammonia compressors.

ANEMOMETERS

THERMOMETRIC The Thermometric Anemometer, J S G Thomas Lond, Edinburgh & Dublin Philosophical Mag, vol 43, no 256, Apr 1922, pp 688-698, 3 figs Calibration curves of low-capacity anemometer of thermometric type for velocities of a few cm. per sec and upwards, and variations caused by heat losses due to conduction and radiation

APPRENTICES, TRAINING OF

SYSTEMS Trends in Management, William Leavitt Stoddard Factory, vol 28, no. 5, May 1922, pp 528 529, 548 and 550, 2 figs Deals with apprenticeship plan, and describes certain systems in the United States.

ASBESTOS

FIRE PREVENTION The Part Asbestos Plays in Fire Prevention, Maurice J Hoover. Fire & Water Eng, vol 71, no 20, May 17, 1922, pp 899-900, 905 and materials which can be used for building purposes; advantages of asbestos for roof covering importance of interior fireproofing

QUEBEC Asbestos Mining and Milling in Quebec, Walter A. RuKeyser Eng & Min Jl -Press, vol 113, nos 15 and 16, Apr. 15 and 22, 1922, pp. 617-625 and 670-677, 19 figs. Apr. 15: Understanding of local geology and essential aid to proper working of deposits; more efficient methods being introduced. Apr. 22: Simple crushing, screening and suction used to separate and grade asbestos

ASH HANDLING

PLANTS. Pneumatic Ash Handling Plant (Pneumatische Entaschungsanlagen), Philippi Archiv fur Warmewirtschaft, vol 3, no 4, Apr 1922, pp. 63-66, 9 figs. Details of construction of small and large plants and advantages of pneumatic conveying

SLUICING AND PUMPING Pumping Ashes Eng & Indus Management, vol. 7, no 15, June 1, 1922, pp 181-182, 1 fig Sluicing process for removal of ashes.

ATOMS

ISOTOPY Recent Results of the Investigation of the Atom (Neuere Ergebnisse der Atomforschung), Karl Przibram Elektrotechnik u Maschinenbau, vol 40, no. 18, Apr. 30, 1922, pp. 205-210, 2 figs. Discusses question of isotopy of certain elements which, in spite of different radioactive behavior and different atomic weights, show exactly same chemical properties

AUTOMOBILE ENGINES

CAMS AND POPPET VALVES Experiments on Cams and Poppet Valves, G E Scholes, Automobile Engr, vol 12, no 163, May 1922, pp 151-157, 16 figs Introduces formulas and charts Paper read before Inst Automobile Engrs.

CRANKSHAFTS, MACHINING Machining a Case Hardened Mack Crankshaft, Fred H. Colvin. Am. Mach., vol. 56, no 16, Apr 20, 1922, pp 585-587, 9 figs. Hard and long-wearing surfaces secured by case hardening. Straightening, turning and grinding operations; balancing, final straightening and inspection.

IGNITION Automobile Ignition, Chas Baxter Engineering, vol 113, no 2941, May 12, 1922, pp. 578-579, 10 figs. Investigation with view to bringing out relative methods of magneto and coil for battery systems.

AUTOMOBILE FUELS

ALCOHOL Alcohol Motor Fuel Research. Motor Transport, vol 34, no 898, May 15, 1922, pp 600-601 6 figs Encouraging interim report issued by Empire Motor Fuels Committee of Imperial Motor Transport Council

AUTOMOBILE INDUSTRY

RENAULT WORKS, FRANCE The Works of the Société Anonyme Renault. Engineering, vol 113, no 2943, May 26, 1922, pp 639-643, 11 figs Description of 640,000-sq yd plant which manufactures own iron and steel castings, rolls metal to their own dimensions; develops 15,000 b.hp

AUTOMOBILES

AXLES, REAR. A Dual Reduction Rear Axle, Fred H. Colvin. Am. Mach., vol. 56, no 18, May 4, 1922, pp. 663-665, 12 figs. Cutting-off, drilling, boring and milling methods on a forged axle. Fixtures which facilitate easy handling.

BRAKE COUPLINGS Are Cables Superior to Rods for Brake Couplings? M W. Bourdon. Automotive Industries, vol 46 no 20, May 18, 1922, pp 1059-1060, 8 figs. European makers claim cables stronger. Sunbeam, Minerva, Ansaldo, Lorraine-Dietrich, and La Licorice furnish some excellent examples of current practice

STARTER ARMATURE. Novel Starter Amature Eliminates Use of Soldered Commutator Joint. Automotive Industries, vol. 46, no. 21, May 25, 1922, p. 1108, 2 figs Closed end of armature coil located at what is usually commutator end. Separate commutator dispensed with Two armature bearings are placed close together Simplified construction greatly reduces production cost

SUSPENSION DESIGN The Design of Motor Car Suspensions, A A Remington, Automobile Engr., vol. 12, no. 163, May 1922, pp 139-141, 2 figs Consideration of factors involved and some conclusions.

SUSPENSION SPRINGS European Makers Adopt Quarter Elliptic Springs for Light Cars M W Bourdon Automotive Industries vol 46, no 22, June 1, 1922, pp. 1153 1157, 18 figs Modifications in original application have been found necessary in practice. Standard and Wolseley offer good examples of "safety leaf". Carrow shows use of radius rod in construction.

AVIATION

AIR PORTS, ORGANIZATION OF The Organization of Airports Aviation, vol 12, no. 23, June 5, 1922, pp. 660-662, 4 figs. Information division, air service issues revised specifications and rules for ground organization.

B

BEAMS

CALCULATION Expansion of the Clapeyron Equation (Erweiterung der Clapeyronschen Gleichung), Edgar Schmidt Eisenbau, vol 13, no 4, Apr 21, 1922, pp 71 77, 7 figs Assumes statically indeterminate main systems for derivation of the equation to simplify work of calculating beams with n supports

DEFLECTION Some Problems in Deflection of Beams, Ewart S. Andrews Concrete & Constructional Eng., vol 17, no 4, Apr. 1922, pp 235-243, 4 figs Gives derivation of formulas for deflection of beams for two cases not usually dealt with in text books.

BELTING

LEATHER. Power Transmission by Belting, P. F O'Shea Machy (N. Y.), vol. 28, no 10, June 1922, pp 814-816, 4 figs Characteristics of leather belting and charts for simplifying calculations

LEATHER, LABORATORY TESTS. Method of Tests on Leather Belt and Laboratory Equipment, L. W. Arny. Belting, vol 20, no 5, May 1922, pp 31-32, 2 figs How research into many perplexing problems is conducted by leather belting exchange foundation at Sibley College of Mech. Eng, Cornell.

STEEL. Machinery Driven by Steel Belt, John D. Knox. Iron Trade Rev., vol. 70, no 16, Apr 20, 1922, pp 1114-1116, 6 figs. Endless steel bans rolled from seamless tubing have wide application for transmitting power; slippage is overcome by facing pulleys with cork; relation of pulley speeds is discussed.

BLAST-FURNACE GAS

CLEANING METHODS, COMPARISON Gas Cleaning Methods Compared, N. H. Gellert. Iron Trade Rev., vol 70, no 20, May 18, 1922, pp 1401-1406, 4 figs. Analysis of relative merits of dry and wet cleaning systems with formulas and tabular data supplying specific information; concludes that hot cleaned gas effects a fuel economy

VALUE OF CLEAN. The Value of Clean Blast-Furnace Gas, N. H. Gellert Mech. Eng., vol. 44, no. 5, May 1922, pp. 305-310, 3 figs. Savings resulting from use of clean gas in hot-blast stove and boiler operation. Superiority of dry cleaning over wet cleaning. Possibilities held out by electrical cleaning process

WASHING PROCESS. Analyzing Gas Washing Losses, H. T. Watts. Iron Trade Rev., vol 70, no 17, Apr 27, 1922, pp 1179-1181 Causes of heat losses in wet washing of blast furnace gas are outlined and amount of loss is calculated Effects of stoves and vapor content are considered.

BLAST FURNACES

CHARGING. Notes on Blast Furnace Filling, D E Roberts Engineering, vol 113, no. 2941, May 12, 1922, pp 599-603, 16 figs Relative advantages of skip and bucket systems Paper read before Iron & Steel Inst

FILLING Notes on Bast-Furnace Filling, D E Roberts Iron & Steel Inst advance paper no 9, meeting May 1922, 17 pp, 14 figs partly on supp plates Description of skip and bucket methods of mechanical charging

LINING FAILURES Lining Failures Caused by Zinc, P O Menke. Iron Trade Rev, vol 70, no 20, May 18, 1922, pp 1409-1410 This element in ores and limestone causes deterioration, effect is accumulative; water cooling above mantle seems to accelerate action, recommends heavier plates

REMODELING. Rebuilds Eastern Blast Furnace, Richard Peters, Jr Iron Trade Rev., vol. 70, no. 18, May 4, 1922, pp. 1258-1260, 4 figs. Thomas Iron Co in modernizing historic plant at Hockendauqua, Pa. completely reconstructs stack no. 3; new equipment includes buildings, power plant and auxiliary apparatus; provision is made for future expansion.

BOILER FEEDWATER

CHARACTERISTICS. The Story of Feed Water, M F Newman Combustion, vol. 6, no. 6, June 1922, pp 275-278, 5 figs Impurities which cause trouble and suggested plan for feedwater.

HEATING. Heating Feedwater by Steam From Turbines (Réchauffage de l'eau d'alimentation par prélèvement de vapeur aux turbines), R. de Kergaradec. Génie Civil; vol. 80, no. 17, Apr. 29, 1922, pp. 380-383, 2 figs. Makes calculations of savings effected; draws attention to some modifications required in boiler equipment.

BOILER FIRING

OIL FIRING SYSTEM The New Korting Oil Firing System (Neue Korting-Oelfeuerungen), Pradel Petroleum, vol 18, no 13, May 1, 1922, pp 481-486, 8 figs Describes new steam jet or compressed air centrifugal atomizer recently put on market, and gives examples of its application.

OIL-FUELED Oil Firing Sixty-four Boilers at Amoskeag Power, vol 55, no 24, June 13, 1922 pp 920-923, 5 figs Features of installation at Manchester, N.H., which eliminates factors of coal firing objectionable in textile plant.

BOILER MAKING

BABCOCK & WILCOX FRENCH PLANT The Works of the French Babcock & Wilcox Co., Engineering, vol. 113, no. 2944, June 2, 1922, pp. 674-676, 7 figs. Description of plant covering 153,000 sq. yd. and containing 8 large buildings in which all operations are carried on.

BOILER OPERATION

COLFAX STATION. Boiler-Room Performance and Practice of the Colfax Station. Duquesne Light Company, C. W. E. Clarke. Mech. Eng., vol. 44, no. 5, May 1922, pp. 295-300, 8 figs. Description of plant of Duquesne Light Co., Cheswick Pa, and some details of its operation and performance.

EFFICIENCY. New Practical Industrial Method of Using Boilers (Nouvelle méthode industrielle pratique pour l'exploitation rationnelle des générateurs de vapeur), H. Carra. Chaleur & Industrie, vol. 3, nos. 23 and 24, Mar. and Apr. 1922, pp. 1049-1056 and 1158-1164, 9 figs. Discusses essentials of combustion and analysis of losses in heat production, measurement and control of these losses, leading to quasi-automatic control.

BOILER PLANTS

PRODUCTION COST. Production Costs and Boiler Plants, W S Johnston. Combustion, vol. 6, no. 6, June 1922, pp. 285-288. General discussion of expenses with suggestions for plant enlargements or renewals as deduced from modern achievements

BOILER PLATES

CRACKS. Formation of Cracks in Boiler Plates, B. Strauss and Ad. Fry. Forging & Heat Treating, vol. 8, no 5, May 1922, pp. 225-229, 23 figs. Force influence figures developed by new etching method permit recognition of brittleness. Tests show that rolled-plates should be finished at as high a temperature as possible. Translated from "Stahl und Eisen" Aug. 18, 1921.

BOILER TUBES

CHARCOAL IRON. Installing and Maintaining Charcoal Iron Locomotive Boiler Tubes, C H. Woodroffe and C E Lester Ry Mech Engr, vol. 96, no. 5, May 1922, pp 274-278, 13 figs Use of welding in tube work, with particular reference to recommended maintenance practice in enginehouses. Describes effective flue shop equipment and lay-out.

BOILERS

Centralized Combustion Control. Centralized Combustion Control for Boilers. Power, vol. 55, no. 20, May 16, 1922, pp. 771-774, 8 figs. Operation of automatic control for bank of boilers thereby maintaining constant character of combustion at all loads.

Developments. Recent Boiler Developments, V. Z. Caracristi. Steam, vol. 29, no. 5, May 1922, pp. 123-128. [illegible] pressure and output by recent development, covers [illegible] power.

Seams, Efficiency of. Calculating the Efficiency of Boiler Seams, R. J. [illegible]. Boiler Maker, vol. 22, no. 5, May 1922, pp. [illegible]. [illegible] to reduce chance for error and facilitate work; points where failure is likely to occur.

Steam Heating. Water returns to Steam Heating Boilers. Am. Soc. Heating & Vent. Engrs. Jl., vol. 28, no. 3, Apr. 1922, pp. [illegible], 1 fig. Proper return connections to heating boilers when set [illegible] application of check valves. Report prepared by representatives of engineering staffs of insurance companies writing steam-boiler insurance in United States.

BOILERS, WATER-TUBE

Spearing. Spearing Water-Tube Boiler, Elec. Rev., vol. 90, no.2320, May 12, 1922, pp. 652-655. 6 figs. Characteristics including sectional headers, downcomer pipes, reservoir mud drum.

BRASS

Corrosion and Dezincing. Selective Corrosion and Dezincing of Brass Parts (Selektive Korrosionen und Entzinkungerscheinungen an Messingteilen), F. V. Wurstemberger. Zeit für Metallkunde, vol. 14, nos. 1 and 2, Jan. and Feb. 1922, pp. 23-29 and 59-69, 26 figs. Explains dezincing as a double process of an anodic dissolution of metal and a cathodic precipitation of copper; elimination of corrosion.

Forged or Hot-Pressed. Making Hot-Pressed or Forged Brass, L. S. Love. Iron Age, vol. 109, no. 23, June 2, 1922, pp. 1581-1583, 3 figs. Advantages of percussion power press; application to bronze, nickel, tin and aluminum; details of process.

BRIDGE DESIGN

Skew Barrel Arch. Thrust of Skew Barrel Arch Measured on Laboratory Model, Clyde T. Morris. Eng. News-Rec. vol. 88, no. 16, Apr. 20, 1922, pp. 638-640, 5 fig. Results showing concentration of thrust at one corner of abutment indicate that common method of stress calculation is in error. Field tests to be made on Scioto River bridges.

BRIDGES

Arched, Expansion and Contraction in. Calculation of Expansion and Contraction in Arched Bridges (Beitrag zur Berechnung der Warmespannungen in Gewölbten Brücken), Rudolf Kern. Bauingenieur, vol. 3, no. 8, Apr. 30, 1922, pp. 239-244, 5 figs. Discusses effect of temperature changes and expresses them mechanically.

Concrete Substructures. Concrete in Bridge Substructures, Concrete & Constructional Eng., vol. 17, no. 5, May 1922, pp. 310-315, 11 figs. Description of Johnson St. Bridge, Victoria, B.C., consisting of two independent "Strauss" Bascule spans constructed side by side upon common substructure.

Iron, Rust Prevention. Rust Formation and Prevention in Iron Bridges (Rostbildung und Rostverhütung bei eisernen Brücken), Paul Hoffman. Zentralblatt der Bauverwaltung, vol. 42, nos. 31, 32, 33 and 34, Apr. 15, 19, 22 and 26, 1922, pp. 183-184, 189-192, 196-198, and 203-206, 22 figs. Apr. 15: Discusses formation of rust and influence of coatings of dust in aggravating corrosion. Apr. 19: Deleterious effect of locomotive flue gases; various examples of corrosion. Apr. 22: Direct and indirect means for preventing formation of rust. Apr. 26: Importance of preparing metallic surfaces before applying paints, by sand blast or chemical means, application of tar colors, metal and concrete coatings.

BRIDGES, HIGHWAY

Batiscan River, Que. New Highway Bridge Over Batiscan River, Que., Edward Holgate. Can. Engr., vol. 42, no. 20, May 16, 1922, pp. 487-489, 5 figs. Important link completed in Montreal; Quebec highway; 6 fixed spans of 189 ft. and 62-ft. bascule span; pile foundation on soft clay; great care in computing counterbalancing; easy operation of bascule.

Gunite-Encased-Steel. Large Steel Arch Bridge Ribs, Encased in Gunite, C. B. McCullough. Eng. News-Rec., vol. 88, no. 29, June 8, 1922, pp. 942-945, 6 figs. Oregon highway bridge has central span of 350 ft. made up of structural steel with thin concrete covering; comparison of alternate designs considered.

BRIDGES, RAILWAY

Specifications. Tentative Specifications for Steel Railway Bridges. Am. Soc. Civil Engrs. Proc., vol. 48, no. 4, Apr. 1922, pp. 572-657, 28 figs. Discussion on design developing formulas bringing out valuable facts on this subject.

Steel Arch. Erection of Hurricane Gulch Arch Bridge on Alaska Government Railway. Ry. Rev., vol. 70, no. 18, May 6, 1922, pp. 638-640, 3 figs. Describes steel arch bridge, 300 ft. high completed over Hurricane Gulch, 284 miles north of Seward; span of arch, 384 ft., contains nearly 1,000 tons of steel, besides 530 tons that were required for approaches.

Substructure, Wabash Rouge River. The Substructure of the Wabash Rouge River at Detroit, Mich., S. M. Smith, Armour Engr., vol. 13, no. 4, May 1922, pp. 250-255, 5 figs. Description of substructure of trunnion bascule type of bridge having 90-ft. span.

BRONZES

Manganese. Occurrence of Blue Constituent in High-strength Manganese Bronze, E. H. Dix, Jr. Trans. Amer. Inst. Min. & Met. Engrs. issued with Min. & Metallurgy, May 1922, no. 1158-N, 16 pp., 19 figs. Study of this feature discovered during investigation of high-strength manganese bronze by Eng. Division of Air Service.

Manganese, Engineering Uses. Manganese Bronze in Engineering Work. Iron Age, vol. 109, no. 22, June 1, 1922, pp. 1513-1515, 5 figs. How it is made in large foundry; its properties in castings and rolled form; typical installations.

BUILDING CONSTRUCTION

Piers, Load Tests. Load Tests of Piers for Chicago, New Union Station. Eng. News-Rec., vol. 88, no. 20, May 18, 1922, pp. 822-824, 4 figs. Jacking load of 87½ tons per sq. ft. gives little compression of hardpan; skin friction of pier in clay.

C

CABLES, ELECTRIC

Lead-Covered, Corrosion of. The Corrosion of Lead-Covered Wiring by Oak, P. Dunsheath. Elec. Rev., vol. 90, no. 2, 321, May 19, 1922, pp. 690-691, 3 figs. Some interesting facts on corrosive effect of oak on lead-covered wire.

Underground Construction. Factors in Reducing Coats in Underground Construction Work. Jl. Elec. & West. Industry, vol. 48, no. 10, May 15, 1922, pp. 414-417, 1 fig. Western Power Co. practice in use of underground cables under local climatic conditions, with discussion of possibilities of cost reduction in underground and submarine cable installations.

CALCULATING MACHINES

Mercedes-Euclid. A Machine That Thinks (Mitteilungen aus der Praxis). Technische Blätter, vol. 12, no. 20, May 20, 1922, pp. 204-206, 3 figs. Describes Mercedes-Euclid arithmetical machine and gives details of its operations in adding, subtracting and multiplication.

CAR WHEELS

Cast-Iron. Metal for Cast Iron Car Wheels, Y. A. Dyer. Iron Age, vol. 109, no. 22, June 1, 1922, pp. 1504-1506. Three distinct compositions embodied in one mass; white, gray and mottled; care necessary in blending cupola charges.

Chilled-Iron. An Investigation of the Properties of Chilled Iron Car Wheels, J. M. Snodgrass and F. H. Guldner. Univ. Ill. Bul. no. 129, vol. 19, May 1, 1922, pp. 9-95, 44 figs. Requirements of car wheels and tests of this type.

Thermal Stresses in Chilled Iron Car Wheels, G. K. Burgess and R. W. Woodward. Technologic Papers of Bur. of Standards, no. 209, Mar. 18, 1922, pp. 193-226, 26 figs. Stresses calculated from strain-gage measurements.

Tire Rolling. A New Departure in Type Rolling Ry. Gaz., vol. 36, no. 18, May 5, 1922, pp. 735-736, 6 figs. Describes system for production of railway tires which has recently been installed by leading firm of manufacturers.

CARS, FREIGHT

Corrugated Steel Roof. A Self-Supporting Corrugated Steel Freight Car Roof. Ry. Age, vol. 72, no. 19, May 13, 1922, pp. 1129-1130, 2 figs. Describing new design placed on market by Sharon Pressed-Steel Company.

CASE-HARDENING

Carburizing. Recommended Practice in Carburizing. S. P. Rockwell. Am. Mach. vol. 56, no. 22, June 1, 1922, pp. 811-812. Suggestions for selection of carburizing material; methods of testing it; best materials for different kinds of works; design and use of carburizing pots. Paper read before Am. Gear Mfrs. Assn.

Penetrability of Carbon. The Penetration of Carbon into Metals and Mixed Crystals of Iron (Ueber die Diffusion des Kohlenstoffs in Metalle und die Mischkristalle des Eisens), Gustav Tammann. Stahl u. 9 figs. Coefficient of penetrability of carbon and effect of molybdenum, cobalt, manganese, tungsten, etc., on depth of penetration.

CAST IRON

Carburization. A Study of Carburization in Manufacture of Synthetic Cast Iron, C. E. Williams and C. E. Sims. Amer. Electrochem. Soc. advance paper, no. 13, meeting Apr. 27-29, 1922, 8 figs. Investigation of factors which influence carburization.

Chemical Composition. Cast Iron and Its Chemical Composition, O. Smalley. Foundry Trade Jl., vol. 25, nos. 298 and 299, May 4 and May 11, 1922, pp. 323-326, and 343-345, 16 figs. Study of little known elements in cast iron which have kept mechanical characteristics from being controlled. Paper read before Inst. of British Foundrymen.

Electrical Melting. Melts Gray Iron Electrically, W. E. Cahill. Foundry, vol. 50, no. 10, May 15, 1922, pp. 420-421. Cheap current makes it profitable to melt both iron and steel for castings electrically; power consumption figures given; iron produced has uniformly fine grain.

Synthetic, Carburization of. Carburize Synthetic Cast Iron, Clyde E. Williams and C. F. Sims. Foundry, vol. 50, no. 10, May 15, 1922, pp. 390-393 and 422, 8 figs. Experiments made in introducing commercial forms of carbon; details of operation and results; effects of slags and various elements contained in iron are studied.

CASTING

Continuous. Improving Casting Methods in Steel Works (Amélioration des procédés de coulée dans une aciérie), Lucien Dujardin. Outillage, Tome 256, no. 16, Apr. 1922, pp. 475-477, 6 figs. Discusses continuous casting in order to increase production, and describes foundry arrangements necessary.

CASTINGS

Centrifugal. Producing Centrifugal Castings, Leon Cammen. Iron Trade Rev., vol. 70, no. 17, Apr. 27, 1922, pp. 1188-1193, 3 figs. Methods of making hollow metal objects and machine used is described. Uniform cooling of poured metal makes manufacture of thin tubes possible; believes process may be applied to plate making. Presented at A.S.M.E. Spring Meeting May 1922.

CATALYSIS

Contact. Contact Catalysis, Wilder D. Bancroft. Engrs.' Soc. West. Pa. Proc., vol. 37, no. 8, Nov. 1921, pp. 375-389 and (discussion) 390-397. Notes on contact sulphuric-acid, Haber ammonia Ostwald nitric-acid, and Sabatier hydrogenation process. Future developments.

CEMENT

Alumina. Alumina Cement; Its Development, Use and Manufacture, Henry S. Spackman. Eng. News-Rec., vol. 88, no. 20, May 18, 1922, pp. 831-834. History and properties of high strength, quick setting cement now being produced commercially in France.

"Cement Fondu'. — Alumina Cement, M. R. Alavene. Concrete, vol. 20, no. 4, Apr. 1922, pp. 73-75. Obtained by fusing in appropriate furnace a mixture of limestone or lime and bauxite; composed of silica, alumina, iron and iron oxide, and lime; rapid hardening allows early use, absolutely unaffected by sulphurous and sea waters. (Abstract.) Science et Industrie, Nov. 3, 1921.

CEMENT MANUFACTURE

Clinker Burning. Heat Distribution in Burning Cement Clinker, Elliott H. Whitlock and Charles E. Burgoon. Concrete, vol. 20, no. 5, May 1922, pp. 111-118, 14 figs. Study of [illegible] conditions with view to improving efficiency of operation from engineering standpoint.

SEGREGATION. Segregation, Charles Catlett. Concrete, vol. 20, no. 5, May 1922, pp. 119-124. Results of original investigation and segregation as applied to cement industry.

CENTRAL STATIONS

CALUMET, CHICAGO. Calumet Station, Commonwealth Edison Co. Power, vol. 55, no. 22, May 30, 1922, pp. 842-850, 10 figs. Initial installation, 60,000 kw. Steam supplied to turbines at 300 lb. pressure and 200 deg. superheat. Seven 15,089 sq. ft. boilers designed for 350 lb. and 250 deg. superheat. Other features of installation.

ECONOMIC OPERATION. Economic Production of Power and the Technical Side of Super-Central Stations. (La production économique de l'énergie et la technique des super-stations centrales), A.-R. Garnier. Technique Moderne, vol. 14, nos. 2, 3 and 4, Feb., Mar. and Apr. 1922, pp. 63-69, 106-112 and 167-170, 9 figs. Feb.: Modern tendencies in mass production of power, including steam driving of turbines, superheat, handling of fuel, air preheating. Mar.: Technical aspects of superpower stations, including simplification of conduits, increase in power per unit, turbines and their characteristics. Apr.: Discusses electrical equipment, especially close connection between turbine and generator.

LIGNITE — FIRED, GERMANY. Golpa Plant Dry Dredges Lignite and Operates Central Power Station, Geo. F. Zimmer, Coal Age, vol. 21, no. 22, June 1922, pp. 913-919, 13 figs. Brown lignite averaging 40 ft. in thickness but half water, mined by removing 60 ft. of overburden with bucket excavator; central power plant uses 7,000 tons of coal daily.

OPERATION. Performance of Equipment and Trends in Station Practice. Elec. World, vol. 79, no. 20, May 20, 1922, pp. 1033-1035, 1 fig. Analysis of turbine outages and operating data for powdered fuel, Diesel and oil plants constitute important part of report of N.E.L.A. Com. on Prime Movers this year.

CHARTS

CONSTRUCTION. Principles of Constructing Charts (Coup d'œil sur les principes fondamentaux de la nomographie), M. d'Ocagne. Revue Générale des Sciences, vol. 33, no. 8, Apr. 30, 1922, pp. 230-239, 9 figs. Discusses cases in which more than three variables can be reduced to graphic presentation on a plane.

CHROMIUM STEEL

SPONTANEOUS PASSIVITY. Spontaneous Passivity of Chromium Steels (Die spontane Passivität der Chromstähle), G. Tammann. Stahl u. Eisen, vol. 42, no. 15, Apr. 13, 1922, pp. 577-578, 1 fig. Behavior of chromium steels and electrolytes and protective effect of chromium.

COAL

ANALYSIS FOR COKE-OVENS. Analysis of Coal in Coke-Oven Practice, J. Bradwell. Iron & Coal Trades Rev., vol. 104, no. 2822, Mar. 31, 1922, p. 452. Examination as to whether more recent methods of obtaining information regarding constitution of coal substances could be usefully employed as routine tests of quality of coal charged into coke ovens. Methods used at Nunnery colliery. (Abstract.) Address before Coke-Oven Mgrs.' Assn.

COMBUSTION. The Combustion of South African Coals in Boiler Furnaces, E. P. Reim. So. African Eng., vol. 33, nos. 3 and 4, Mar. 31 and Apr. 29, 1922, pp. 40, 73-75. Mar. 31: Origin and mode of formation of coal; impurities. Apr. 29: Describes combustion characteristics. From paper read before Chem. Matallurgical Min. Soc. of So. Africa.

SPONTANEOUS COMBUSTION. Microscopical Examination of Batt, James Lomax. Colliery Guardian, vol. 123, no. 3190, Apr. 21, 1922, pp. 975-977 (includes discussion), 21 figs. Microscopical research carried on for describing the various forms of pyrites of iron disulphide found in coal, its origin and probable effects in relation to spontaneous combustion. Paper read before Manchester Geological & Min. Soc. See also Iron & Coal Trades Rev., vol. 104, no. 2825, Apr. 21, 1922, pp. 577-578.

Spontaneous Combustion of Coal in Mines. Colliery Guardian, vol. 123, no. 3199, Apr. 21, 1922, pp. 977-979. Further discussion by South Staffordshire and Warwickshire Inst. Min. Engrs. of paper presented by S. L. Thacker. South Staffordshire's inmunity from explosions; regulations and preventions; influence of pyrites and fusain; cementationp rocess, etc.

COAL GAS

MANUFACTURE. Coal Gas Manufacture, Jerome J. Morgan. Forging & Heat Treating, vol. 8, no. 5, May 1922, pp. 239-243, 3 figs. Advantages of vertical retorts. Reasons for ascendancy of water gas; present trend of industry.

COAL HANDLING

CONVEYOR, SHAKING. Horizontal Reciprocating Conveyor and Screen on a New Principle, Alphonse F. Brosky. Eng. & Indus. Management, vol. 7, no. 13, May 4, 1922, pp. 407-410, 10 figs. This device is manipulated by revolving weights and spring supports whereby compound motion is obtained and coal [illegible] forward continuously. By duplicating opposing parts use-[illegible] prevented.

CONVEYORS. Tells How Conveyor saved Money for Plant, A. MacLean. Black Diamond, vol. 68, no. 18, May 6, 1922, p. 429, 1 fig. Description of Barber-Greene Conveyor which operated for five years without requiring repairs and handles coal and ashes at thirteen cents a ton, including labor.

[illegible] Devices [illegible] Elevator Company [illegible] the Victoria and Albert Docks, Geo. F. Zimmer, Eng. & Indus. Management, vol. 7, no. 14, May 18, 1922, pp. 435-440, 7 figs. Description of machines designed by Suisted Elevator Co. and ultimate successful accomplishment.

POWER. Handling Coal by Power, James B. Hayden. Combustion, vol. 6, no. 6, June [illegible] for planning same.

COAL MINES

[illegible] Fans, E. Seymour Wood. Instn. Min. Engrs. Trans., vol. 63, part 1, Mar. 1922, [illegible] data for further study of subject.

PNEUMATIC [illegible] Hoadley Tingley. Compressed Air Mag., vol. 27, no. 5, May 1922, pp. 141-145, 10 figs. Review of modern developments brought about by introduction of mining machinery. Some most efficient air-driven machines enumerated and [illegible]

COKE

BLAST FURNACE AND FOUNDRY. Testing of Coke for Blast Furnace and Foundry Purposes (Vorschläge zur Prüfung des Kokses für Hochofen-und Giessereizwecke), Heinrich Koppers. Stahl u. Eisen, vol. 42, no. 15, Apr. 13, 1922, pp. 569-573, 4 figs. Properties of metallurgical coke, ease of combustion, porosity, and different requirements of coke for blast furnaces and foundries.

COKE PLANTS

BY-PRODUCT. Developments in By-Product Coking, A. Thaw. Blast Furnace & Steel Plant, vol. 10, no. 2, Feb. 1922, pp. 122-125, 3 figs. Describes new plant which overcome many difficulties formerly encountered and affords excellent heat economy. Prevention of lime deposits in ammonia stills.

COLUMNS

CONCRETE, FORMS FOR. How to Make Forms for Concrete Buildings, William F. Lockhardt. Concrete, vol. 20, no. 4, Apr. 1922, pp. 164-169, 11 figs. Forms for interior and exterior columns.

COMBUSTION

SPONTANEOUS. Spontaneous Combustion and Friction, Walter L. Wedger. Fire & Water Eng., vol. 71, no. 15, Apr. 12, 1922, pp. 603-604 and 614. Notes on substances subject to spontaneous ignition; coal, fibers and wood charcoal said to be very susceptible; friction fires caused by foreign substances.

AMMONIA. *See Ammonia Compressors.*

CONCRETE

ABRASION TEST. New Laboratory Abrasion Test for Concrete, C. H. Scholer. Cement & Eng. News, vol. 34, no. 4, Apr. 1922, pp. 23-24, 4 figs. Test being developed by Engineering Experiment Station of Kansas State Agricultural College, 9-in. spheres of concrete cast and tested after proper aging and curing. Tested in standard brick rattler using standard abrasive charge.

CAPILLARY CANALS IN. Capillary Canals in Concrete and the Percolation of Water through them, E. T. Moullin. Concrete & Constructional Eng., vol. 17, no. 4, Apr. 1922, pp. 273-278 and (discussion) pp. 278-280. Notes on nature of internal structure and presence of capillary canals as revealed by microscope: Theory to explain why absorption takes place at decreasing rate, etc. Describes tests carried out three years ago. (Abstract.) Paper read before Concrete Inst.

CENTRAL-PLANT-MIXED. Central-Plant-Mixed Concrete Tested for Safe Haul, James W. Brooks. Contractors' & Engrs.' Monthly, vol. 4, no. 4, Apr. 1922, p. 48. Description of tests made to determine safe maximum length of haul.

FASTENING MACHINERY TO. Fastening Machinery to Concrete, G. H. Radebaugh. Brick & Clay Rec., vol. 60, no. 11, May 30, 1922, pp. 848-851, 12 figs. Practices which have been found successful in working with hard concrete; procedure outlined step by step.

LUMBER. Development of Concrete Lumber. Concrete Products, vol. 22, no. 5, May 1922, pp. 61-63, 4 fig. Description of Hahn system and new factory for turning out its units.

CONCRETE CONSTRUCTION, REINFORCED

FORMS. How to Make Forms for Concrete Buildings — Beams and Girders, William F. Lockhardt. Concrete, vol. 20, no. 5, May 1922, pp. 191-197, 13 figs. Valuable information for designing forms used in this type of construction.

CONDENSERS, ELECTRIC

SHORT WAVES, THEORY OF ACTION. The Theory of Action of the "Short Wave" Condenser, F. Addey, Elec. Rev., vol. 90, no. 2, 322, May 26, 1922, pp. 724-725, 5 figs. Explanation not easily obtainable in print.

CONDUITS

CONCRETE. Design and Construction of Novel Concrete Conduit, W. A. Kunick. Eng. & Contracting, vol. 57, no. 15, Apr. 12, 1922, pp. 347-351, 7 figs. Unusual design and cement-gun construction produce economical lowhead conduit. Details, costs and solutions of special problems.

GUNITE SEMI-CIRCULAR. Tacoma Builds Semi-Circular Conduit of Gunite. Eng. News-Rec., vol. 88, no. 22, June 1, 1922, pp. 906-909, 6 figs. Addition to water-supply line for city in Washington has inverted arch of concrete placed with cement gun with precast slab top and gunite cover.

CONVERTERS

SYNCHRONOUS. Voltage Limitations and Flashing of synchronous Converters, J. L. Burnham, Gen. Elec. Rev., vol. 25, no. 6, June, 1922, pp. 348-351, 6 figs. Discussion of technical details of causes of flashovers and remedies for them.

COPPER

ZINC AND USES OF. The Uses of Copper and Zinc, C. T. Van Winkle. Utah Soc. Engrs. Jl., vol. 7, no. 9, Feb. 1922, pp. 167-177. Notes on copper and substitutes; zinc and its applications and uses.

COPPER ALLOYS

CUPRO-NICKEL, COLD-WORK AND RECRYSTALLIZATION. The Internal Mechanism of Cold-Work and Recrystallization in Cupro-Nickel, Frank Adcock. Metal Industry (Lond.), vol. 20, nos. 16 and 17, Apr. 21 and 28, 1922, pp. 372-374 and 392-394, 21 figs. Experiments for gathering information on process of cold-work and recrystallization of metals.

COPPER METALLURGY

COMBINATION WITH PHOSPHOROUS. The Rate of Combination of Copper and Phosphorus at Various Temperatures, C. A. Edwards and A. J. Murphy. Engineering, vol. 113, no. 2944, June 2, 1922, pp. 697-700, 7 figs. Experiments to determine temperature at which rapid combination commences and to follow effect of time on progress of reaction velocity. (Abstract). Paper read before Inst. of Metals.

CORE OVENS

ELECTRIC VS. OIL-FIRED. Core-oven Tests, F. L. Wolf and A. A. Grubb. Am. Inst. Min. & Met. Engrs. Trans. advance paper, no. 1152-N, Apr. 1922, 13 pp. 2 figs.; also (abstract) in Min. & Metallurgy, no. 184, Apr. 1922, pp. 37-38, 2 figs. Describes tests to obtain information regarding costs, efficiency, etc. of baking cores in oil-fired and two electric ovens installed in 1920 in core room of Ohio Brass Co. Power and fuel costs favor oil while quality and uniformity of bake, core losses, convenience and cost of tending favor electricity.

CORROSION

Ferrous Metals. Corrosion of Ferrous Metals, Robert Abbott Hadfield. Engineering, vol. 113, no. 2936, Apr. 7, 1922, p. 419. Preparation of various ferrous metals used in corrosion research of Instn. Civ. Engrs. together with their physical and mechanical properties and general considerations on subject of corrosion. (Abstract). Paper read before (British) Instn. Civ. Engrs.

Prevention by Deactivation of Water. Control of Corrosion by Deactivation of Water, Frank N. Speller. Franklin Inst. Jl., vol. 193, no. 4, Apr. 1922, pp. 515-542, 13 figs. Outline of present status of corrosion prevention by deactivation and deaeration of water.

Sea-Water. Reducing Corrosion by Sea Water, Robt. Hadfield. Iron Trade Rev., vol. 70, no. 21, May 25, 1922, pp. 1481-1483, 3 figs. British conduct extensive investigation to determine best type of steel for under-water structural work; nonrusting steel containing 12 to 14 per cent chromium is found to be most satisfactory.

Water-Carrying Vessels, Prevention. Corrosion and Its Prevention in Vessels Carrying Water, J. R. McDermet. Am. Soc. Heat. & Vent. Engrs., vol. 28, no. 4, May 1922, pp. 407-416. Suggestions for reducing corrosion in water piping, boiler economizers, boilers, steam piping or water tanks.

CRANES

Electric. Electric Cranes At the Swiss, Federal Railway Shops at Bellinzona. Engineering, vol. 113, no. 2943, May 26, 1922, pp. 653-654, 4 figs. Arrangement of two 80-ton electric travelling cranes for handling heavy electric locomotives.

Wharf, Hydraulic. Hydraulic Wharf Cranes. Ship-bldg. & Shipg. Rec., vol. 19, no. 21, May 25, 1922, p. 684, 1 fig. Description of six 30-cwt. luffing cranes for port of London authority.

CUTTING TOOLS

Action of. The Action of Cutting Tools, E. G. Coker and K. C. Chakko. Engineering, vol. 113, no. 2940, May 5, 1922, pp. 564-569, 18 figs. Investigation of most efficient action of various tools for shaping metals and means of determining stresses set up.

Experiments. An Account of Some Experiments on the Action of Cutting Tools, E. G. Coker, Engineer, vol. 133, no. 3462, May 5, 1922, pp. 503-505, 12 figs. Means of studying stress distribution in cutting tools by polarized light.

D

DAMS

Arched. Arched Dams (Etude sur les barrages arqués), A. Stucky. Bul. Technique la Suisse Romande, vol. 48, nos. 1, 3, 4, 8 and 9, Jan. 7, Feb. 4, Mar. 4, Apr. 15 and 29, 1922, pp. 1-7, 25-30, 49-53, 85-90 and 97-103, 28 figs. Jan. 7: American practice; examples for water storage; method of calculation. Feb. 4: Calculation of arcs. Mar. 4: Calculations in connection with Jogne (Gruyère) barrage dam. Apr. 15 and 29: Hydrostatic pressure; temperature variation; calculation of fatigue; profiles of dam walls.

Flood-Control. Flood-Control Dam Replenishes Underground Water Source. Eng. News-Rec., vol. 88, no. 19, May 11, 1922, pp. 770-771, 4 fig. Result of two season's experience with Devil's Gate Dam at Pasadena; flood and water-storage functions conflict.

DETONATION

Study of. The Background of Detonation, Stanwood W. Sparrow. Nat. Advisory Committee for Aeronautics Tech. Notes, no. 93, Apr. 1922, 17 pp., 5 figs. Consideration of several features of detonation problem which it is claimed, have received comparatively little attention.

DIESEL ENGINES

Beardmore-Tosi. The Beardmore-Tosi Marine Diesel Engine. Engineering, vol. 113, no. 2938, April 21, 1922, pp. 488-489, 4 figs. Description of main engines of single-screw motorship Pinzon.

Power Plants. Diesels at Southend. Elec Times, vol. 61, no. 1594, May 4, 1922, pp. 429-430, 3 figs. Rapid increase in demand for electric power met by successive installations of Diesel engines.

Power Plants, Application in. Diesel Engines and Examination into Their Economic Application (Dieselmotoren, Eine Untersuchung über ihre wirtschaftliche Verwendung), Alfred Büchi. Schweizerische Bauzeitung, vol. 79, nos. 18 and 19, May 6 and 13, 1922, pp. 230-235 and 239-243, 11 figs. May 6: Compares hydroelectric with Diesel-electric power generation. May 13: Discusses Diesel engine installation in connection with water power works and gives cost calculation for water power only and water power with Diesel engines.

Submarine Type for Power Plants. Submarine Diesel Engines at Southend, Elec. Rev., vol. 90, no. 2321, May 19, 1922, pp. 688-690, 3 figs. Description of engines taken from dismantled German submarines and generating units which they operate.

Water-Works Power. Diesel Engines to Furnish Power for Water-Works. W. DeWitt Vosbury. Eng. News-Rec., vol. 88, no. 19, May 11, 1922, pp. 793-794, 2 figs. New station at Gloucester, N.J., to be equipped with motorized pumps and high-economy, oil-engine generators.

DYE INDUSTRY

French. The French Dye Industry (L'Industrie Française des matières colorantes), Galopeau. Nature, no. 2506, Apr. 15, 1922, pp. 229-236, 3 figs. State of industry before war and developments during war; reviews principal French works now in operation.

E

ELECTRIC CIRCUITS

Magnetically-Coupled. Chains of Magnetically-Coupled Circuits, E. Bellini. Electrician, vol. 88, no. 2295, May 12, 1922, pp. 560-561. Solving frequencies which occur in cases of 4 and 5 magnetically-coupled circuits. Attempts at solving 6 and 7 circuits.

ELECTRIC COMMUNICATION

Aurora, Effects of. Effects of Aurora on Telegraphs, Telephones and Wireless in New Zealand. Telegraph & Telephone Age, no. 11, June 1, 1922, pp. 248-249. Report by A. Gibbs, deputy chief telegraph engr., on effects of auroral phenomenon generally, and those during exceptionally brillant display.

ELECTRIC DISTRIBUTION

A. C. System. The Development of the Alternating-Current Distribution System, Frank W. Smith. Elec Jl vol 19, no 5, May 1922, pp 209-213, 4 fig. Some facts about alternating current system of the United Elec. Light & Power Co. by its vice-president.

ELECTRIC DRIVES

Installation. Protected Motor Service, T. W. C. Hartmann. Elec. Rev. & Indus. Engr., vol. 80, no. 5, May 1922, pp. 227-228, 257 and 262, 4 figs. Recent installation at Keystone Spring-Works where electric drive has speeded up machine production.

ELECTRIC FURNACES

Carbon Steel. Electric Furnace Practice on Carbon Steel, L. J. Barton. Western Machy. World, vol. 13, nos. 4 and 5, Apr. and May 1922, pp. 134-137 and 173-175, 2 figs. April: Basic Operation; Two-slag practice in production of electric steel, with details of charging, melting down, chemical and other factors. May: Slagging and details of reducing period. Effects of high lime temperature tests. Finishing of heat.

Cast-Iron Production. Cast Iron as Produced in the Electric Furnace and Some of Its Problems, George K. Elliott. Am. Electrochem. Soc. advance paper, no. 9, for meeting Apr. 27-29, 1922, pp. 75-87. Review of literature of electric-furnace cast iron. Discusses conditions favorable to electric furnace, and expresses preference for duplex process with basic-hearth electric furnace. Describes desulphurization and deoxidization; etc.

Electric Furnace Iron and Steel. Intermittent and Alternating Operations, W. E. Cahill. Am. Electrochem. Soc. advance paper, no. 6, for meeting Apr. 27-29, 1922, pp. 49-54. In Treadwell, Alaska, cast iron is made more cheaply in electric furnace than in cupola. Analyses figures show that from charges of all-scrap cupola-melted iron electric furnace produces metal of greatly reduced sulphur content.

Fiat. The Fiat Electric Furnace. Engineering, vol. 113, no. 2936, Apr. 7, 1922, pp. 421-422, 5 figs. partly on p. 424. Three-phase type, having a hearth slightly conductive, neutral and connected to earth. One of characteristic features if the Fiat economizer, or electrode holders.

Non-Ferrous. Metal Electric Furnaces, A. Glynne Lotley. Metal Industry (Lond.) vol. 20, nos. 14 and 15, Apr. 7 and 14, 1922, pp. 322-325 and 343-341 and (Discussion) 341-342, 6 figs. Examples of number of uses for electric furnaces not in iron and steel industry. Portion of report before Sheffield section of Inst. of Metals.

Shaft and Open-Top. A Comparison Between Shaft and Open Top Furnaces in the Manufacture of Pig Iron Electrically from Iron Ore, R. C. Gosrow. Am. Electrochem. Soc., advance paper, no. 8, for meeting Apr. 27-29, 1922, pp. 63-74. Notes on stack and open-top type of furnace and combination open-stack type.

Types. Electric Furnaces and Electrometallurgy, Recent Patents (Les fours électriques et l'électrométallurgie d'après les brevets récents), L. Jumau, Revue Générale de l'Electricité, vol. 11, nos. 12 and 13, Mar. 25 and Apr. 1, 1922, pp. 436-441 and 463-468, 11 figs. Mar. 25: Describes Foley induction. Greiner resistance, Ferron, Moore, and other furnaces. Apr. 1: Electrodes; electric furnaces used in manufacture of steel and production of oxides of nitrogen.

ELECTRIC GENERATORS

Single-Phase. Theory of Single Phase Generator, G. Shimidzu and K. Ito. Danki Kakkwai Zasshi (Jl. Inst. Elec. Engrs. of Japan), no. 404, Mar. 1922, pp. 199-227, 14 figs. Solution for fundamental equation covering steady phenomena is sought, and instantaneous maximum and effective values of steady short-circuit current are calculated. Explains phenomena caused by short circuit taking place between two line terminals in one, two and three-phase generators. (In Japanese.)

ELECTRIC GENERATORS, A.C.

Queenston, Ont. Building Queenston Generators. Can. Chem. & Metallaurgy, vol. 6, no. 5, May 1922, pp. 105-108, 4 fig. Details of 45,000-Kva, (55,000 hp.), 3-phase, 25-cycle, 12,000-v., a.c. generator of Hydro-electric Power Commission of Ontario, manufactured by Can. Westinghouse Co.

ELECTRIC LAMPS

Manufacture. Siemens Lamp Works at Dalston, Elec. Times, vol. 61, no. 1, 597, May 25, 1922, pp. 507-509, 6 figs. Description of many new and interesting processes. (See also Electrician for, vol. 80, no. 2297 pp. 630-631, 6 figs. and Elec. Rev., vol. 90, no. 2322, May 26, 1922, pp. 727-729, 5 figs.

ELECTRIC LOCOMOTIVES

Condensing Turbine. The Ramsay Condensing Turbine Electric Locomotive. Engineer, vol. 133, no. 3456, Mar. 24, 1922, pp. 328-329, 2 figs. Characteristics of experimental locomotive built by Armstrong, Whitworth & Co., Ltd.: Length overall, 69 ft. 7 in.; max. width. 8 ft. 3 in.; total weight, including 2200 gal. water for cooling purposes and 4 tons coal, 130 tons 15 cwt.; tractive force, 22,000 lb.; turbo-generator, 890 kw., at 3,600 rev., voltage, 600. See also Ry. Rev., vol. 70, no. 19, May 13, 1922, p. 667.

Metropolitan Ry., London. 1,200-Hp. Electric Locomotives for the Metropolitan Railway. Engineering, vol. 113, nos. 2936 and 2938, Apr. 7 and 21, 1922, pp. 409-412 and 477-481, 32 figs, partly on supp. plate. Locomotives are 0-4-4-0 type and each have two bogie trucks of carriage type on which body is carried. Max. speed on non-stop runs is 60 mi. per hr.; electric supply is at 500 to 600 volts on third-rail system, and insulated negative return rail is laid in center of track; motors are of standard series-wound type with commutating poles. Describes control gears

ELECTRIC METERS

Accuracy. Providing for Accuracy in Power Company, Meter Records, W. R. Frampton, Jl. Elec. & West. Industry, vol. 48, no. 10, May 15, 1922, pp. 409-414, 16 figs. Good practice in meter installation and testing, as well as advisable organization of company meter departments discussed in convention report of meter committee of Pacific Coast Electrical Assn.

Phase Meters, Theory of. Some Notes on the Theory of Phase Meters, G. W. Stubbings, Electrician, vol. 88, no. 2296, May 19, 1922, pp. 586-588, 2 figs. Detailed consideration of single- and three-phase meters. Resultant rotating field, pulsating fields, frequency errors, accuracy and factor meters discussed.

ELECTRIC MOTORS

Blowers, for. The Control of Blower Motors, H. G. Issertell, Power Plant Eng., vol. 26, no. 11, June 1, 1922, pp. 573-575, 5 figs. Factors to be considered in selection of motors and type of control for blower service.

[illegible] Motor Installation, Edgar P. [illegible] 1922, pp. 687-689, 3 figs. Table is given [illegible] installation of motors, and some [illegible] table to motor circuits.

ELECTRIC MOTORS, A.C.

COMMUTATOR. Single- and Three-Phase Alternating-Current Commutator Motors [illegible] Instn. Elec. Engrs. [illegible] Mar. 1922, pp. 308-314 and discussion 314-327, 15 figs.

Test-Results Obtained from a Three-Phase Shunt Commutator Motor, [illegible] vol. 60, no. 307, Mar. 1922, pp. 328-338, 34 figs. Tests on motor manufactured by Swedish Elec. Co. operation of motor, [illegible] with symmetrical brush-gear setting, [illegible] gear setting, theory with vector diagrams.

ELECTRIC MOTORS, D.C.

BRAKING, REGENERATIVE AND DYNAMIC. Regenerative and Dynamic Braking with Direct-Current Motors, B. A. Briggs. Power, vol. 55, no. 24, June 13, 1922, pp. 924-925, 6 figs. Explanation of two types of braking and how they are applied to elevator motors.

ELECTRIC PLANTS

INTERCONNECTION OF A.C. The Interconnection of Alternating-Current Power Stations, [illegible] and [illegible] Instn. Elec. Engrs. Jl., vol. 60, no. 307, Mar. 1922, pp. 287-298 and (discussion) 298-303, 9 figs. Special factors governing design of interconnecting link between two a.c. power stations, with particular reference to power factor and power-factor control. Gives equations in [illegible] power factor [illegible] current with any given load and voltage [illegible] types of booster for controlling power factor.

WASTE FUEL UTILIZATION. Electricity from Limburg Waste Fuels (Electriciteitsopwekking uit Limburgsche afvalbrandstoffen), A. J. Ter Linden. Ingenieur, vol. 37, no. 15, Apr. 15, 1922, pp. 282-297, 26 figs. Use of low-grade fuels, brown coals, etc., hand and mechanical stoking, results of tests made.

ELECTRIC RAILWAYS

ELECTROLYSIS AND INDUCTIVE INTERFERENCE. Effects of Electric Power Used for Traction, Chas. [illegible] Ry. Elec. Engr., vol. 13, no. 4, Apr. 1922, pp. 113-116, 1 fig. Question of inductive interference and electrolysis as related to railway [illegible]

ELECTRIC SWITCHES

OIL, D.C. CIRCUITS. The Suitability of Oil Switches for D.C. Circuits, W. Wilson. [illegible] vol. 10, no. 5, May 1922, pp. [illegible]-373, 7 figs. Discussion of construction made necessary by recent increase in D.C. voltage use.

ELECTRIC TRANSMISSION LINES

140-KV. [illegible] Hydro and Steam Plants Joined by 140-Kv. lines in Michigan, Harry J. Burton and William W. Tefft. Elec. World, vol. 79, no. 16, Apr. 22, 1922, pp. 770-773, 5 figs. 1300 mi. of transmission line involved, of which 526 mi. is of above voltage. 11 years' experience justified line construction employed.

PROTECTIVE DEVICES. The Influence of Condenser and Choke Coil Protective Devices on Travelling Electric Waves, S. Austin Stigant. Elec. Times, vol. 61, [illegible] May 11, 18 and 25, 1922, pp. 453-454, 481-482 and 505-506, 12 figs. Study of travelling pressure and current waves as effected by [illegible] coils. (Abstract.) Paper read before Jr. Inst. of Engrs.

224,000 VOLTS. EXPERIMENTS [illegible] with Electrical Transmission at 224,000 volts, H. Michener. Jl. Elec. & Western. Indus. vol. 48, no. 10, May [illegible] [illegible] apparatus as it has stood up under actual operating conditions at 224,000 volts and discussion of equipment [illegible] Pit River and Big Creek Lines when they go into action.

ELECTRIC WELDING, ARC

STRUCTURAL STEEL. Arc Welded Steel Building, B. C. Tracey. Welding Engr., vol. [illegible] labor and material; [illegible]

The Arc Welding of Structural Steel, E. S. Humphrys, Jr. Iron Age, vol. 109, no. 21, May 25, 1922, pp. 1422-1425, 7 figs. Tests made to determine reliability of welded joints and limiting conditions of various types of joints.

UTILITY. Utility Arc Welding. Engineer, vol. 133, no. 3458, Apr. 7, 1922, pp. 378-[illegible]

ELECTRICAL DISTRIBUTION

[illegible] How West Penn [illegible] three-phase with maximum use of old equipment and least interruption of ser-[illegible]

ELECTRICAL MACHINERY

[illegible]

ELECTROLYTES

[illegible] r, no. 11, Meeting Apr. [illegible]

F

FATIGUE

FAILURE BY. Failure By Fatigue. Engineering, vol. 113, no. 2939, April 28, 1922, pp. 525-526. Doubts as to mathematical theory of elasticity; discussion and means of determining fatigue tendencies of material.

FERRONICKEL

BRITTLENESS AT LOW TEMPERATURES. On the Brittleness of Ferronickel at Low Temperatures (Etude de la fragilité des Ferronickels aux basses températures), P. Chevenard. Revue de Métallurgie, vol. 19, no. 4, Apr. 1922, pp. 209-214, 3 figs. Experiments to produce metal which would not become brittle at temperature of liquid air, to be used for accessories of liquid-air machines, and results.

FILTRATION PLANTS

DETROIT. New Filtration Plant for Detroit, Largest in the World. Eng. World, vol. 20, no. 5, May 1922, pp. 269-271, 5 figs. Plans for plant having daily capacity of from 320 to 360 million gallons per day.

FIREBRICK

TESTING. New Methods for Determining Compression Strength and Softening of Firebrick at High Temperatures (Neue Verfahren zur Bestimmung der Druckfestigkeit und Erweichung feuerfester Ziegel bei hohen Temperaturen). Tonindustrie-Zeitung, vol. 46, no. 57, May 16, 1922, pp. 561-563. Reviews present methods and shows that there is as yet no uniform method of testing.

FLOW OF OIL

PIPES. Flow of Oil in Pipes. Lubrication, vol. 8, no. 4, Apr. 1922, pp. 45-48, 1 fig. Investigation of properties of oil and their effects on flow through pipes.

FLUMES

METAL. Design, Construction and Use of Metal Flumes, Julian Hinds. Eng. News-Rec., vol. 88, no. 21, May 25, 1922, pp. 854-861, 11 figs. Semi-circular flumes discussed from standpoint of types, supports, stresses, expansion, end structures and surface coverings.

FORGING

HYDRAULIC BULGING. Hydraulic Bulging and Bending. Machy. (Lond.), vol. 20, nos. 497, 498 and 499, Apr. 6, 13 and 20, 1922, pp. 8-12, 42-45 and 75-77, 43 figs. Apr. 6: Manufacture of gramophone swan necks and horn elbows. Apr. 13: Manufacture of telephone receiver cases. Apr. 20: Tooling for production of motor side lamp.

FOUNDATIONS

BRACING. Caisson Cofferdam Foundation With Special Bracing, T. Kennard Thomson. Eng. News-Rev., vol. 88, no. 22, June 1, 1922, pp. 914-918, 6 figs. Deep cellar substructure in filled ground, First Nat. Bank of Jersey City; Caissons braced by built-up struts during excavation; toe wall holds caissons against sliding; waterproofing.

FOUNDRIES

BLAST METER, USE OF. Use of a Blast Meter in Foundry Practice, Louis L. Vayda. Iron Age, vol. 109, no. 23, June 8, 1922, pp. 1584-1586, 5 figs. Measurement of air blast volume important in cupola control; methods of measurement.

ELECTRICITY IN. Foundry Employs Electricity for Melting and Annealing, Herbert R. Simonds. Iron Trade Rev., vol. 70, no. 22, June 1, 1922, pp. 1567-1570, 8 figs. Description of units employed by Eastern manufacturer shows electrical equipment affects economies.

MOTOR CASTINGS. A New Canadian Motor Foundry Plant. Iron Age, vol. 109, no. 16, Apr. 20, 1922, pp. 1068-1070, 6 figs. How old plant was made into new one, designed with view to future expansion. Machine molding a feature in plant of Hiram Walker & Sons Metal Products Co. Ltd., Walkerville, Ont.

FUEL ECONOMY

FRANCE. Reducing the Cost of Motive Power (Réduction des dépenses de force motrice), Ch. Molette. Outillage, Tome 259, no. 19, May 13, 1922, pp. 604-605. Generally discusses question of efficiency and shows that in nearly all cases a saving of from 10 to 20 per cent can be effected.

N. C. & ST. L. RY. Keen Competition Key to Fuel Economy on N. C. & St. L. Ry., J. B. Hill. Ry. Rev., vol. 70, no. 20, May 20, 1922, pp. 701-705, 7 figs. Rivalry based on individual and divisional fuel performance records improves entire operation of railroad.

WABASH RAILROAD. How the Wabash Railroad is Organized for Fuel Economy, J. B. Hurley. Ry. Rev., vol. 70, no. 20, May 20, 1922, pp. 705-708. Practical supervision, individual performance records and monthly meetings result in large fuel saving.

FUELS

See Automobile Fuels, Coal, Coke, Gasoline, Lignite, Pulverized Coal.

FURNACES

See also Electric Furnaces.

FURNACES, BOILER

AIR PREHEATER. European Preheater for Furnace Air. Power, vol. 55, no. 16, Apr. 18, 1922, pp. 615-616, 3 figs. Describes type of air heater, known as Thermix, manufactured by Emile Prat Daniel, Paris, which is said to be finding extensive employment in Europe.

FURNACES, HOT-AIR

DEVELOPMENTS. Recent Developments in Warm Air Furnace Heating, F. R. Still. Am. Soc. Heat. & Vent. Engrs., vol. 28, no. 4, May 1922, pp. 385-395, 5 figs. Valuable suggestions sponsored by Warm Air Furnace Code Committee including formulas and charts and some facts about circulation stimulators.

FURNACES, METALLURGICAL

LOW-HEAT GAS-FIRED. Furnaces Utilize Low Heat Gases, R. J. Weitlaner. Iron Trade Rev., vol. 70, no. 19, May 11, 1922, pp. 1332-1334, 6 figs. Application of split flame principle and employment of regenerators similar to those used with open-hearths enable German furnaces of recent design to operate efficiently on inferior grade fuels.

G

GAGES

Gage Blocks. Measurement of Precision Standards [illegible] Interferometer Method. Machy. (Lond.), vol. 20, no. [illegible], May [illegible], 1922, [illegible] figs. Checking gage blocks by N. P. L. comparator [illegible] apparatus for testing accuracy of precision [illegible].

Gage-Block Comparator. Comparator for Checking Precision Gage-blocks, Franklin D. Jones. Machy. (N. Y.), vol. 28, no. [illegible], 1922, pp. [illegible], 6 figs. Extremely sensitive mechanical apparatus [illegible] very effective at plant of Pratt & Whitney Co. for testing [illegible] of precision gage blocks.

GASOLINE

Use and Handling. Use and Handling of Gasoline, D. E. [illegible]. Oil News, vol. 10, no. 10, May 20, 1922, pp. 36-38 and 50. Important educational work of Assn. Natural Gasoline Mfrs; new methods now used; prospective developments.

Water in. Determination of Water in Gasoline as Received, Exposed to Atmosphere, to Humid Atmosphere, and Saturated with Water. Air Service Information Circular, vol. 4, no. 320, Mar. 15, 1922, 2 pp., 1 fig. Investigation to ascertain whether sufficient quantities of water can be absorbed by gasoline to cause corrosion, and investigation of several methods for determining water in gasoline.

GEAR CUTTING

Hobbing Spur Gears. Cutting Spur Gears by Hobbing. Machy. (N. Y.), vol. 28, no. 9, May 1922, pp. 716-721, 5 figs. Setting up gear hobbing machines; examples from practice; application of multiple-threaded hobs; cutting small pinions.

Internal Spur. Cutting Internal Spur Gears, F. D. Jones. Machy. (N. Y.), vol. 28, no. 10, June 1922, pp. 776-779, 8 figs. Milling internal gear teeth with formed cutters; generating teeth on gear shaper; use of form-copying gear planer.

Mass Production. Mass Production in Gear-Cutting, Joseph Horner. Engineering, vol. 113, nos. 2935, 2937, 2938, Mar. 31, Apr. 14, Apr. 21, 1922, pp. 379-380, 443-445 and 477, 5 figs. Discusses methods associated with mass production of all kinds of gears, embracing such matters as division of operations between roughing and finishing, mounting of several blanks in series when practicable, and use of multiple cutters.

Turbine Reduction Gears. Turbine Reduction Gearing and its Production, J. H. Melloy. Engineer, vol. 133, no. 3462, May 5, 1922, pp. 495-496, 3 figs. Means of attaining greatest accuracy in cutting, thereby obtaining silence and smooth running. (Abstract.) Read before North-Western Setion of Instn. Mech. Engrs.

GEARS

Bevel. The Assembling of Bevel Gears, Charles H. Logue. Am. Mach., vol. 56, no. 10, Apr. 20, 1922, pp. 580-584, 14 figs. Adjustment of pinion and of gear produce different results. Gears should be cut with allowance for backlash. Bottoming of teeth.

The Gleason System of Bevel Gears, F. W. McMullen and T. M. Durkan. Am. Mach., vol. 56, no. 23, June 8, 1922, pp. 849-853, 8 figs. Quietness in operation, strength and durability considered; limiting undercut; preference for low-pressure angle; pressure causes wear.

The Gleason Works System of Bevel Gears, F. E. McMullen and T. M. Durkan. Machy. (N. Y.), vol 28, no. 10, June 1922, pp. 788-792, 8 figs. Description of Gleason improvement in design of form of tooth consistent with strength and wear.

New System of Bevel Gearing Developed by Recent Research, F. E. McMullen and T. M. Durkan. Automotive Industries, vol. 46, no. 20, May 18, 1922, pp. 1064-1068, 8 figs. Quietest form of tooth consistent with strength and durability. Addendum and dedendum for any pitch varies with ratio; usually different for pinion and gear. Pressure angle depends on number of teeth ratio. Paper read before Am. Gear Mfrs. Assn.

Chattering. Nodal Arrangements of Geared Drives, J. H. Smith. Engineering, vol. 113, nos. 2936 and 2937, Apr. 7 and 14, 1922, pp. 438-440 and 467-469, 1 fig. Results of author's investigation of chattering of gearing. Deals with dynamics of geared drives; dynamically equivalent masses and shafts; equations of motion; effect of tooth form irregularities. Results and general conclusions relating to critical speeds; simplification of geared drives; arranging periodicity of disturbing torques. Paper read before (British) Instn. Nav. Architects.

Comparator for Testing Teeth. Inspecting Gear and Gear Cutters at One Hundred Magnifications, Ralph E. Flanders. Iron Age, vol. 109, no. 17, Apr. 27, 1922, pp. 1137-1138 and 1183, 5 figs. Describes invention for use in connection with Hartness projection comparator for testing gear teeth. (Abstract.) Paper read before Am. Gear Mfrs.' Assn.

Helical. A Chart to Aid the Figuring of Helical Gears, W. C. Stewart. Am. Mach., vol. 56, no. 17, Apr. 27, 1922, pp. 630-633, 12 figs. Relation between elements of helical gears. Method of constructing "spiral" gear protractor. More rapid solution of problems in helical gearing.

Hydraulic Transmission. Recent Types of Hydraulic Transmission Gear. Eng. & Indus. Management, vol. 7, no. 11, Apr. 6, 1922, pp. 323-327, 5 figs. Discusses main requisites of efficient hydraulic gear and describes Williams-Janney, Hele-Shaw, and Constantinesco systems

Production, Estimating. Estimating Modern Gear Production, Gustave E. Spies. Am. Mach., vol. 56, no. 22, June 1, 1922, pp. 799-804, 7 figs. Charts and a slide rule that make estimating easy; use of disk cutters and hobs; extra travel of cutters; examples of estimate sheets.

Spur. Backlash in Hobber Spur Gears. Machy. (Lond.), vol. 20, no. 502, May 11, 1922, pp. 163-165, 5 figs. Amount of backlash recommended to provide for unavoidable inaccuracies in machining and heat-treatment.

Strength and Proportion. Strength and Proportion of Industrial Gears, G. E. Katzenmeyer. Am. Mach., vol. 56, no. 18, May 4, 1922, pp. 666-671, 7 figs. Charts for determining strength of industrial gears. Formulas and symbols used and practical examples.

Teeth, Grinding. Gear Tooth Grinding Process Reduces Heat Treatment Distortion Dangers, Automotive Industries, vol. 46, no 22, June 1, 1922, pp. 1162-1164, 3 figs. Finishing grinding gear teeth after heat treatment big factor in eliminating noise; permits resurfacing gears already finished cut to size and surfacing of gears which have grinding stock.

The Grinding of Gear Teeth and Its Future in the Industry, R. S Drummond. Am. Mach., vol. 56, no. 21, May 25, 1922, pp. 779-781. Application of ground gear teeth in automotive industry; overcoming effects of heat treatment; elimination of noisy gearing by grinding. Paper read before Am. Gear Mfrs. Assn.

See also Reduction Gears.

GLASS

Colorless. Making Colorless Glass in Tank Furnaces. Glass Worker, vol. 41, nos. 31 and 32, Apr. 29 and May 6, 1922, pp. 11, 22 and 23, and p. 27. Discussion [illegible] of eliminating harmful discolorations by members of British Soc. of Glass Technology. From Pottery Gaz. & Trade Rev.

H

HANDLING MATERIALS

German Mechanical Devices. Development of Mechanical Handling Devices in Germany During and Since the War, George Frederick Zimmer. Eng. & Indus. Management, vol. 7, no. 11, Apr. 6, 1922, pp. 334-340, 13 figs. Deals with mechanical handling devices for blast furnaces.

Port Development, and. Material Handling in Its Relationship to Port Development. Engrs. & Eng., vol. 1, no. 3, Mar. 1922, pp. 65-77 and 96. Symposium of following articles: Design of a Port to Take Full Advantage of Mechanical Equipment, by Carroll R. Thompson; What Has Been Done and What We Should Plan to Do, by Fred Jasperson, What Can Be Done with Ship's Gear, S. C. Loveland. Discussion.

See also Ash Handling; Coal Handling.

HARBOUR IMPROVEMENTS

Iceland. Survey of Harbours on the Icelandic Coast, 1917-'21, N. P. Kirk and Th. Krabbe. (In English.) Timarit, vol. 7, no. 2, 1922, pp. 33-40, 21 maps on supp. plates. Reports submitted to Icelandic Government showing necessary improvement to provide sufficient barbour facilities for fishing industries.

HEATING AND VENTILATING

Individual Units. Individual Heating and Ventilating Units, James Mackay. Domestic Eng. (Chicago), vol. 99, nos. 5 and 6, Apr. 29 and May 6, 1922, pp. 189-191 and 231-232, 11 figs. Notes on construction, installation and operation.

HEATING, ELECTRIC

Industrial. Industrial Electric Heating for Factories, Wirt S. Scott. Elec. Jl., vol 19, no. 5, May 1922, pp. 203-208, 8 figs. Pointing out the many possibilities as yet partially or entirely undeveloped.

HEATING, STEAM

Central Stations. Commission for the Utilization of Fuel—4th Report (Commission d'Utilisation du Combustible). Annales des Mines, vol. 1, no. 3, Mar. 1922, pp. 192-256. Gives report of First Sub-committee on actual practice at central steam heating stations, discussing their general character, types of boilers, superheating, economizers, air preheating, feed-water, etc.

HELIUM

Production. The Industrial Production of Helium, S. G. Roberts. Sci. Am., vol. 126, no. 5, May 1922, pp. 308-309, 5 figs. Improvements in past five years toward development of non-explosive airship.

HIGHWAYS

Motor Trucks Loads. What Should be the Weight Limit for Trucks Operating on Highways? Automotive Industries, vol. 46, no. 20, May 18, 1922, pp. 1053-1055. Highway officials suggest ten tons. Committee appointed by Natl. Highway Traffic Assn. set maximum at 14 tons. Expansion of railroads through trucks.

HYDRAULIC TURBINES

High-Speed Runners. Developments in High-Speed Runners for Hydraulic Turbines, Frank H. Rogers. Power, vol. 55, no. 17, Apr. 25, 1922, pp. 640-643, 8 figs. Limitations of Francis type runners; comparison of different types of high-speed propeller runners; location of turbine with respect to tailwater; use of inverted-type and ejector-type turbines in low-head plants.

Mixed-Flow. The American Mixed-Flow Turbine and Its Setting, Arthur T. Safford and Edward Pierce Hamilton. Am. Soc. Civil Engrs. Proc., vol. 48, no. 4, Apr. 1922, pp. 753-808, 34 figs. Review of developments of turbine runner and of water-wheel setting.

Niagara Falls. Three 70,000 h.p. Hydraulic Turbines To Be Installed at Niagara Falls. Power, vol. 55, no. 23, June 6, 1922, pp. 894-895, 4 figs. Largest hydraulic-power tunnel in world to supply water to three largest hydro-electric units designed up to this time; these machines will operate under 215-ft. head.

Surge Tanks. Surge Tanks, B F. Jakobsen. Am. Soc. Civil Engrs. Proc., vol. 48, no. 4, Apr. 1922, pp. 853-869, 15 figs. Distinction between surge tanks acceleration and deceleration and difference in requirements for medium-high head and high head plants.

HYDRO-ELECTRIC PLANTS

Auxiliaries, Selection of. Selection of Auxiliaries for Hydro-Electric Power Stations, F. H. Rogers. Power, vol. 55, no. 20, May 16, 1922, pp. 775-777, 4 figs. [illegible] Lubrication [illegible] for bearings. Small water wheels for auxiliary power.

Developments. Hydro-Electric Developments Involve an Expenditure of $150,000,000. Elec. World, vol. 79, no. 19, May 13, 1922, pp. 951-953, 2 figs. Construction in progress under licenses granted by Federal Power Commission involves almost 1,750,000 hp. Big Creek project largest for which license has been granted.

New Brunswick. New Hydro Plant in New Brunswick. Contract Rec., vol. 63, no. 20, May 17, 1922, pp. 474-477, 5 figs. Unique installation just completed at Musquash River near St. John. Actually 2 plants in one. Work of New Brunswick Power Commission.

Smoky Falls, Ont. Smoky Falls Development on the Sturgeon River, C. C Irvine. Can. Engr., vol. 42, no. 15, Apr. 11, 1922, pp. 377-379, 4 figs. Details of hydro-electric plant for Spanish River Pulp and Paper Mills at Smoky Falls, Ont. Present installation of 5200 hp. in two units with provision for two more units. Details of turbines and generators.

I

IMPACT TESTING

METHODS. A Discussion of Impact Testing Methods and the Results Obtained, John M. Lessells. Am. Soc. for Steel Treating Trans., vol. 2, no. 8, May 1922, pp. 659-672, 22 figs. Value of this method which shows up characteristics in heat-treated steel and not evident from conventional tests.

INDUSTRIAL MANAGEMENT

BOSSES. Management that Includes Bosses in the Office and in the Shop, Frank E. Gooding. Elec. Rev. & Indus. Engr., vol. 80, no. 5, May 1922, pp. 260-261. Influence of industrial engineering on earnings of Capital and Labor. Conservation of materials, plant and equipment, and labor. Discussion at meeting of Soc. Indus. Eng.

BRITISH FACTORY. Scientific Management in the British Factory, Wm. J. Hiscox. Am. Mach., vol. 56, no. 23, June 8, 1922, pp. 837-838. Considered by some a revolutionary movement; why it cannot be adopted as a whole; methods not popular with organized labor.

COST RECORDING AND PRODUCTION CONTROL. Cost Recording and Production Control in Drop-forging plants, H. F. Osler. Machy. (N. Y.), vol. 29, no. 10, June 1922, pp. 807-809, 3 figs. Description of system of management which has proven very successful in two drop-forging plants.

DIVERGENCE CHARTS. Divergence Charts and Their Uses, G. W. Greenwood. Management Eng., vol. 2, no. 6, June 1922, pp. 347-350, 4 figs. Means of presenting absolute differences between two magnitudes from month to month, and value of same.

INSPECTION METHODS. Inspection Methods, E. Fairbrother. Eng. Production, vol. 4, nos. 78, 79 and 80, Mar. 30, Apr. 6 and 13, 1922, pp. 303-306, 314-319 and 338-343, 35 figs. Development and practice. Notes on duties of an inspector; location of inspection department in factory. A system is described. Paper presented before Instn. Production Engrs.

MANAGER'S PROBLEMS. Solving the Manager's Present Day Problems, John H. Van Deventer. Indus. Management, vol. 63, no. 6, June 1922, pp. 321-324. Fixity and flexibility as factors in organization.

ORGANIZATION FOR SMALL PLANT. A Workable Organization Plan for the Small-Plant Manager, M. B. Bartlett. Factory, vol. 28, no. 6, June 1922, pp. 640-643, 662 and 664, 3 figs. Practical system covering cost and purchase records, routine adaptable to most small plants.

PERSONNEL DEPARTMENT, DUTIES OF. Duties of a Personnel Department in an Industrial Plant, Bruce F. Brown. Jl. Elec. & West. Industry, vol. 48, no. 11, June 1, 1922, pp. 443-444. How one successful western industry has solved industrial problems among its workers by developing scope of its personnel department.

PRODUCTION PLANNING. Planning with Equipment Standards, Chester D. Buoy. Indus. Management, vol. 63, no. 6, June 1922, pp. 363-365, 2 figs. Effective means of putting accurate and complete equipment standard data at service of planning department.

PRODUCTION REGULATION. Managing Production According to the Business Cycle, Ernest F. DuBrul. Management Eng., vol. 2, no. 6, June 1922, pp. 343-346, 1 fig. Fitting supply to demand in booms and depressions; analyzing business cycles.

RECORDS, EQUIPMENT AND INSPECTION. Equipment and Inspection Records. Elec. Rev. & Indus. Engr., vol. 80, no. 5, May 1922, pp. 211-213 and 216, 3 figs. Description of simple system which can be modified to suit large or small shop requirements.

WORKS ORGANIZATION. Works Organization, T. E. Pattinson. Eng. & Indus. Management, vol. 7, nos. 12, 13 and 14, Apr. 20, May 4 and 18, 1922, pp. 354-356, 388-391 and 430-431, 19 figs. Discusses ways of dealing with scrap and gives scrap charts. Machine-shop layout and operation. Paper read before Instn. Production Engrs.

INDUSTRIAL ORGANIZATION

MODERN. Modern Industrial Organization, Hugo Hirst. Electrician, vol. 88, no. 2297, May 26, 1922, pp. 625-626. Some views gathered from 35 years' experience along this line. Based on address before Assn. Civil Servants.

INSULATING MATERIALS

DIELECTRICS, HARD COMPOSITE. Insulating Materials. Beama, vol. 10, no. 5, May 1922, pp. 374-382, 19 figs. Test methods for use in investigation of mechanical and electrical properties. From publication issued by British Electrical and Allied Industries Research Assn.

INSULATION

REFRIGERATING FIELD. The Economic Thickness of Insulation in the Refrigerating Field, P. Nicholls. Am. Soc. Heating & Vent. Engrs. Jl., vol. 28, no. 3, Apr. 1922, pp. 343-358, 6 figs. Expense caused by leakage of heat, and formulas which include all definite expense factors. Consideration of case of walls of ice and cold storage houses.

INTERNAL-COMBUSTION ENGINES

HESSELMANS. A New Internal Combustion Engine (En ny forbränningsmotor), E. Hubendick. Teknisk Tidskrift, vol. 52, no. 16, Apr. 22, 1922, pp. 259-266, 15 figs. Describes in detail the Hesselmans engine, its construction, and results of tests made with it.

See also Aviation Engines, Diesel Engines, Oil Engines, semi-Diesel Engines.

IRON

SPONTANEOUS IGNITION OF ALUMINUM AND. Spontaneous Ignition of Iron and Aluminum Chips (Die Selbstentzündung von Eisen- und Aluminiumspänen). Warme- und Kälte-Technik, vol. 24, no. 8, Apr. 15, 1922, p. 97. Discusses the causes and recommends storage under water.

IRON ALLOYS

IRON-CARBON SYSTEM. On the Constitutional Diagram of Iron-Carbon System Based on Recent Investigations, K. Honda, Iron & Steel Institute, Advance paper no. 7, Meeting [illegible] May 1922, [illegible]. Brief summary of results [illegible] giving [illegible] diagram to meet new requirements.

IRON METALLURGY

OXIDIZING GASES, EFFECT OF. The Effect of Oxidizing Gases at Low Pressures on Heated Iron, H. C. H. Carpenter and [illegible]. Engineering, vol. 113, no. [illegible], May 12, 1922, pp. [illegible], 7 figs. [illegible] Paper read before Iron & Steel Inst.

L

LATHES

AUTOMATIC. Milling Eight Transmission Covers At One Time, J. H. Moore. Can. Machy., vol. 27, no. 18, May 4, 1922, pp. 33-35, 8 figs. Describes automatic lathe designed for rapid production of duplicate parts in large quantities.

TURRET. Saving Money by Means of the Turret Lathe, H. Alton. Can. Machy., vol. 27, no. 21, May 25, 1922, pp. 17-20, 10 figs. Production increased by efficient chucks and work-holding fixtures; indexing devices with ample wearing surface most suitable; machining hydraulic shock absorber; operations on bronze valve.

LIGHTING

BUILDINGS. The Lighting of Public Buildings, A. L. Powell and Edgar Parker. Illuminating Eng. Soc. Trans., vol. 16, no. 9, Dec. 30, 1921, pp. 533-550, 13 figs. Lighting of art galleries, statuary, museums, libraries, municipal, county and state buildings, and banks. Bibliography.

FACTORY. Lighting the Factory, S. G. Hibben. Factory, vol. 28, no. 5, May 1922, pp. 523-526, 6 figs. Discusses harnessing daylight with refracting prisms, curtains and ground glass; and substituting for artificial light in whole or in part.

INDUSTRIAL. Industrial Illumination. Eng. & Indus. Management, vol. 7, no. 14, May 18, 1922, pp. 450-451, 453, 455 and 460, 11 figs. Effect of good lighting on production; choice of lamps and fittings; correct light distribution; increasing workers' efficiency; economy in workshop.

STREET. Highway Lighting, H. H. Ashinger. Elec. Jl., vol. 19, no. 5, May 1922, pp. 194-195, 2 figs. Design features of lighting units.

Improved Lighting System to be Installed on Lincoln Highway, H. H. Bell. Elec. World, vol. 79, Apr. 15, 1922, pp. 731-732, 5 figs. Among features which it is intended shall mark completed work are concentration on light on roadway, flexibility of arrangement and reasonable cost of installation and maintenance.

The Value of Improved Street Lighting, C. H. Shepherd. Elec Jl., vol. 19, no. 5, May 1922, pp. 187-190, 4 figs. Bringing out importance of proper street illumination and value to community.

LIGHTNING ARRESTERS

COMPENSATED IMPULSE GAP. Same Wet and Dry Sparkover Obtained with Compensated Impulse Gap, C. E. Bennett, Elec. World, vol. 79, no. 21, May 27, 1922, pp. 1065-1067, 5 figs. Unaffected by weather conditions; most sensitive to impulse potentials; characteristics from test data; porous porcelain aids metal surfaces to relieve line disturbances.

LIGNITE

BURNING. Direct Drying of Brown Coal by Flue Gases and Firing the Dried Coal in Powder Form (Unmittelbare Trocknung der Rohbraunkohle mittels Feuergasen und Verheizung der getrockneten Kohle in Staubform), Max Weiss. Technische Blätter, vol. 12, No. 18, May 6, 1922, pp. 185-186, 3 figs. Describes installation of this kind in operation at Becker steel works at Willich.

CARBONIZATION. Lignite Carbonization: Carbonized Residue Briquettes, W. W. Odell, Gas Engr., vol. 38, no. 553, May 15, 1922, pp. 137-138. Results of experiments of Dr. E. J. Babcock, Univ. of N. Dakota which included briquetting and carbonizing in various combinations.

PULVERIZED, FIRING. Drying of Lignite and Firing Pulverized Lignite (Braunkohlen-Trocknung und Staubfeuerung) Weiss-Braunkohle, vol. 21, no. 5, May 6, 1922, pp. 79-85, 6 figs. Describes Brittner Lignite drying installation; pulverizing and storage of lignite; firing of pulverized lignite.

LOCOMOTIVES

CONSTRUCTION. Locomotive Construction. Eng. Production, vol. 4, nos. 79 and 80, Apr. 6 and 13, 1922, pp. 321-327 and 347-351, 28 figs. Methods in Great Western Works at Swindon, England.

POWER TRANSMISSION IN. Power Transmission in Locomotives From the Engine to the Wheels (Di alcuni dei principali biellismi per transmissione del movimento dai motori alle ruote nelle locomotive a motori rotanti), Andrea Caminati. Elettrotecnica, vol. 9, no. 10, Apr. 5, 1922, pp. 222-230, 19 figs. Principles of individual transmission, and for various combinations of wheels.

TURBINE TYPE. Turbine Locomotive Saves 52 Per Cent in Fuel. Ry. Age, vol. 72, no. 22, June 3, 1922, pp. 1295-1296, 1 fig. Describes many novel features of design brought out by Ljungstrom Turbine Co. of Sweden.

UNIFLOW, DEVELOPMENTS. Recent Developments in the Uniflow Locomotive. Ry. Mech. Engr., vol. 96, no. 5, May 1922, pp. 247-250, 7 figs. Exhasut ejector effect overcomes handicap of high compression and reduces size of cylinders.

LUBRICATING OILS

VISCOSITY. Influence of Viscosity on Operation of Oiling Systems, W. F. Osborne. Power, vol. 55, no. 21, May 23, 1922, pp. 820-821. Mechanical considerations where oil is to be used; effect of viscosity.

LUBRICATION

FILTERING METHODS. Modern Filtering Methods for Lubricating Systems, W. F. Osborne. Power, vol. 55, no. 24, June 13, 1922, pp. 930-931, 3 figs. Advantages and disadvantages of five general methods.

LUMINESCENCE

RADIO. Radioluminescence and Its Technical Application, Victor F. Hess, Illuminating Eng. Soc. Trans., vol. 17, no. 3, Mar. 1922, pp. 127-134 and (discussion) 144-146. Describes processes of production of "radium luminous material" and demonstrates its technical application. Computation of economy of luminous material.

M

MACHINE TOOLS

DESIGN. Tool Engineering, Albert A. Dowd and Frank W. Curtis. Am. Mach., vol. 56, no. 19, May 11, 1922, pp. 702-705, 6 figs. Methods employed in designing tools for turret lathes. Use of layouts and sketches, familiarity with machines necessary for designer.

DESIGN STANDARDS. Tool Design Standards, H. P. Losely. Machy. (N.Y.), vol. 28, no. 9, May 1922, pp. 713-715, 2 figs. Development of standard instruction sheets for use of tool designers.

Railway Shops. Machine Tools in the Railway Shop. [illegible] Production, vol. 4, nos. 76-77-78, 79, 80, 81, 82 and 83, Mar. 16, 23, 30, Apr. 6, 13, 20, 27 and May 4, 1922, pp. 244-248, 279-283, 293-297, 32[illegible], [illegible], 366-370, 398-403 and 427-432, 106 figs. Review of latest practice in [illegible] tool and other equipment designed for use in railway shops. Describes representative types of modern equipment.

MACHINE WORK

Optical Instruments, Use in. Use of Optical Instruments in Machine Work. Am. Mach., vol. 56, no. 19, May 11, 1922, pp. 697-701, 19 figs. Microscope and projector used to check location and contour of work. Accurate gear and rack cutting; an eyepiece with radial lines.

MAGNESIUM

Use in Foundry. Magnesium and Its Use in the Foundry (Le Magnésium et son utilisation en Fonderie), J. Gaillard. Fonderie Moderne, no. 1, Jan. 1922, pp. 17-21. Substitution of aluminum by magnesium, and chemical properties of latter; magnesium alloys; etc.

MAGNESIUM ALLOYS

Dowmetal. Dowmetal and Its Application, J. A. Gann. Am. Soc. for Steel Treating Trans., vol. 2, no. 7, Apr. 1922, pp. 607-615 and (discussion) 615-619, 14 figs. Describes series of magnesium alloys produced by the Dow Chemical Co., commercially known as dowmetal. Characteristics and uses.

MATERIALS

Pressure Effect on Physical Properties. Change of the Physical Properties of Materials with Pressure, Erskine D. Williamson. Franklin Inst. Jl., vol. 193, no. 4, Apr. 1922, pp. 491-513, 8 figs. Tools employed in experiments. Change of electrical resistance with pressure; effect of pressure on thermo-electromotive force at junction of two metals; conductivity of solutions; effect of pressure on compressibility; and on viscosity of liquids.

MEASURING INSTRUMENTS

Selection and Use. The Selection and Use of Instruments in Industrial Plants, Frederick J. Schlink. Management Eng., vol. 2, no. 6, June 1922, pp. 337-342, 6 figs. Importance of care in selection and use, and suggestions.

METALS

Electrodeposited. Idiomorphic and Hyp-Idiomorphic Structures in Electro-Deposited Metals, W. E. Hughes. Am. Electrochem. Soc. advance paper, no. 5, meeting, Apr. 27-29, 1922, pp. 35-48, 6 figs. Author seeks to show that idiomorphic structure occurs in deposits of copper, zinc and iron, when they are formed during prevalence of certain conditions of deposition common to the three cases.

Kinetic Theory and Thermal Energy. On the Kinetic Theory of Solids (Metals) and the Partition of Thermal Energy, B. M. Sen. Lond., Edinburgh, & Dublin Philosophical Mag., vol. 43, no. 256, Apr. 1922, pp. 672-687, 1 fig. Part. 1: Investigation of theory of solid state with rough working model of 14 molecules placed on sphere about each individual molecule at center. Part II: Restatement of theory for cubic and face-centered cubic crystals.

Mechanical Properties. On the Variation of Mechanical Properties of Some Metals and Alloys at Low Temperatures (Sur la variation des propriétés mécaniques de quelques métaux et alliages aux bases températures), Léon Guillet and Jean Cournot. Revue de Métallurgie, vol. 19, no. 4, Apr. 1922, pp. 215-221, 9 figs. Describes experiments with special steels, ferronickel, cobalt, copper alloys, and aluminum alloys, and gives results in tabular form.

MICA

Geology and Mining. Geology and Mining of Mica, J. Volney Lewis. Eng. & Min. Jl-Press., vol. 113, no. 20, May 20, 1922, pp. 856-864, 4 fig. Deposits mainly associated with pegmatites. Valuable by products may be recovered. Mining generally shallow and of small magnitude. Modern methods being introduced.

Properties and Uses. Properties and Uses of Micas. Instn. Elec. Engrs. Jl., vol. 60, no. 307, Mar. 1922, pp. 339-342 and (discussion) 342-346. Notes on specifications, identification tests; selection; mica and micanite for commutators; commutator segment separators; rings and cones. Report from British Elec. & Allied Industries Research Assn. See also India-Rubber Jl., vol. 63, no. 19, May 13, 1922, p. 168.

MINERAL RESOURCES

Australia. Geology and Mineral Resources of the North-West, Central, and Eastern Divisions, H. W. B. Talbot. Geol. Survey (West. Australia) Bul., no. 83, 1920, 226 pp. 70 figs. partly on supp. plates. Results of reconnaissance surveys and explorations covering in general way large tracts of country, describing physical features of structural geology, and giving complete account of its mineral and pastoral resources.

MINES

Surveying. Methods of Measuring Horizontal Angles Involving Steep or Precipitous Sighting, L. H. Cooke. So. African Eng., vol. 33, nos. 3 and 4, Mar. 31 and Apr. 29, 1922, pp. 50-54 and 69-70. Mar. 31: Efficiency in mine surveying; testing theodolites for obliquity of plate and limb-axes; methods in which striding bubble is used; etc. Apr. 29: Methods with theodolites having supersensitive plate bubbles.

MONEL METAL

Electrical Properties. Some Electrical Properties of Nickel and Monel Wires, M. A. Hunter, F. M. Sebast and A. Jones, Trans. Amer. Inst. Min. & Met. Engrs. issued with Min. & Metallurgy, May 1922, No. 1159-N, 6 pp. 2 figs. Investigation of specific resistance and temperature coefficient of electrical resistance of nickel and monel metal.

MOTORS

Conductor Sizes for Peak-Load. Determining Sizes of Motor Circuits for Peak-Load Duty, Edgar P. Slack. Power, vol. 55, no. 22, May 30, 1922, pp. 853-854, 2 figs. Examples of motors operating under severe conditions and computations for conductor sizes.

MOTOR TRUCKS

Design. Motor Truck Design from the Truck Buyer's Viewpoint, Cornelius R. Myers. Indus. Management, vol. 63, no. 5, May 1922, pp. 273-281, 11 figs. Important features in buying transportation which might be overlooked in salesman's emphasis on detail.

Logging Methods. Motor Truck Logging Methods, Frederick Malcolm Knapp. Univ. of Wash. Eng. Exper. Station Bul., no. 12, Apr. 1921, pp. 3-29, 13 figs. Useful facts for ordinary truck type not including tractor and caterpillar.

Producer Gas Fueled. Land Transport and the Gas Producer, R. J. Mitchell. Eng. Rev., vol. 35, no. 10, Apr. 1922, pp. 335-337, 1 fig. Description of gas producer developed by D. J. Smith applied to motor truck which shows marked economy over liquid-fueled type.

N

NON-FERROUS METALS

Gas Absorption and Oxidation. Gas Absorption and Oxidation of Non-Ferrous Metals, B. Wyoski and J. W. Beeck. Trans. Amer. Inst. Min. & Met. Engrs. issued with Min. & Metallurgy, May 1922, no. 1160-N, 8 pp., 2 figs. Argument that oxidation and gasings of bronzes and red brasses cannot take place simultaneously, and conditions effecting each.

O

OIL

Crude. Properties of Some Typical American Crude Oils. Oil Eng. & Finance, vol. 1, no. 19, May 29, 1922, pp. 613-616. Selected analyses from Western oils and 39 from Eastern fields, carried out under auspices of U. S. Bur. Mines.

OIL ENGINES

Airless-Injection. New Airless-Injection System for Oil Engines, E. Lundgren. Motorship, vol. 7, no. 6, June 1922, pp. 444-445, 4 figs. Remarkable results obtained from highly scientific experiments made by Hesselman in Sweden.

Design and Operation. Oil Engine Hints. Power Plant Eng., vol. 26, no. 11, June 1, 1922, pp. 565-569, 5 figs. Proportions, installation of engine, operating suggestions for modern installations.

Foundations. An Erector's Experiences in Building Oil-Engine Foundations, L. H. Morrison. Power, vol. 55, no. 17, Apr. 25, 1922, pp. 651-654, 8 figs. Increasing use of this type of engine makes consideration of details of foundation design important.

OIL SHALES

Distillation, Analytical. Analytical Distillations of Typical Shale Oils, Martin J. Gavin. U. S. Bur. of Mines Reports on Investigations, serial no. 2332, Mar. 1922, 12 pp. Important characteristics of oils discussed are summarized. Results of re-distillations of oils from Utah shales, are tabulated, showing change in quality caused by repeated re-distillations.

OPEN-HEARTH FURNACES

Design. Design of Open-Hearth Furnaces, A. D. Williams. Iron Age, vol. 109, no. 16, Apr. 20, 1922, pp. 1075-1076. Consideration of port areas and velocities as affected by pressures; chimney height determined.

Fuel Utilization. Utilizing Fuels in Open Hearths, Herbert F. Miller, Jr. Iron Trade Rev., vol. 70, no. 23, June 8, 1922, pp. 1646-1647 and 1650, 6 figs. Present pressures of both air and gas in gas-fired furnaces are too low and should be increased from ounces to pounds; experiments show that time of heating may be reduced. From paper read before Am. Iron & Steel Inst.

Valve Design. Improving Reversing Valve Design, Wm. C. Bulmer. Iron Trade Rev., vol. 70, no. 22, June 1, 1922, pp. 1560-1561. Types of air or gas valve providing most effective seal and affording unrestricted passage is considered best for open hearths; water-cooled slide with inclined seat is favoured.

ORE TREATMENT

Chloridizing Volatilization. Heat Requirements in Chloridizing Volatilization, Rudolf Gahl, Eng. & Min. Jl. Press, vol. 113, no. 22, June 3, 1922, pp. 957-958, 1 fig. Fuel consumption appears crucial point in commercial application of process; depends chiefly on tonnage, draft, and radiation.

OSCILLOGRAPHS

Turbo-Generator Investigation. Investigation of Oscillation Phenomena in Turbo-Generators (Untersuchung von Schwingungserscheinungen an Turbo dynamos mit Hilfe des Vibrographen), Jos. Geiger. Zeit. des Vereines deutscher Ingenieure, vol. 66, no. 18, May 6, 1922, pp. 437-440, 39 figs. Explains investigation by means of vibrograph; methods of measuring used; successful methods adopted to eliminate vibration.

OSMOSIS

Electro, Application of. Electro-Osmosis and Its Applications, Paul Bary, Chem. Trade Jl. & Chem. Engr., vol. 60, no. 1827, May 26, 1922, pp. 625-627. Commercial applications of this phenomenon becoming daily more important. Translated from Chimie et Industrie, Apr. 1922.

OXY-ACETYLENE CUTTING

Cutting Machines. Efficiency of Machine Cutting, F. J. Maeurer. Welding Engr., vol. 7, no. 5, May 1922, pp. 17-23, 25 figs. Cutting with oxy-acetylene torch can be made to approach very closely maximum theoretical efficiency. Paper read before Am. Welding Soc.

Underwater. Cutting Metals Under Water. Robert G. Skerrett. Compressed Air. Mag., vol. 27, no. 5, May 1922, pp. 129-133, 14 figs. Repairing broken 36-in. diam. water main under New York Harbor by means of submarine torch and compressed air.

OXY-ACETYLENE WELDING

Water Main, Submarine. The Repair of The New York-Brooklyn Submarine Water Main. Engineering, vol. 113, no. 2939, April 28, 1922, pp. 509-511, 8 figs. Account of procedure and discussion of apparatus used.

P

PAINTS

[illegible] INTEGRATING SPHERES, FOR. Paints for Integrating Spheres, A. H. Taylor. Illuminating Eng. Soc. Trans., vol. 16, no. 9, Dec. 30, 1921, pp. [illegible] and [illegible] pp. [illegible]. Requirements of satisfactory paint. Preparation of zinc oxide paint [illegible] being used at Bur. of Standards.

PAPER MANUFACTURE

POWER. Power Used in Papermaking, A. G. Darling and H. W. Rogers. Paper, vol. 30, no. 7, Apr. 19, 1922, pp. 20-24. Heat and mechanical energy must be balanced. Demands for steam in processes.

WATERWHEELS. Waterwheels in Making Groundwood, Adolph F. Meyer. Paper vol. 30, no. 7, Apr. 19. 1922, pp. 58-66. Suggestions as to selection and regulation of speed of waterwheels for grinding machinery. Paper read before Tech. Assn. of Pulp & Paper Industry.

PAPER MILLS

ELECTRIC GENERATION OF STEAM. Electric Generation of Steam, Horace Drever and Frank Hodson. Paper, vol. 30, no. 7, Apr. 19, 1922, pp. 73-75 and 78-81, 3 figs. Recent development in conversion of electric energy into steam by means of electric steam generator; underlying theories and practical application. Paper read before Technical Assn. of Pulp and Paper Industry.

ELECTRICITY IN, USE OF. Electricity in the Paper Mill, R. W. Leeper. Paper, vol. 30, no. 7, Apr. 19, 1922, pp. 24-28. Uses of the force from power plant to finished product.

WATERPOWER SOURCES, CANADA. Mill Waterpower Sources in Canada. Paper, vol. 30, no. 7, Apr. 19, 1922, pp. 11-18, 8 figs. Paper prepared by Dominion Water Power Branch of Dept. of Interior, Ottawa, Ont., giving power supply of various mills in Canada.

PAVEMENTS

DESIGN. Recent Changes in Pavement Design. Pub. Works, vol. 52, no. 15, Apr. 15, 1922, pp. 262-264. 150 cities report changes made last year in base, binder, cushion, joint filler, kind or proportion of aggregate, use of reinforcement, and other details.

WHEEL LOADS, DISTRIBUTION OF. Distribution of Wheel Loads on Pavement Sections H. F. Clemmer and C. A. Hogentogler. Good Roads, vol. 62, no. 20, May 17, 1922, pp. 273-278, 4 fig. Part of investigational work at Bates Experimental Road, Ill. Div. of Highways. Observation of deflections of various surfaces and pressures delivered to subgrade during passage of heavy motor truck wheels.

PAVEMENTS, ASPHALT

SPECIFICATIONS, STANDARDIZED. Standardized Specifications for Mineral Aggregates for Asphalt Pavements, Roy M. Green. Can. Engr., vol. 42, no. 20, May 16, 1922, pp. 496-498. Not desirable to have too rigid specifications for agregates; sheet asphalt paving mixtures; proposed asphalt concrete specifications. Paper read at Am. Road Bldrs. Assn. convention.

PAVEMENTS, CONCRETE

DAY'S WORK. What is a Day's Work Laying Concrete Pavement? H. K. Davis. Eng. News-Rec., vol. 88, no. 18, May 4, 1922, pp. 720-723. Construction progress on 31 contracts by 19 contractors using 29 outfits in 17 counties in Iowa in 1921 gives answer. Shows how small a part of year actual work is done.

PETROLEUM

BIBLIOGRAPHY. Recent Articles on Petroleum and Allied Substances. U. S. Bur. of Mines Reports on Investigations, serial no. 2340, Mar. 1922, 29 pp. Bibliography compiled by E. H. Burroughs.

FEDERAL SPECIFICATION REVISION. Federal Government Revises Petroleum Specifications. Automotive Industries, vol. 46, no. 19, May 11, 1922, pp. 1012-1013, 1 fig. Color test only change of importance in respect to motor gasoline. Points on distillation curve unchanged. Viscosity limits on lubricating oils are altered and some minor changes are made in other items.

PHOSPHOR-BRONZE

PROPERTIES AND MANUFACTURE. Phosphor Bronze from the Engineering Standpoint R. T. Rolfe. Metal Industry, vol. 20, nos. 18 and 19, May 5 and 12, 1922, pp. 413-416 and 437-438, 3 figs. May 15: Classification, composition and tests. Manufacture, microstructure and bearing properties of 85:15. May 12: Alloys for [illegible] wheels and characteristics. Manufacture and uses of malleable.

PHOTOELASTICITY

APPLICATION TO ENGINEERING PROBLEMS. Photo-Elasticity and Its Application to Engineering Problems, P. Heymans. Tech. Eng. News, vol. 3, no. 3, June 1922, pp. [illegible] and 108, 27 figs. Application of temporary birefraction properties shown by transparent bodies when stressed, on general stress determinations.

PIGMENTS

[illegible] Manufacture and Properties of [illegible] White. Fabrication et propriétés [illegible] C. Coffignier. Chimie & Industrie, vol. 7, no. 4, Apr. 1922, pp. 651-661, 11 figs. Manufacture and properties of white pigments in Norway, America and France; describes Devaux, Paquet and Andreu processes.

PIPE LINES

CAPACITY [illegible] CHART. A [illegible] Chart for Calculating Pipe Line Capacities, C. H. M. Burnham. Natural Gas Industry, vol. 16, no. 5, May 1922, p. 165. Graphic method of solving usual pipe lines capacity equation.

SUBMERGED INTAKE. Submerged Intake for 24-in. Pipe Placed without Diver, George W. Pracy. Eng. News Rec. vol. 88, no. 19, May 11, 1922, pp. 786-788, 5 figs. Concrete anchor block cast on shore, floated to place and sunk simul[illegible]

[illegible] Steam, [illegible] ing pipe diameter for least steam loss on saturated steam lines; most economic [illegible]

PIPES

ECONOMIC SIZE. Economic Size of Pipe for Power Purposes, George E. Lyon. Eng & Contracting. vol. 57, no. 19, May 10, 1922, pp. 436-437, 1 fig. Formulas and curves from which proper diameters can be found.

PIPES, CAST-IRON

FLEXIBLE JOINT. Making 30-Inch Flexible Joint Cast-Iron, William G. Hammerstrom. Eng. News-Rec, vol. 88, no. 19, May 11, 1922, pp. 780-782, 5 figs. Spherical-shaped bell and spigot on each length machined to give flexibility at every joint; foundry practice.

PISTONS

DOWMETAL. A Superior Piston Material. Motor Boating, vol. 29, no. 6, June 1922, pp. 39 and 100, 2 figs. Dowmetal an alloy composed of high percentage of magnesium and small accounts of other metals, manufactured by Dow Chem. Co., Midland, Mich., for pistons of internal-combustion engines, equal, if not superior, to cast iron or aluminum.

MACHINING. Tooling Equipments for Pistons. Machy. (Lond.), vol. 20, no. 504, May 25, 1922, pp. 220-224, 13 figs. Use of automatic machines and special equipment for machining pistons at high rate of production.

POLES, WOODEN

PRESERVATION. On the Preservation of Wooden Transmission Poles (Erhönte Bedeutung der Mittel zur Verlängerung der Lebensdauer von hölzernen Leitungsmasten), Wintermeyer. Elektrotechnischer Anzeiger, vol. 39, no. 61-62, Apr. 19, 1922, pp. 521-522. Use of bichloride of mercury, zinc chloride and other baths for impregnating wooden poles.

POWER FACTOR

CORRECTION. Power-Factor Correction by Rearrangement of Motor Drives, T. H. Arnold. Power, vol. 55, no. 23, June 6, 1922, pp. 886-889, 3 figs. Four methods of power factor correction.

POWER GENERATION

RATING OF SUPPLY UNDERTAKINGS. The Rating of Electric Power Supply Undertakings, L. Andrews. Elec. Times, vol. 61, no. 1596, May 18, 1922, pp. 477-478, 1 fig. Economic consideration of various factors and necessity of analyzing same.

POWER PLANTS

AUXILIARIES. Power Plant Auxiliaries, L. R. Lee. Power Plant Eng., vol. 26, no. 11, June 1, 1922, pp. 553-557, 4 figs. Requirements and types used in modern plants.

AUXILIARIES DRIVE. Under What Conditions are Steam Turbines Preferable to Electrical Units for Driving Auxiliaries? Coal Age, vol. 21, no. 21, May 25, 1922, pp. 875-876, 1 fig. Turbines save conversion costs; independent steam units may release large generator at times of idleness; cheap fuel makes heat balance less imperative.

CALUMET STATION, CHICAGO. Calumet Station. Power Plant Eng., vol. 26, no. 10, May 15, 1922, pp. 497-508, 17 figs. Description of Commonwealth Edison Company's new plant which will ultimately produce 180,000-kw.

HELL GATE. New Hell Gate Power Station. Power, vol. 55, no. 18, May 2, 1922, pp. 678-686, 12 figs. Description and table of principal equipment of this plant of United Elec. Light & Power Co.

The Hell Gate Station, Howard W. Leitch. Elec. Jl., vol. 19, no. 5, May 1922, pp. 214-220, 14 figs. Layouts, curves, illustrations and general description.

Maintaining Heat Balance at Hell Gate. Power, vol. 55, no. 20, May 16, 1922, pp. 760-763, 4 figs. Features of units and control.

Switching Equipment for the Hell Gate Station, C. M. Moss and J. B. Macneill. Elec. Jl., vol. 19, no. 5, May 1922, pp. 221-226, 10 figs. Description of unusually good installation at this plant.

LOTS ROAD STATION, LONDON. Lots Road Power Station, London "Underground" Railways. Ry. Gaz., vol. 36, no. 19, May 12, 1922, pp. 777-780, 3 figs. This station, opened in Feb. 1905, is largest in British Isles erected for supplying current for railway traction and associated purposes. New plant recently added is described, and main features of original equipment, in so far as it still applies, are set forth.

POWER TRANSMISSION

DRIVE, UNIT AND LINE. Comparative Advantages of Unit and Line Drive in Industry, H. P. Phillips. Jl. Elec. & West. Industry, vol. 48, no. 11, June 1, 1922 pp. 445-447, 6 figs. Discussion of mechanical installations in some important western industrial plants tending to show that adoption of unit or line drive depends upon type of work to be done.

EFFICIENCY IN. Power Transmission and Production, M. A. Nicholls. Eng. & Indus. Management, vol, 7, no. 11, Apr. 6, 1922, pp. 316-318. Deals with motor overload, question of overtime, ascertaining horsepower and belt stretch. Points out economical utilization of power depends largely upon efficiency of facilities provided for transmission.

ELECTRIC VS. MECHANICAL. The Merits of Electrical vs. Mechanical Power Transmission, R. Gillespie Williams. Eng. & Indus. Management, vol. 7, no. 11, Apr. 6, 1922, pp. 319-322, 3 figs. Deals with questions relating to running costs and maintenance, and economical arrangement of electric generator plant.

FLUID WAVES. Transmitting Power in Fluid Waves. Sci. Am., vol. 126, no. 5, May 1922, pp. 320 and 362. Setting up wave motions or pulsations in enclosed column of liquid, usually water, which is contained in pipe connecting wave-generating apparatus with point of power, application. Discusses generator now on market and applications.

MACHINERY. A Review of Power-Transmission Machinery. Belting, vol. 20, nos. 4 and 5, Apr. and May 1922, pp. 29-30 and pp. 36 and 38, 10 figs. Apr.: Deals with steel hangers. May: Steel pulleys and one type of steel hanger.

PRECIPITATION

ELECTRICAL. Application of Electrical Precipitation to the Wood-Distillation Process, L. F. Hawley and H. M. Pier, Chem. & Met. Eng., vol. 26, no. 22, May 31, 1922, pp. 1031-1033, 3 figs. Tests on experimental wood-distillation retort indicate possibility of precipitating tar from hot vapors by means of cottrell precipitator, thus reducing amount of soluble tar in pyroligneous acid to a point where direct neutralization is feasible. Paper read before Am. Chem. Soc.

PRESSES

ACCIDENT ELIMINATION. Eliminating Cold Trim Press Accidents, G. A. Kuechenmeister, Can. Machy., vol 27, no. 21, May 25, 1922, pp. 21-29, 2 figs. Danger of working on unguarded presses; repeating of press ram not always cause of trouble; unsatisfactory experiments with mechanical tripping devices; electrical guard which has solved problem

PULVERIZED COAL

Boiler Firing. Commission of Fuel [illegible] Commission d'Utilisation du Combustible. Annales des Mines, [illegible] 2 Feb. 1922, pp. 90-152. Firing with pulverized coal. [illegible] pulverized coal; description of installation using it; detailed description of advantages and drawbacks.

Boiler Firing, American Practice. Powdered Coal, John Blizard. Colliery Guardian, vol. 123, nos. 3198, 3199 and 3201, Apr. 13, 21 and May 5, 1922, pp. 918-919, 990-991 and 1119-1120, 10 figs. Apr. 13: Functions of powdered fuel plant, preparation and distribution of fuel. Apr. [illegible]: Various appliances employed in use of pulverized fuel; applications of powdered fuel. May 5: Use of powdered fuel in raising of steam; cost and inherent dangers involved. From Bul. Can. Dept. Mines.

Power Plants. First Large Plant Using Pulverized Coal Exclusively. Elec. World, vol. 79, no. 15, Apr. 15, 1922, pp. 720-724, 13 figs. partly on supp. plate. Lakeside generating station of Milwaukee Elec. Ry. & Light Co. designed for initial capacity of 40,000 kva., with ultimate rating of 200,000 kva. Central control and minimum of attendance. See also Power, vol. 55, no. 16, Apr 18, 1922, pp. 604-610, 16 figs. partly on supp. plate, and Elec. Ry. Jl., vol. 59, no. 15, Apr. 15, 1922, pp. 633-640, 15 figs. partly on supp. plate.

PUMPING PLANTS

Coal Mines, Efficiency in. Pipe Friction and Pump Efficiency, William Brazenall. Instn. Min. Engrs. Trans., vol. 63, part 1, Mar. 1922, pp. 59-69, 1 fig. Account of experiments carried out with original intention to find cost of pumping worked out in terms of actual horsepower for three types of pumps, namely, turbine, three-throw ram, and differential ram. Shows results obtained from pumping plant at modern coal mine.

Hamilton, Ont. Beach Water Works Pumping Plant at Hamilton, R. De Bruno-Austin. Can. Engr., vol. 42, no. 19, May 9, 1922, pp. 462-468, 8 figs. General description of machinery, with special reference to recent installations of 2 ten-million-gallon pumping units; tests show efficiencies as high as 80 per cent; historical review of earlier equipment.

Maple Ridge, B. C. New Pumping Plant for the Maple Ridge Dyking in B. C., H. M. Burwell. Contract Rec., vol. 63, no. 20, May 17, 1922, pp. 465-467, 4 figs. Old pumps in service for 27 years for reclaiming 9,000 acres of rich land replaced by two 20,000 g.p.m. electrically-driven centrifugal pumps. Unusual type of valves.

PUMPING STATIONS

Stand-By Service. A 2,500-Kva. Diesel-Engine Plant for Stand-by Service, Homer [illegible]. Power, vol. 55, no. 21, May 23, 1922, pp. [illegible], 8 figs. Calumet station equipped with four 750-b.hp. two-stroke cycle Diesel-engine generator units, insuring breakdown service for sewage-pumping stations.

Q

QUARRYING

Explosives, Use of. Use of Explosives in Production of Crushed Stone, S. R. Russel. Eng. & Contracting, vol. 57, no. 16, Apr. 19, 1922, pp. 371-374. Selection and methods of using explosives in quarrying. Paper delivered before Nat. Crushed Stone Assn.

R

RADIO COMMUNICATION

Amplifiers. Potentiometer Control of H. F. Amplifiers, S. O. Pearson. Wireless World, vol. 110, no. 8, May 20, 1922, pp. 235-237, 5 figs. Potentiometer method of controlling tendency for continuous oscillations in high-frequency amplifying circuits.

Four-Electrode Valves. Four-Electrode Valves and Their Circuits, H. de A. Donisthorpe. Wireless World, vol. 10, nos. 7, 8 and 9, May 13, 20 and 27, 1922, pp. 198-201, 230-235, and 265, 8 figs. Discussion. Description of the various forms of quadrodes and their corresponding circuits.

Long-Distance. Long Distance Radio Communication, L. W. Austin. Franklin Inst. Jl., vol. 193, no. 4, Apr. 1922, pp. 437-459, 9 figs. Development of the electron tube; comparison of three methods of generating continuous waves, namely, arc, high-frequency alternator, and electron-tube generator; antennae used in high power [illegible] elimination of atmospheric disturbances. Projects for extremely long-distance radio communications.

Modulation, Theory of. Notes of the Theory of Modulation, John R. Carson. Inst. of Radio Engrs., Proc. vol. 10, no. 1, Feb. 1922, pp. 57-64. Transmission system of frequency modulation mathematically analyzed. That it is inferior to amplitude variation system is proved.

RADIOTELEGRAPHY

Decrement of Distant Station. The Determination of the Decrement of a Distant Station by Means of a Coil Aerial, J. Erskine-Murray and B. Williams. Instn. Elec. Engrs. Jl., vol. 60, no. 307, Mar. 1922, pp. 347-351 and (discussion) pp. 356-362, 6 figs. Method of measuring decrement of distant transmitting station, based on fact that if coil aerial be in a plane 45 deg. of the bearing of station, current induced in it, is $1/\sqrt{2}$ of that when on bearing.

Power for. The Provision of Power for Wireless Telegraphy, J. H. Wittaker-Swinton. Beama, vol. 10, no. 5, May 1922, pp. 383-391, 6 figs. Survey of forms of high-tension power; present practice and statement of probabilities regarding future. Extract of paper read before I.E.E.

RAILWAY ELECTRIFICATION

Chile. Electrification on the Chilean Railway. Ry. & Locomotive Eng., vol. 35, no. 5, May 1922, pp. 111-115, 6 figs. Solution of high cost of fuel, and congested traffic. Descriptions of locomotive equipment.

Industrial Plants. Yard Electrification of Industrial Plant Railways, D. M. Petty. Engrs. & Eng., vol. 1, no. 3, Mar. 1922, pp. 79-84 and 96-97. Underrunning third-rail scheme is best suited for heavy work and low voltages; existing substations used to supply d.c. power; etc.

Mountain Districts. Advantages of Electrical Operation in Mountain Districts, Frank Rusch. Gen. Elec. Rev., vol. 25, no. 6, June 1922, pp. 362-364. Some features of 660 route miles operation of C., M., & St. Paul Ry. Co., on five mountain ranges. (Reprinted from Milwaukee Employees Mag., Mar. 1922).

RAILWAY MANAGEMENT

Chinese Government. The Administration of Chinese Government Railways, Ching-Chun Wang. Assn. Chinese & Am. Engrs. Jl., vol. 3, no. 1, Jan. 1922, pp. 3-16, 2 figs. Development; statistical features; central administration; improvements.

RAILWAY MOTOR CARS

Diesel-Electric. Diesel-Electric Motor Cars for Railway Service. Ry. Age, vol. 72, no. 20, May 20, 1922, pp. 1183-1184, 2 figs. Successful operation in Sweden has led to introduction of 250-hp. cars.

Gasoline. Some Recent Developments in Gasoline Motor Rail Cars, W. L. Bean. Ry. Rev., vol. 70, no. 21, May 27, 1922, pp. 741-747, 8 figs. Present equipment admirable in design but limited in capacity; railways need larger cars built on same principle.

Gazoline Engine. The Power Behind the Modern Gasoline Motor Rail Car. Ry. Rev., vol. 50, no. 19, May 13, 1922, pp. 669-673, 6 figs. Features to which consideration must be given in selection of power unit for gasoline rail car operation. Describes Midwest heavy-duty high-speed engine.

RAILWAY OPERATION

Amphibious. By Rail and By Water. Sci. Am. vol. 126, no. 6, June 1922, p. 374, 5 figs. Combination train and two barges invented by Belgian engineer for use in Congo.

Parallel Traffic Working. "Parallel" Traffic Working on South Eastern & Chatham Railway. Ry. Gaz., vol. 36, no. 20, May 19, 1922, pp. 805-814, 7 figs. By systematic scheduling of trains on "Parallel" basis in both directions, time-keeping is improved, facilities increased, signalling movements reduced, and engines and rolling-stock utilized to better advantage.

Suburban Passenger Service. The Operation of Heavy Suburban Passenger Services on A Steam Railway, F. V. Russell. Ry. Gaz., vol. 36, no. 21, May 26, 1922, pp. 841-842. Steam and electric traction compared. Suggestions for adoption by steam railways of features in use in electrically-operated ones. From Lecture before Roy. Soc. Arts.

RAILWAY SHOPS

Tools and Fixtures. Special Tools and Fixtures in a Southern Railroad Shop, S. Ashton Hand. Am. Mach., vol. 56, no. 17, Apr 27, 1922, pp. 613-616, 15 figs. Describes equipment of shops of Chesapeake & Ohio Ry., Richmond, Va.

RAILWAY SIGNALING

Interlocking. New Interlocking on the C.R.R. of N.J., Fred W. Bender. Ry. Signal Engr., vol. 15, no. 5, May 1922, pp. 184-189, 14 figs. Large Electro-pneumatic plant at Phillipsburg, N.J. uses new operating mechanisms and lead-covered cables.

Location of Signals. Location of Signals as an Aid to Traffic Working, R. S. Proud. Engineering, vol. 113, no. 2939, April 28, 1922, pp. 533-535, 3 figs. Signals from standpoint of traffic handling rather than safety. Paper read before Instn. Ry. Signal Engrs.

RAILWAY TERMINALS

Electrification. Operation of an Electrified Terminal, L. E. Lynde. Elec. Traction, vol. 28, no. 5, May 1922, pp. 403-404, 2 figs. Conditions at Broad Street Station, Philadelphia, as compared with steam operation on this portion of Penna. system.

RAILWAY TIES

Electric Resistance. Electrical Resistance of Treated and Untreated Crossties, P. R. Hicks. Ry. Signal Engr., vol. 15, no. 5, May 1922, pp. 190-192, 2 figs. Results of measurements made by Forest Prod. Laboratory in co-operation with Chicago, Milwaukee, & St. Paul.

RAILWAY TRACK

Crossings. 11 Types of Railroad Crossings. Eng. & Contracting, vol. 57, no. 16, Apr. 19, 1922, pp. 375-377, 11 figs. Information regarding different types of crossings given in preliminary report presented before Am. Ry. Eng. Assn. (Abstract.)

Machines for Track Work. Special Machines and Combinations for Track Work. Eng. & Contracting, vol. 57, no. 16, Apr. 19, 1922, pp. 368-370, 3 figs. Information on use of mechanical appliances and tools in track work and organization of labor involved, given in appendix to report presented before Am. Ry. Eng. Assn. by Committee on Rules and Organization. (Abstract.)

Maintenance. Applying Machinery to Railway Maintenance of Way, Robert H. Ford, Eng. News-Rec., vol. 88, no. 20, May 18, 1922, pp. 821-825. Enormous aggregate economy seen in use of labor-saving and material handling devices for track work. (Abstract.) Paper read before West. Soc. of Engrs.

REDUCTION GEARS

Double. Double Reduction Gears in the SS. "Melmore Head," J. W. Wilkie. Engineering, vol. 113, no. 2837, Apr. 14, 1922, pp. 469-471, 6 figs. Detailed account of troubles experienced with double-reduction gearing, together with description of methods recently adopted to overcome them. [Paper read at Spring Mtg. of I. N. A.] See also Mar. Engr. & Naval Archt., vol. 45, no. 536, May 1922, p. 190 and Shipbldg & Shipg. Rec., vol. 19, no. 15, Apr. 13, 1922, pp. 457-460.

Turbine. Turbine Reduction Gearing and Its Production, J. H. Melloy. Mar. Engr. & Naval Architect, vol. 45, no. 536, May 1922, pp. 184-187, 3 figs. Hobbing process with particular reference to Muir & Melloy patent hobbing machine. Abstract of paper read before Northwestern Branch of I.M.E.

REFRIGERANTS

Hydrocarbon. Some Properties of Hydro-Carbon Refrigerants, H. D Edwards. A.S.R.E. Jl. vol. 8, no. 6, May 1922, pp. 488-495, 5 figs. Discusses use of butane, propane, ethane, and makes comparison with ammonia.

REFRIGERATING PLANTS

Steam vs. Electric Drive. A Few Facts About Steam- and Electric-Driven Refrigerating Plants, C. E. Porce. Power, vol. 55, no. 22, May 30, 1922, pp. 855-856. Comparison of electric motors and other prime movers.

REFRIGERATION

Insulation, Thickness of. The Economic Thickness of Insulation in the Refrigerating Field, P. Nicholls. Am. Soc. Heat. & Vent. Engrs. Jl., vol. 28, no. 3, Apr. 1922, pp. 343-358, 6 figs. Various items of monetary expense which leakage of heat causes and formulas which include all definite expense factors.

RELAYS

PROTECTIVE. Relay Protection for Electrical Apparatus in Western Use, C. H. Bragg, [illegible] & West Industry, vol. 48, no. 10, May 15, 1922, pp. 402-405, 9 figs. Discussion of special problems of western irrigation pumping installations, latest schemes of relay connections, recent developments in relays and operating experienced with existing relay systems.

RIVERS

CANALIZATION OF ST. LAWRENCE. An Examination of the Plan for Canalizing the St. Lawrence River, Wilfred H. Schoff. Engrs. & Eng., vol. 1, no. 3, Mar. 1922, pp. 85-89. Author concludes that as economical investment in combined power and navigation it is not desirable. Better to develop each separately.

COLORADO. Controlling the Principal Artery of the Southwest States, C. E. Grunsky. [illegible] & West Industry, vol. 48, no. 9, May 1, 1922, pp. 348-350, 4 figs. Discusses feasibility of construction of dam that would rise to height of 550 ft., storing 25,000,000 acre-ft. of water which will irrigate thousands of acres of and land, protect Imperial Valley from disastrous floods and generate approximately 600,000 hp. of electrical energy.

ROAD CONSTRUCTION

TRUCK OVERLOADS. Truck Overloads and Road-Building, J. G. McKay. Power Wagon, vol. 28, no. 210, May 1922, pp. 25-28. Importance of having roads meet traffic demands. Analysis of over loading and cause of traffic increase.

ROADS

OIL SPECIFICATIONS, ILLINOIS. Illinois Prepares New Road Oil Specifications, H. F. Clemmer. Good Roads, vol. 62, no. 20, May 17, 1922, pp. 280-281. Requirements resulting from experimentation in the laboratory Division of Highways.

ROADS, CONCRETE

FRACTURES. Fractures in Concrete, Harry Bentham. Surveyor, vol. 61, no. 1577, Apr. 7, 1922, pp. 289-290. Account of author's experience in reconstruction of thoroughfare to meet requirements of present day fast and heavy traffic. Fractures thought to be due to expansion and contraction in bulk. (Abstract.) Paper read before British Soc. of Engrs.

PROPER AGGREGATE. Proper Aggregate for Concrete Roads, Duff A. Abrams. Contract Rec. vol. 36, no. 19, May 10, 1922, pp. 417-421. General requirements for highway work. Tests for stone and sand that aid in selection of suitable material for best results.

ROLLING MILLS

COLD-ROLLING STRIP. New Five-Stand Cold-Rolling Strip Mill. Iron Age, vol. 109, no. 19, May 11, 1922, pp. 1289-1291, 5 figs. Tandem mill of new design has unusual flexibility of control; electric power a feature.

CONTINUOUS. Development of Continuous Rolling Mills, John W. Sheperdson. Iron Age, vol. 109, nos. 11, 15 and 17, Mar. 23, Apr. 13 and 27, 1922, pp. 791-794, 993-995 and 1149-1151, 15 figs. Design affected by fundamental conditions specific problems, and co-relation of units. Merchant mills not well adapted to continuous principle. Selection of cooling-bed length; staggering of mills. Paper read before Engrs'. Soc. West. Pa.

ELECTRIFICATION PROGRESS. Mill Electrification Progresses, Wilfred Sykes. Iron Trade Rev., vol. 70, no. 22, June 1, 1922, pp. 1550-1554, 1 fig. Recent years have witnessed number of large installations of motor drives on rolling mills; operation results are satisfactory; power and motor size not limited; general plant layout discussed. From paper read before Am. Iron & Steel Inst.

HOT BILLET SCRAPER. An Automatic Hot Billet Scraper, R. C. Rohrabacher. Iron Age, vol. 109, no. 17, Apr. 27, 1922, pp. 1126-1128, 6 figs. Mechanical device for removing defects in use in Canadian rolling mills. Advantages and savings.

STRIP MILLS. New Continuous Ten-Stand Strip mill, Iron Age, vol. 109, no. 22, June 1, 1922, pp. 1510-1512, 3 figs. Compact unit designed for heavy production; interesting details of electric drive; arrangement at Trumbull Steel Co.

WROUGHT-IRON BARS, ROLLING. Power Required to Roll Wrought Iron Bars, Edwin L. Fletcher. Iron Age, vol. 109, no. 17, Apr. 27, 1922, p. 1144. Results of tests in reducing [illegible] billets to [illegible] in rounds.

ROPE

FLEXIBLE STEEL. Making and Care of Flexible Steel Ropes, W. Voigtlander. Iron Age, vol. 109, no. 16, Apr. 20, 1922, pp. 1065-1066, 1 fig. Operation of standing machines; securing open ends of rope; effective strength with some wires broken.

WIRE, FLEXIBLE. Making and Care of Flexible Steel Ropes, W. Voigtlander. Eng. & Indus. Management, vol. 7, no. 15, June 1, 1922, pp. 463-465. Description of three steps in manufacture, lubrication and inspection when in use. Based on paper read before Assn. Iron & Steel Elec. Engrs.

S

SAFETY

ELECTRICITY IN FACTORIES. Electricity and Safety First in Factories, W. H. Seal. Electrician, vol. 88, no. 2297, May 26, 1922, pp. 618-623, 4 figs. Suggests code of safety rules; precautions desirable in using electrical machinery.

SAWS

WIRE, FOR SLATE AND MARBLE. Wire Saws for Slate and Marble Cutting. Quarry, vol. 27, no. 303, May 1922, pp. 181-183, 4 figs. Description of this kind of saw [illegible]

SCRAP

[illegible] Reclaiming Railroad Scrap Pile, Edward K. Hammond. Machy. (N.Y.), vol. 28, no. 10, June 1922, pp. 769-772, 8 figs. Conversion into useful articles of much material found in scrap piles. How Can. Pacific turns its scrap pipe into source of revenue.

SHEET METAL [illegible] Metal Scrap (Das Entzinnen von Meissblechabfallen), B. Haas. Metall-Technit, vol. 48, no. 17, Apr. 22, 1922, pp. 17[illegible] [illegible] processes, their [illegible]

SCREW THREADS

[illegible] Screw Thread Inspection by Optical Projection, Ralph E. Flanders. Automotive Industries, vol. 46, no. 21, May 25, 1922, pp. 1116-1119, 7 figs. Speed and accuracy attained by Hart- [illegible] locate imperfect edges of gear teeth by tracing outline of median tooth section. Paper presented before Am. Gear Mfrs. Assn.

SCREWS

MACHINE BOLTS AND. Designing Machine Screws and Bolts, L. T. Rutledge. Can. Machy. vol. 27, nos. 8 and 10, Feb. 23 and Mar. 9, 1922, pp. 26-27 and 24-25 and 29, 6 figs. Feb. 23: Various thread shapes and their respective uses; screw thread as a power medium; thrust factor depending on shape; safety of bolts; pipe threads. Mar. 9: Screw threads for bolts and nuts. Bending stresses; stripping of threads; failure due to shear; lacking deviees; effect of vibration; etc.

MILLING. The Milling of Screws, H. H. Jeffcott. Engineering, vol. 113, no. 2936, Apr. 7, 1922, pp. 441-442, 5 figs. Account of problems of interest to manufacturer and meteologist. Paper read before (British) Instn. Mech. Engrs.

SEMI-DIESEL ENGINES

OPERATION. Semi-Diesel Engines (Les Moteurs Semi-Diesel). Technique Moderne, vol. 14, no. 4, Apr. 1922, pp. 145-150, 31 figs. Construction and operation, fuel injection, regulation and general application.

WATER INJECTION IN. The Use of Water Injection in Semi-Diesel Oil Engines, R. B. White. Power, vol. 55, no. 16, Apr. 18, 1922, pp. 617-618. Author claims that while water injection is necessary in low-pressure engines, it is not desirable and may be avoided by higher compressions; and that water does free cylinder of carbon, and its occasional use is recommended, even in dry engines.

SEWAGE DISPOSAL

ACTIVATED SLUDGE. Activated Sludge Plant at Brampton, Ontario, W. M. Threadgold. Can. Engr., vol. 42, no. 19, May 9, 1922, pp. 459-461, 4 figs. Sedimentation tanks reconstructed for new system. Capacity 300,000 gal. per day; four-hour aeration period; diffusion ratio 4.8; sludge dewatered in tank; used as fertilizer; troubles overcome.

SEWERS

COEFFICIENT OF FRICTION. On the Proper Value of Kutter's for Sewer Computations, Chas. W. Sherman. Eng. New-Rec., vol. 88, no. 23, June 8, 1922, pp. 948-950. Existing data based on actual sewer conditions scanty; overlooked federal bulletins; suggestion for.

VANCOUVER DISTRICT. Three Million Dollars Spent on Sewer Schemes for Vancouver District, Contract Rec., vol. 36, no. 21, May 24, 1922, pp. 485-488, 4 figs. Review of progress made to date by Vancouver and districts joint sewerage and drainage board in development of comprehensive sewer layout.

SHEARS

HYDROELECTRIC BLOOM. Hydro-Electric Bloom Shear, Iron Age, vol. 109, no. 16, Apr. 20, 1922, pp. 1078-1079, 4 figs. New method of operation devised for use in mills without steam power.

SNOW REMOVAL

CRANE CARS. Crane Cars Solve Snow-Removal Problem. Elec. Ry. Jl., vol. 59, no. 20, May 20, 1922, pp. 825-827, 5 figs. Three crane cars designed by Third Ave. Ry., New York City, for general track repair and handling and transportation of miscellaneous materials have been used to increase snow-fighting equipment by addition of wings.

SOUND WAVES

SUBMARINE. Propagation of Sound Waves and the Phenomena of Submarine-Listening (Etude sur la propagation des ondes acoustiques et les phénomènes d'écoute à sous-marine), H. Brillie, Bul. Technique du Bureau Veritas, vol. 3, no. 12, Dec. 1921, and vol. 4, nos. 1, 2 and 3, Jan., Feb. and Mar. 1922, pp. 302-305, 15-21, 39-42 and 68-72, 23 figs. Dec.: Propagation of waves and their reflection; maximum amplitude of waves resulting from combination of several waves. Jan.: Transmission of acoustic waves between three mediums; resonance and its use in selection of sounds. Feb.: Propagation of waves in listening tubes and combination of waves. Mar.: Theory and application of stethoscopes

SPRINGS

AUTOMOBILE. *See Automobiles, Suspension.*

LEAF, MODERN MANUFACTURE. Modern Methods of Making Leaf Springs, E. F. Lake. Iron Age, vol. 109, no. 20, May 18, 1922, pp. 1343-1346, 6 figs. Mechanical forming machines; tempering furnaces; assembling, testing and inspecting.

STANDARDS

BRITISH AUTOMOBILE DRIVING LAMPS. Disc for Determining the Illuminating Effect of Automobile Driving Lamps, British Eng. Standards Assn., Jan. 1922, no. 151, 9 pp. 2 figs.

BRITISH, RAIL TESTING MACHINES. Falling Weight Testing Machines for Rails. British Eng. Standards Assn., Apr. 1922, no. 103, 1 p.

U. S. BUREAU OF STANDARDS. What the Bureau of Standards Can Do for You. Factory, vol. 28, no. 5, May 1922, pp. 540-541 and 554, 556 and 558, 3 figs. Indicates scope of service.

STEAM

CONSUMPTION, CALCULATION. Steam Consumption Accounted For by Indicator Diagram. Power, vol. 55, no. 24, June 13, 1922, pp. 935-937, 7 figs. Development of equations for water rate and application to indicator diagram giving steam, that would be used if no condensation occurred.

PRODUCTION. Economics in Steam-Raising, T. W. Harper. Gas Jl., vol. 158, no. 3075, Apr. 19, 1922, pp. 154-156. Lancashire versus water-tube boilers; boiler settings and flues; feedwater and scale; fuel and grate; waste heat utilisation; superheaters; steam distribution. Paper read before North British Assn. Gas Managers.

PRODUCTION AND USE. Production and Use of Steam (Production et utilisation de la vapeur), Victor Kammerer. Bul. de la Société Industrielle de Mulhouse, vol. 87, no. 9, Nov. 1921, pp. 440-464. Discusses fuel, efficiency and losses, automatic stokers, etc.

PRODUCTION AND UTILIZATION. Work of the Fuel Utilization Commission, V. Kammerer (Travaux de la Commission d'Utilisation du Combustible). Bul. de la Société d'Encouragement pour l'Industrie Nationale, vol. 134, no. 1, Jan. 1922, pp. 50-78. Report on production and utilization of steam, including transmission, motive power, use of steam for manufacturing and heating purposes, etc. See also Chaleur et Industrie, no. 24, Apr. 1922, pp. 1175-1182.

STEAM ENGINES

Extraction. Possibilities of the Extraction Engine. Iron & Coal Trades Rev., vol 104, no 2825, Apr 21, 1922, pp 567-568, 2 figs. Describes a steam-extraction engine built by John Musgrave & Sons, Ltd., Bolton, Eng., of 650 i.hp. at 160 r.p.m. for maximum extracted steam quantity of about 11,000 lb. per hr. at from 10 to 15 lb. receiver pressure, drives line shafting by ropes, and is direct-coupled to a 200-kw. d.c. generator.

STEAM POWER PLANTS

Battle Creek. Battle Creek Steam Plant of Consumers Power Company, W. W. Tefft. Power, vol. 55, no. 23, June 6, 1922, pp. 880-885, 6 figs. Plant capacity of 27,500 kw.; modern boiler installation with large boilers to operate at high capacity; combined evaporative efficiency of boilers, water backs, superheaters and economizers of 85 per cent on test, and average under load for January of 80 per cent; other outstanding features.

STEAM TURBINES

Reliability and Design. Steam Turbine Reliability and Design. Engineer, vol. 133, no. 3462, May 5, 1922, pp. 486-487, 1 fig. Particular considerations are reliability, economy and first cost.

Starting Up. Putting Steam Turbines in Service. Power, vol. 55, no. 20, May 16, 1922, pp. 756-759, 4 figs. Increasing size of units makes procedure of starting more serious. Features to look out for.

STEEL

Carburizing. Influence of Dissolved Oxides on Carburizing and Hardening Qualities of Steel, E. W. Ehn, Iron & Steel Institute, Advance Paper no. 5, Meeting May 1922, 39 pp., 32 figs. Tests showing that steels of similar chemical composition do not respond similarly to case-hardening operations due to non-metallic impurities in solid solutions.

Chromium. *See Chromium Steel.*

Fracture Test. Fracture Test on Steel to Determine Its Quality, W. J. Priestley. Am. Soc. for Steel Treating Trans., vol. 2, no. 7, Apr. 1922, pp. 620-622, 2 figs. Saw disk about 1 ¼ in. thick from end of forging or bloom; quench slightly above critical temperature, draw between 900 and 1100 deg. fahr., and break in two. Fracture parallel to direction of forging or rolling will disclose texture of metal. Flake, slag, blowholes and pipe are easily detected.

Heat Treatment of. On the Stepped A1 Transformation in Carbon Steel During A Rapid Cooling, K. Honda and T. Kikuta. Iron & Steel Inst., advance paper, no. 8, meeting, May 1922, 13 pp., 13 figs. Experiment and discussion of effect of rapid cooling on A1 transformation point.

Rivet, Effect of Sulphur on. Effect of Sulphur on Rivet Steel, E. E. Thum. Chem & Mt. Eng., vol. 26, no. 22, May 31, 1922, pp. 1019-1024, 15 figs. Maximum sulphur now allowed (0.045 per cent) is at least 0.01 per cent below quantity where sulphur will damage strength of well-made rivet steel as far as its performance can be predicted by standard tests.

Stainless. Stainless Steel and Rustless Iron, Herbert Whitaker. Ironmonger, vol. 175, no. 2530, May 13, 1922, p. 106. Rustless iron, rustproofing cast iron and steel, formation of magnetic oxide.

Stainless Steels and the Making of Cutlery, R. G. Hall. Am. Soc. for Steel Treating Trans., vol. 2, no. 7, Apr. 1922, pp. 561-565 and (discussion) 566-568, 6 figs. Manufacture of stainless steel blade, while not materially different in shape or size from that of ordinary carbon steel blade, is shown to be a great deal more costly.

Crystal Structure, X-Ray Studies. X-Ray Studies on Crystal Structure of Steel, A. Westgren and G. Phragmen, Iron & Steel Inst., advance paper, No. 11, Meeting, May 1922, 22 pp., 12 figs. Crystallographic investigations of iron and steel carried on with improved apparatus obtaining results hitherto lost.

Decarburisation by Hydrogen. Hydrogen Decarburisation of Carbon Steels with Considerations on Related Phenomena, Chas. R. Austin, Iron & Steel Inst., Advance Paper, No. 1, Meeting, May 1922, 50 pp., 40 figs. Removal of carbon from certain fairly pure carbon steels by hydrogen at normal pressure and varying temperatures. See also Iron & Coal Trade Rev., vol. 104, no. 2827, May 5, 1922, p. 661.

STEEL, HEAT TREATMENT OF

Abrasive Qualities, Effect on. The Abrasive Qualities of Plain Carbon and Alloys Steels, A. M. Cox. Am. Soc. for Steel Treating Trans., vol. 2, no. 8, May 1922, pp. 680-690, 12 figs. Results of tests on effect of heat treatment on abrasive qualities of plain carbon and alloy steels, after having been subjected to various heat treatments.

Annealing. A New Annealing Process for Sub-Pearlite Steels (Ein neues Glühverfahren für unterperlitische Stähle), Bengt Kjerrman. Stahl u. Eisen, vol. 42, no. 18, May 4, 1922, pp. 697-700, 3 figs. Annealing of steel to increase its workability by means of cutting tools.

Chrome Steel for Ball Bearings. Heat Treatment of Chrome Steel for Ball Bearings, Haakon Styri. Am. Soc. for Steel Treating Trans., vol. 2, no. 8, May 1922, pp. 718-729, 34 figs. Metallography and important features of process.

Heating and Cooling. Importance of the Proper Heating and Cooling of Steel, John A. Succop. Am. Soc. for Steel Treating Trans., vol. 2, no. 8, May 1922, pp. 673-679, 4 figs. Vital points in this process including temperature, time, surface and mass.

Magnetic Properties, Influence on. The Influence of Heat Treatment Upon the Magnetic Properties of Steel, Lancelot W. Wild. Am. Soc. for Steel Treating Trans., vol. 2, no. 8, May 1922, pp. 696-704, 6 figs. Intensity of Magnetization, permeability, residual induction, and coercive force. Bibliography.

STEEL, HIGH-SPEED

Physical Tests. Physical Tests on High Speed Steels, A. H. d'Arcambal. Am. Soc. for Steel Treating Trans., vol. 2, no. 7, Apr. 1922, pp. 586-595 and (discussion) 595-601, 33 figs. Results of series of tensile and transverse tests on two classes of high-speed steel, namely 18-per cent tungsten, 1-per cent vanadium type and the 14-percent tungsten, 2-per cent vanadium grade.

STEEL MANUFACTURE

Acid Open-Hearth Process. Fine Steels from the Acid Open Hearth, W. P. Barba and Henry M. Howe. Chem. & Met. Eng., vol. 26, no. 20, May 17, 1922, pp. 929-931, 1 fig. Discussion of underlying principles and necessary furnace practice for production of high-grade nickel steel for gun tubes and shafting. Comparison of pig, scrap, and ore processes used in America with all-scrap practice used in Europe. Digest of paper presented before Am. Inst. Min. & Met. Engrs.

Acid, Analysis. Analysis Aids Acid Steelmaking, A. C. Jones. Iron Trade Rev., vol. 70, no. 24, June 15, 1922, pp. 1720-1722. Operating schedule and discussion of elements entering into electric furnace process; desirability of accurate control; melter's ability.

Direct Process. A Direct Method of Steel Manufacture, A. E. Bourcoud. Iron Age, vol. 109, no. 20, May 18, 1922, pp. 1349-1351, 3 figs. Discussion of Bourcoud process and possibility of using oil, lignites and other fuels; data on costs. (Abstract). Paper presented at meeting of Am. Iron and Steel Inst.

Tropenas Converter. Tropenas Converter for Making Steel, S. R. Robinson. Blast Furnace & Steel Plant, vol. 10, no. 5, May 1922, pp. 282-284. General description of this process, details of converter and information regarding cupola change. This process very similar to Bessemer process.

STEEL WORKS

Electric, Adaptable. An Adaptable Electric Steel Company, Sidney G. Koon. Iron Age, vol. 109, no. 18, May 4, 1922, pp. 1196-1202, 10 figs. Two forging plants of different characteristics afford opportunity for handling in each work to which it is best fitted.

STOKERS

Developments. Topical Discussion: Stokers and Their Recent Developments. Assn. Iron & Steel Elec. Engrs., vol. 4, no. 4, Apr. 1922, pp. 163-211. Various notable features brought out by men prominent in industry.

Forced-Draft. Some Notes on the Construction and Operation of Coxe Stokers, John van Brunt. Am. Soc. Heating & Vent. Engrs. Jl., vol. 28, no. 3, Apr 1922, pp. 298-308 and (discussion) 308-310, 8 figs. History of development, details of present type, and notes on operation.

Selection. What to Know When Selecting Stoker Equipment, J. G. Worker. Power, vol. 55, no. 17, Apr. 25, 1922, pp. 647-650. Combustion characteristics of principal coals; types of stokers best suited to burn them.

STORAGE BATTERIES

Impurities, Effect of. A Study of Effect of Impurities on Storage Batteries, Helen C. Gillette. Am. Electrochem. Soc. advance paper, no. 7, for meeting Apr. 27-29, 1922, pp. 55-62. Effect of presence of certain amounts of impurities in electrolyte of storage cell on electrical performance of cell. Comparison of electrical characteristics of cells before and after contamination and with normal cells included in same series of tests.

STREET RAILWAYS

Quebec. Quebec's Railways and Their Power Supply. Elec. Ry. Jl., vol. 59, no. 21, May 27, 1922, pp. 855-858, 9 figs. Growth of local transportation has more than kept pace with that of population. In 25 yrs., while population has doubled, car-mileage has more than quadrupled, number of passengers carried has sextupled and gross earnings have octupled.

Toronto's Rolling Stock. Toronto's Progressive Rolling Stock. Elec. Ry. Jl., vol. 59, no. 21, May 27, 1922, pp. 867-870, 10 figs. Toronto Transportation Commission has added 250 new cars to its passenger rolling stock and has remodeled more than 350 other cars.

Turnstile Cars. Improvement in Turnstile Cars. Elec. Ry. Jl., vol. 59, no. 19, May 13, 1922, pp. 787-789, 6 figs. One-man operation with double-truck cars in Utica and Syracuse has increased steadily until now Utica has 100 per cent operation. Improvements in turnstile arrangement are described.

STRUCTURAL STEEL

Testing. The Blow Bending Strength and Blow Hardness of Structural Steel (Schlagbiegefestigkeit und Schlaghärte legierter Konstruktionsstähle), W. Müller. Forschungsarbeiten auf dem Gebiete des Ingenieurinesins, no. 247, 1922, 38 pp., 74 figs. partly on supp. plate. Describes tests steel and method of carrying out experiments; results of breaking tests, bending tests, hardness tests; connection between mechanical properties and alloying of steels.

STRUCTURES

Mechanical Analysis. Indeterminate Structures Mechanically Analyzed, G. E. Beggs. Eng. and Contracting, vol. 57, no. 21, May 24, 1922, pp. 497-501, 16 figs. Results by mechanical method give remarkable check with theory and provide great reduction in labour. Tests with paper and celluloid models of various structures described in detail.

Statically Indeterminate and Non-Articulated. Statically Indeterminate and Non-Articulated Structures, F. C. Lea. Engineering, vol. 113, nos. 2933, 2934, 2935 and 2938, Mar. 17, 24, 31 and Apr. 21, 1922, pp. 313-315, 351-352, 403-404 and 482, 15 figs. Writer seeks to show how number of important practical problems can be solved by application of two theorems known as Castigliano's theorems, and "principle of least work" which can be said to be special case of these theorems.

SUBSTATIONS

Montreal. New Power Distribution Centre for Montreal. Elec. Ry. Jl., vol. 59, no. 21, May 27, 1922, pp. 861-866, 6 figs. Cote Street Substation, recently constructed at load center of tramways system, will serve as power distribution headquarters; rotary converters used rather than motor-generator sets installed in several other substations of system.

SULPHURIC ACID

Fumes. Atmospheric Pollution from Sulphuric Acid Plant Fumes, James R. Withrow. Chem. & Met. Eng., vol. 26, no. 21, May 24, 1922, pp. 972-976. Discussion of importance of fume problem to chemical manufacturer from standpoint of public health, legislation and economical operation. Work of Atmospheric Pollution Committee of Am. Inst. Chem. Engrs.

SUPERHEATED STEAM

Temperature Measurement. Measurement of Superheat, B. O. Snyder. Power Plant Eng., vol. 26, no. 10, May 15, 1922, pp. 515-516, 2 figs. Types of thermometers used; precautions in taking readings; making corrections.

SUPERHEATERS

Design. Advantages and Calculation of Size of Superheaters As Well As Flue Gas and Waste Steam Preheaters (Vorteile und Grössenberechnung von Dampfüberhitzer sowie Rauchgas- und Abdampfvorwärmer). Wärme- und Kälte-Technik, vol. 24, no. 9, May 1, 1922, pp. 101-102. Mainly deals with superheaters.

SURVEYING

Aerial. Surveying from the Air, E. Lester Jones. Franklin Inst. Jl., vol. 193, no. 4, Apr. 1922, pp. 461-490, 11 figs. Aerial mapping problems; Atlantic City project; topographic revision of coast of New Jersey; Mississippi River Delta; experiments in under-water photography.

SWITCHGEAR

High-Voltage. High Voltage Switchgear Design, W. A. Coates. Electrician, vol. 88, nos. 2294 and 2295, May 5 and 12, 1922, pp. 526-530 and 556-559, 9 figs. Details of modern outdoor switchgear compared with indoor equipment, pointing out economic and engineering advantages.

T

TAPERS

STANDARDIZATION. Shall We Standardize Tapers? Am. Mach., vol. 56, nos. 15, 16 and 17, Apr. 13, 20 and 27, 1922. pp. 551-552, 595-597 and 627-629. Opinions of many firms making and using tapered members. Nearly all want a standard.

TAR

DISTILLATION. New Tar Distillation Process. Chem. Trade Jl. & Chem. Engr., vol. 60, no. 1827, May 26, 1922, p. 628. Industrial application of volatilization of steam removes some difficulties previously encountered.

TELEPHONY

TELECHRONOMETER. A New "Universal Service", Garrison Babcock. Telephone Engr., vol. 26, no. 5, May 1922, pp. 21-24, 7 fig. Semi-automatic system adopted by Everett, Wash. said to have increased service, economy and clientele.

TEMPERATURE MEASUREMENT

ACCURACY. Accuracy in Temperature Measurements, Horace C. Knerr. Forging & Heat Treating vol. 8, no. 5, May 1922, pp. 235-237. Accuracy essential because of variations in steel; potentiometer pyrometers recommended; cold junction compensation; remarks on thermocouples with reference to standardization.

TESTING MACHINES

COMPARING HARDNESS, FOR. Apparatus for Comparing the Hardness of Pitches and Bitumens. Engineer, vol. 133, no. 3456, Mar. 24 1922, pp. 338-339, 2 figs. Describes the Hall-Marriott automatic penetrometer, designed to exclude human element in determination of consistency of plastic substances used in road construction.

TINNING

HOT TINNING. Hot Tinning, S. R. Gerber. Metal Industry (Lond.), vol. 20, nos. 16 and 17, Apr. 21 and 28, 1922, pp. 369-371 and 396, 2 figs. Description of reorganization of department for tinning steel cans.

TIRES, RUBBER

CORD. The Superiority of Cord Tires, C. M. Gautier. India-Rubber Jl., vol. 63, no. 18, May 6, 1922, pp. 7-8, 4 figs. Superiority of this type shown by experiments with appliances which subject tires to conditions actually met in service.

TITANIUM OXIDE

PRODUCTION AND USE. Production and Use of Titanium Oxide, Noel Heaton. Chem. Trade Jl. chem. Engr. vol. 70, no. 1825, May 12, 1922, pp. 565-566. Discussion of development, manufacturing processes, chemical and physical properties and uses. Read before Royal Soc. of Arts.

TOOLS

CALCULATION OF CIRCULAR. The Calculation of Circular Form-Tools. An Empirical Formula. Mech. World, vol. 71, no. 1847, May 26, 1922, pp. 375-376, 4 figs. Development of simplified empirical formula, circular form tools.

RING. The Economical Design of Ring Tools. H. Baker. Machy. (Lond.), vol. 20, no. 504, May 25, 1922, pp. 236-238, 2 figs. Formulas for figuring labor costs in consideration of circular form tool.

TRACTORS

TESTING, STANDARD CODE FOR. Standard Code for Testing Tractors. Agricultural Eng., vol. 3, no. 5, May 1922, pp. 82-83 (includes discussion). Report of Subcommittee on Tractor Ratings presented at annual meeting of Agricultural Engrs.

TRANSFORMERS

OPEN-DELTA ARRANGEMENT. Economy of Open-Delta Operation, Merrill de Merit. Elec. World, vol. 79, no. 16, Apr. 22, 1922, pp. 774-776, 3 figs. In growing industries, it is claimed, two transformers may serve load for some time, thus postponing purchase of one transformer. Condition when third unit is necessary.

TUBES

AUTOMATIC SEAM WELDING. Automatic Seam Welding and the Manufacture of Tubes, J. L. Anderson. Am. Welding Soc. Jl., vol. 1, no. 3, Mar. 1922, pp. 26-34, 1 fig. Describes simple process which makes possible production of this class of tubing at fraction of cost of seamless steel tubing.

SEAM WELDING, AUTOMATIC. Automatic Seam Welding in Making of Tubes. J. L. Anderson. Can. Machy., vol. 27, no. 21, May 25, 1922, p. 31. Material must be of suitable composition; finger arrangement prevents all twist or curl when strip stock is entering rolls, compressing metal after weld is made.

TUNNELS

HUDSON RIVER. Involves Iron and Steel Tonnage. Iron Trade Rev. vol. 70, no. 18, May 4, 1922, pp. 1263-1265, 3 figs. Hudson River tunnel project for which contracts recently were awarded, introduces new engineering problems and requires many thousands tons of castings, structural steel, bolts, pipe, reinforced steel, etc.

TURBO-GENERATORS

PROTECTIVE APPARATUS. Protective Apparatus for Turbo-Generators, J. A. Kuyser. Electrician, vol. 88, no. 2294, May 5, 1922, pp. 531-532, 1 fig. Discussion of breakdowns. Old methods of preventing damage and improved new system. Automatic field switches and means of extinguishing fires. (Abstract.) Paper read before Inst. of Elec. Engrs.

V

VALVES

EMERGENCY CLOSING. Emergency Closing Valves, P. W. Knauf. Refrig. World, [illegible] 1922, pp. 22-24, 6 figs. Necessity for and types of valve [illegible] pipes.

GATE, ELECTRICALLY-OPERATED. Electrically Operated Gate Valves, C. E. Reese. [illegible] 1922, pp. 619-622, 10 figs. Discussion [illegible] development of Dean control system for operation of gas, air, steam, water, oil, tar and ammonia gate valves.

VENTURI METERS

[illegible] Tests, [illegible] Venturi Flume and Meter Tests, [illegible] no. 19, May 11, 1922, pp. 797-798, 1 fig. Discussion of peculiar variations of Venturi coefficients of discharge. Wave formation, air and other theories.

VIADUCTS

REINFORCED-CONCRETE. North Avenue Viaduct, Milwaukee. Pub. Works, vol. [illegible] and 17, Apr. [illegible] 4 figs., Apr. [illegible] contractor's [illegible] Apr. 29; [illegible]

VIBRATIONS

MEASUREMENT. Apparatus for Studying the Vibrations Produced in Building by the Traffic (Appareil destiné à l'étude des vibrations produites dans les édifices par la circulation des véhicules), Paul Prache. Bul. de la Société d'Encouragement pour l'Industrie Nationale, vol. 134, no. 3, Mar. 1922, pp. 177-186, 7 figs. Holds that a disagreeable element is acceleration and describes principle and operation of accelerometer for measuring vibrations.

VOLTAGE REGULATION

THREE-WIRE D. C. SYSTEM. A Method of Regulating the Voltages on the Two Sides of a Three-Wire D.C. System Equalized by Static Balancers, R. D. Archibald. Instn. Elec. Engrs. Jl., vol. 60, no. 307, Mar. 1922, pp. 303-307, 7 figs. Compares merits of static balancer with those of rotary balancers, chief disadvantage of former being that voltage on two sides of three-wire system cannot be regulated without aid of mid-wire booster. Describes arrangement whereby this disadvantage can be overcome.

W

WAGES

PAYMENT PLANS. Wage-Payment Plans — A Discussion, Harrington Emerson. Management Eng., vol. 2, no. 6, June 1922, pp. 370-372, 1 fig. Exposition of six plans of payment with some detail of author's plan.

WATER

ANALYSIS. Processes of Analyzing Water (Sur les procédés d'analyse des eaux), F. Touplain. Chimie & Industrie, vol. 7, no. 4, Apr. 1922, pp. 634-639, 3 figs. Discusses sampling, physical and chemical methods; concludes that present methods need revising.

WATER FILTRATION

FERRIC ALUMINUM COAGULATION. Manufacture of Ferric Aluminum in the National Sanitary Works (La fabricación del alùmino ferrico en las obras sanitarias de la nacion), S. Barabino. Anales de la Sociedad Cientifica Argentina, vol. 91, Jan.-June 1921, pp. 152-182. Report of a commission appointed to investigate works in question, "ferric aluminum" being used for clarification of potable water, 0.04 g. being required to clarify 1 liter of Plata water.

HYDROGEN-ION CONCENTRATION. Applied Hydrogen-Ion Concentration — A Study of Its Merits in Practical Filter Plant Operation, A. Wagner and Lin H. Enslow. Am. Water Works Assn. Jl., vol. 9, no. 3, May 1922, 373-391, 1 fig. on Supp. splate. Ideas on coagulation through regulation.

WATER PIPES

SIZES. Water Pipe Sizes for Plumbing Fixtures, Branches and Mains, W. S. Timmis, Am. Soc. Heat. & Vent. Engrs., vol. 28, no. 4, May 1922, pp. 397-403. Discussion of formulas and variables intended to supply a general lack of data.

WATER POWER

APPLICATIONS. Water-Power Applications Total 20,473,548 Hp. Elec. World, vol. 79, no. 21, May 27, 1922, pp. 1072-1073, 1 fig. Federal power commission has received 303 applications for preliminary permits and licenses, and of these had granted 74 up to and including April 17, 1922.

DEVELOPMENT IN SOUTHEAST. Power Development in the Southeast, Chas. G. Adsit. Mech. Eng., vol. 44, no. 5, May 1922, pp. 291-294, 300, 5 figs. Utilized and undeveloped waterpower resources of 5 southern states discussed. Present state of Muscle Shoals project and future possibilities described.

WATER PURIFICATION

TORONTO 1912-1922. Statistical Record of Toronto Water, 1912-22, Norman J. Howard. Can. Engr. vol. 42, no. 19, May 9, 1922, pp. 469-476, 2 figs. Laboratory observations recorded during 10-year period of purification. Relation of hydrogen-ion concentration to residual alum; bacterial concentration and seasonal variation in filter efficiency, with reference to PH concentration and colloidal content; reduction in typhoid fever.

WATER SUPPLY

SEWAGE CONTAMINATION, PREVENTION FROM. The Work of the Provincial Board of Health of Ontario, F. A. Dallyn. Contract Rec., vol. 36, no. 21, May 24, 1922, pp. 493-497. What Board is doing to protect various water works throughout province from sewage contamination; research activities.

WELDING

BOILERS. Boiler Welding, Edward H. Heigel. Am. Welding Soc. Jl., vol. 1, no. 3 Mar. 1922, pp. 13-25, 20 figs. Notes on autogenous welding of locomotive boilers; electric or gas welding of firebox, side and door sheets, door collars, stoker tubes, etc; electric welding of flexible sleeves; cutting of staybolts.

See also Autogenous Welding, Electric Welding, Oxy-Acetylen Welding.

WELDS

CAST-IRON, DEPENDABILITY OF. The Dependability of Cast Iron Welding, G. O. Carter. Acetylene Jl., vol. 23, no. 11, May 1922, pp. 535-538, 8 figs. Pre-heating and annealing; correct preparation of casting, by having complete casting at red temperature. From paper read before Am. Welding Soc.

TESTING STANDARDS. Standards for Testing Welds. Eng. World, vol. 20, no. 5, May 1922, pp. 297-300, 13 figs. Report of Committee on Standards Tests for Welds of Am. Bureau of Welding, a joint advisory board of Am. Welding Soc. and Eng. Div. of Nat. Research Council, on Welding Research and Standardization.

WHEELS

CAR. *See Car Wheels.*

WIRE DRAWING

CHROMEL WIRE. Drawing Chromel Wire, E. F. Lake. Machy. (N.Y.), vol. 28, no. 10, June 1922, pp. 793-797, 7 figs. Methods of drawing special alloy wire; uses and physical properties of alloy; manufacture of dies.

Z

ZIRCONIUM

USES. New Possible Uses of Zirconium (Neue Verwendungsmöglichkeiten für Zirkon), Raphael Eugen Kirchner. Chemiker-Zeitung, vol. 46, no. 50, Apr. 27, 1922, p. 380. Discusses zirconium steel, crucibles carbide, etc.

Engineering Index

This Index is prepared by the American Society of Mechanical Engineers.

In this department will be published from month to month the titles of current engineering papers with the authors and source and a brief extract of the more important. It is designed to give the members of The Institute a survey of all important articles relating to every branch of engineering profession.

PHOTOSTATIC PRINTS

Photostatic copies of the articles listed in this section, or others on engineering subjects, may be obtained from the Engineering Societies Library.

Price of each print (up to 11 by 14 in. size) 25 cents, plus postage. Where possible, two pages, up to 7 by 9 in. size, will be photographed on one print. Larger magazines require a print per page. Bills will be mailed with the prints.

The Library is also prepared to translate articles, to compile lists of references on engineering subjects and render assistance in similar ways. Charges are made, sufficient to cover the cost of this work. Correspondence is invited. Information concerning the charge for any specific service will be given those interested. In asking for information please be definite, so that the investigator may understand clearly what is desired.

The Engineering Societies Library is under the management of the United Engineering Society, which administers it as a public reference library of engineering. It is maintained jointly by the American Society of Civil Engineers; the American Institute of Mining and Metallurgical Engineers; the American Society of Mechanical Engineers and the American Institute of Electrical Engineers. It contains 150,000 volumes on engineering and allied subjects, and receives currently most of the important periodicals in its field.

Orders and correspondence should be addressed to

Harrison W. Craver, Director

Engineering Societies Library,

29 West Thirty-ninth Street, New York, N. Y.

A

ACCOUNTING

CONSTRUCTION PROJECTS. Accounting for Construction Projects, W. Paxton Little. Elec. World, vol. 79, no. 24, June 17, 1922, pp. 1211-1215, 18 figs. Commission regulation requirements give importance to proper accounting; actual unit-cost information needed as guide to engineers and executives; outline of specific methods that have been found successful.

AERONAUTICS

GOVERNMENT LABORATORIES AID. Government Laboratories Aid Aircraft Growth, P. M. Heldt. Automotive Industries, vol. 46, no. 26, June 29, 1922, pp. 1423-1426, 3 figs. Aeronautic session of S. A. E. develops discussion on aircraft performance formulas, government subsidies, and commercial flying. McCook field work is shown in motion pictures.

AIR COMPRESSORS

CENTRIFUGAL. A New Air Compressor (Ein Neuer Luftkompressor), E. Löwenstein. Deutsche Optische Wochenschrift, vol. 8, no. 22, May 28, 1922, pp. 413-414, 4 figs. Describes new compressor by Gotz, having very high efficiency and requiring little power, for use in glass-blowing and technical glass industries.

AIRCRAFT

RESEARCH IN AMERICA. America Makes Creditable Showing in Aircraft Research, Archibald Black. Automotive Industries, vol. 46, no. 23, June 8, 1922, pp. 1257-1265, 13 figs. Speed and reliability increased; helicopters; variable pitch propeller; landing field development; Handley Page slotted wing.

AIRPLANE ENGINES

DEVELOPING, METHOD OF. A Method of Developing Aircraft Engines, Geo. E. A. Hallett. Soc. Automotive Engrs. Jl., vol. 10, no. 6, June 1922, pp. 457-462, 10 figs. Outline of procedure taken by Air Service before beginning actual design, and subsequent developments.

METALS FOR. Metallurgical Problems of the Airplane Engine (Le Problème métallurgique posé par le Moteur d'Aviation), C. Grard. Aeronautique, vol. 4, no. 46, May 1922, pp. 156-165. Conditions metals must fulfill for construction of airplane engines.

AIRPLANES

SLOTTED-WING THEORY. Theory of the Slotted-Wing, A. Betz. Nat. Advisory Committee for Aeronautics Technica Notes, no. 100, June 1922, 13 pp., 7 figs. Means of varying coefficient of lift, thereby reducing difficulties of taking off and landing and making greater flight speeds possible; suggestions for theories from which formulas may be developed. From Berichte u. Abhandlungen der Wissenschaftlichen Gesellschaft für Lufthahrt, no. 6, Jan., 1922. See also Aerial Age, vol. 15, no. 15, June 26, 1922, pp. 366-368, 6 figs.

TWO-WAY. Introducing the Two-Way Airplane, John B. Flowers. Aviation, vol. 13, no. 1, July 3, 1922, pp. 9-10, 1 fig. Tentative design presented to stimulate thought in this direction and criticism of idea, by well-known aeronautical engineer.

ALIGNMENT CHARTS

ELECTRIC LIGHTING LINES. Alignment Charts, Their Principles and Application to Questions of Calculating Electric Lighting Lines (Fluchtinientafeln, Grundlagen und Anwendungen auf Fragen der Leitungsberechnung und Beleuchtungstechnik), H. Schwerdt. Elektrotechnische Zeit., vol. 43, no. 23, June 8, 1922, pp. 777-781, 8 figs. Explains charts and how to use them.

ELECTRIC MACHINES. Alignment Charts and Their Application in Electric Machine Construction (Die Nomographic und ihre Anwendungen im Elektromaschinenbau), Stritzl. Elektrotechnische Zeit., vol. 43, no. 23, June 8, 1922, pp. 781-782, 4 figs. Discusses as example calculation of magnetic characteristics of a d.c. machine.

ALLOYS

See Aluminum Alloys, Nickel Alloys, Zinc Alloys.

ALUMINUM

COATING WITH. Coating With Aluminum (Les recouvrements par l'aluminium), Léon Guillet. Revue de Métallurgie, vol. 19, no. 5, May 1922, pp. 296-297. Describes various processes and their successful application.

DETERMINATION OF. The Determination of Aluminium by the Phosphate Method, J. E. Clennell. Min. Mag., vol. 26, no. 5, May 1922, pp. 267-271. Brief Summary of experiments at Royal School of Mines on phosphate method of aluminum estimation.

ALUMINUM ALLOYS

ALUMINUM-SILICON. Aluminum-Silicon Alloys and Their Industrial Uses (Les alliages aluminium-silicum et leurs emplois industriels), Leon Cuillet. Revue de Métallurgie, vol. 19, no. 5,, May 1922, pp. 303-310, 15 figs. Reviews development of this type of alloy and discusses new types and their properties.

ALUMINUM-ZINC. A Study of Alloys of Aluminum and Zinc, D. Hanson and Marie L. V. Gayler. Raw Material, vol. 5, no. 5, June 1922, pp. 174-181, 29 figs. Results of experiments on work along this line; effects of age hardening. Paper read before British Inst. of Metals.

LIGHT. Light Aluminum Alloys, Prof. F. C. Lea. Metal Industry, (Lond.), vol. 20, no. 23, June 9, 1922, pp. 533-536, (includes discussions), 2 figs. Effect of various combinations on melting point and characteristics of alloys. From paper read before Inst. of Metals.

MELTING AND POURING. Melting and Pouring Aluminum Alloys. Am. Mach., vol 57, no. 1, July 6, 1922, pp. 1-4. Proper care of furnace; effect of melting and pouring temperatures on castings; how to overcome foundry difficulties.
See also Duralumin.

AMMONIA

CAPACITY TABLE. A Pound of Ammonia, John E. Starr. Refrig. World, vol. 57, no. 6, June 1922, pp. 19-20. Table showing work of a pound of ammonia when heat is received at various temperatures and discharged at various other temperatures.

CHART, BUREAU OF STANDARDS. The New Bureau of Standards Ammonia Chart. Ice & Refrigeration, vol. 62, no. 6, June 1922, pp. 461-464, 2 figs. Historical facts; nature of chart properties of an hydrous ammonia which are represented; characteristic curves to show properties; phases of cycles of operation; some common cycles of operation shown graphically.

DETERMINATION WITHOUT DISTILLATION. Determining Ammonia Without Distillation, A. Sander. Am. Gas. Jl., vol. 116, no. 25, June 24, 1922, pp. 576-577. Method for determining total ammonia in gas liquor without distillation or use of heat. Translated from Gas u Wasserfach, vol. 64, pp. 770-772.

OXIDATION. Some Economic Aspects of Ammonia Oxidation, Guy B. Taylor. Chem. and Met. Eng., vol. 26, no. 26, June 28, 1922, pp. 1217-1219, 1 fig. Cost of concentrating weak nitric acid produced by ammnoia oxidation at present more than offsets advantages due to lower conversion and nitrogen costs; economic study of factors that determine when ammonia can profitably replace saltpeter as source of nitric acid. Paper read before Annual Meeting of Am. Inst. Chem. Engrs.

AMMONIUM NITRATE

MANUFACTURE. The Manufacture of Ammonium Nitrate, E. M. Symmes. Chem. and Met. Eng., vol. 26, no. 23, June 7, 1922, pp. 1069-1074, 5 figs. Description of modern operating practice and considerations affecting design and operation of ammonia stills, scrubbers, condensers, neutralizing tubs, evaporators and crystallizing kettles; use of ammonium nitrate in permissible explosives.

ASBESTOS

AUTOMOTIVE USES. Asbestos — The Mineral's Automotive Uses. Raw Material, vol. 5, no. 5, June 1922, pp. 184-186. Various uses to which this mineral fibre is put in automotive industries.

MILLING OF. A Problem in Crushing. Can. Min. Jl., vol. 43, no. 24, June 16, 1922, pp. 379-380, 1 fig. Saving long fibre; crushing and fiberizing; requirements of crushers; stages of crushing.

SOUTHERN AFRICA. Southern Africa's Coming Industry. So. African Min. and Eng. Jl., vol. 33, no. 1595, Apr. 22, 1922, pp. 1115-1117, 2 figs. Review of recent discoveries and developments; Canadian interests entering field? Expansion of Rhodesian output; occurrences in union; Kaapsche hoop fields; Amianthus mines; an expanding industry.

SUBSTITUTES AND SIMILARITIES. Asbestos Substitutes and Similarities. India-Rubber Jl., vol. 63, no. 23, June 10, 1922, pp. 7-8, 1 fig. Slag wool with its many advantages; spun glass; soapstone; talc; fossil meal and wood pulp.

ASHES

USE FOR REFIRING. Ash Treatment (Ashen-Aufbereitung), F. A. Gruessner. Technische Blätter, vol. 12, nos. 8 and 9, Feb. 25 and Mar. 4, 1922, pp. 81-82 and 89-90, 3 figs. Feb. 25: Discusses processes of preparing ashes for refiring, such as magnetic separation. Mar. 4: Detailed discussion of magnetic separation.

AUTOMOBILE ENGINES

DIESEL TYPE. Small Diesel Type Automotive Engine Now in Production. Automotive Industries, vol. 46, no. 24, June 15, 1922, pp. 1320-1321, 2 figs. Four-cylinder Austrian engine designed to avoid excessive compression and combustion pressures, thus reducing strain on working parts. Hindl engine can be started by means of hand crank and operates at speed of 1150 r.p.m.

LUBRICATION. Oil-Pumping, Geo. A. Round. Soc. Automotive Engrs. Jl., vol. 10, no. 6, June 1922, pp. 509-512, 4 figs. Factors controlling rate of oil consumption; methods of lubrication, including splash and force-feed systems; oil-pumping troubles.

OIL CONSUMPTION. Oil Consumption, A. A. Bull. Soc. Automotive Engrs. Jl., vol. 10, no. 6, June 1922. pp. 513-522, 19 figs. Fundamental factors affecting oil consumption. Methods of testing.

AUTOMOBILE FUELS

ALCOHOL. Alcohol Motor Fuel Research. Petroleum Times, vol. 7, no. 176, May 20, 1922, pp. 711-712. Report of four series of tests which showed that all speeds, both with high and low compression, thermal efficiency obtained with alcohol was higher than that obtainable with petrol or benzol at any compression which could be employed with them.

RESEARCH, EFFECT ON INDUSTRY. Automotive Engineering Development Rests Largely on Fuel Research. Herbert Chase. Automotive Industries, vol. 46, no. 23, June 8, 1922, pp. 1219-1231, 16 figs. Gasoline substitutes used in other countries; cracking processes developed; work of Ricardo and Kettering.

AUTOMOBILE INDUSTRY

RESEARCH IN IRON AND STEEL. Better Cars and Trucks May Result from Iron and Steel Research. P. M. Heldt. Automotive Industries, vol. 46, no. 23, June 8, 1922, p. 1270. Study of chrome-molybdenum steel, high-carbon steel brake drums, resistance-to-wear investigation and heat treatment.

RESEARCH IN LIGHT METALS. Light Metal Research Will Affect Future Car and Truck Design. Automotive Industries, vol. 46, no. 23, June 8, 1922, pp. 1278-1279. New all-aluminum car. Rosenhain's aluminum alloy for pistons. Germans light alloys in high-speed engines. Aluminum forging and soldering.

RESEARCH IN NON-FERROUS METALS. Non-Ferrous Metal Research Affects Design of Small Automotive Parts. Automotive Industries, vol. 46, no. 23, June 8, 1922, pp 1289-1290. New coefficient of expansion determined for nickel; properties of monel metal; brazing flux.

AUTOMOBILES

DIFFERENTIALS, WITH AND WITHOUT. With and Without the Differential, G. E. Bradshaw. Autocar, vol. 48, no. 1382, April 15, 1922, pp. 611-613. Upholding argument that differentialless axle is not suitable for touring cars.

SUSPENSION. New System of Spring-Suspension for Automotive Vehicles, H. M. Crane. Soc. Automotive Engrs. Jl., vol. 10, no. 6, June 1922, pp. 463- 465, 2 figs. History; Hotchkiss drive for Shaft-driven cars, rear-axle mountings and device developed by author.

TRANSMISSION, MECHANICAL SHIFT. Gear Transmission with a Mechanical Shift, H. O. Herzog. Am. Mach., vol. 57, no. 1, July 6, 1922, p. 17, 5 figs. on p. 16. Describes Saden gear shift, a German device; 4 speeds and reverse; operator merely selects speed desired, shift is mechanical.

AVIATION

LANDING BY ELECTROMAGNETIC RADIATION. The Field Radiated from Two Horrizontal Coils, Gregory Breit. Sci. Papers of Bur. of Standards, no. 431, Mar. 10, 1922, pp. 589-606, 5 figs. Type of transmitting coil antenna devised and formulas for current received in coil aerial.

TRAFFIC LAW PROPOSED. Proposed Air Traffic Law, Geo. Ripert. Aerial Age, vol. 15. no. 14, June 12, 1922, pp. 320-323. Suggestions for international laws deduced from those adopted at international conventions and by various governments.

B

BABBITT

BABBITT. The Microstructure of Babbitt Metal, A. McArthur Johnston and R. W. Irwin. So. African Instn. of Engrs. Jl., vol. 20, no. 10, May 1922, pp. 197-211, 21 figs. Characteristics, construction, and properties of alloys recommended by Chamber of Mines Eng. Standardization Committee; nature of microstructure [illegible] physical properties likely to be found.

BEAMS

PLATE. Dimensions of Plate Beams (Dimensionierung Einfach Bewehrter Plattenbalken), Leo Baron. Bauingenieur, vol. 3, no. 9, May 15, 1922, pp. 273-275. Gives new, simplified, expeditious and reliable method of calculation, and [illegible]

[illegible] Shear Problem in Beams Concrete, vol. 20, no. 6, June 1922, pp. 243-244, 8 figs. Importance of their anchorage and new [illegible]

[illegible] METALS

[illegible] Red Brass Bearing Metals for [illegible] und Rotguss-Lagermetalle [illegible] Zeit. für die Gesamte Giesserei- [illegible] 316-317. Composition of bearing [illegible] percentages of tin, zinc, [illegible] physical properties, elasticity, [illegible]

BEARINGS

BABBITTED, TROUBLES. Fourteen Causes of Trouble With Babbitted Bearings, L. D. Allen. Belting, vol. 20, no. 6, June 1922, pp. 55-56, 1 fig. Points that should be investigated when bearings give trouble.

MOTOR. Some Pointers on Bearings, A. L. Gear. Elec. Rev. & Indus. Engr., vol. 80, no. 6, June 1922, pp. 265-270, 309-310, 13 figs. Sleeve-bearing materials, design and construction.

STEAM-ENGINE, LUBRICATION OF. The Problem of Lubricating Steam-Engine Bearings, W. F. Osborne. Power, vol. 56, no. 2, July 11, 1922, pp. 53-54, 1 fig. Method of lubrication; effect of characteristics of engine on selection of suitable lubrication.

BEARINGS, BALL

ADVANTAGES. On the Quality of Various Bearings and the Advantages of Ball Bearings (Note sur les qualités générales des divers paliers de transmissions, avantages des paliers à billes), H. Bursie. Revue Générale de l'Electricité, vol. 11, no. 21, May 27, 1922, pp. 792-794, 3 figs. Progress made in recent years in journal bearings and SKF ball bearings.

BELT DRIVE

POWER TRANSMISSION BY. Power Transmission by Belting. Machy. (Lond.), vol. 20, no. 507, June 15, 1922, pp. 325-327, 4 figs. Characteristics of leather belting and charts for simplifying calculations.

POWER TRANSMITTED. How much Power is Belt Transmitting? W. F. Schaphorst. Nat. Engr., vol. 26, no. 6, June 1922, pp. 268-269, 1 fig. Simple method of determining from easily obtained instruments.

BELTING

CELLULOSE. Experiments With Cellulose Belting (Versuche mit Zellstofftreibriemen), M. Rudeloff. Zeit. des Vereines deutscher Ingenieure, vol. 66, nos. 19 and 20, May 13 and 20, 1922, pp. 466-469 and 491-494, 23 figs. May.13: Equipment for experiment, details of testing operation and conditions under which each test was carried out. May 20: Discusses friction in ball bearings in pulley-driven machinery; determination of useful work; records of revolution counters.

GRAIN ELEVATORS. Belting Systems in Two Large Grain Elevators, D. R. Egbert. Belting, vol. 20, no. 6, June 1922, pp. 13-17, 6 figs. Reconstructed C. & N. W. elevator contains 8½ miles of conveyor and elevator belt; New Orleans public elevator; four installations compared.

SLIDE RULE, CALCULATION BY. The Improved Belt Slide Rule, Carl G. Barth. Management Eng., vol. 2, no. 6, June 1922, pp. 351-354, 2 figs. As now constructed it solves problems for three classes of belts, viz., machine, heavy countershaft and light countershaft.

BLAST FURNACES

CHINA. New Steel Plant is Wholly Chinese. Trans.-Pacific, vol. 6, no. 4, April 1922, pp. 72-74, 1 fig. Some details of 250-ton blast furnace of Lungyen Min. Administration near Peking which is expected to make iron this spring.

FUEL ECONOMY. The Alabama Company's No. 1 Stack Breaks Production Record on Low Fuel Consumption, H. R. Stuyvesant. Blast Furnace and Steel Plant, vol. 10, no. 6, June 1, 1922, pp. 343-346. 1 fig. Production increased 17 per cent, coke consumption decreased 30 per cent; labor force reduced 50 per cent.

BOILER, FEEDWATER

FEEDING COMPOUND WITH. Methods of Feeding Boiler Compound With the Feed Water, W. H. Wakeman. Southern Engr., vol. 37, no. 4, June 1922, pp. 43-45, 4 figs. Description of successful application.

BOILER PLATES

STRENGTH AND ELASTICITY. Strength and Elasticity of Boiler Plate at Elevated Temperatures, H. J. French. Chem. and Met. Engr., vol. 26, no. 26, June 28, 1922, pp. 1207-1209, 3 figs. Proportional limit maintained or increased with first temperature rise; tensile strength has slight maximum at about 250 deg. cent., but both fall off badly at higher temperatures; reduction and elongation have minimum at about 260 deg. cent., but recover their original value around 450 deg. cent.

BOILER TUBES

SAFE ENDS, ELECTRIC WELDING. Electrically Safe Ending Boiler Tubes, J. J. Sullivan. Boiler Maker, vol. 22, no. 6, June 1922, pp. 153-154, 2 figs. Summary of results in safe-ending boiler tubes and flues with Thomson electric butt welder at Nashville, Chattanooga & St. Louis Ry., Nashville, Tenn.

BOILERS

ELECTRICALLY HEATED. Production of Steam and Hot Water in the Electric Boiler (Dampf- und Warm-wassererzeugung in elektrischen Dampfkesseln), Hindelang. Zeit. des Bayer. Revisions-Vereins, vol. 26, no. 10, May 31, 1922, pp. 84-85, 1 fig. Providing hot water to Municipal Bath and German Museum in Munich.

FIRE BRIDGES. Refractories in Central Heating Boilers (Schomatte-Eimbauten in Zentralheizungs-Kesseln) de Grahl. Glasers Annalen, vol. 90, no. 12, June 15, 1922, pp. 215-221, 5 figs. Naseel fire bridge and tests made to establish its efficiency, including flue-gas analysis, determination of heat losses, etc.

LADD-BELLEVILLE. Large Units of Modern Boiler Plants (Les grandes unités des chaufferies modernes), C. Radiguer. Revue Générale de l'Électricité, vol. 11, no. 24, June 17, 1922, pp. 897-906, 6 figs. Describes Ladd-Belleville boilers at Ford plant on River Rouge, their operation, upkeep, firing with gas and pulverized coal, etc.

See also Locomotive Boilers.

BOILERS, WATER-TUBE

SPEARING, MANUFACTURE OF. The Manufacture of the Spearing Boiler. Eng. Rev., vol. 35, no. 11, May 1922, pp. 379-381, 3 figs. Facts about design, manufacture and testing of this comparatively new type.

BRASS

FORGINGS. Brass Forgings, C. G. Heiby. Metal Industry (N.Y.), vol. 20, no. 6, June 1922, pp. 220-221. How produced; chilled cast blanks; composition of metal; microstructure of forgings. Paper read at Convention of A. F. A.

The Development of Brass Forging, Oscar T. Roder. Forging and Heat Treating, vol. 8, no. 6, June 1922, pp. 256-259, 7 figs. Art of working brass while hot; general details of process of presses used and of die construction; composition; physical properties; microstructure of forgings and castings.

484

BRAZING

Dip Brazing and Heat Treatment. Dip-Brazing With No. 20 Brass and the Heat Treatment of Brazed Joints, E. V. [illegible] Chem. and Met. Eng., vol. 26, no. 24, June 14, 1922, pp. 1121-1125, 9 figs. Satisfactory methods for dip brazing; strengths of joint and effect of heat-treatment; [illegible] of brazed joints; strength of bond between brass and steel.

BRIDGES, CONCRETE

Arch, Wide Span. Arched Bridges of Wide Span, Dr. F. von Emperger. Eng. and Contracting, vol. 57, no. 22, May 31, 1922, pp. [illegible], 11 figs. Austrian engineer's demonstration of possibilities in stone and concrete beyond ordinarily accepted limits. Summary of paper read before Swedish Concrete Inst. in 1921.

Dover Street Viaduct. Dover Street Viaduct Scheme, L. C. Mouchel. Ferro-Concrete, vol. 13, no. 10, Apr. 1922, pp. [illegible], 16 figs. Description of construction including main viaduct 1000 ft. long, including two bridges, a spur and a separate bridge.

Elora, Ontario. High Level Concrete Bridge, Elora, Ont., A. W. Connor. Can. Engr., vol. 42, no. 21, May 23, 1922, pp. 517-521, 2 figs. Two span reinforced concrete arch structure 85 ft. high replaces steel truss structure; old trusses utilized as support for ribs during concreting; deck supported by ribs; old masonry utilized.

Springfield, Mass. Springfield-West Springfield Bridge. Pub. Works, vol. 52, nos. 20, 21, 23 and 24, May 20, 27, June 10 and 16, 1922, pp. 365-368, 384-386, 417-419, and 449-451, 17 figs. Structure 1,494 ft. across Connecticut River containing 54,000 cu. yds. concrete, 3,560 tons of steel and nearly 11,000 foundation piles. Various features of construction.

BRIDGE DESIGN

Waterways Calculation. Hydraulic Design of Bridge Waterways, Ivan E. Houk. Eng. News-Rec., vol. 88, no. 26, June 29, 1922, pp. 1071-1075. Each opening requires individual design; formulas are makeshifts; cloudburst data; applying 1913 flood and Pueblo flood figures; scour velocities; other considerations.

BRIDGES, HIGHWAY

Girder, Concrete Truss. Concrete Truss Girder in New Street Viaduct at Dover. Eng. and Contracting, vol. 57, no. 22, May 31, 1922, pp. 513-514, figs. 8-19. Details of design and severe test on new street viaduct at Dover.

Substructure, Edmundston-Madawaska. Substructure of Edmundston-Madawaska Bridge, C. McN. Steeves. Can. Engr., vol. 42, no. 22, May 30, 1922, pp. 545-549, 7 figs. International highway bridge of four 232-ft. spans replaces cable ferry over St. John river; piers on well-compacted sand and blue clay containing boulders; reinforcement at pier faces; Pontoon construction. Paper read before Eng. Inst. of Canada.

BRIDGES, LIFT

Substructure, Victoria. Substructure, Johnson St. Bridge, Victoria, B.C., F. W. Allwood. Can. Engr., vol. 42, no. 23, June 6, 1922, pp. 577-579, 6 figs. Central single-leaf spans with plate girder spans at either end; construction of concrete piers and abutments; details of caisson construction; launching and sinking caissons; pouring concrete under water.

BRIDGES, STEEL

Revelstoke, B.C. New Bridge Over the Columbia River at Revelstoke, B.C., Contract Rec., vol. 36, no. 24, June 14, 1922, p. 558. 1 fig. Tenders to be received soon for six-span steel structure with five concrete piers on piles and 2 deep-water piers of steel cylinder design.

BUILDING CONSTRUCTION

Column Removal in Skyscraper. Removal of Three First-Story Columns in Twenty-Seven Story Building, Edward F. Weiskopf. Eng. News-Rec., vol. 89, no. 1, July 6, 1922, pp. 4-7, 6 fig. Transfer of load accomplished by using cantilever trusses as levers; elastic distortion of columns taken up by jacking; procedure checked by straingage readings.

BUILDINGS

Concrete, Reinforced. The Tallest Reinforced Concrete Building in the United States, A. E. Wynn. Concrete and Constructional Eng., vol. 17, no. 6, June 1922, pp. 365-371, 7 figs. Eighteen-story all reinforced concrete office building represents most modern methods in engineering and most scientific use as structural and architectural building attainment.

BUSES

Trolley, Overhead Materials for. Overhead Materials and Current Collection Equipment for Trolley Bus Lines, M. W. Manz. Bus Transportation, vol. 1, no. 6, June 1922, pp. 327-330, 1 figs. Advantages of continuing use of present standards as far as practicable. Details of trolley harp, base and overhead special work design.

C

CABLES, ELECTRIC

Breakdown Strength. On the Minimum Stress Theory of Cable Breakdowns, Donald M. Simons. Am. Inst. Elec. Engrs. Jl., vol. 41, no. 6, June 1922, pp. 433-438. Discusses Fernie's theory that point of minimum stress, which occurs at sheath of a cable is its limit of strength; his experimental data.

Voltage, Rating In Relation to. Rating of Cables in Relation to Voltage. Am. Inst. Elec. Engrs. Jl., vol. 41, no. 6, June 1922, pp. 418-422. Summarized history of published knowledge bearing upon performance of insulation under electric stress. Prepared by Subcommittee on Wires and Cables of Standards, Committee.

CANS

Seaming, Special Machines for. Building Special Machines for Can-Seaming, Arthur Mumper. Machy. (N.Y.), vol. 28, no. 11, July 1922, pp. 899-902, 3 figs. Highly developed type of single-purpose machine which closes ends of cylindrical tin containers.

CAR CONSTRUCTION

Side Frame. A One Piece Wrought Steel Truck Side Frame. Ry. Rev., vol. 70, no. 24, June 17, 1922, pp. 918-920, 6 figs. Symington type which is sheared and formed under hydraulic press; electric welded in final form.

CAR LIGHTING

Generator, Direct-Drive. Direct Driving Axle Generators for Passenger Cars. Ry. Rev., vol. 70, no. 25, June 24, 1922, pp. 972-974, 5 figs. Am. Ry. Assn. committee on train lighting and equipment report direct drive still in development stage. (Abstract.)

Generator, Body Suspension. Long Island Changes Generator Suspensions. Ry. Elec. Engr., vol. 13, no. 6, June 1922, pp. 190-192, 2 figs. Truck mounted machines placed on car bodies show economy by giving greater belt mileage.

CARS, COAL

N. & W. Ry., 120-Ton. Coal Car of 120-Tons Capacity — Norfolk and Western Railway. Ry. and Locomotive Eng., vol. 35, no. 6, June 1922, pp. 142-145, 7 figs. Details of construction and design.

CASE-HARDENING

Distortion. Distortion Produced in Case-hardening, A. A. Blue. Am. Mach., vol. 56, no. 25, June 22, 1922, pp. 915-916, 3 figs. Consistent minimum warpage in manganese steel; large holes decrease, small holes increase when carbonized; greater wall thickness produces greater effect.

Steel, Failures. Causes of Failures in Case-Hardening Steel. Iron Age, vol. 109, no. 26, June 29, 1922, pp. 1807-1808. Non-metallic impurities, chiefly dissolved oxides, responsible in many cases in which hardening process has been thought at fault.

Selective. Selective Case-Carburizing, W. P. Wood and O. W. McMullan. Chem. & Met. Eng., vol. 26, no. 23, June 7, 1922, pp. 1077-1080, 4 figs. Review of various methods of producing local cases; in general, electrodeposited copper has furnished best protection; non-metallic coating whose application and removal presents no great difficulties is described.

CAST IRON

American vs. British. American Versus British Grey Cast Iron, F. J. Cook. Can. Foundryman, vol. 13, no. 6, June 1922, pp. 26-32, 7 figs. Superior qualities of British iron shown; sulphur and phosphorus not as detrimental as generally believed; soft castings depreciate value of American machinery.

CASTINGS

Centrifugal. Centrifugal Castings, N. Lilienberg. Blast Furnace & Steel Plant, vol. 10, no. 7, July 1922, pp. 375-379, 9 figs. States advantages of making centrifugal castings in vertical molds rather than in horizontal molds as is customary; theoretical calculations necessary for method are given.

Cutting and Welding. Cutting and Welding of Castings, G. O. Carter. Iron Trade Rev., vol. 71, no. 2, July 13, 1922, pp. 107-110. Minimum interruption caused by changing of tips, altering of pressures, etc.; castings should be segregated according to size of risers. Paper read before Am. Foundrymen's Convention.

Feeding Heads, Without. The Making of Castings Without Feeding Heads, E. Ronceray. Foundry Trade Jl., vol. 25, no. 302, June 1, 1922, pp. 393-397. Suggestions of importance in practice which would obviate necessity for heads in many cases. Paper read before Inst. British Foundrymen.

Plaster Molds for. Plaster Moulds for Small Castings. Machy. (Lond.), vol. 20, no. 509, June 29, 1922, pp. 398-399, 2 figs. Advantageous features for models and exacting commercial work.

CEMENT

Sulphide. Investigation of Sulphide Cement, H. F. Clemmer. Highway Engr. & Contractor, vol. 6, no. 6, June 1922, pp. 33-34, 2 figs. Work of Testing Bureau benefits manufacturer and ensures delivery of good materials.

CEMENT MANUFACTURE

Fusion Process. Possibilities of Fusion Process for Cement Production, S. L. Meyers. Concrete, vol. 20, no. 6, June 1922, pp. 105-107, 5 figs. This process contains fuel economy possibilities that rotary kiln with sintering methods does not.

CEMENT MILLS

Iowa. Building and Operating Iowa's First Cement Plant, W. T. Christine. Cement, Mill & Quarry, vol. 20, no. 10, May 20, 1922, pp. 25-34, 19 figs. Plant was put into operation in 1908; intricate process of cement manufacture; waste-heat boiler furnishes all power to operate plant.

CEMENT, PORTLAND

Chemical Analysis. Interpreting the Chemical Analysis of Portland Cement, J. C. Witt. Cement & Eng. News, vol. 34, no. 6, June 1922, pp. 21-23. Suggested system of recasting has not demonstrated relationship of results with physical behavior.

CENTRAL STATIONS

Superpower. The Superpower Undertaking in Styria (Austria) (Das steirische Grosskraftwerksunternehmen), Richard Hofbauer. Elektrotechnik u. Maschinenbau, vol. 40, no. 23, June 4, 1922, pp. 265-269. Discusses power works of Enns group, Mur groupe, water-storage works at Teigitsch and Mixnitz, and districts they supply with power.

CIRCUIT BREAKERS

Oil. Baltimore Oil Circuit Breaker Tests, H. C. Louis and A. F. Bang. Am. Inst. Elec. Engrs. Jl., vol. 41, no. 6, June 1922, pp. 399-405, 9 figs. Results of tests made by Consolidated Gas, Electric Light and Power Co. of Baltimore by throwing three-piece metallic short circuits directly on system which breaker was called upon to clear immediately.

Breakers Withstand Short-Circuit Tests. Elec. World, vol. 80, no. 1, July 1, 1922, pp. 21-23, 3 figs. With minor modifications, all types ruptured short circuits several times in succession without failure; oscillogram studies made in each case; ample capacity provided back of short circuits.

CITY PLANNING

New York and Vicinity. Planning for an Urban Population of Thirty-Seven Millions. Am. City, vol. 26, no. 6, June 1922, pp. 533-536, 1 fig. Sage Foundation announces regional planning study covering 300 communities in New York area.

COAL

Briquetting. Briquetting of Peat (Brikettierung von Rohtorf oder Kohlenschlamm durch maschinelle Druckentwässerung ohne Bindemittel), Kampers. Technische Blätter, vol. 12, no. 5, Feb. 4, 1922, pp. 49-51, 4 figs. Processes depending on extracting water by pressure.

LOW-GRADE FOR PLASTIC FUEL. Plastic Fuel Can Be Made of Low-Grade Coal and [illegible] Can Be Coked Even if Non-Coking Coal Is Used, George H. Dacy. Coal Age, vol. 21, no. 23, June 8, 1922, pp. 953-956, 5 figs. With fine grinding almost all but inherent ash is removed by Trent process; ash may be reduced to 1 per cent; amalgam produced twice as much gas as ingredients separately.

PRODUCTION COSTS. Analyzing the Cost of Producing Anthracite, S. D. Warriner. Min. & Metallurgy, no. 187, July 1922, pp. 7-9. Explanation of wide difference in price to consumer from labour cost in mine.

SMOKELESS, ILLINOIS. Illinois Coal as a Source of Smokeless Fuel, S. W. Parr. Power Plant Eng., vol. 26, no. 12, June 15, 1922, pp. 600-605, 13 figs. Why some coals are called non-coking; effects of oxygen; low-temperature coking.

STEAMING. Coal Steaming, A. W. Binns. Power Plant Eng., vol. 26, no. 12, June 15, 1922, pp. 595-598, 8 figs. Costs, steam consumption and mechanical details.

COAL HANDLING

EQUIPMENT FOR ASH AND. On Coal and Ash Handling Equipment, Harry R. Westcott. Power House, vol. 15, no. 10, May 20, 1922, pp. 25-29 and 42. Numerous types of apparatus for these purposes are described in outline, and suitability of one or other is indicated under differing conditions.

COILS

SELF-INDUCTANCE OF CIRCULAR. The Self-Inductance of Circular Coils, H. B. Dwight. Elec. Jl., vol. 19, no. 6, June 1922, pp. 268-270, 4 figs. Curves from which self-inductance can be read thereby avoiding long formulas; also useful in design of reactance coils, choke coils and air-cored balancing coils for transformers.

COKE

NON-COKING COALS. Coke from "Non-Coking" Coals. Iron & Coal Trades Rev., vol. 104, no. 2828, May 12, 1922, pp. 708-709. Process of heating non-coking coals so rapidly that resinous content is decomposed before excessive oxidation occurs.

COMPASSES

ADJUSTMENTS. Adjustments of the Compass, C. H. Peabody. Mar. Eng., vol. 27, no. 7, July 1922, pp. 439-442, 10 figs. Causes of deviation of compass and methods of compensation.

GYROSCOPIC, RECORDS. Gyro-Compass Records, R. E. Kortepeter, Sperryscope, vol. 3, no. 6, June 15, 1922, pp. 5-7, 5 figs. Description of 4-hour- and 30-day-course recorders, and advantages of each.

COMPRESSORS

See Air Compressors.

CONCRETE

ALKALI ACTION. The Effect of Alkali Upon Concrete, S. H. McCroy. Cement & Eng. News, vol. 34, no. 6, June 1922, pp. 17-18. Decomposition caused and explanations of it offered. No method known of preventing such deterioration, but impermeability retards it. Recommendations as to aggregate, proportioning and placing of concrete.

HYDRATED LIME IN. Plasticity is the Chief Purpose of Hydrated Lime in Concrete. Contract Rec., vol. 36, no. 25, June 21, 1922, pp. 583-585. Engineer's report states that chief merit of lime in concrete is production of smooth, workable mix; reduction in strength is unimportant.

LUMBER. Concrete Lumber Industry Is Growing, W. A. Scott. Concrete Products, vol. 22, no. 6, June 1922, pp. 29-31, 8 figs. Company in California has developed system of manufacture which is leased in assigned territory.

SAND CLASSIFICATION. Improving Concrete Sand by Classification, E. Shaw. Concrete Products, vol. 22, no. 6, June 1922, pp. 59-61, 3 figs. Reclassification of sand involves throwing out grains finer than 48 mesh; some experiences with sand reviewed.

SPECIFICATIONS. Grading and Measuring Concrete Aggregates, R. C. Yeoman. Cement, Mill & Quarry, vol. 20, no. 10, May 20, 1922, pp. 35-36. Indiana specifications for handling sand and gravel; 1–2–4 concrete requires 1½ bbls. of cement, 0.45 cu.yd. of sand and 0.89 cu.yd. of gravel.

CONCRETE CONSTRUCTION, REINFORCED

CALCULATION. Reinforced Concrete Construction Work and Calculations (Rechnung und Konstruktion im Eisenbetonbau), Robert Otzen. Bauingenieur vol. 3, no. 9, May 15, 1922, pp. 262-266, 1 fig. Methods of calculating cross-sections, stresses, etc., develops formulas and gives examples of application.

CONDENSERS, STEAM

AIR PUMPS FOR. The C. M. and M.-Delas Air Extractor. Electrician, vol. 88, no. 2300, June 16, 1922, pp. 718-719, 3 figs. Results of tests made in Paris workshops of Société Condenseurs Délas.

TUBE PACKING. Condenser Tube Packing. Am. Mar. Engr., vol. 17, no. 6, June 1922, pp. 25-31, 17 figs. Underlying causes of corrosion and an easy economical solution of problem.

COOLERS

LIVE-STEAM. Live-Steam Coolers (Heissdampf-Kühlapparate). Archiv für Wärmewirtschaft, vol. 3, no. 5, May 1922, pp. 91-92, 4 figs. Describes cooler built by Sieffert & Co., A. G., for cooling live steam to be used in manufacturing [illegible] supply [illegible] insufficient.

COPPER METALLURGY

ELECTROLYTIC REFINING. Electrolytic Refining of Copper, H. T. Burns, vol. 8, no. 6, June 1922, pp. 1-5, 2 figs. Description of process in which impurities and precious metals are removed from product of Anaconda casting furnaces.

CORROSION

[illegible] Influence of Molecular Concentration on Immersion-Test Investigations, D. M. Strickland. Chem. & Met. Eng., [illegible] rate of corrosion [illegible] approaches spent solutions often harmless, but sometimes accelerate corrosion; short tests in [illegible] tests.

COST ACCOUNTING

[illegible]

CRANES

ELECTRIC. Electric Cranes. Mech. World, vol. 71, no. 1846, May 19, 1922, pp. 361-362, 1 fig. Operating speed and methods of crane motions; characteristics of motors, both D.C. and A.C. rating and electric braking.

HAMMERHEAD, 200-TON. Two-Hundred-Ton Fitting Out Crane at Camden Yard. Mar.Eng., vol. 27, no. 6, June 1922, pp. 383-385, 4 figs. Details of construction and operation of huge electrically operated hammerhead crane installed at South Yard of N.Y. Shipbldg. Corp.

CUPOLAS

CHARGING MACHINES. Charging Machines for Cupolas. Engr., vol. 133, no. 3470, June 30, 1922, pp. 727-728, 5 figs. Design of Thwaites Bros., Ltd., Bradford, which combines comparative low first cost and ease of installation.

CUTTING METALS

CUTTING FLUIDS FOR. Cutting Fluids, Eugene C. Bingham. Am. Mach., vol. 56, no. 26, June 29, 1922, pp. 958-961, 4 figs. Why adhesion is important lubrication factor; relative physical properties found by tests; best oil for each operation and material. (Abstract.) Tech. Paper No. 204, Bur. of Standards.

D

DAMS

CONCRETE. Construction of Loch Ravan Dam, Wm. A. Megraw. Pub. Works, vol. 62, nos. 24 and 25, June 17 and 24, 1922, pp. 437-439 and 460-462, 5 figs. Solid concrete structure 640 ft. long overall, spillway 288 ft. long, rising 103 ft. above bed rock. Raising dam 52 ft., using concrete chuted to place from one end. Gravity and machinery used in plant with considerable cost exceeds million dollars. Paper read before Am. Water Wks. Assn.

PINE HILL. Pine Hill Dam. Public Works, vol. 52, no. 22, June 3, 1922, pp. 397-399, 3 figs. Foundations 62 ft. deep built in 10 sections with iron stop plates in construction joints. Water cushion formed by weir. Part of main dam built in narrow long sections temporarily serving as cofferdams.

DIESEL ENGINES

AIR SUPPLY. Air for Diesel Engine-Installations, W. P. Sillince. Oil Eng. & Finance, vol. 1, nos. 11 and 13, Mar. 25 and Apr. 8, 1922, pp. 370-371 and 439-440. Survey of air for combustion of fuel, for starting and maneuvering engines, for injection of fuel and to operate auxiliaries.

CONSTRUCTION AND OPERATION. Diesel and Semi-Diesel Engines (Moteurs Diesel et Semi-Diesel), Ed. Allar. Bul. des Associations Françaises de Propriétaires d'Appareils à Vapeur, vol. 3, no. 8, Apr. 1922, pp. 86-105, 5 figs. Theory, principle of combustion, construction, operation, and application.

PETROLEUM AS FUEL. Some Characteristics of Petroleum Oils Used on Diesel Engines, Harold Moore. Oil Eng. & Finance, vol. 1, no. 14, Apr. 15, 1922, pp. 458-460 and 463-464. Number of analyses of fuel oils from various sources and their value as means of predicting behavior of new oils of similar characteristics. Paper read before Diesel Engine Users Assn.

TOSI. Internal-Combustion Engines (Les moteurs à combustion interne). Génie Civil, vol. 80, no. 25, June 24, 1922, pp. 561-564, 7 figs. Compares two-stroke and four-stroke Diesel engines, their application for marine purposes, and describes in detail Tosi Diesel four-stroke engine.

DISTILLATION

LOW-TEMPERATURE. Low-Temperature Distillation (Essais de Distillation à basse température), M. Laffargue and R. Jaugey. Annales des Mines, vol. 1, no. 5, May 1922, pp. 327-347, 1 fig. Utilization of lignite; process of low-temperature distillation; experimental results.

DRAINAGE

PUMPING PLANT. Drainage System Supplemented by High Capacity Pumping Plant, W. A. Scott. Eng. World, vol. 20, no. 6, June 1922, pp. 341-345, 17 figs. Methods of bank protection and current control on Sacramento, Cal.

DURALUMIN

GEARING, FOR. Duralumin for Gearing, Robert W. Daniels. Am. Mach., vol. 57, no. 2, July 13, 1922, pp. 62-65. History of duralumin; some properties that make it desirable for worm and other gearing; its strength and wearing qualities.

DUST

PRECIPITATION, ELECTRICAL. Electrical Precipitation of Dust and Its Application in the Purification of Gas (La précipitation électrique des poussières), Saget. Bul. de la Société Française des Électriciens, vol. 2, no. 12, Feb. 1922, pp. 83-100, 6 figs. Discusses precipitation in metallurgical, sulphuric acid, and other plants, and advises its more general adoption.

DYNAMOMETERS

TRACTOR, RECORDING TYPE. The Watson Dynamometer, George W. Watson. Engineering, vol. 113, no. 2948, June 30, 1922, pp. 814-816, 10 figs. Tractive force transmitted by oil pressure in one cylinder to spring-actuated piston in smaller cylinder. Link motion controls stylus recording on paper roll actuated by speed of tractor. Time and furrow depth also recorded.

E

EARTH

FULLERS, PREPARATION AND USE. Commercial Preparation and Use of Fullers Earth, T. P. Maynard and L. E. Mallory. Chem. & Met. Eng., vol. 26, no. 23, June 7, 1922, pp. 1074-1076. A highly siliceous clay, usually indurated, which has property of absorbing certain organic coloring matters from vegetable and mineral oils. Occurrence, origin, physical character; bleaching power.

ECONOMIZERS

VALUE OF. The Case for the Economizer, Julius Frith. Engineer, vol. 133, no. 3468, June 16, 1922, pp. 655-656, 3 figs. Rapid application of first principle usually shows coal economy but not always reduction of operating costs and features which influence this result.

EDUCATION, ENGINEERING

Technical Literature, Use of. Instruction of Students in the Use of Technical Literature; an Unexploited Phase of Engineering Education, J. H. McClelland. Eng. & Contracting, vol. 57, no. 25, June 21, 1922, pp. [illegible]. Importance of research in present-day manufacture and available literature from which to start.

ELECTRICAL MACHINERY

Temperature Limits. Temperature Limits in Large Machines, Philip Torchio. Am. Inst. Elec. Engrs. Jl., vol. 41, no. 6, June 1922, pp. [illegible]-451, 8 figs. Discussion of safe temperatures which make for efficiency; effect on life of fibrous insulation and new tentative conventional allowance for reducing to maximum copper temperature.

ELASTICITY

Moduli. The Modulus of Elasticity in Mechanical Construction Work (Le rôle du module d'élasticité dans la construction mécanique), R. de Fleury. Revue de Métallurgie, vol. 19, no. 5, May 1922, pp. 298-302. Its application to malleable iron, aluminum bronzes and other light metals, and construction of Diesel, aeronautical, and automobile engines.

ELECTRIC DISTRIBUTION

Secondary Construction. Secondary Construction of Proved Value, L. C. Peterman. Elec. World, vol. 79, no. 23, June 10, 1922, pp. 1167-1170, 3 figs. Description of method of supporting secondary circuits of the Chillicothe (Ohio) Elec. Ry Light & Power Co., having given satisfactory service for four years.

ELECTRIC FURNACES

Design. New Electric Furnaces for Temperatures of 2500 Degrees and Over (Neuartige elektrische Ofen für Temperaturen von 2500° und darüber), E. Löwenstein. Centralblatt für Mineralogie, Geologie und Paläontologie, no. 9, May 1, 1922, pp. 283-285, 3 figs. Describes furnace built by Göttinger Elektroschaltwerk, in which high temperatures can be reached quickly, temperatures can be accurately regulated, current consumption is small; suitable for metals and minerals, and difficulty fusible earths of all kinds.

Development. Developing an Electric Furnace, R. Sylvany. Iron Trade Rev., vol. 71, no. 1, July 6, 1922, pp. 33-34. Experience in application of electrometallurgy shows certain definite conditions must be met in designing efficient melting unit; factors involved are discussed; new French furnace is described briefly.

Electrodes, Continuous. Soderberg Self-Baking Continuous Electrodes, C. W. Soderberg and M. Sem. Chem. & Met. Eng., vol. 26, no. 25, June 21, 1922, pp. 1178-1182, 7 figs. Outline of process of manufacture of continuous electrodes at furnace; installations in various types of furnaces; ferro-alloy; carbide; steel; electric pig iron. Advantages over ordinary carbon electrodes. Cost comparisons. Probable trend of future developments.

Fiat. Development of the Italian Iron Industry by Extensive Use of Electric Power in Smelting Works (Ueber die Entwicklung der italienischen Eisenindustrie durch weitgehende Anwendung elektrischer Energie im Schmelzbetrieb), Dornhecker. Stahl u. Eisen, vol. 42, no. 22, June 1, 1922, pp. 845-848, 3 figs. Discusses electric furnaces in iron foundries, especially Fiat furnace, and works of Fiat Co.

Single-Phase. Single-Phase Electric Furnaces, H. P. Abel, A. A. Liardet and W. West. Foundry Trade Jl., vol. 25, no. 302, June 1, 1922, pp. 398-401. Description and advantages of this type of furnace. Suggestions for overcoming objections due to unbalancing of load on generators of usual two, three or polyphase type.

ELECTRIC GENERATORS, A.C.

45,000-kva., Canada. Description of the 45,000-kva. Queenston Generators, B. L. Barns and F. Bowness. Am. Inst. Elec. Engrs. Jl., vol. 41, no. 6, June 1922, pp. 459-463, 6 figs. Detailed description of vertical shaft type generator with direct-connected exciter.

ELECTRIC LAMPS, INCANDESCENT

Dangers. Danger of Touching Unclean Incandescent Bulbs (Gefährdungsmöglichkeiten bei Berührung unsauberer Glühlampen), Stefan Jellinek. Elektrotechnische Zeit., vol. 43, no. 24, June 15, 1922, pp. 815-817, 4 figs. Discusses case of a death resulting from touching glass bulb covered with spots of lime; in investigations very considerable potentials were found by making contact with unclean bulbs.

ELECTRIC LOCOMOTIVES

British Design. Electric Locomotives, Vincent L. Raven. Ry. Gaz., vol. 36, no. 25, June 23, 1922, pp. 994-996, 2 figs. Design of shunting, freight and passenger locomotives. Foreign practice in relation to British conditions. Summary of paper read before Instn. Mech. Engr.

ELECTRIC METERS

Phase-Angle. A New Phase-Angle Meter, L. F. Vieillard. Ry. Signal Engr., vol. 15, no. 6, June 1922, pp. 224-225, 2 figs. Device facilitates adjustment of A.C. track circuit, increasing efficiency of operation.

ELECTRIC MOTORS

Selection and Application. Fundamentals in Selection and Application of Electric Motors, Gordon Fox. Power, vol. 55, no. 26, June 27, 1922, pp. 1007-1009. General machine requirements and loads; motor characteristics to meet them; classification of motor types.

ELECTRIC MOTORS, D.C.

Reversing Switches. Reversing Switches as Used in Electric Motor Controllers. Power, vol. 55, no. 25, June 20, 1922, pp. 967-969, 20 figs. Reversing direction of direct current motors and different types of switches used.

ELECTRIC PLANTS

Turbo-Alternator. Some Notes on the Design of Generating Plant, C. F. Hewitt. Elec. Times, vol. 61, no. 1599, June 8, 1922, pp. 552-553. Reliability; working conditions; thermal economy, capital cost, ease of operation and general accessibility are design factors in order of their importance.

ELECTRIC RAILWAYS

Single-Phase Car Equipment. New Single-phase Equipment for the New Haven, Walter H. Smith. Ry. Age, vol. 72, no. 24, June 17, 1922, pp. 1477-1479, 5 figs. Two master controllers installed in trail cars permit operation from any car in train.

Single-Phase Interurban. Operation of Single-phase Interurban, C. N. Wilcoxon. Elec. Traction, vol. 18, no. 6, June 1922, pp. 489-492, 4 figs. Some details of service and operation on Chicago Lake Shore and South Bend Ry. after 14 years.

ELECTRIC TRANSMISSION LINES

220,000-Volt. 220,000-Volt Transmission and Apparatus, J. F. Peters. Eng. Inst. of Canada Jl., vol. 5, no. 6, June 1922, pp. 296-301, 8 figs. Field of application of 220-kv. transmission; description of equipment, and reference to two 220-kv. systems under construction in California.

ELECTRIC WELDING

Apparatus. Electric Welding Installations (Elektrische Schweissanlagen), Karl Midsch. 'Metall-Technik, vol. 48, no. 19. May 4, 1922, pp. 205-208, 10 figs. Discusses electric arc, resistance, and spot welding, and explains operations and apparatus.

Development. The History of the Development of Electric Welding, J. M. F. Wilson. Elec. News, vol. 31, nos. 7 and 11, Apr. 1 and June 1, 1922, pp. 35-37 and 40-41, 3 figs. Discusses carbon-electrode and metal-electrode systems of welding; selection of electrodes; impurities, etc.

ELECTROCHEMICAL INDUSTRY

Advances. Recent Advances in Applied Electrochemistry, Maurice de Kay Thompson. Jl. of Franklin Inst., vol. 193, no. 6, June 1922, pp. 775-794, 9 figs. General survey of progress made in this field.

ENAMELS

Coating. Microscopic Study of Ground Coat and Cover Coat Enamel Reactions, E. E. Geisinger. Am. Ceramic Soc. Jl., vol. 5, no. 6, June 1922, pp. 322-337, 13 figs. Study showing that susceptibility of enamels to furnace gases is easily classified by cross-section under microscope; examples.

ENERGY

World, Economics of. A Swedish Scientist onthe World Energy Economics, Svante Arrhenius. Eng. Progress, vol. 3, no. 6, June 1922, pp. 136-138. Consideration of sources of energy which are still available and how long they are likely to last.

ENGINEHOUSES

Equipment. Expediting Enginehouse Work at Hoboken. Ry. Mech. Engr., vol. 96, no. 6, June 1922, pp. 301-304, 8 figs. Modern machine equipment and efficient labor-saving devices show good results at D. L. & W. enginehouse.

EXPLOSIVES

C. P. Toluene. Report on the Manufacture of C. P. Toluene from By-Products Plants and Petroleum Distillates, W. K. Kirby. Alumini Mag. of Colorado School of Mines, vol. 12, no. 2, June 1922, pp. 5-10. Description of toluene and its production by scrubbing coal or water gas and synthetic process by cracking petroleum distillates.

Detonators, Lead Plate Test. The Lead Plate Test as Applied to Commercial Detonators, Bennett Grotta. Chem. & Met. Eng., vol. 26, no. 24, June 14, 1922, pp. 1126-1132, 12 figs. Tests and experiments demonstrating its value in grading commercial detonators according to well-defined standards; efficiency of commercial detonators.

Liquid Air. Use of Liquid Air as an Explosive(Empleo de oxigeno liquido como explosivo), Eduardo Carvajal. Revista Minera, Metalurgica y de Ingenieria, vol. 73, no. 2829, Apr. 24, 1922, pp. 230-233, 3 figs. Making of cartridges; comparative costs; method of operation.

F

FANS

Forced-Draft, Operating Characteristics. Operating Characteristics of Forced-Draft Fans, H. E. Corl. Power, vol. 55, no. 26, June 27, 1922, pp. 1012-1013, 2 figs. Recent developments due to underfeed stokers; new type of fan in which maximum hp. is only approximately 5 per cent higher than rated hp.

Output and Efficiency. The Characteristic Curves of Fans, and Their Application to Pre-determine the Output and Efficiency of Fans Working Singly and In Parallel on Various Resistances, Joseph Parker. Instn. Min. Engrs. Trans., vol. 63, part 3, May 1922, pp. 222-234, 11 figs. Brief consideration of a comprehensive view of all laws brought into operation by two fans working in parallel. See also Min. Instn. of Scotland Trans., vol. 43, Apr. 22, 1922, pp. 22-34, 11 figs.

FERTILIZERS.

Industry. The Fertilizer Business as a Chemical Industry, F. S. Lodge. Am. Fertilizer, vol. 56, no. 12, June 17, 1922, pp. 28-37, 3 figs. Some features of largest group of heavy chemical industries.

The Fertilizer Industry in the United States, J. G. Lipman. Soc. Chem. Industry Jl., vol. 41. no. 11, June 15, 1922, pp. 233-237. Fertilizing material; manufacture of artificial fertilizer and its future. Paper read before Chem. Industry Club.

FIRE PREVENTION

Building Materials Tests. Lessons of Fire Tests, S. H. Ingberg. Clay Worker, vol. 77, no. 7, June 1922, pp. 657-660, 5 figs. partly on p. 661. Brick as fire-resisting material and some results of tests on steel and concrete columns subjected to fire conditions. Paper read before Nat. Brick Mfrs. Assn. convention.

Reinforced-Concrete Slab Tests. British Fire Tests on Reinforced Concrete Slabs. Indian Eng., vol. 71, no. 20, May 20, 1922, pp. 278-279, 5 figs. on supp. plate. Dept. of Sci. and Indus. Research four-hour tests, maximum temperature 2,000 deg. fahr., followed by 5 min. water application.

FLOATING DOCKS

Reinforced-Concrete. Reinforced Concrete Floating Dock of 2,000 Tons at Trieste (Dock flottant en béton armé, de 2,000 tonnes, du port de Triste). Génie Civil, vol. 80, no. 22, June 3, 1922, pp. 489-491, 8 figs. Details of construction and equipment.

FLOORS

CONCRETE. Hardening Concrete Floors, Edward D. Boyer. Cement & Eng. News, vol 34, no. 6, June 1922, p. 28. Sometimes defects in workmanship make use of remedies advisable.

FLOW OF WATER

PIPE-CAPACITY CHART. Chart That Solves Pipe-Capacity Problems, W. F. Schaphorst. Coal Age, vol. 21, no. 24, June 15, 1922, pp. 999-1000, 1 fig. Chart from which velocity that water will travel through a pipe of given diameter may be quickly determined in cu. ft. gals. or lb. per min.

FOUNDATIONS

REINFORCED-CONCRETE IN COMPRESSED AIR WORK. Reinforced-Concrete as a Building Material in Compressed Air Foundation Work (Eisenbeton als Baustoff bei Druckluftgründungen), Joachim Schultze. Beton u. Eisen, vol. 21, no. 8, May 9, 1922, pp. 113-116, 4 figs. Compares properties of reinforced-concrete and wood and discusses advantages of each.

FOUNDRY EQUIPMENT

COMPRESSED AIR. Compressed Air Applied to the Foundry, R. Hoadley Tingley. Compressed Air Mag., vol. 27, no. 6, June 1922, pp. 153-158, 20 figs. Description of some of many air appliances indispensable in modern foundry practice.

FUELS

COAL AND OILS. Relative Value of Coal and Oils as Fuels, C. H. Butz. Forging & Heat Treating, vol. 8, no. 6, June 1922, pp. 262-265, 6 figs. Comparison made by means of charts based upon practical operating figures obtained from processes varying in nature from very inefficient furnace to highly efficient boiler.

UTILIZATION ON RAILWAYS. Utilization of Fuels on Railroads—6th Report of the Commission for the Utilization of Fuels (L'Utilisation des combustibles sur les chemins de fer—Sixième rapport de la Commission d'utilisation des combustibles). Génie Civil, vol 80, no. 20, May 20, 1922, pp. 449-453. Effect of electrification of railway lines; character and performance of steam locomotives; production and use of steam; etc.

See also Automobile Fuels, Coal, Coke, Gasoline, Oil Fuel, Pulverized Coal.

FURNACES, BOILER

CARE AND UPKEEP. Views of Mechanical Engineers in Wyoming Valley as to Proper Care and Upkeep of Boiler Furnaces, D. C. Ashmead. Coal Age, vol. 21, no. 26, June 29, 1922, pp. 1083-1087, 3 figs. Anthracite boiler practice inefficient; some plants install Dutch ovens; combustion arches increase temperature and steadiness of heat; large-size fuel may ruin arches; water softening much needed; fireclay as a mortar.

FURNACES, HEATING

FUEL ECONOMY. Fuel Economy in Heating Furnaces, K. Huessener. Blast Furnace & Steel Plant, vol. 10, no. 7, July 1922, pp. 380-383, 2 figs. New methods to obtain increased production with decreased fuel consumption from regenerative and recuperative furnaces.

G

GAGES

GAGE BLOCKS. Interference Methods for Standardizing and Testing Precision Gage Blocks, C. G. Peters and H. S. Boyd. Scientific Papers Bur. of Standards, no. 436, May 2, 1922, pp. 677-713, 21 figs. Use of interference of light waves makes possible detection of errors within a few millionths of an inch.

WEAR, ALLOWING FOR. Allowing for Gage Wear, R. Dumas and E. C. Peck. Am. Mach., vol. 56, no. 26, June 29, 1922, pp. 953-954. Discussion of desirability of having fixed tolerance or an allowance for wear; difference of American and British points of view.

GALVANIZING

HEAT TRANSMISSION IN. Heat Transmission in the Hot-Galvanizing Process, J. D. Keller. Blast Furnace and Steel Plant, vol. 10, no. 7, July 1922, pp. 371-373, 2 figs. Describing thermal features of process; rate of motion of sheets through bath should vary with sheet thickness if based on factor of heat transmission.

GARAGES

RAMP AND ELEVATOR TYPE. Comparison of Ramp and Elevator Type Garages, Harold F. Blanchard. Bus Transportation, vol. 1, no. 6, June 1922, pp. 331-335, 12 figs. Description of comparative capacities and convenience.

GAS CLEANING

FILTERING PROCESS. A New Process For Scrubbing Gases and Vapours, E. Stach. Eng. Progress, vol. 3, no. 6, June 1922, pp. 127-130, 7 figs. Rotary filtering process by Freytag-Messler for removing dust, tar, oil, and other impurities more completely than hitherto.

LIQUIDS, BY. Report on Liquid Purification, A. M. Beebe. Gas Age-Rec., vol. 49, no. 24, June 17, 1922, pp. 741-743, 2 figs. Investigations into Seaboard and O' Neill systems by Committee of Empire State Gas and Elec. Assn., and their results.

GAS MANUFACTURE

BY-PRODUCT FOR INDUSTRIAL USES. By-Product Gas Industrial Uses, Harry Dobrin. [illegible] pp. 719-722. Present day utilization of this type of gas, formerly thought unfit for most purposes. Paper read before joint session of Birmingham Sec. of A.S.M.E. and Am. Iron and Steel [illegible]

GAS PRODUCERS

SEABOARD BY-PRODUCT COKE PLANT. Producer Gas for By-Product Ovens, Freeman D. Lohr. Gas Age.-Rec., vol. 49, no. 22, June 3, 1922, pp. 677-681, 8 figs. Description of new plant built to meet increasing demand for gas and decreasing market for coke.

GASOLINE

[illegible] Heavier Oils, E. W. Dean and W. A. Jacobs. Petroleum World, vol. 19, no. 261, June 1922, pp. 225-226 [illegible] 1 fig. [illegible] illation and vapor-phase processes; exper[illegible] n same. See also Petroleum Times, vol. 7, [illegible] and 915.

HIGH-EXPLOSIVE, PROCESS FOR. New Process Makes High-Explosive Gasoline. Oil Trade Jl., vol. 13, no. 6, June 1922, p. 15. Wm. J. Knox perfects invention which will increase percentage of distillate recovered from crude on large scale.

GEAR-CUTTING MACHINES

GEOMETRIC CONTROL. Geometric Control of Gear Cutter Movement, Chester B. Hamilton, Jr. Can. Machy., vol. 27, no. 22, June 1, 1922, pp. 40-41 and 48, 4 figs. Careful grinding of cutters is necessary to maintain proper shape; using mill type of cutter; machines for cutting double-helical gears are of special design.

SPUR, MUIR AUTOMATIC MACHINE. The Muir Automatic Spur Gear Generating Machine. Machy. (Lond.), vol. 20, no. 506, June 8, 1922, pp. 292-294, 4 figs. Teeth of spur gears are formed with rackshape cutter which has vertical reciprocating motion across face of gear blank.

FELLOWS HIGH-SPEED SHAPER. New Fellows High-Speed Gear Shaper. Machy. (Lond.), vol. 20, no. 507, June 15, 1922, pp. 329-332, 6 figs. Machine that operates with a shaping action and generates gear teeth from gear-shape cutter.

SPUR, HOBBING. Cutting Spur Gears by Hobbing. Machy. (Lond.), vol. 20, no. 509, June 29, 1922, pp. 393-398, 5 figs. Setting up gear-hobbing machines; examples from practice; application of multiple-threaded hobs; cutting small pinions.

GEARS

AUTOPITCH. A New Form of Gear. Eng. Production, vol. 4, no. 88, June 8, 1922, pp. 545-548, 24 figs. Development of new type of gear as an attempt to reach requirements of theoretically ideal one; description of extent to which attempt is successful. Abridgment of paper read before Instn. of Engrs. and Shipbuilders.

HELICAL AND SPUR. Helical Gears and Spur Gears, W. G. Dunkley. Machy. (Lond.) vol. 20, nos. 500 and 506. Apr. 27 and June 8, 1922, pp. 105-107 and 300-302, 9 figs. April 27: Effect of sliding action on uniform velocity and on relative efficiency. June 8: Contact conditions of spur gears; load distribution and periodical variations; effect of variation of load distribution on uniformity of rotation; effect of increased speed.

GLASS

COMPOSITION AND DURABILITY. An Examination and Extension of Zulkowski's Theory of the Relation between the Composition and Durability of Glasses, Wm. L. Baillie. Soc. of Glass Technology Jl., vol. 6, no. 21, May 1922, pp. 68-95 and (discussion) 95-101, 1 fig.

DURABILITY. A Critical Examination of Methods Commonly Used in Determining the Durability of Glass, W. E. S Turner. Soc. Glass Technology Jl., vol. 6, no. 21, May 1922, pp. 30-45. Four methods of testing.

GOLD METALLURGY

ONTARIO. Development of Metallurgical Practice at the Hollinger Mine, P. A. Robbins. Eng. and Min. Jl.-Press, vol. 113, no. 25, June 24, 1922, pp. 1093-1097, 1 fig. Early history of enterprise; original mill; amalgamation vs. cyanidation; treatment of high-grade ore; development of present practice.

H

HANDLING MATERIALS

SAFETY IN. Making Material Handling Safe. Vernon C. King. Iron Trade Rev., vol. 71, no. 1, July 6, 1922, pp. 29-32, 8 figs. Greatest number of industrial accidents occur in handling of material; use of proper trucking and conveying equipment is aid to safety; discipline and morale are essential factors. Paper presented before Worcester Sec. A.S.M.E.

See also Coal Handling.

HARBORS

CHINA. The Harbor Facilities of Chefu, China (Beschouwingen in verband met den havenaanleg te Chefoo (China), O. C. A. Van Lidth de Jeude. Ingenieur, vol. 37, no. 25, June 24, 1922, pp. 476-485, 15 figs. Detailed description of harbor works, construction of quays, dams, revetements, etc.

DETERIORATION OF CONSTRUCTION MATERIAL. The Deterioration of Materials Used in Harbor Construction. Engineering, vol. 113, no. 2946, June 16, 1922, pp. 739-740. Information gathered by Committee appointed by Inst. Civil Engrs on means of protecting timbers from destructive marine parasites, and concrete construction that will stand up under salt water conditions.

HARDNESS

TESTING. The Ball Hardness Test, Dr. Moore. Metal Industry (Lond.), vol. 20, no. 22, June 2, 1922, pp. 510-513, 1 fig. Indentation tests being purely empirical should specify conditions. Features of Brinell test and Meyer's laws. Paper presented before Inst. of Metals.

HEAT TRANSMISSION

MEASUREMENT. American Heat Transmission Measurement by the Two-Plate System (Amerikanische Wärmedurchgangsmessungen nach der Zweiplatten methode) Max Jakob. Zeit. für die gesamte Kärte-Industrie, vol. 29, no. 5, May 1922, pp. 83-87, 3 figs. Recent works carried out by Bur. of Standards and Am. Soc. Heat and Vent. Engrs.

HEATING AND VENTILATING

CLEVELAND PUBLIC AUDITORIUM. Ventilating Equipment of Cleveland's Public Auditorium, M. A. Boyd. Heat. and Vent. Mag., vol. 19, no. 6, June 1922, pp. 33-40, 9 figs. Methods followed in handling air supply for largest plastered structure in world.

HEATING, STEAM

GENERAL FIRE EXTINGUISHER CO. Heating System of the General Fire Extinguisher Co., Chas. L. Hubbard. Power Plant Eng., vol. 26, no. 12, June 15, 1922, pp. 591-595, 10 figs. Steam is generated at high pressure and used only for heating. Power is purchased from an outside source.

BUILDING HEATING PLANT. World's Largest Gas Heating Plant, S. S. Fyfe. Gas Age-Rec., vol. 49, no. 25, June 24, 1922, pp. 765-768, 3 figs. Gas-fired steam boilers at Los Angeles; heats building of 3,000,000 cu. ft. using mixed natural and artificial gas.

HIGHWAYS

Construction Materials. Controlling Quality of Materials in Highway Construction, John H. Bateman, Can. Engr., vol. 42, no. 25, June 20, 1922, pp. 631-634 Field and laboratory tests: methods of obtaining samples; testing materials for concrete; control of cement concrete; standardizing tests. Paper read before Eighth Annual Conference in Highway Eng.

HOISTING ENGINES

Steam and Air Combination. Combination Steam and Air Hoist, R. C. Demary. Nat. Engr., vol. 26, no. 6, June 1922, pp. 244-246, 5 figs. Description of twin tandem compound with Corliss-type valve gear; high-pressure cylinders which are used for compressing air.

HOISTS

Skip. Elevating Coke by Skip Hoist. Gas Age-Rec., vol. 49, no. 22, June 3, 1922, pp. 683-684 and 687, 5 figs. Taking coke from small cars to elevated bins by means of automatic device; straight-up lift eliminates consideration of belt conveyor.

HYDRAULIC TURBINES

Queenston-Chippawa 55,000-Hp. Queenston-Chippawa 55,000-Horsepower Hydraulic Turbines, Frank H. Rogers. Power, vol. 56, no. 2, July 11, 1922, pp. 40-44, 12 figs. Five units being installed to operate under 305-ft. effective head; each weighs 2,000,000 lb., 620,000 lb. of which is in turbine; new type of turbine casing and operating gear developed. (Abstract.) Paper read before Hydro-electric conference under auspices of Phila. Engrs. Club.

HYDROELECTRIC DEVELOPMENTS

Tunnel for Kern River Plant. Hydro-Electric Development Involves Unusual Tunnel Job, H. K. Fox. Eng. News-Rec., vol. 89, no. 2, July 13, 1922, pp. 50-55, 8 fig. Reconstruction of Kern River plant requires enlargement of 8,300 ft. of rock tunnel; location, topography, and ground give rise to special problems.

HYDROELECTRIC PLANTS

France. Hydroelectric Plant of Baumont-Monteaux (Usine hydro-électrique de Beaumont-Monteux), J. Reyval. Revue Générale de l'Electricité, vol. 11, no. 21, May 27, 1922, pp. 781-790, 17 figs. A central station situated at confluence of Isère and Rhone; will supply current to industrial works; general description of parts of plant and engineering work connected with it.

New Brunswick. New Hydro Plant in New Brunswick. Elec. News, vol. 31, no. 11, June 1, 1922., pp. 34-39, 9 figs. Unique installation just completed at Musquash River, near St. John; actually two plants in one; work of New Brunswick Power Commission.

Queenston-Chippawa, Canada. Arrangement for Handling 500,000-Kw. Load from Queenston Plant. Elec. World, vol. 79, no. 25, June 24, 1922, pp. 1261-1263, 2 figs. Most economical utilization of water power available and protection against interruption of service were chief factors influencing design of this new station of Hydro-Electric Power Commission of Ontario.

Queenston-Chippawa Hydro Development Largest in the World. Power, vol. 55, no. 26, June 27, 1922, pp. 1000-1006, 9 figs. Initial installation five 55,000-hp. hydroelectric units; 305 ft. of 327-ft. head between Lake Erie and Lake Ontario effective on turbines; water carried through concrete-lined canal designed for possible ultimate capacity of 600,000-hp.

Semi-Outdoor. Semi-Outdoor Hydro-Electric Plant with Backwater Suppressor, John A. Sirnit. Elec. World, vol. 79, no. 23, June 10. 1922, pp. 1161-1164, 5 figs. Mitchell Dam development of the Alabama Power Company will involve an entirely new principle in hydroelectric construction. Results of long series of experiments in backwater suppression.

Switzerland. Hydroelectric Plant of Fully (Valais' Switzerland). Using a Head of 1,650 m. (Usine hydro-électrique de Fully (Vailis, Suisse), utilisant une chute de 1,650 mètres), Ch. Dantin. Génie Civil, vol. 80, nos. 18 and 19, May 6 and 13, 1922, pp. 393-397 and 423-427, 29 figs. partly on supp. plate. May 6: Describes civil-engineering features, damming of Fully Lake, pressure piping, etc. May 13: Electric generating machinery; turbine regulators; pipe lines.

I

INDICATORS

Indicator Diagrams of Compound Engine. Indicators Diagrams of Compound Engines. Power, vol. 56, no. 2, July 11, 1922, pp. 55-58, 10 figs. Classification of engine types; fixed and variable low-pressure cut-off. Other characteristics which determine proper setting of valves.

Micro, for High-Speed Engines. The Collins Micro-Indicator for High-Speed Engines. Engineering, vol. 113, no. 2945, June 9, 1922, p. 716, 3 figs. Description of instruments which within half a minute will produce on card ten successive indicator diagrams of performance of a high-speed engine.

INDUSTRIAL MANAGEMENT

Business Depression Cycle. Facts May Prevent Depressions, Ernest F. Dubrul. Iron Trade Rev., vol. 70, no. 25, June 22, 1922, pp. 1791-1794. Ignorance of business cycles brings reversals; burden rests upon management of modern industry to study basic factors; should contribute to general store by frank publicity about its own conditions.

Cost Explanation for Employees. Interpreting the Corporation to the Workers, C. M. Ripley. Elec. World, vol. 79, no. 25, June 24, 1922, pp. 1281-1282, 2 figs. Value of explaining distribution of costs to employees.

Manager's Problems. Solving the Manager's Present Day Problems, John H. Van Deventer. Indus. Management, vol. 64, no. 1, July 1922, pp. 1-3. Barriers to improved methods and how to overcome them.

Planning and Controlling, Chart for. Planning and Controlling Work in the Assembling Department of a French Shop, E. Jullien. Am. Mach., vol. 56, no. 25, June 22, 1922, pp. 932-933, 6 figs. Work plotted on revolving calendar and always under control of planning department; forms used for assembly specifications and piece-work tickets.

Purchase Controlled by Output Records. Making Output Records Control Material Purchases, Kenneth Coggeshall. Indus. Management, vol. 64, no. 1, July 1922, pp. 6-11, 23, 6 figs. Practical procedure for conservative purchasing with materials in stock bought at former high levels.

INSULATION

Paper, Dielectric Strength. Effects of the Composite Structure of Impregnated Paper Insulation On Its Electric Properties, Wm. A. Del Mar and C. F. Hanson. Am. Inst. Elec. Engrs. Jl., vol. 41, no. 6, June 1922, pp. 439-445, 10 figs. Quantitative expression of power-factor and dielectric loss in terms of resistivities and specific capacities of elements of insulation.

INTERNAL-COMBUSTION ENGINES

Fuels. Research Aimed at Solution of Fuel Problem, Herbert Chase. Automotive Industries, vol. 46, no. 26, June 29, 1922, pp. 1412-1418, 5 figs. Co-operation of automotive and petroleum industries; new knock preventive announced by General Motors; lubricating problems also discussed.

The Value of Gas Engine Fuels, Letson Balliett. Min. Rev., vol. 24, no. 5, June 15, 1922, pp. 14-15. Exposition of impossible claims to increase heat values of hydrocarbon fuels; use of fuel oil in blacksmith's shop.

Combustion. Combustion Research—An Aid to Better Performance, Herbert Chase. Automotive Industries, vol. 46, no. 23, June 8, 1922, pp. 1253-1265, 2 figs. Internal-combustion engines; factors affecting detonation; flame propagation and related subjects examined by various investigators.

Sproule. The Sproule Internal Combustion Engine. Oil Eng. and Finance, vol. 1, no. 81, March 4, 1922, pp. 277-279, 1 fig. Description of engine in which it is claimed that difficulties of limited flexibility, low efficiency, and lack of easy reversibility are almost completely overcome.

See also Airplane Engines, Automobile Engines, Diesel Engines, Gas Engines, Oil Engines.

IRON

Metallography. Influence of Graphite on Iron, J. W. Bolton. Foundry, vol.. 50, no. 11, June 1, 1922, pp. 436-443, 19 figs. Theories advanced for varying effects of graphite on cast iron and semi-steel explain states in which it is found; causes are analyzed; micrographs illustrate points.

Oxidizing Gases, Effect of. Effect of Oxidizing Gases at Low Pressure on Heated Iron, H. C. H. Carpenter and C. F. Elam. Blast Furnace and Steel Plant, vol. 10, no. 6, June 1, 1922, pp. 317-319, 7 figs. Principal agent in production of characteristic facets of oxide is mixture of gases evolved by copper on heating.

IRON INDUSTRY

Nord-Paris Co. Plant. The Works of the Nord-Paris Company. Engineering, vol. 113, no. 2945, June 9, 1922, pp. 708-709, 2 figs. Description of steel works, iron foundry, large machine shop, and auxiliary buildings covering some 50,000 sq. yd.

IRON ORE

Chromite. Chromite for the Manufactuie of Ferro-Chrome, J. A. Holden. So. African Min. and Eng. Jl., vol. 33, no. 1595, Apr. 22, 1922, pp. 1120-1121, 1 fig. Rhodesian and new Caledonian ores contrasted; varieties suitable for electro-metallurgical smelting and some features of process.

Electric-Furnace Reduction. Electrothermic Reduction of Iron Ores and Pyrites (Sulla riduzione elettrotermica dei minerali di ferro e delle ceneri di pirite), Stefano Pagliani. Forno Elettrico, vol. 3, no. 12, Dec. 15, 1921, pp. 168-183, 13 figs. Development of direct reduction of iron ore in electric furnace; summary description of the various furnaces and their working.

IRON, PIG

Silicon, Lower. Foundries Can Use Lower Silicon Irons, Y. A. Dyer. Iron Age, vol. 109, no. 25, June 22, 1922, pp. 1749-1750. Blast furnacemen would be relieved by lessened demand for high silicon pig; call for high phosphorus iron may be overcome also.

IRRIGATION

Efficiency of. The Efficiency of Irrigation, G. E. P. Smith. Eng. and Contracting, vol. 62, no. 24, June 14, 1922, pp. 576-578. Ratio of water beneficially used to total water diverted onto land and conditions determining these factors.

K

KILNS

Continuous-Tunnel. Data on the Operation of a Continuous Tunnel Kiln at the Plant of the A. C. Spark Plug Company, S. J. McDowell and P. D. Helser. Am. Ceramic Soc. Jl., vol. 5, no. 6, June 1922, pp. 267-275, 3 figs. Description of simple construction permitting rapid heating and cooling; output depends upon ability to safely absorb heat necessary for their vitrification; used for firing spark plug porcelain insulators; total length, 75 ft., interior width, 2 ft. 8 in.

Operation. Correct Methods Lower Burning Cost J. H. Kruson. Brick and Clay Rec., vol. 60, no. 12, June 12, 1922, pp. 921-924, 4 figs. What happens in kiln during burning; gives outline for efficient burning records and suggests method fot studying burning process.

L

LAMPS, INCANDESCENT

Siemens Works, England. The Siemens Electric Lamp Works. Electricity, vol. 36, nos. 1646 and 1647, May 26 and June 2, 1922, pp. 268-270 and 274-276, 9 figs. Description of one of the best plants in England, at Dalston.

LEAD

Analysis, Rapid. Rapid Analysis of Impure Lead. Metal Industry (Lond.), vol. 20, no. 20, May 19, 1922, pp. 461-462. Description of simple process for analysis of lead and other materials in combination.

LEATHER

Drying Artificially. Artificial Drying of Leather. M. Hirsch. Eng. Progress, vol. 3, no. 6, June 1922, pp. 123-125, 5 figs. Arrangement for regulating admission of air according to progress of drying and proportioning recirculated and fresh air as drying proceeds.

LIGHTING

Industrial. Industrial Lighting: Ideal Requirements Legislative and Otherwise) and Practical Solutions, L. Gaster. Illuminating Engr., vol. 15, no. 2, Mar. 1922, pp. 74-88, 8 figs. Consideration of four essentials for ideal lighting and discussion of code. Paper read before Illuminating Eng. Soc.

Electric Signs. Better Signs, C. A. Atherton. Illuminating Eng. Soc. Trans. vol. 17, no. 5, May 1922, pp. 211-232, and (discussion) 232-234, 17 figs. Serious consideration from engineering standpoint. Equation by which spot sizes of light can be determined for various conditions and modifications giving maximum distance at which certain letters can be read.

LIGNITE

Carbonization and Distillation. Disintegration and Carbonization of Lignite (Verschwelung und Vergasung von Braunkohle), Conrad Arnemann. Braunkohle, vol. 21, no. 6, May 13, 1922, pp. 124-138, 4 figs. Symposium on modern distillating and carbonizing plants before German Lignite Industries Assn.

LIME

Plants. The New Rockland Lime Plant, Nathan C. Rockwood. Rock Products, vol. 25, no. 12, June 17, 1922, pp. 35-44, 36 figs. Six continuous discharge, gas-fired mount design kilns of which five turn out 130 tons of lime in 24 hours.

A Plant Ahead of Its Time, Clinton S. Darling. Rock Products, vol. 25, no. 12, June 17, 1922, pp. 59-68 32 figs. Rotary kiln for dry or semi-wet burning with 175 ft. flame; remarkable flexibility to make every lime product at Am. Lime and Stone Co.'s plant.

LIMESTONE

Iceland Spar, from. Pure Calcium Carbonate or "Iceland Spar", Oliver Bowles. Rock Products, vol. 25, no. 11, June 3, 1922, pp. 25-27. Limestone in its most valuable form is to be found in Iceland spar, occurrences of which are found in California, Montana, Spain and Argentina; property and uses.

LOCOMOTIVE BOILERS

Circulation, Effect on Efficiency. Effect of Circulation on Locomotive Boiler Efficiency, F. G. Lister. Ry. Rev., vol. 70, no. 22, June 3, 1922, pp. 787-790. Needed improvements in design for effecting better circulation, covered in paper presented at annual convention of Int. Ry. Fuel Assn. 1922.

Design and Maintenance. Current Problems in Boiler Design and Maintenance. Ry. Rev., vol. 70, no. 25, June 24, 1922, pp. 87-991, 9 figs. Am. Ry. Assn. Committee recommends standard practice for buttonhead stays and dry pipe sizes; advocates water treatment and hot-water washout systems. (Abstract).

LOCOMOTIVES

Fire Box, Water-Tube. Development of a Practical Water Tube Locomotive Fire box, D. L. Kiss. Ry. Rev., vol. 70, no. 24, June 17, 1922, pp. 900-908, 16 figs. Hungarian state railways successfully operating locomotives equipped with Broton type boilers; use of water purifiers an important factor.

Design and Equipment. Current Question of Locomotives Design and Equipment. Ry. Rev., vol. 70, no. 25, June 24, 1922, pp. 982-987, 1 fig. Am. Ry. Assn. Committee on locomotive construction considers relative merits of locomotive types and details in design. (Abstract.)

Fuel Economy. Effect of Tonnage Rating and Speed on Fuel Consumption, J. E. Davenport. Ry. Rev., vol. 70, no. 22, June 3, 1922, pp. 777-782, 10 figs. Practical interpretation of results of laboratory tests conducted in Pennsylvania Locomotive testing plant, showing heavy slow-speed trains to be most economical. Paper read before Int. Ry. Fuel Assn.

Locomotive Fuel—The Life Blood of Transportation, G. M. Basford. Ry. Rev., vol. 70, no. 22, June 3, 1922, pp. 782-785, 2 figs. Salient points in address at annual convention of Int. Ry. Fuel Assn.

Superheater. The Superheater Locomotive — Its Lubrication. Lubrication, vol. 8, no. 5, May 1922, pp. 49-60, 10 figs. Important features in operation and lubrication in connection with these.

LUBRICATING OILS

Frictional Loss, Testing. A Practical Way to Test Lubricating Oils for Frictional Losses, W. F. Osburne Power, vol. 55, no. 26, June 27, 1922, pp. 1010-1011. Readings to be taken; heat carried away from bearings; considerations other than bearing temperatures.

Storing and Handling. The Storage and Handling of Lubricating Oil, Allen F. Brewer. Indus. Management, vol. 64, no 1, July 1922, pp. 27-30, 4 figs. Application of engineering principles to elimination of waste and obtaining maximum efficiency.

Voltol. The Production of Voltol. Eng. Progress, vol. 3, no. 6, June 1922, pp. 121-122, 2 figs. Process of making high-viscosity oil from thin cheap ones under effect of electrical glow discharges in rarefied gas.

LUBRICATION

Lubricants and. Lubrication and Lubricants, W. A. Ludwick. Steam, vol. 29, no. 6, June 1922 pp. 157-164 Consideration of straight-run mineral, blended mineral, compounded and animal oils; greases; selection of lubricants.

Petroleum. Petroleum and Lubrication, E. A. Evans. Oil Eng. and Finance, vol. 1, no. 13, Apr. 8, 1922, pp. 434-436. Consideration of true friction and proper specifications for oil to overcome same; constitution of film; carbonization; emul- [illegible] Mar. [illegible]

MALLEABLE IRON

Manufacture. Malleable Anneals Not Packed. E. K Smith. Foundry, vol. 50, no. 11, June 1, 1922, pp. 457-458, 2 figs. Pot with flange at both ends is developed to prevent gases from entering and attacking castings; temperature must be kept low to eliminate warping when castings are not supported.

Sandardization. Standardizing Malleable Iron (Ueber die "Normung" von Temperguss), Rudolf Stotz. Giesserei-Zeitung, vol. 19, nos. 20 and 21, May 16 and 23, 1922, pp. 301-303 and 319-322, 3 figs. May 16: Dependence of tensile strength on thickness of wall and methods of production; gives figures for tensile strength from various foundries. May 24: Chemical composition and physical tests; shrinkage; etc.

METALLOGRAPHY

Preparation of Metal. Preparation of Metal for Microscopic Examination, Wm. Campbell. Chem. and Met. Eng., vol. 26, no. 25, June 21, 1922, pp. 1163-1164. Preparation of specimens, development of structures for various samples.

METALS

Fatigue. Fatigue of Metals, C. E. Stromeyer. Iron and Coal Trades Rev., vol. 104, no. 2831, June 2, 1922, pp. 282-824, 2 figs. Empirical law by which fatigue limit may be obtained by direct measurement quickly and fatigue coefficient within one-half hour. (Abstract.) Paper read before So. Wales Inst. of Engrs.

Calorizing. Calorization (Note sur la calorisation), Léon Guillet. Bul. Technique du Bureau Veritas, vol. 4, no. 4, Apr. 1922, pp. 83-86, 3 figs. Discusses methods of protecting metallic articles, especially calorization or coating by means of aluminum by Schoop spraying process.

Casting. The Casting of Metals, Thomas Turner, Brass World, vol. 18, no. 6, June 1922, pp. 191-195. Consideration of smelting and molding of metals as a whole with special attention to non-ferrous alloys. Lecture before Inst. of Metals.

Properties, Effect of Temperature on. The Effect of Temperature on Some of the Properties of Metals, F. C. Lea. Engineering, vol. 113, no. 2948, June 30, 1922, pp. 829-832, 11 figs. Results of experiments on critical points; tensile tests at from 40 deg. to 1000 deg. cent. tests on Armco iron; table showing properties of iron and certain steels at various temperatures; alloys of aluminum and copper. Paper read at Paris meeting of I.M.E.

METRIC SYSTEM

Arguments Against Adoption. Standardization and the Metric System (La standdardizzazione e la serie metrica standard), Narciso Desirello. Industria, vol. 36, no. 9, May 15, 1922, pp. 163-167, 6 figs. Concludes that metric system, although perfect theoretically is entirely inadequate for practical use and modern industrial exigencies.

MICA

Industry. Mica, Oliver Bowles. Bur. of Mines, Report of Investigation, no 2357, May 1922, 46 pp. 3 figs. Report of extensive investigation on mica industry and recent developments in foreign mica mining.

MINE LOCOMOTIVES

Germany. Mine Locomotive Conveying in the Ruhr District (Der Stand der Biubenlokomotiv-dörderung im Ruhrbezirk), O. Gunderloch. Glükauf, vol. 58, 58, nos. 20, 21 and 22, May 20, 27 and June 3, 1922, pp. 589-592, 616-622 and 653-657, 25 figs. Describes various types of benzol wired electric, accumulator; and compressed-air locomotives; their management and cost of operation.

MINERALS

Concentration by Alternate Currents. The Concentration of Minerals by Means of Alternate Electric Currents, W. M. Mordey. Min. Mag., vol. 26, no. 6, June 1922, pp. 333-343, 14 figs. Difference in action of alternate currents, electro-magnet and direct current types and means of using former; separation of minerals; practical application of tests. Paper read before So. Africa Instn. Elec. Engrs.

MINES

Concrete, Uses in. The Uses of Concrete in Mines, Anton S. Rosing. Can. Min. Jl., vol. 43, no. 21, May 26, 1922, pp. 321-323, 3 figs. Desirability due to resistance to fire and water.

Explosions. Explosions and Their Causes, Alexander McEachern. Can. Min. Jl., vol. 43, no. 25, June 23, 1922, pp. 395-397. Precautionery or preventative measures to be observed; researches abroad; safe practice. Paper read before Min. Sec. of U. S.

MINING

Methods. Mining Methods, C. F. Jackson. Min. and Metallurgy, no. 187, July 1922, pp. 27-28. Work of Mining Methods Committee to present general classification of methods and its relationship to physical characteristics of deposit; unit production data; publication of established experiences; revised mining method chart.

MOTOR TRUCKS

Parts Inspection. Rigid Inspection One of Rules at This Plant. Can. Machy., vol. 27, no. 25, June 22, 1922, pp. 47-48, 2 figs. Practice at Nat. Steel Car Corp., Hamilton, Ont. Parts purchased from outside sources are tested before leaving place of manufacture; further test given at Hamilton factory; jigs and fixtures are extensively used.

N

NITRATES

Supply. The Supply of Nitrate, A. W. Allen. Eng. and Min. Jl.-Press, vol. 114, no. 1, July 1, 1922, pp. 15-16, 2 figs. Mr. Ford's proposal calls attention to vital importance of adequate supply of mineral in peace as well as in war; Chilean deposits are far from exhaustion; synthetic production a problem of economics.

NICKEL ALLOYS

Chromel. Chromel Castings, Bars, Wire and Ribbons, E. F. Lake. Brass World, vol. 18, nos. 5 and 6, May and June 1922, pp. 158-161 and 165-167, 9 figs. Nickel-chromium alloy with higher chromium content than is found in others; its uses.

Nickel-Chromium Casting. Cast Nickel-Chromium Alloys, F. L. Lake. Foundry vol. 50, no. 11, June 1, 1922, pp. 452-454, 6 figs. Metals are melted in induction, arc and crucible-type electric furnace, purity found to be essential, iron added to one of alloys, occluded gases a menace in melting.

O

OIL ENGINES

Cold-Starting Crude. The Brotherhood Cold-Starting Crude Oil Engine. Engineering, vol. 113, no. 2946, June 16, 1922, pp. 746-748, 12 figs. Horizontal 4 cycle type started by compressed air on regular fuel. Will operate after starting on any grease that can be pumped.

OIL FIELDS

Ontario. Future Prospects for Oil and Gas Production in Ontario, M. Y. Williams. Can. Min. Inst. Trans. vol. 23, 1920, pp. 341-349 and discussion 347-350. Five geological formations which have produced petroleum in commercial quantities prospects on Manitoulin Island; James Bay slope; oil shales.

Western Canada. The Oil Possibilities of Western Canada, D. B. Dowling. Can. Min. Inst. Trans. vol. 23, 1920, pp. 351-359 and (discussion) 360-361, 2 figs. Location of oil-saturated sands in lower part of Cretaceous in 7 different localities; possibilities near Alberta.

OIL FUEL

Burning Efficiency. How to Burn Fuel Oil Efficiently, Jos. W. Hays. Refrigeration, vol. 30, no. 2, Apr. 1922, pp. 31-36. Correct conditions of furnace, atomizing burner, air supply and operation.

OIL INDUSTRY

Low-Pressure. Gas Utilization. Low-Pressure Gas for Oilfield Boilers. Oil Eng. and Finance, vol. 1, nos. 12 and 13, Apr. 1 and 8, 1922, pp. 412 and 431-432. Investigation of practicability of using low-pressure gas ordinarily wasted into the air and best types of gas burners.

OIL SHALES

Esthonian. The Chemical Properties of Esthonian Shales. Petroleum Times, vol. 7, no. 178, June 3, 1922, pp. 777-778. Some facts about most successful developments in this field and unusually rich properties of shale.

Kukkersite, the Oil Shale of Esthonia, E. H. Cunningham. Petroleum World, vol. 19, no. 261, June 1922, pp. 255-259. Facts about occurrence and development of one of richest oil shales known.

OPEN-HEARTH FURNACES

British Practice. British Open-Hearth Furnace Practice. Iron Age, vol. 110, no. 2, July 13, 1922, pp. 75-78, 2 figs. Higher temperatures and more rapid working aimed at in proposed design of a 100-ton furnace; reduction of heat losses great desideratum.

Design Improving. Improving Open-Hearth Design, Willis McKee. Iron Trade Rev., vol. 70, no. 26, June 29, 1922, pp. 1865-1868, 5 figs. Blow-torch principle insures better combustion; proposal to introduce gas into uptakes without regeneration; improved design is resulting in greatly increased output; better steel and longer life of furnace.

Valves. Gas and Air Valves for Open Hearth Furnaces, Wm. C. Bulmer. Blast Furnace and Steel Plant, vol. 10, no. 6, June 1,1922, pp. 302-306, 4 figs. Discussion of development of various types of valves for which inventor claims some superiority.

ORES

Present Value and Ore Reserves. Present Value in Its Relation to Ore Reserves, Plant Capacity, and Grade of Ore, Edwin S. Berry. Min. and Metallurgy, no. 187, July 1922, pp. 11-16. Losses in mining; sorting; purchase of adjacent property.

ORE DRESSING

Electro-Magnetic. Electro-Magnetic Dressing of Ore. Eng. Progress, vol. 3, no. 6, June 1922, pp. 117-121, 12 figs. Principles of magnetic separation historical development; methods of wet electro-magnetic separation.

OVENS

Electric, Enameling. Electric Ovens Are A Good Investment, West S. Scott. Elec. Rev. and Indus. Engr., vol. 80, no. 6, June 1922, pp. 275-277, 4 figs. Flexibility and ease of heat control, freedom from gases and low maintenance are among advantages of various examples discussed.

OXY-ACETYLENE CUTTING

Cutting Machines. Oxy-Acetylene Cutting Machine, I. William Chubb. Am. Mach., vol. 56, no. 25, June 22, 1922, pp. 929-931, 5 figs. Mechanically guided torch cuts intricate shapes at great speed; gas pressure and rate of torch travel regulated to suit work.

Machine, Efficiency of. Efficiency of Machine Cutting, Fred J. Maeurer. Acetylene Jl., vol. 23, no. 12, June 1912, pp. 587-595, 25 figs. Cutting with oxy-acetylene torch can be made to approach very closely maximum theoretical efficiency. Paper read before Am. Welding Soc.

Underwater. The Underwater Torch Makes Good. Pacific Mar. Rev., vol. 19, no. 6, June 1922, pp. 337-339, 5 figs. Temperature of 6,000 deg. fahr. enables diver to cut metals at any depth to which he can descend.

OXY-ACETYLENE WELDING

Foundries. Oxy-Acetylene Cutting and Welding in Foundry, G. O. Carter. Can. Foundryman, vol. 13, no. 6, June 1922, pp. 36-39. Piped oxygen and acetylene installations are recommended for large foundries. Many uses, such as cutting steel risers and welding gray iron.

P

PAINTS

Exposure Tests. Miscellaneous Exposure Tests, Henry A. Gardner. Educational Bur., Paint Manufacturers' Assn. of U. S. no. 153 June 1922, pp. 282-315, 12 figs. Durability tests on paints applied by spray gun vs. hand brush; three-years exposure results on Atlantic City panels; and tests on metal power paint, titanium oxide pigment and antimony oxide pigment.

PAPER MANUFACTURE

New Paper From Old. Making New Paper From Old Paper Stock, Sidney D. Wells. Paper, vol. 30, no. 14, June 7, 1922, pp. 7-10. Deinking processes for old newspapers and use of bentonite as peptizing agent.

PAPER MILLS

Machines, High-Speed. Developments in High Speed Machines. Paper, vol. 30, no. 12, May 24, 1922, pp. 7-11. Effect of late developments in making paper by high-speed processes.

PAINTS

White Pigments. New White Pigments, C. A. Klein. Chem. Industry, vol. 41, no. 10, May 31, 1922, pp. 209-210. Possibilities of two recently added pigments.

PAVEMENTS

Granite-Block. Recommended Procedure in the Construction of Granite Block Pavements, C. D. Pollock. Mun. and County Eng., vol. 62, no. 6. June 1922, pp. 207-210, 3 figs. Advantages of this type of pavement; laying and finishing it.

Wheel Load Distribution. Distribution of Wheel Load on Pavement Sections, H. F. Clemmer and C. A. Hogenthaler. Highway Engr. and Contractor, vol. 6, no. 6, June 1922, pp. 45-49, 4 figs. Tests on Bates experimental road in Illinois indicate effect of traffic.

PAVEMENTS, ASPHALT

Sand, for. Selecting and Proportioning Sand Asphalt Paving Mixtures, Prevost Hubbard. Rock Products, vol. 25, no. 11, June 3, 1922, pp. 37-39, 7 figs. Grading of sand to meet required specifications as told to 1922 convention of Am. Road Builders Assn.

PAVEMENTS, BRICK

Construction, Developments. Developments in the Methods of Constructing Brick Pavements. Contract Rec., vol. 36, no. 24, June 14, 1922, pp. 561-563. Importance of making construction durable and waterproof; asphalt cement fillers; even spacing; advantages of lug-brick.

PHASE MODIFIERS

Phase Advancers. Phase Advancers, Electricity, vol. 36, no. 1648, June 9, 1922, pp. 289-290, 2 figs. Description of A.C. exciter supplying magnetizing current to rotor 90 deg. ahead of working rotor current. This tends to improve power factor which has been lowered by induction motors. Describes Knapp vibrator type.

PHOSPHORIC ACID

Uses and Manufacture. Phosphoric Acid; its Uses and Manufacture, L. Carpenter, Chem. Age (Lond.), vol. 6, no. 158, June 24, 1922, pp. 830-831. As substituted for tartaric and citric acids in manufacture of jellys, preserves, and soft drinks. Combined with calcium and sodium as substituted for cream of tartar in baking and in making double superphosphate for fertilizer.

PILES

Protection by Gunite. Protection of Piles by Gunite. Can. Engr., vol. 42, no. 22, May 30, 1922, p. 549, 1 fig. Encasement of 2 in. of reinforced concrete resists Marine organisms; piles withstand driving and rough handling without damage.

PILES, CONCRETE

Types and Advantages. The Concrete Pile, Geo. P. Morrill. Concrete, vol. 20, no. 6, June 1922, p. 229-233, 6 figs. General discussion of advantages and methods of use.

PIPE, CAST-IRON

Centrifugal Process. Cast Iron Water Pipe Made by de Lavaud Process. Can. Foundryman, vol. 13, no. 5, May 1922, pp. 26-27, 33, 2 figs. Melted metal poured into revolving mold is deposited by centrifugal force against wall of mold; makes dense grained homogeneous casting.

Failure, Causes of. Causes of Failure in Cast Iron Pipe, F. A. McInnes. Eng. and Contracting, vol. 62, no. 124, June 14, 1922, pp. 563-564. Quality of pipe line; permissable sulphur content; importance of analyses of iron.

PIPE LINES

Cast Iron vs. Steel. Cast Iron or Steel Underground Pipes? (Les canalisations souterraines, fonte ou acier?), O. Hock. Revue Universelle des Mines, vol. 13, no. 4, May 15, 1922, pp. 245-264, 13 figs. Buried pipe lines for water, gas, and other purposes; seamless tubes, their flexibility, perosity, etc., joints; corrosion.

PIPES

Coating for Cast Iron and Steel. The Right Kind of Coating for Pipe, Wm. R. Conard. Fire and Water Eng., vol. 71, no. 25, June 21, 1922, pp. 1107-1108 and 1122, 1 fig. Suggestions for durable and efficient coating that will insure longer life for cast-iron or steel-pipe. From paper read before Convention of Am. Water Wks. Assn.

Tar Coating for. Present Day Tars for Pipe Coatings, Wm. R. Conard. Can. Engr. vol. 42, no. 22, may 30, 1922, pp. 560-561. Dr. Angus Smith's solution; standard-specification for pipe coatings; quality of tar used at present time; objective for research work. Paper read at Annual Mtg. Am. Water Wks. Assn.

PISTONS

[illegible] Aluminum Pistons (A Propos des Pistons en aluminium), Frank Jardine and Ferdinand Jehle. Technique Automobile et Aérienne, vol. 13, no. 117, 1922 pp. 54-59, 9 figs. Design and operation; measuring for temperature, tolerance, etc.

FOUNDATIONS. Second-Story Planer Foundations, A. E. Robinson. Am. Mach., vol. 56, no. 25, June 22, 1922, pp. 917-919, 4 figs. How American Tool Works supports its planer department upstairs; concrete slabs for foundations; methods of leveling and straightening long planer beds.

PLATES

RECTANGULAR, STRESS IN. Method for Approximate Static Calculation of the Bending Stress of Rectangular Plates (Verfahren zur angenähertenstatischen Berechnung biegefester rechteckiger Platten), Ludwig Hotopp. Beton u. Eisen, vol. 21, nos. 6, and 8, Apr. 5 and May 9, 1922, pp. 95-97 and 116-119, 8 figs. Discusses distribution of stresses and gives examples and calculations.

POLES, WOODEN

PRESERVATIVE TREATMENT. Penetration of Creosote, J. D. Burnes. Telephone Engr., vol. 26, no. 6, June 1922, pp. 35-36, 2 figs. Am. Wood Preservers Assn. committee tests effect of inner bark on creosote penetration of perforated and non-perforated cedar poles.

Roving Creosoting Plant, W. F. Norris. Telephone Engr., vol. 26, no. 6, June 1922, pp. 17-19, 44, 8 figs. Plant on wheels that brings treatment to poles; successful operation of compact outfit in storage yards.

POTASH

KELP, EXPERIMENTAL PLANT. The Work of the Experimental Kelp-Potash Plant of the Bureau of Soils, J. W. Turrentine. Chem. Age, (N.Y.), vol. 30, no. 5, May 1922, pp. 224-225, 5 figs. Development of products from kelp made possible by experiments of the Dept. of Agriculture at Summesland, Cal.

POWER FACTOR

SLIDE RULE. A New Power-Factor Slide Rule, P. L. Alger and H. W. Samson. Genl. Elec. Rev. vol. 25, no. 7, July 1922, pp. 455-457, 5 figs. New slide rule which solves power factor problems by means of solution of right triangles.

POWER PLANTS

CHILE. The Power Works of Chuquicamata (Los talleres y fuerza motriz de Chuquicamata). Ingenieria Internacional, vol. 8, no. 2, Aug. 1922, pp. 89-94, 3 figs. Production of power for mines and metallurgical works; a central heating station which burns oil and uses salt water

MANAGEMENT. Power Station Management. J. S. Thomson. Iron & Coal Trades Rev., vol. 104, no. 832, June 9, 1922, pp. 847-848. Sixteen economic areas suggested for England; most of power must come from thermal efficiency; gas and electric typical stations; automatic operations; steam considerations; electrical details.

PAPER MILLS. The Provincial Paper Mills Power Plant, T. H. Fenner. Power House, vol. 15, no. 11, June 5, 1922, pp. 19-23, 8 figs. Interesting features of boiler room and facilities for enlargement of plant.

PRESSES

POWER, CRANKSHAFT DESIGN. Designing Power Press Crankshafts, Wm. J. Smith. Eng. Production, vol. 4, no. 87, June 1, 1922, pp. 509-513, 5 figs. Details of calculations and formulas involved.

PULVERIZED COAL

BOILER FIRING. Progress in Pulverized Fuel Firing. F. J. Crolius. Blast Furnace and Steel Plant, vol. 10, no. 6, June 1, 1922, pp. 337-339. Code recommended for adoption by Carnegie Steel Company in handling of pulverized coal, presented; many points of unnecessary danger have been eliminated.

Powdered Fuel under Steam Boilers. Iron and Coal Trades Rev., vol. 104, no. 2, 832, June 9, 1922, p. 858. Summary of results of five boiler tests with pulverized Illinois coal, made by Milwaukee Elec. Ry. and Light Co.

FIRE HAZARDS. Fire Hazards in Plants Using Pulverized Coal, L. D. Tracy. Blast Furnace and Steel Plant, vol. 10, no. 7, July 1922, pp. 395-399. Various cases where fires and explosions originated from improper handling of pulverized coal; many hazards connected to apparatus used for pulverizing.

STATIONARY BOILERS. Use and Abuse of Powdered Fuel for Stationary Boilers, John E. Muhlfield. Blast Furnace and Steel Plant, vol. 10, no. 6, June 1922, pp. 353-355. Any great advance in combined boiler and furnace efficiency will depend largely upon full utilization of radiant heat.

PUMPING PLANTS

LAND DRAINAGE. Pumping Plants for Land Drainage, L. C. Craig. Can. Engr., vol. 42, no. 21, May 23, 1922, pp. 525-527. Reclaiming land in Mississippi River valley. electrically-driven centrifugal pumps often used for drainage work; advantage of Diesel engines.

PUMPS

ENDLESS-CHAIN. The "Aquatole" Endless-Chain Pump. Engineering, vol. 113, no. 2948, June 30, 1922, pp. 827-828, 9 figs. Installation of Aquatole liquid [illegible] per [illegible] with driving pulley speed of 350 [illegible] ease of setting up and variety [illegible]

H[illegible] Hy[illegible] vol. no. 1600, June 15, 1922, pp. 573-574, 2 figs. Invention whereby water is lifted through open and closed [illegible]

VALVELESS RECIPROCATING. A Valveless Reciprocating Pump. Colliery Guardian, vol. 123, no. 3206, June 9, 1922, pp. 1420-1421, 4 figs. New type which effects operation of opening and closing inlet and oulet ports by means of alternate axially-reciprocating and rotary-oscillating movements of piston or cylinder itself.

PUMPS, CENTRIFUGAL

EFFICIENCY. Centrifugal Pumps—Notes on Efficiency, E. T. Keenan. Southern Engr., vol. 37, no. 4, June 1922, pp. 39-40, 2 figs. Factors bearing on efficiency of turbine and volute pumps.

SUBMERSIBLE MOTOR. Submersible Motors. Practical Engr., vol. 65, no. 1842, June 15, 1922, pp. 371-372, 2 figs. Extreme portability, lightness and compactness; suction lift of 30 ft.; when pump is working submerged no suction hose or priming is required; advantages of this device.

R

RADIO COMMUNICATION

H.F. AND L.F. AMPLIFICATION. Simultaneous H.F. and L.F. Amplification, P. G. A. H. Voigtt Wireless World; vol. 10, no. 9, May 27, 1922, pp. 249-252, 5 figs. Improvements which eliminate most of troubles experienced when working with dual amplification and construction details.

INSTALLATION RULE REVISION. Radio Installation Rule Revision. Telephony, vol. 82, no. 22, June 3, 1922, pp. 20-22. Tentative rules for installation of radio equipment prepared by special committee of Nat. Fire Protection Assn.; proposed revision of rule 86, Nat. Electric Code, with discussion by Bur. of Standards.

RECEIVING SETS, CLOSED-COIL. Notes on the Design of Closed Coil Receiving Sets, J. Hollingworth. Wireless World, vol. 10, no. 12, June 17, 1922, pp. 351-354, 4 figs. Some new facts about size of coil desirable.

RADIOTELEGRAPHY

SIGNAL STRENGTHS. Reception Measurements at Naval Radio Research Laboratory, Washington, L. W. Austin. Inst. Radio Engrs. Proc. vol. 10, no. 3, June 1922, pp. 158-160. Signal intensity from Bordeaux, Lyons, and Nauen measured by comparison of telephone current with that produced by known audio frequency e.m.f.

RADIOTELEPHONY

TUNING. Fine Adjustments of Tuning for Telephony, G. P. Kendall. Wireless World, vol. 10, no. 10, June 3, 1922, pp. 289-291, 4 figs. Discussion of adjustment of inductance and capacity adjustments for best results.

RADIOTELEPHOTOGRAPHY

TRANSATLANTIC. Transatlantic Radiotelephotography of Writing and Drawings (Radiotelephotographie Transatlantique de textes et de dessins), Edouard Belin. Onde Electrique, vol. 1, no. 5, May 1922, pp. 271-283, 8 figs. Principle of transmission; transmission and reception apparatus; use of Einthoven galvanometer; synchronizing; etc.

RAILWAY ELECTRIFICATION

ADVANTAGES IN U.S. Advantages of Railroad Electrification, R. J. O'Brien. Elec. Jl., vol. 19, no. 6, June 1922, pp. 252-260, 4 figs. Thorough discussion of ability to increase capacity and transportation efficiency of line; examples of installation and further advantages produced therefrom.

CHILEAN STATE RAILWAYS. Electrification of the Chilean State Railways. Engineer, vol. 133, no. 3470, June 30, 1922, pp. 711-714, 11 figs. Utilization of great water power resources for reducing working expenses, increasing traffic capacity and obviating dependence on coal supply from other countries; technical features of problem.

ENGLISH MAIN LINE. The Electrification of English Main Line Railways, Henry Fowler. Instn. Mech. Engrs. Proc., no. 2, 1922, pp. 317-3301 Discussion of paper presented at joint meeting of Instn. Mech. Engrs. Instn. Civil Engrs., and Instn. Elec. Engrs.

JAPAN. Electrification of the Chichibu Railway of Japan, C. A. Bercaw. Ry. Rev., vol. 70, no. 24, June 17, 1922, pp. 911-912, 2 figs. Five 41-ton locomotives shipped by Westinghouse Co., represent first shipment of electric locomotives from America for operation on steam-railroad electrification in Japan.

SWITZERLAND. Conclusion of the Work of Electrification of Rhaetian Railway (Der Abschluss der Elektrifizierungsarbeiten der Rhätischen Bahn) W. Dürler. Schweizerische Bauzeitung, vol. 79, nos. 14, 15, 20, 21 and 22, Apr. 8, 15, May 20, 27, and June 3, 1922, pp. 180-183, 194-198, 249-254, 267-269 and 279-281, 26 figs. Apr. 8 and 15: Discusses power plants at Thusis and Küblis, and their equipment, transmission lines, distributing system, transformers, etc. May 20: Describes the various types of electric locomotive and gives particulars as to their wiring and connecting. May 27: Data of trial runs of locomotives, and heating of trains, June 3: Discusses workshops and engine-houses and their equipment.

VOLTAGES NEAR GROUND. Railway Electrification and Safety Limits of Voltages Near the Ground. Electricity, vol. 36, no. 1649, June 16, 1922, pp. 303-304. Comments on report on comparative tests of different voltages; danger of high voltages at surface.

RAILWAY MOTOR CARS

ADVANTAGES OF. What is the Future or Automotive Rail Cars? L. G. Plant. Ry. Rev., vol. 70, no. 24, June 17, 1922, pp. 930-934, 3 figs. Modern features which are recommended for light local passenger service. From paper read before Soc. Automotive Engrs.

DIESEL-ELECTRIC. Diesel-Electric Motor Cars for Railway Service. Ry. Mech. Engr., vol. 96, no. 6, June 1922, pp. 314-315, 2 figs. Successful operation in Sweden has led to introduction of 250-hp. cars.

492

Gasoline. Some Recent Developments in Gasoline Passenger Rail Cars, W. L. Bean. N.Y. R.R. Club Proc., vol. 32, no. 7, May 19, 1922, pp. 6713-6726 and (discussion) 6726-6744, 6 figs. Considerations which may assist in reducing charges by substituting for light steam trains.

Developments in Gasoline Passenger Rail Cars, W. L. Bean. Ry. Age, vol. 73, no. 1, July 1, 1922, pp. 17-20 (includes discussion), 3 figs. Design, power requirements and operating results of self-propelled cars. (Abstract.) Paper read before N.Y. R.R. Club.

120 Hp. Gasoline Motor Features New Rail Car Design. Ry. Rev., vol. 70, no. 24, June 17, 1922, pp. 934-937, 8 figs. Low maintenance and adaptability to wide range of rail requirements objective in latest automotive development.

Pittsburgh and Shawmut. Operation of Motor Cars on the Pittsburgh and Shawmut, D. C. Morgan. Ry. Rev., vol. 70, no. 24, June 17, 1922, pp. 928-929, 3 figs. Costs less to operate than local steam train; affords better and more frequent service. Paper read before N.Y. R.R. Club.

RAILWAY OPERATION

Train Control. Schweyer Automatic Train Control. Ry. Elec. Engr., vol. 13, no. 6, June 1922, pp. 187-189, 3 figs. Intermittent, non-contact, inert roadside, element type.

The Sprague Train Control System. Ry. Signal Engr., vol. 15, no. 6, June 1922, pp. 226-230, 9 figs. Description of display system of auxiliary control by magnets.

RAILWAY REPAIR SHOPS

Albuquerque, N. M. A. T. & S. F. Ry. Shop Improvements at Albuquerque. Ry. Rev., vol. 70, no. 24, June 17, 1922, pp. 889-896, 16 figs. Engineering and mechanical features of improvement program of largest locomotive erecting shop in West, involving expenditure of about $10,000,000.

Grinding Practice. Railway Shop Grinding Practice in England. Ry. Mech. Engr., vol. 96, no. 6, June 1922, pp. 325-327, 3 figs. Interesting machines developed for grinding locomotive cylinders, car journals and mounted crank-pins.

Passenger-Car. The Design of Passenger Car Repair Shops. Ry. Mech. Engr., vol. 96, no. 6, June 1922, pp. 332-336, 1 fig. Requirements for various departments outlined and typical layouts proposed by A.R.E.A. Committee.

RAILWAY SIGNALING

Automatic. New Signaling on the Big Four, C. F. Stoltz. Ry. Signal Engr., vol. 15, no. 6, June 1922, pp. 221-224, 6 figs. A. C. floating battery installed for operation of 68 miles of double-track automatics shows economy in operation.

Operation, Economy in. Introducing Economies in Signal Operation, Sidney L. Baxter. Ry. Signal Engr., vol. 15, no. 6, June 1922, pp. 231-232, 4 figs. Storage batteries replaced by primary battery, electric lights installed, and maintenance force reduced.

Wires and Cables. Railroad Signal Wires and Cables, Wm. A. Del Mar and F. A. Westbrook. Ry. Signal Engr., vol. 15, no. 6, June 1922, pp. 233-239, 15 figs. Methods of installation and causes of deterioration of rubber insulated conductors.

RAILWAY STATIONS

Waterloo, England. The New Waterloo Station, London and South Western Railway. Ry. Gas., vol. 36, no. 23, June 9, 1922, pp. 919-936, 25 figs. Description of rebuilding of largest station in British Isles and facilities provided.

RAILWAY YARDS

Freight. New Haven Builds Freight Yards at Providence. Ry. Age, vol. 72, no. 24, June 17, 1922, pp. 1467-1470, 4 figs. New terminal forms important unit in broad improvement program to effect operating economies.

REFRIGERATING MACHINES

Condensers, Free-Air. Influencing the Pressure of Free-Air Condensers, M. Hirsch. Ice and Refrigeration, vol. 62, no. 6, June 1922, pp. 457-459, 4 figs. Descriptive article with charts on subject; formula for measuring difference of vapor tension between water surface and moisture contained in surrounding atmosphere; empirical curves for regulation of water and air.

REFRIGERATION

Absorption Process. Refrigeration for the Power Plant, Engineer. Power House, vol. 15, no. 12, June 20, 1922, pp. 31-32, 34, 2 figs. Absorption process of refrigerating; aqua ammonia; general construction and details of parts of machine; few words on operating features.

Absorption System. Outline of the Absorption Refrigerating System, D. L. Fagnan. Power, vol. 55, no. 25, June 20, 1922, pp. 977-979, 2 figs. Discussion of functions of several parts; cycle of events in system; operating procedure to be followed.

RELATIVITY

Theory. Critique of the Theories of Relativity (Critiques des théories de la relativité) P. Juppont. Génie Civil, vol. 80, nos. 19, 20 and 21, May 13, 20, and 27, 1922, pp. 430-431, 443-446 and 468-473, 2 figs. May 13: Discusses relativity and postulates, force, action and reaction, temperature, entropy, May 20: Relativists' solutions of these problems; inadequacy of relativity; Lorentz contractions. May 27: Shows that Einstein's theory is not a physical theory. Physical mechanics; mechanical force and power.

RELAYS

Protective. On the Behavior of a Plunger Type Protective Relay, Y. Toriyama. Denki Galskmai Zasshi Jl. of Inst. Elec. Engrs. of Japan), no. 406, May 1922, pp. 377-390, 19 figs. Study of action of plunger under sudden increase of load current.

493

RESEARCH

Malleable Iron. Malleable Castings Research Laboratory. Iron Age, vol. 109, no. 26, June 29, 1922, pp. 1819-1820, 2 figs. Freedom from routine tests permit concentration on work to advance state of art.

ROAD CONSTRUCTION

Drainage. Comparison of Road Drainage by Deep Side Ditches and Tile Dains, Chas. M. Upham. Mun. and County Eng., vol. 62, no. 6, June 1922, pp. 197-200. Stabilizing subgrades, side ditch and underdrain, comparison of open ditch and tile drain; effect of frost.

Sub-Drainage. Comparison of Sub-Drainage by Deep Side Ditches and Tile Drains. Chas. M. Upham. Contract Rec., vol. 36, no. 22, May 31, 1922 pp. 522-524. Importance of stabilization of road foundations: desirability of combination of ditch and underdrain.

ROAD MATERIALS

Bituminous Sands. Bituminous Sands of Alberta as a Road Building Material Dr. K. A. Clark. Contract Rec., vol. 36, no. 26, June 28, 1922, pp. 603-605. Delivrance of prairies from bad roads may result from discovering how to use bitumen from Athabasca deposits as soil modifier.

ROADS

Improving Improved. Improving Improved Roads in Maryland. Eng. News-Rec., vol. 89, no. 2, July 13, 1922, pp. 56-58, 7 fig. Macadam roads widened at little cost by concrete borders; original structure conserved and modern pavement produced by resurfacing.

Testing of Surfaces, Subgrades and Materials. Developments in the Scientific Testing of Road Surfaces, Subgrades and Materials. Eng. and Contracting, vol. 57, no. 23, June 7, 1922, pp 547-549, 4 figs. Equipment and methods developed for use on Bates and Arlington experimental roads.

Traffic Tests. Results of Heavy Traffic on Pittsburgh Test Road. Eng. News-Rec., vol. 88, no. 26, June 29, 1922, pp. 1066-1069, 4 figs. Trucks travel 96,000 miles; wave motion in concrete slab plotted; moisture percolates slowly in rolled adobe subgrade; tests of wider scope to follow.

Surfaced. Surfaced Roads Would Save $23,000,000, A. W. Campbell. Contract Rec., vol. 36, no. 25, June 21, 1922, pp. 581-582. This amount would be saved to motorists in decreased gasoline consumption alone, quite aside from lower repair expenses; effect of road surfaces and grades on tractive resistance.

ROADS, CONCRETE

Alkali Effect. Alkali Attack on Concrete Roads and Building Brick, Irving Furlong. Eng. News-Rec., vol. 89, no. 2, July 13, 1922, pp. 64-67, 7 figs. Notes on study of disintegration in rice field country of Glenn County in California.

Asphalt Surface. What Is the Best Time to Surface Concrete with Asphalt? W. E. Rosengarten. Contract Rec., vol. 36, no. 25, June 21, 1922, pp. 575-578, 5 figs. Economic study of factors involved in construction of concrete highways with and without asphalt surface; determination of relative expense.

ROLLING MILLS

Electrically-Driven. Steel Rolled for Less on Electric Mills than with Steam Drive, G. E. Stoltz. Elec. World, vol. 80, no. 1, July 1, 1922, pp. 7-10, 2 figs. Records show that steam mills can often be replaced by electric mills with marked advantages; accurate cost accounting is possible with electric mills, and labor and maintenance costs are reduced.

Ship-Plate. The Dominion Iron and Steel Company's New Ship-Plate Rolling Mill, H. E. Rice. Can. Min. Inst. Trans., vol. 23, 1920, pp. 167-178, 5 figs. Description of $5,000,000-installation with its Lauth type 110-in. by 36-in. in three-high plate mill driven by 4,000-hp. 82 r.p.m. special motor.

S

SAFETY

Electric Power Stations. Safety as Applied to Operating Equipment of Large Electric Power Station, E. W. Gorry. Safety Eng., vol. 43, no. 6, June 1922, pp. 261-268. Provisions at plants and sub-stations of United Elec. Light and Power Co. and new Edison Company. Paper read before A.S.S.E.

Safety is Built into the Design of the New Hell Gate Electric Power Station, E. M. Van Norden. Safety Eng., vol. 43, no. 6, June 1922, pp. 257-260. Precautions resulting from knowledge of conditions existing at other stations where trouble has been experienced. Paper read before A.S.S.E.

SAND BLAST

Apparatus. Development of Sand Blast Apparatus in Germany and America (Die Entwicklung des Sandstrahlgebläsebaues in Deutschland und Amerika), W. Kaempfer. Giesserei-Zeitung, vol. 19, no. 19, May 9, 1922, pp. 289-292, 15 figs. Discusses the various types of apparatus and their operation.

SAND, MOLDING

Properties for Steel. Study Properties of Steel Sand. Iron Trade Rev., vol. 71, no. 2, July 13, 1922, pp. 103-106, 8 figs. Facing mixtures must possess highly refractory qualities to resist intense heat of steel at pouring temperatures; determining standards for measuring permeability and strength.

SCRAP

Railway, Reclamation of. Scrap Reclamation on the Chesapeake and Ohio, E. A. Murray. Ry. Mech. Engr., vol. 96, no. 6, June 1922, pp. 308-311, 8 figs. Methods used and savings effected in reclaiming locomotive, car and other parts at Huntingdon shops.

SEPARATORS

[illegible] Magnetic Separator for Low Magnetic Ores (Neue Magnetscheider [illegible]). H. [illegible] Technische Blätter, vol. 12, [illegible] 1922, pp. [illegible] Discusses drum separators for large and small size of grain, and describes their operation.

SEWAGE DISPOSAL

[illegible] The [illegible] of Iron to Activated Sludge, Geo. H. W. Lucas. [illegible] 1922, pp. 131-134. Theories of iron deposition by bacteria; iron precipitated by alkaline sewage; general conclusions.

[illegible] Hydraulics of Dosing Tanks and Trickling Filters, E. E. Sands. Eng. News-Rec., vol. 89, no. 2, July 13, 1922, pp. 67-69, 3 figs. How to design so that settled sewage will be delivered intermittently at uniform rate per sq. ft.

SCREENINGS. The Disposal of Sewage Screenings, Wm. F. Morse. Mun. and County Eng., vol. 62, no. 6, June 1922, pp. 200-201. Continuous incinerator; best method of disposal; increase in quantity.

SEPTIC TANKS. Septic Tanks. Concrete, vol. 20, no. 6, June 1922, pp. 245-246, 7 [illegible] of many types to meet increasing demand in suburban and rural communities.

SHOVELS

ROTARY. The Clere Mechanical Rotary Shovel (Pelle mécanique rotative, système Clere), E. Weiss. Génie Civil, vol. 80, no. 21, May 27, 1922, pp. 477- 479, 8 figs. Describes Clere system for mechanical excavating, loading, etc.

STANDPIPES

DESIGN AND CONSTRUCTION. The Design and Construction of the Gloversville Standpipe, Frank A. Marston. New England Water Works, Assn. Jl., vol. 36, no. 2, June 1922, and (discussion) 334-306, pp. 288-304, (Disc. pp. 304-306) 8 figs. [illegible] equalized under variable requirements by one 1,000,000 gallon standpipe.

STEAM

PRODUCTION AND USE. Economies in Steam-Raising, T. W. Harper. Gas. Jl., vol. 158, no. 3075, Apr. 19, 1922, pp. 154-156. Lancashire versus watertube boilers; boiler settings and flues; feedwater and scale; fuel and grate; waste-heat utilization; superheaters; steam distribution. Paper read before North British Assn. Gas Managers.

PRODUCTION AND UTILIZATION. Commission for the Utilization of Fuels—5th Report (Commission d'Utilisation du Combustible—Cinquième Rapport), V. Krammerer. Annales des Mines, vol. 1, no. 5, May 1922, pp. 348-394. Production and utilization of steam; transportation of steam; steam power and pressure; application of steam in industries.

Work of the Fuel Utilization Commission, V. Kammerer. (Travaux de la Commission d'Utilisation du Combustible.) Bul. de la Société d'Encouragement pour l'industrie Nationale, vol. 134, no. 1, Jan. 1922, pp. 50-78. Report on production and utilization of steam, including transmission, motive power, use of steam for manufacturing and heating purposes, etc. See also Chaleur et Industrie, no. 24, Apr. 1922, pp. 1175-1182.

SUPERSATURATED CONDITION. The Supersaturated Condition as Shown by Nozzle Flow. Prof. A. L. Mellanby. Engineering, vol. 113, no. 2948, June 30, 1922, pp. 832-835, 11 figs. Investigation of flow quantities exceeding those calculated on assumption of isentropic expansion of saturated steam. Paper read before Instn. Mech. Engrs.

STEAM ENGINES

UNIFLOW. The Uniflow Steam Engine Industry. Power, vol. 55, no. 25, June 20, 1922 pp. 960-964, 8 figs. Characteristics of this high-efficiency type which [illegible] development from stagnation.

UNIFLOW LUBRICATION. Lubricating the Uniflow Engine. Practical Engr., vol. 65, no. 1841, June 8, 1922, pp. 363-364. Errors in common practice indicated relieving excessive compression; selection of oil; speed and friction.

STEAM POWER PLANTS

AMSTERDAM. New Steam Plant at Amsterdam. Power Plant Eng., vol. 26, no. 13, July 1, 1922, pp. 639-645, 10 figs. Description of steam-turbine plant with an ultimate capacity of 200,000 hp.; boiler room; electric generating equipment; control equipment.

STEAM TRAPS

SELECTION AND USE. Steam Traps—Their Selection, Installation and Upkeep, E. Smiley. Power, vol. 56, no. 2, July 11, 1922, pp. 45-48. General consideration and method of distinguishing actual leakage of steam from vapor formed [illegible]

STEAM TURBINES

[illegible] Turbine, W. R. Woolrich. Nat. Engr., vol. [illegible] economical [illegible] performance [illegible]

STEEL

[illegible] Iron Age, vol. [illegible] hammer forged metal under static and dynamic stress as produced by direct current and steel [illegible]

ELECTROLYTIC BUILDING UP. A Successful "Putting On" Tool for Steel Parts, David [illegible]

IDENTIFICATION BY SPARK. Steels and Their Sparks. Metal Industry (Lond.), vol. 20, no. 23, June 9, 1922, pp. 549, 551-552, 10 figs. Determining character of steel by examination of sparks given off when sample is held against abrasive wheel.

STAINLESS. Stainless Steels, W. H. Hatfield.Instn. Min. Engrs., Trans. vol. 63, part 3, May 1922, pp. 177-195, 3 figs. Features which make for desirability in mining.

STEEL CASTINGS

MANUFACTURE. The Production of Light Steel Castings. H. Spencer Kipling. Metal Industry, vol. 20, nos. 21, and 22, May 26 andJune 2, 1922. pp. 493, 495 and 525-526. Suggestions for overcoming metal difficulties of making castings for this type.

STEEL, HEAT TREATMENT OF

CARBON- AND CHROMIUM-MOLYBDENUM STEEL. Effect of Heat Treatment on Mechanical Properties of a Carbon-Molybdenum and A Chromium-Molybdenum Steel, H. J. French. Am. Soc. for Steel Treating Trans., vol. 2, no. 9, June 1922, pp. 769-797 and (discussion) 797-798, 17 figs. Summary of results of previous tests and comparison of treatments for production of high resistance to impact and best combination to strengthen ductility.

ANNEALING OVERSTRAINED STEEL. The Efficiency of Annealing Overstrained Steel. I. H. Cowdrey. Am. Soc. for Steel Treating Trans., vol. 2, no. 9, June 1922, pp. 802-808, 3 figs. Tests made to determine extent to which treatment of overstrained steel is successful.

MAGNETIC PROPERTIES, INFLUENCE ON. The Influence of Heat Treatment Upon the Magnetic Properties of Steel. Lancelot W. Wild Am. Soc. for Steel Treating Trans., vol. 2, no. 8, May 1922, pp. 696-704, 6 figs. Intensity of magnetization, permeability, residual induction, and coercive force. Bibliography.

STEEL MANUFACTURE

DIRECT PROCESS. A Direct Method of Steel Manufacture, A. E. Bourcoud. Iron Age vol. 109, no. 20, May 18, 1922, pp. 1349-1351, 3 figs. Discussion of Bourcoud process and possibility of using oil, lignites and other fuels; data on costs. (Abstract.) Paper presented at meeting of Am. Iron and Steel Inst.

STEEL, HIGH-SPEED

TESTS, PHYSICAL. Tests on High-Speed Steels, A. H. D'Arcambal. Iron Age, vol. 110, no. 1, July 6, 1922, pp. 1-5, 7 figs. Transverse and tensile tests of two grades compared; effect of these properties on service of tool.

STEEL WORKS

ELECTRIFICATION. The General Effect of Electrification on the Operation of Steel Mills, W. Sykes. Blast Furnace and Steel Plant, vol. 10, no. 6, June 1, 1922, pp. 306-312. Some interesting figures on operation of mills at Mark Plant are included; writer believes electric power is more economical than steam power.

Calumet Steel Company Electrify Mills, L. H. Hook and F. R. Burt. Blast Furnace and Steel Plant, vol. 10, no 6, June 1, 1922, pp. 313-316, 4 figs. Rotary converter adjustable speed sets at applied to rail rerolling mill; twelve stands of rolls are now electrically driven.

STOKERS

CHAIN-GRATE. A New Chain-Grate Stoker. Mar. Engr and Naval Architect, vol. 45, no. 537, June 1922, pp. 246-247, 1 fig. Mechanical method of coal firing; self-cleaning features; application of chain-grate to marine boilers.

SELECTION. What to Know When Selecting Stoker Equipment, J. G. Worker. Power, vol. 55, no. 17, Apr. 25, 1922, pp. 647-650. Combustion characteristics of principal coals; types of stokers best suited to burn them.

STORAGE BATTERIES

LEAD HYDRATE. Some Reflection on the Lead Hydrate Accumulator, W. R. Cooper, Electrician, vol. 88, no. 2298, June 2, 1922, pp. 654-656, 1 fig. Examination of claims made for new type and consideration of characteristics.

MOTIVE-POWER, CHARGING OF. Automatic Charging of Motive-Power Storage-Batteries, H. M. Beck. Soc. Automotive Engrs., Jl. vol. 10, no. 6, June 1922, pp. 499-506, 10 figs. Storage batteries suitable for propulsion of vehicles, and charts showing results obtained from automatic charge-control.

STREET RAILWAYS

TORONTO'S ROLLING STOCK. Toronto's Progressive Rolling Stock. Elec. Ry. Jl., vol. 59, no. 21, May 27, 1922, pp. 867-870, 10 figs. Toronto Transportation Commission has added 250 new cars to its passenger rolling stock and has remodeled more than 350 other cars.

TURNSTILE CARS. Improvement in Turnstile Cars. Elec. Ry. Jl., vol. 59, no. 19, May 13, 1922, pp. 787-789, 6 figs. One-man operation with double-truck cars in Utica and Syracuse has increased steadily until now Utica has 100 per cent operation. Improvements in turnstile arrangement are described.

STRESSES

ALLOWABLE, SAFETY AND. Factors of Safety and Allowable Stress, C. D. Albert. Am. Mach., vol. 57, no. 2, July 13, 1922, pp. 54-57. Meaning of allowable stress; factors of safety for live and dead loads; effects of fatigue, shock, and uncertainty as to actual conditions existing.

TORSIONAL. Torsional Stresses (Die Lehre der Drehungsfestigkeit), Constantin Weber. Forschungsarbeiten auf dem Gebiete des Ingenieurwesens, no. 249, 1921, 70 pp. 170 figs. Discusses phenomena of torsion, stresses occurring, conditions of equilibrium, internal change of form; develops formulas and makes calcultions; application to various cross-sectins.

TWO-DIMENSIONAL. Some Special Cases of Two Dimensional Stress or ' train, C. E. Inglis. Engineering, vol. 113, no. 2945, June 9, 1922, pp. 732-733, 8 figs. Mathematical consideration in six special cases in plates.

SUBSTATIONS

[illegible]

[illegible]

VALVES

EMERGENCY-CLOSING. The Importance of Emergency Closing Valves. P. W. Knauf. [illegible]

Emergency Closing Valves. P. W. Knauf. Refrig. World. vol. 57. no. 5. May 1922. pp. 22-24. 6 figs. Necessity for and types of valve for boiler end of steam pipes.

GATE. [illegible] Gas Age-Rec., vol. 49. no. 20. May 20. 1922. pp. 619-622. 10 figs. Discussion of power-operated valves and review of development of Dean control system for operation of gas. air. steam. water, oil. tar and ammonia gate valves.

Electrification of Gate Valves. Payne Dean. New England Water Works Assn. Jl., vol. 36. no. 2. June 1922. pp. 264-270 and (discussion) 270-272. 5 figs. [illegible] and how valve operating system works.

VENTILATION

PIPES. FRICTION FACTORS. Friction Factors in Ventilating Pipe. W. S. Weeks, W. P. Goss and G. H. Warren. Eng. and Min. Jl.-Press. vol. 113. no. 23. June 10. 1922. pp. 1001-1002. 1 fig. Results of series of experiments at Univ. of Cal. little difference between metal and wood pipe.

VENTURI METERS

ANOMALOUS TEST RESULTS. Anomalous Results in Venturi Flume and Meter Tests. William J. Walker. Eng. News-Rec., vol. 88. no. 19. May 11. 1922. pp. 797-798. 1 fig. Discussion of peculiar variations of venturi coefficients of dis- [illegible]

APPLICATIONS. [illegible] u. Frachtverkehr. vol. 15. no. 11. May 26. 1922. pp. 150-152. 10 figs. Principle and law of venturi tube, its application to measurement of water, steam, gas and air, flow formulas, accuracy, etc.

VIBRATIONS

MEASUREMENT. Apparatus for Studying the Vibrations Produced in Buildings by [illegible] pour l'Industrie Nationale. vol. 134. no. 3. Mar. 1922. pp. 177-186. 7 figs. Holds that a disagreeable element is acceleration and describes principle and oper- [illegible]

W

WASTE HEAT

UTILIZATION. Utilizing the Waste Heat of Flue Gases for Heating and Drying on a Large Scale (Rauchgas-Abwärmeausnutzung für Grossraumheizung und Trocknungsanlagen), Otto Brandt. Wärme- und Kälte-Technik, vol. 24, no. 11, June 1, 1922, pp. 125-127, 5 figs. Use of waste heat for preheating furnace air, feedwater heating, heating of buildings, etc.

WATER

ANALYSIS. Processes of Analyzing Water (Sur les procédés d'analyse des eaux), F. Touplain. Chimie & Industrie, vol. 7, no. 4, Apr. 1922, pp. 634-639, 3 figs. Discusses sampling, physical and chemical methods; concludes that present methods need revising.

WATER GAS

SET CAPACITY, INCREASING. Increasing Water Gas Set Capacity, W. E. Steinwedell. Gas Age-Rec. vol. 50, no. 1, July 1, 1922, pp. 3-4, 3 figs. Consideration affecting changing of set to secure increased capacity according to plan which has been successful at number of plants.

WATER POWER

APPLICATIONS. Water-Power Applications Total 20, 473,548 Hp. Elec. World, vol. 79, no. 21, May 27, 1922, pp. 1072-1073, 1 fig. Federal power commission has received 303 applications for preliminary permits and licenses, and of these had granted 74 up to and including April 17, 1922.

WATER SUPPLY

SAN FRANCISCO PROJECT. San Francisco Water Supply Project, M. M. O'Shaughnessy. Scien. Am. July 1922, pp. 18-19, 5 figs. Bringing 400,000,000 gallons daily by tunnel and pipe lines from Yosemite to San Francisco.

SEWAGE CONTAMINATION PREVENTION. Prevention of Sewage Contamination in Ontario, F. A. Dallys. Can. Engr., vol. 42, no. 21, May 23, 1922, pp. 522-524, What provincial Board of Health is doing to protect water works operated by various municipalities; four divisions of Board's activities. Paper read before Am. Water Wks. Assn.

SOUTH SAANICH, B.C. Water Supply System for the Rural Municipality of South Saanich, B.C., J. B. Holdcroft. Contract Rec., vol. 36, no. 24, June 24, 1922, 550-551, 3 figs. Six-square mile area in which water is being supplied from gravity main which feeds city of Victoria; ten miles of new mains; estimated cost $175,000.

WATER WORKS

BORING, PRELIMINARY. Exploratory Boring Needed as Guide to Design and Construction of Public Works, James F. Sanborn. Eng. News-Rec., vol. 68, no. 25, June 22, 1922, pp. 1024-1028, 6 figs. Subsurface surveys save money and prevent mistakes; boring methods and drill-rig types discussed; preservation of records vital.

WATERWAYS

ST. LAWRENCE SEAWAY. The St. Lawrence Seaway and Its Advantages to This Country, William L. Saunders. Manufacturers Rec., vol. 81, no. 24, June 15, 1922, pp. 57-60. General economic advantages from shipping standpoint.

WELDING

FROGS AND CROSSINGS. Welding Frogs and Crossings with Manganese Steel, H. R. Pennington. Eng. & Contracting, vol. 57, no. 7, Feb. 15, 1922, pp. 152-154, 2 figs. Qualities and methods of use in welding operations. Paper read before Am. Welding Soc.

See also Electric Welding; Electric Welding, Arc; Oxy-Acetylene Welding.

WELDS

TESTING STANDARDS. Standards for Testing Welds. Eng. World, vol. 20, no. 5, May 1922, pp. 297-300, 13 figs. Report of Committee on Standards Tests for Welds of Am. Bureau of Welding , a joint advisory board of Am. Welding Soc. and Eng. Div. of Nat. Research Council, on Welding Research and Standardization.

WIND TUNNELS

MOTOR REGULATOR. Langley Field Wind Tunnel Motor Regulator, D. L. Bacon. Aviation, vol. 12, no. 8, Feb. 20, 1922, pp. 226-227, 1 fig. N.A.C.A. develops motor regulator which practically solves problem of constant propeller speed in wind tunnel. N.A.C.A. Technical Note No. 81.

WIRE DRAWING

CHROMEL WIRE. Drawing Chromel Wire, E. F. Lake. Machy. (N.Y.), vol. 28, no. 10, June 1922, pp. 793-797, 7 figs. Methods of drawing special alloy wire; uses and physical properties of alloy; manufacture of dies.

Drawing Chromel Wire. Machy. (Lond.), vol. 20, no. 508, June 22, 1922, pp. 350-354, 7 figs. Methods of drawing special alloy wire, uses and physical properties of alloy, and manufacture of dies.

WIRE MANUFACTURE

ENGLAND AND FRANCE. Wire Manufacturing in England and France, Kenneth B. Lewis. Blast Furnace & Steel Plant, vol. 10, no. 6, June 1, 1922, pp. 323-325. General comparison of wire drawing practice of England and France with that of United States; reasons for differences in method of manufacture given.

WOOD

TESTING APPARATUS. New Apparatus for Testing Wood, Especially Wood for Aeronautics (Appareils nouveaux pour l'essai des bois), Pierre Breuil. Génie Civil, vol. 80, nos. 19 and 20, May 13 and 20, 1922, pp. 417-422 and 446-449, 17 figs. May 13: Describes Amsler system and apparatus, the Breuil volume meter, and various tests carried out. May 20: Machines for testing wear of woods; Amsler machine for testing propellers.

WOOD PRESERVATION

IMPREGNATION. Practical Experience in Impregnation of Wood (Über praktische Erfahrungen mit Holzimprägniermitteln), Robert Nowotny. Zeit. für angewandte Chemie, vol. 35, no. 37, May 9, 1922, pp. 217-219, 1 fig. Discusses the various methods available and gives tabulation of them, giving name of firm, name of process, composition of impregnating material, durability, etc.

Z

ZINC ALLOYS

BINARY. Studies on the Constitution of Binary Zincbase Alloys, W. M. Pierce. Min. and Metallurgy, no. 182, Feb. 1922, p. 64. Author endeavors to correlate and complete data on constitution of alloys of zinc with other common metals, dealing exclusively with zinc-rich alloys in which zinc content is between 90 and 100 per cent. (Abstract.) See also Am. Min. & Met. Engrs. Trans., no. 1133-N, Feb. 1922, 26 pp. 52 figs. (complete papers.)

ZINC METALLURGY

VAPOR CONDENSATION. Condensation of Zinc Vapors (Sur la Condensation des Vapeurs de Zinc), P. Pierron. Annales de l'Energie, vol. 2, no. 1, Jan.-Feb. 1922, pp. 13-18, 2 figs. Difficulties of condensation of metal to liquid state.

ZINC ORES

ELECTROTHERMIC DRY DISTILLATION. A Proposed Plant for the Electrothermic Dry Distillation of Zinc Ores, Chas. H. Fulton. Eng. and Min. Jl.-Press, vol. 114, no. 1, July 1, 1922, pp. 8-14, 10 figs. Design based on experimental unit operated at East St. Louis; advantages claimed include high recoveries of zinc, adaptability to all types of ores, and lower costs of operation than either retort or electrolytic process.

Engineering Index

This Index is prepared by the American Society of Mechanical Engineers.

In this department will be published from month to month the titles of current engineering papers with the authors and source and a brief extract of the more important. It is designed to give the members of The Institute a survey of all important articles relating to every branch of engineering profession.

PHOTOSTATIC PRINTS

Photostatic copies of the articles listed in this section, or others on engineering subjects, may be obtained from the Engineering Societies Library.

Price of each print (up to 11 by 14 in. size) 25 cents, plus postage. Where possible, two pages, up to 7 by 9 in. size, will be photographed on one print. Larger magazines require a print per page. Bills will be mailed with the prints.

The Library is also prepared to translate articles, to compile lists of references on engineering subjects and render assistance in similar ways. Charges are made, sufficient to cover the cost of this work. Correspondence is invited. Information concerning the charge for any specific service will be given those interested. In asking for information please be definite, so that the investigator may understand clearly what is desired.

The Engineering Societies Library is under the management of the United Engineering Society, which administers it as a public reference library of engineering. It is maintained jointly by the American Society of Civil Engineers; the American Institute of Mining and Metallurgical Engineers; the American Society of Mechanical Engineers and the American Institute of Electrical Engineers. It contains 150,000 volumes on engineering and allied subjects, and receives currently most of the important periodicals in its field.

Orders and correspondence should be addressed to

Harrison W. Craver, Director

Engineering Societies Library,

29 West Thirty-ninth Street, New York, N. Y.

A

ABRASIVE WHEELS

NOMENCLATURE. Grinding Wheel Nomenclature, H. A. Plusch. Machy., (N.Y.), vol. 28, no. 12, Aug. 1922, pp. 979-980, 1 fig. Brief description of various types of wheels.

ABRASIVES

See Emery Paper.

ACCOUNTING

INDUSTRIAL. Present-Day Problems in Industrial Accounting, Stanley G. H Fitch. Jl. of Accountancy, vol. 34, no. 1, July 1922, pp. 1-10. Balance-sheet and its connection with profit-and-loss statement; various other features of industrial accounting.

AIR COMPRESSORS

CENTRIFUGAL. Centrifugal Compressors (Les compresseurs centrifuges). Robert Huguenin. Technique Moderne, vol. 14, no. 6, June 1922, pp. 1921, pp. 241-250, 10 figs. Characteristics of centrifugal compressors for mines. Tests with compressors at Orange-Nassau mines.

INTERCOOLING. Compressor Intercooler Complication, Frank Richards. Power Plant Eng., vol. 26, no. 13, July 1, 1922, pp. 669-670, 2 figs. Moisture in air at different stages of comparison

TRANSFORMERS. Air Transformer Shows Remarkable Efficiency, D. M. McLean. Power House, vol. 15, no. 14, July 20, 1922, pp. 25-26, 5 figs. Description fo device for blowing forge fires and similar purposes.

See also Turbo-Compressors.

AIR CONDITIONING

AIR PURIFIER. The "Vigoratair" System of Air Purification. Eng. Production, vol. 5, no. 95, July 27, 1922, p. 82, 1 fig. Description of details of portable air purifier for factory ventilation. See also Machy. Lond. vol. 20, no. 510, July 6, 1922. pp. 437-438, 2 figs

COOLING BUILDINGS. Cooling of Theatres and Public Buildings, Fred Wittenmeyer. Ice and Refrigeration, vol. 63, no. 1, July 1922, pp. 13-14. Capacities for and methods of cooling theatres; test on air cooling apparatus at Blackstone Hotel; costs.

AIRCRAFT

STRUCTURAL STRENGTH. Structural Strength of Aircraft. Flight, vol. 14, no. 27, July 6, 1922, pp. 385-386. English certificates of airworthiness to be granted only to design meeting specifications in tables shown for general class and for commercial class.

TESTING TO DESTRUCTION. Testing Aircraft to Destruction, Wm. D. Douglas. Aeronautical Jl., vol. 26, no. 138, June 1922, pp. 195-222 and (discussion) 222-230, 36 figs. Examples of certain types of defects which are revealed by strength tests. Necessity for supplementing calculations. Description of present methods.

AIRPLANES

COMMERCIAL. The Design of a Commercial Aeroplane, G. De Havilland. Aeronautical Jl., vol. 26, no. 139, July 1922, pp. 204-211 and (discussion) 211-218. Consideration of this type of engine; construction; stability; passenger accommodations; gasoline systems; controls.

STRENGTH CALCULATOR FOR DETAILS. A Strength Calculator for Aeroplane Details. Flight, vol. 14, no. 23, June 8, 1922, p. 330, 2 figs. Description of slide rule for quickly determining sizes of wiring lugs, bracing attachments, bolts, pins, etc.

ALLOY STEELS

DECOMPOSITION OF MARTENSITE IN. The Decomposition of Martensite Into Troostite in Alloy Steels, Howard Scott. Forging Heat Treating, vol. 8, no. 7, July 1922, pp. 296-299, 3 figs. Only manganese, silicon and chromium show marked effect, first increased intensity of transformation, last two raised its temperature in certain percentages.

TESTS. Heat Tests with Special Steels (Warmversuchemit Souderstählen), H. Edert. Stahl u. Eisen, vol. 42, no. 25, June 22, pp. 961-968, 18 figs. Results of tests made with refined, low-percentage chrome-nickel, chrome-vanadium and non-rustable steels. Investigation includes chemical composition tensible tests, measurements up to maximum temperature of 800 deg. cent., bending tests up to 600 deg., Brinell tests up to 300 deg. and notched-bar tests up to 700 deg.

ALLOYS

ALUMINUM. *See Aluminum Alloys.*

DIAMOND. Diamond Alloy — A New Cutting Metal. Machy. (N.Y.), vol. 28, no. 12, Aug. 1922, pp. 958-959, 2 figs. Alloy composed mainly of chromium, molybdenum and tungsten used for connecting cutting tools.

HIGH-RESISTANCE. Leefurite — High Resistance Alloy. Machy. (Lond.), vol. 20, no. 511, July 13, 1922, pp. 452-455, 5 figs. Description of new alloy metal at 1,500 deg. cent. intended for use as resistance wire.

MAGNESIUM. *See Magnesium Alloys.*

See also Bearing Metals; Monel Metal

ALUMINUM

CASTING. Aluminum Casting and Metal Spraying (Vom Aluminium- und Spritzguss). Zeit. für die gesamte Giessereipraxis, vol. 43, no. 28, July 22, 1922, pp. 393-395. Operations in production of aluminum castings and metal for metal spraying.

CONDUCTORS. The Use of Aluminum in the Electric Industry (L'Emploi de l'aluminium dans l'Industrie Electrique), E. Dusaugey. Société Industrielle de l'Est, Bul. No. 165, Apr.-June 1922, pp. 15-29, 4 figs. on supp. plates, compares mechanical and electrical properties of aluminum, copper and aluminum-steel; examples of overhead aluminum lines.

ALUMINUM ALLOYS

PROPERTIES. Improving Aluminum Alloys (Studien an vergütbaren Aluminiumlegierungen), W. Fraenkel and E. Scheuer. Zeit. für Metallkunde, vol. 14, nos. 2 and 3, Feb. and Mar. 1922, pp. 49-58 and 111-118, 15 figs. Processes of improving aluminum alloys with magnesium content; measuring their conductivity, elasticity, e.m.f., velocity of dissolution; determination of density; experiments with alloys containing Mn; change of tensile strength on prolonged heating; effect of tempering; corrosion.

AMMONIA

SYNTHETIC. New Processes and Proposals for the Production of Synthetic Ammonia (Neue Verfahren und Vorschläge zur synthetischen Gewinnung des Ammoniaks), A. Sander. Zeit. für komprimierte u. flüssige Gase, vol. 22, nos. 1, 3 and 4, 1922, pp. 1-3, 29-32 and 41-43, 2 figs. No. 1: Discusses Haber and Claude processes, and the Hyper-compressor, with which pressures of 1,000 atmos, are reached. No. 2: Discusses Claude process as stated in German patent 341,230, and describes apparatus No. 3: Production of synthetic ammonia in England, America and other countries.

The Synthesis of Ammonia by Means of High Pressures (La Synthèse de l'Ammoniaque par les Hyperpressions), Georges Claude. Société Industrielle de l'Est, Bul. No. 165, Apr.-June 1922, pp. 46-63, 13 figs. partly on supp. plates. Discusses Haber process; simple way of producing high pressures; work of Linde.

AUTOMOBILE ENGINES

CARBURETORS. *See Carburetors.*

MANUFACTURE. Manifacturing Practice on Light Motor-Car Power Units. Machy. (Lond.), vol. 20, no. 512, July 20, 1922, pp. 473-477. Methods of Hotchkiss et Cie. Coventry; deals with heat treatment, case-hardening and refining of stills used.

SLEEVE-VALVE. 10-Hp. Sleeve-Valve Motor-Car Engine. Engineering, vol. 113, no. 2942, May 19, 1922, p. 618, 3 figs. Two-cylinder, horizontally-opposed type made by Vulcan Motor and Eng. Co. which develops 18 b.hp. at 2,000 r.p.m.

AUTOMOBILE FUELS

ALCOHOL-BENZOL TESTS. Testing Alcohol-Benzol Fuel, W. F. Bradley. Motor Transport, vol. 35, no. 905 July 3, 1922, pp. 29-30, 3 figs. Results obtained by Paris Omnibus Co. with over a thousand buses running on 50-per cent mixture.

Tetralite Benzol. Recent Development in Automobile Fuel (Die neuere Entwicklung der Motorkraftstoffe), Wa. Ostwald. Zeit. für angewandte Chemie, vol. 35, no. 46, June 9, 1922, pp. 278-280. Development of explosion and Diesel engines; combustion and mixing of fuels; detailed description and analysis of Reichskrafstoff or tetralite benzol, a mixture of 50 per cent benzol, 25 per cent tetralin and 25 per cent spirits.

AUTOMOBILES

Creeper Track Car. Good Going over Bad Ground Motor Transport, vol. 35, no. 906, July 10, 1922, p. 62, 3 figs. Remarkable performance in this country by Citröen-Kegresse creeper track car.

Transmission Gears. Practical Difficulties in Automatic Transmission Gear Design, P. M. Heldt. Automotive Industries, vol. 47, no. 4, July 27, 1922, pp. 164-165, 1 fig. Describes Andreau gear consisting essentially of internal-type planetary gear with operation controlled by pair of centrifugal weights.

Wheels. How Pressed Steel Wheels are Made, J. Edward Schipper. Automotive Industries, vol. 47, no. 2, July 13, 1922, pp. 71-74, 14 figs. Recent machine-tool developments add to manufacturing efficiency; varied nature of press work shows wide possibilities in pressed-steel production; disk of tapered section is employed.

AVIATION

Aerial Navigation and Instruments. Aerial Navigation and Navigating Instruments, H. N. Eaton. Nat. Advisory Committee for Aeronautics, Report No. 131, 1922, 44 pp., 26 figs. Description of dead reckoning method; natural and artificial horizons and radio direction finder.

Newfoundland and Labrador. Aviation in Newfoundland and Labrador. Aviation, vol. 13, no. 2, July 10, 1922, pp. 41-43, 3 figs. Practical demonstration of value of aerial mail and passenger transport in Arctic countries.

B

BALANCING

Rotating Parts. Balancing Rotating Parts (Sur l'équilibrage des pièces tournantes), C. Feru and J. Labouret. Revue Générale de l'Electricité, vol. 11, no. 25, June 24, 1922, pp. 919-926, 12 figs. Balancing on one and two bearings; determination of angle.

BALLISTICS

Exterior. Exterior Ballistics in Anti-Aircraft Firing and Their Industrial Applications (La balistique extérieure du tir aérien, applications industrielles), Gustave Lyon. Bul. de la Société d'Encouragement pour l'Industrie Nationale, vol. 134, no. 4, Apr. 1922, pp. 327-380, 32 figs. Discusses progress made during war in measuring and determination of trajectories, and describes in detail instruments used. Includes two appendices by Maurie Garnier.

BEAMS

Reinforced-Concrete. Chart for Rapid Calculation of the Minimum Iron Cross-Section in Reinforced-Concrete Beams Under Flexure and Compression or Tension (Graphique pour l'obtention rapide des sections de fer minima, dans une poutre en béton armé, soumise à des efforts composés de flexion avec compression ou tension), E. Gardiol. Bul. Technique de la Suisse Romande, vol. 48, no. 10, May 13, 1922, pp. 113-119, 5 figs. Develops formulas and explains use of chart.

T-Beams Calculation. Charts for Calculating T-Beams Under Flexure (Abaque pour le calcul des poutres en T soumises à flexion simple), R. Coppee. Annales de l'Association des Ingénieur Sortis des Ecoles Spéciales de Gand, vol. 12, no. 1, 1922, pp. 49-53, 2 figs. partly on supp. plate. Develops formulas and explains use of chart.

BEARING METALS

Car and Power-House. Metals for Car and Power House Bearings, H. H. Buckman. Elec. Ry. Jl., vol. 60, no. 2, July 8, 1922, pp. 47-48. Some essential characteristics of satisfactory bearing metal; advantages of using lead base metal. (Abstract.) Paper read before Central Elec. Ry. Assn.

BEARINGS

Casting. Foundry Practice (La Pratique du Réglage), M. Verneret. Fonderie Moderne, nos. 4 and 5, Apr. and May 1922, pp. 97-99, and 143-152, 15 figs. Apr.: Operations connected with casting anti-friction metals direct on to bearing surfaces: nature and choice of anti-friction metals and alloys. May: Utilization of scrap; remelting of metal, fluxes and oxidizing agents; casting; etc.

BEARINGS, BALL

Design. Load on Ball Bearings (Kulelagrets Belastning), F. Symanzik. Teknisk Ukeblad, vol 69, no 23, June 9, 1922, pp 216-218, 3 figs New method for determining size of ball bearings; examples and calculations.

Flour-Mill Equipment. Saving Power in Minnesota Mill. Am. Miller, vol. 50, no 7, July 1, 1922, pp 719-720, 5 figs Ball bearing equipment of Hubbard Milling Co., Manketo; installation of SKF ball bearings on lineshafts which accomplished estimated saving of $3,250 first year.

Roller and. Ball and Roller Bearings in Street-Car Operation and Small Factories (Kugel- und Rollenlager im Strassen- und Kleinbetrieb), Carl Tobias. Zeit. des Osterr. Ingenieur- u. Architekten-Vereines. vol. 74, nos. 11-12 and 15-16, Mar 17 and Apr 14 1922, pp 55-56, and 69-71, 5 figs Mar. 17: Experiments with ball and roller bearings for railway rolling stock; lubrication and its relative cost. Apr. 14: Discusses advantages in saving of lubricants and attention.

BEARINGS, ROLLER

Design and Construction. Rolling Contact Bearings, Tobias Dantzig. Steam, vol. 30, no. 1, July 1922, pp. 3-7. Important requirements of efficiency, capcity, [illegible] self alignment, and ability to maintain perma[illegible] Read before Cincinnati Section A.S M E.

BLAST FURNACES

Sulphur Excess in Slag. Blast Furnaces Difficulties Due to Excessive Sulphur in Slag [illegible] im Hochofen durch Schwefelelend"), A. Killing. Stahl u. vol 42, no. 25, June 22, 1922, pp. 968-971, 3 figs. [illegible] slag. Injurious effect of sul[illegible]

BLOWERS

Blast-Furnace Centrifugal. Centrifugal Blast-Furnace Blowers. Iron and Coal Trades Rev., vol. 104, no. 2833, June 16, 1922, pp. 896-897, 5 figs. Turbo-blowers producing pressures up to 40-lb. per sq. in. and turbo-compressors for higher pressures both transform for energy, half into direct compression and half kinetic energy. Many blast-furnace requirements.

BOILER FEEDWATER

Treatment. Continuous Blowdown and Water Purification Process, M. Kestner. Power Plant Eng., vol. 20, no. 13, July 1, 1922, pp. 647-652, 10 figs. Method of precipitating impurities outside of boiler without loss of heat. (Abstract.) Paper read before British Inst. Mech. Engrs.

Softening of the Boiler Feedwater (Enthärtung des Kesselspeisewassers), P. Martiny. Archiv für Wärmewirtschaft, vol. 3, no. 6, June 1922, pp. 103-110, 7 figs. Action of carbonic acid and oxygen; formation of incrustation and its remedy; describes principal process of treating water.

BOILER OPERATION

Grate Charge. Dependence of Grate Charge on Water Content of Fuel (Die Abhängigkeit der Rostbelastungen vom Wasserstoffgenalt des Brennstoffes), W. Viebahn. Braunkohle, vol. 21, no. 13, June 30, 1922, pp. 258-262, 3 figs. Discusses so-called grate load, i.e., number of kg. of fuel burned per hr. per sq. m. of grate surface and discusses this load for lignite and coal containing different percentages of water.

Humidity and Barometric-Pressure Effects. Effect of Humidity and Barometric Pressure on Boiler Efficiency (Der Einfluss der Luftfeuchtigkeit und des Barometerstandes auf den Kesselwirkungsgrad), L. Finckh. Wärme, vol. 45, no. 23, June 9, 1922, pp. 283-285. Quantity and temperature of air for combustion for lignite, coal and peat; gives table of comparative figures.

See also Peat, Pulverized Coal, Boiler Firing.

BOILERS

Electrically Heated. Regulating Electrode Steam Boilers (Die Leitsungsregelung von Elektrodendampfkesseln), Edgar Zeulmann. Elektrotechnische Zeit., vol. 43, nos. 22 and 23, June 1 and 8, 1922, pp. 759-762 and 784-788, 27 figs. Describes best-known types of electrode steam boilers in which boiler water itself forms electric resistance, and gives their advantages and disadvantages, methods of regulation, etc.

Report on an Investigation of an Electric Boiler Installation (Bericht uber die Untersuchung einer Elektrokesselanlage). Zeit. des Bayer. Revisions-Vereins, vol. 26, no. 10, May 31, 1922, pp. 85-86, 3 figs. Detailed description of boiler installation of a textile spinning and weaving establishment at Blaichach, working on 1000-k.w. polyphase current at 510 volts which has given entire satisfaction.

Maintenance. Recommendations on Boiler Maintenance, A. G. Pack. Ry. Jl., vol. 28, no. 8, Aug. 1922, pp. 19-21. Data from practical experience and suggestions. Welding employed where other means of construction could be more profitably employed. Author is chief inspector of locomotive boilers for U.S. Government.

Testing. The Question of Accurate Boiler Tests, Alfred Cotton. Power House, vol. 15, no. 14, July 20, 1922, pp. 17-20, 2 figs. Attempt to establish accuracy of tests; discussion of various items involved.

BRAKING

Regenerative. An Analysis of Regenerative Braking on Electric Locomotives, C. E. Fiarburn and F. A. Harper. English Elec. Jl., vol. 2, no. 2, Apr.-July, pp. 68-77, 5 figs. Mathematical analyses with curves.

BRIDGES, CONCRETE

Arch. Constructing Arch Ribs of Springfield Bridge. Pub. Works, vol. 53, no. 1, July 1, 1922, pp. 8-10, 5 figs. 35 ribs containing 6,000 cu. yds. of concrete and 1,800 tons of structural steel and supporting floor of 7-span bridge across Connecticut River.

Specifications. Modern Specifications for Concrete Bridge Construction. Can. Engr., vol. 43, no. 2, July 11, 1922, pp. 131-133. Concrete to develop specified strengths but proportions fixed by engineer; joints carefully specified; underwater placing; rubbed finish.

BRIDGES, HIGHWAY

Driveway Surfacing. Surfacing Driveway of Victoria Bridge, Irving H. Parker. Can. Engr., vol. 43, no. 2, July 11, 1922, 125-127, 4 figs. Wooden planking covered with 2-in. sheet asphalt wearing surface; unusually dense, resilient mixture; laying done at night; roadway opened 1½ hours after last load dumped; marks ironed by traffic.

Roadway Platforms. Reinforced-Concrete Roadway Platforms for Iron Bridges (Fahrbahntafeln in Eisenbeton bei Eisernen Brücken), H. Kayser. Bauingenieur, vol. 3, no. 11, June 15, 1922, pp. 325-329, 18 figs. Disadvantages in various methods of construction; calculations and costs.

BRIDGES, LIFT

Italy. New Economical Type of Metal Lift Bridge (Nuovo tipo economico di ponte metallico apribile) Adolfo Rossi, Giornale del Genio Civile, vol. 50, Mar. 30, 1922, pp. 166-174, 9 figs. partly on supp. plates. Describes type of bridge constructed at Caorle, Livenza, with minimum weight in iron and simplest kind of mechanical construction, and gives calculations.

BRIDGES, RAILWAY

Secondary Stresses. An Investigation of Secondary Stresses in the Kenova Bridge, George Alfred Maney and John Ira Parcel. Univ. of Minn. Research Pub., no. 4, May 1922, 51 pp. 25 figs. Analytical investigation of secondary stresses in long simple span railway bridge and experimental verification of same.

BRIDGES, SUSPENSION

Construction. A Rigid Bridge on Suspension Cables (Pont suspendu rigide sur cables), A. Vierendeel. Annales des Travaux Publics de Belgique, vol. 12, no. 5, Oct. 1921, pp. 745-804, 26 figs. on supp. plates. Discusses metal or reinforced-concrete framework, and makes calculations for rigid bridge which under whatever load does not deform more than ordinarily supported bridge.

BUILDING CONSTRUCTION

Mount Royal Hotel, Montreal. The Mount Royal Hotel, Montreal. Contract Rec., vol 36, no. 26, June 28, 1922, pp 620-625, 12 figs., description of 1,000-room hotel now in course of construction being one of largest buildings undertaking on continent.

BUILDING MATERIALS

Testing Machines. New Machines for Testing Building Material. Eng. Progress, vol 3, no 7, July 1922, pp. 157-158, 6 figs Exhibition at last Spring Fair at Leipsic of testing machines for cement and other construction materials which have remarkable constructional features.

BUSES

Trolley. Notes on Railless Electric Traction, E. M. Munro. Tramway & Ry. World, vol. 51, no. 29, June 15, 1922, pp. 287-295, 15 figs. Analysis of principles involved. Data from types of cars in daily service and comparison with tramcars and motor buses. Paper to be read at Congress of Tramways & Light Rys. Assn.

C

CABLES

Potential Gradient. Potential Gradient in Cables, W. L. Middleton, C. L. Dawes, E. W. Davis, Am. Inst. Elec. Engrs. Jl., vol. 41, no. 8, Aug. 1922, pp. 572-584, 23 figs. Description of logarithmic formula; its modifications and effect of internal heat based on results of tests on cables with large ratios of dielectric diameter to conductor diameter.

CABLES, ELECTRIC

Dielectric Losses. Heating of a Cable Through Dielectric Losses (Die Erwärmung eines Kabels durch dielektrische Verluste), H. Schering. Archiv für Elektrotechnik, vol. 11, no. 2, June 10, 1922, pp 68-76, 4 figs. Discusses cables with single core and a.c. cables; calculates excess temperature of conductors above that of sheaths.

Rating. Rating of Cables in Relation to Voltage, Donald M. Simons. Am. Inst. Elec. Engrs. Jl., vol. 41, no. 8, Aug. 1922, pp. 617-626. Prepared at request of Subcommittee on Wires and Cables of Standards Committee of Am. Inst. Elec. Engrs.

Telephone. Philadelphia-Pittsburgh Section of the New York-Chicago Cable, Jas. J. Pilliod. Am. Inst. Elec. Engrs., Jl., vol. 41, no. 8, Aug. 1922, pp. 585-595, 30 figs. Description of telephone cable system over 300 miles in length and connecting Philadelphia and Pittsburgh including recently developed metallic telegraph system.

Underground. The Underground Cable System, William S. Jones. Power Plant Eng., vol. 26, no. 14, July 15, 1922, pp. 712-714. Points to be kept in mind in design and construction of underground systems.

CALORIMETERS

Gas, Integrating and Recording. A Recording and Integrating Gas Calorimeter, C. V. Boys. Gas Jl., vol. 158, no. 3085, June 28, 1922, pp. 882-888, 1 fig. Description of new instrument in which water is allowed to flow from a tank of constant level through nozzle into eccentric bucket, which when overbalanced discharges its contents into water box.

Gas, Recording. Recording Calorific Value of Gas, Gas World, vol. 77, no. 1980, July 1, 1922, pp. 12-13, 1 fig. Fairweather instrument with water-flow Boy's type adapted to record continuously total heat value reduced to standard temperature and pressure.

CAMS

Circumference Formula. Formula for Circumference of Portion of Cam. Machy. (Lond.), vol. 20, no. 513, July 27, 1922, pp. 524-525, 1 fig. Mathematical treatment.

CAR LIGHTING

Electric. Principal Systems of Train Lighting (Les principaux systèmes d'éclairage électrique individuel appliqués aux voitures de chemins de fer), M. Bougrier. Electrician, vol. 38, no. 1304, July 15, 1922, pp. 313-320, 7 figs. Describes electric systems by Stone, Vicarino, and Aichelé, and their apparatus and operation.

Train Lighting (L'Eclairage des trains), H. Guérin. Génie Civil, vol. 81, nos. 1, 2 and 3, July 1, 8 and 15, 1922, pp. 13-15, 36-40 and 59-63, 25 figs. Substitution of electric lighting for systems in use; development of train lighting and its general principles; Brown-Boveri, Dick-E. V. R. Vickers. Etat-E. V. R., Stone, Leitner, Electric Storage Battery Co., and Société de l'Eclairage des Véhicules sur Rails systems; various types of storage batteries.

CAR COUPLINGS

Screw, Railway. Railway Screw Couplings. Ry. Gaz., vol. 37, no. 2, July 14, 1922, pp. 61-62, 1 fig. Test results of nickel-chrome steel coupling for Bengal-Nagpur railway.

CAR WHEELS

Chilled-Iron. Properties of Chilled Iron Car Wheels, George W. Lyndon. Elec. Traction, vol. 18, July 1922, no. 7, pp. 592-594, 2 figs. Association of manufacturers of chilled car wheels and Univ. of Ill. investigate wheel fit and static load strains. Bur. of Standards conducts tests on thermal stresses.

CARS, FREIGHT

Gondola, C. M. & St. P. How the C. M. & St. P. R. R. Designed Their New Gondola Cars. Ry. Rev., vol. 70, no. 23, June 10, 1922, pp. 834-841, 11 figs. Analysis of function of individual members and calculation of stresses involved.

Springs. Spring Assemblages for Freight Car Trucks, Geo. S. Chiles. Ry. Rev., vol. 70, no. 23, June 10, 1922, pp. 844-850, 8 figs. New side frame and bolster design provides higher spring capacity and lower truck weight.

CARS, PASSENGER

6-Wheel Cast-Steel Truck. The Latest Development in 6-Wheel Passenger Trucks Ry. Rev., vol. 70, no. 23, June 10, 1922, pp. 831-833, 6 figs. Pullman Company adopts new design of commercial type with clasp-brake equipment.

CARBURETORS

Adjustment by Gas Analysis. Carburetor Adjustment by Gas Analysis, A. C. Fieldner and G. W. Jones. Jl. Indus. & Eng. Chem., vol. 14, no. 7, July 1922, pp. 594-600, 10 figs. Experimental work on determination of carbon dioxide in exhaust gas, which has direct bearing on carburetor adjustment.

CASE-HARDENING

Steels for. A Comparison of the Rate of Penetration of Carbon into Various Commercial Steels in Use for Case Carburizing, S. C. Spalding. Am. Soc. for Steel Treating Trans., vol. 2, no. 11, Aug. 1922, pp. 950-976, 136 figs. Investigation of straight carbon, chromium silicomanganese, nickel, chromium nickel and chromium molybdenum steels. Curves and photomicrographs.

CAST IRON

Testing Methods. New Methods of Testing Cast Iron, E. V. Ronceray. Metal Industry (Lond.), vol. 20, no. 25, and vol. 21, no. 1, June 23 and July 7, 1922, pp. 586-588 and 13-18, 20 figs. Review of various methods and description of work of Fremont's Transverse testing machine. Paper read before Inst. British Foundrymen.

New Methods of Testing Cast Iron, E. V. Ronceray. Foundry Trade Jl., vol. 26, no. 307, July 6, 1922, pp. 5-12, 19 figs. Fremont's transverse testing machine, shearing tests; M. Portevin's test; elastic limit, modulus of elasticity, sounding and ball tests.

CEMENT

Electric. Electric Cement, Henry J. Harms, Jr. Concrete, vol. 20, no. 6, June 1922, pp. 113-115. Description of French process for producing cement in an electric furnace; superiority of product.

CEMENT MANUFACTURE

Iron and Steel Application. Iron and Steel Application to the Cement Industry, W. R. Shimer. Eng. World, vol. 21, no. 2, Aug. 1922, pp. 93-96. Selection of steels for use in handling cement, particularly heat-treated steel for shovels, gyratories.

CENTRAL STATIONS

France. The Great Thermoelectric Central Station at Comines (La grande centrale thermoélectrique de Comines [Nord]), J. Reyval. Revue Générale de l'Electricité, vol. 12, nos. 2 and 3, July 15 and 22, 1922, pp. 55-68 and 93-105, 34 figs. July 15: One of the most modern stations; has three 25,000-kw units giving normal power of 50,000-kw., one unit being spare; describes boiler-house, machine room and equipment. July 22: Describes pumping station and water intake, 45,000-v. transmission lines, overhead equipment, and underground equipment.

Superpower. The Bavarian Works and Its Sources of Power (Das Bayernwerk und seine Kraftquellen), A. Menge. Elektrotechnische Zeit., special no. May 28, 1922, pp. 2-20, 30 figs. Object of this works is to supply whole of Bavaria with electric power as economically as possible and for this purpose a 110-kv. transmission line has been built, connecting up Munich, Meitingen, Nurenberg, Amberg, Regensburg and Landshut lines; describes masts, insulators, general line equipment, transformers, and switching systems.

CERIUM

Effect on Brass and Iron. Adds Cerium to Brass and Iron, L. W. Spring. Foundry, vol. 50, no. 13, July 1, 1922, pp. 542-544, 2 figs. Effect on red brass is to increase percentage of leaky castings and lower tensile strength and ductility. Shows marked effect on converter steel and causes gray iron to feed better. Paper prepared for convention of Am. Foundrymen's Assn.

CHROMIUM STEEL

Chromium Determination. Rapid Methods for the Determination of Chromium in Steel, A. S. Townsend. Forging and Heat Treating, vol. 8, no. 7, July 1922, pp. 304-305. Oxidation of chromium in acid solution to chromic acid; bibliography.

CIRCUIT BREAKERS

High-Speed. High Speed Circuit-Breakers, Ashton Bremner. Elec. Times, vol. 61, no. 1602, June 29, 1922, pp. 642-643, 5 figs. Tests by oscillograph and high-speed cinematograph by means of reducing current in shorter time than that taken by given commutator per second in traveling from one row of brushes to next.

Oil. Tests on General Electric Oil Circuit Breakers at Baltimore, J. D. Hilliard. Am. Inst. Elec. Engrs. Jl. vol. 41, no. 7, July 1922, pp. 530-535, 6 figs. Developing breaker which would handle short circuit on 13,300-volt, 25-cycle system and show an apparent factor of speed at 25,000 r.m.s. amperes.

Tests on Westinghouse Oil Circuit Breakers at Baltimore, J. B. MacBeill. Am. Inst. Elec. Engrs. Jl. vol. 41, no. 7, July 1922, pp. 537-546, 13 figs. Tests on breakers of different sizes, rupturing capacity ratings ranging from 10,000 amperes to 40,000 amperes at 15,000 volts. Data on tripping speed, length of arc duration and conditions after test.

Quick-Acting. Quick-Acting breakers for Protecting Machines Against Flash (Les disjoncteurs à rupture rapide et la protection contre amorçages d'arcs au collecteur des machines électriques), Candie. Revue Générale de l'Electricité, vol. 11, no. 20, May 20, 1922, pp. 743-752, 18 figs. Detailed description of apparatus, its application to protection of a generator set; its advantages.

COAL

Carbonization. Increasing the Rate of Carbonization, Geoffrey Weyman. Gas Jl., vol. 158, no. 3085, June 28, 1922, pp. 864-868 and (discussion) 868-870, 10 figs. Increases in thermal and volume output per retort of continuous vertical type is usually accompanied by tonnage increase; experimental amplification of observations, coal-testing plant experiments.

Drying. Hoyle Centrifugal Dryer at Tinsley Park Coke Ovens. Colliery Guardian, vol. 123, no. 3209, June 30, 1922, p. 1603, 2 figs. Apparatus in which coal flung outward by centrifugal forces against screens passes down as thin film on inner surfaces of screen while moisture goes through.

Origin. New Contributions on the Origin and Chemical Structure of Coal. Franz Fischer and Hans Schrader. Fuel in Sci. and Practice, vol. 124, no. 3213, July 28, 1922, pp. 114-119. Record of authors' experimental work and development and completion of their theory of origin of coal. Translated from Brennstoff-Chemie.

COAL BREAKERS

Razing and Rebuilding. Razing of Seneca Hoist Tower by Dynamite and Rebuilding of Breaker, Dever C. Ashmead. Coal Age, vol. 22, no. 1, July 5, 1922, pp. 5-8, 8 figs. Dynamite sticks placed in its 10 legs are exploded while locomotive and stump puller pull structure out of perpendicular. Good example of modern breaker of moderate dimensions.

COAL HANDLING

Ash and. Economical Handling of Coal and Ashes. Henry J. Edsall. Can. Manufacturer, vol. 42, no. 7, July 1922, pp. 23-26, 2 figs. Great savings made from installations and recent developments.

Modern Coal and Ash Handling Plant. Gas Engr., vol. 38, no. 554, June 15, 1922, pp. 155-158, 9 figs. Advantages and disadvantages of various types and general points for considera on.

PNEUMATIC. The Pneumatic Handling of Coal H. Blyth. Gas. Engr., vol. 38, no. 554, June 15, 1922, pp. 151-154, 5 figs. Conditions under which satisfactory results may be expected and details of successful installation.

COAL MINES

POWER. The Case Against Use of Purchased Power at Coal Mines, C. W. Smith. Coal Age, vol. 22, no. 1, July 6, 1922, pp. 13-17, 4 figs. Steam hoist with mixed pressure turbine advocated; Power cost is 10c. per ton at Nason Plant. From paper read at Ill. Mining Inst. meeting.

SHAFTS. Study of Stresses and design of Head Sheaves for Coal-Mine Shafts, J. S. Watts. Coal Age, vol. 22, no. 4, July 27, 1922, pp. 127-130, 5 figs. Excessive weight causing slip in rope; effect of lead; cooling action of spokes in casting rim; design of bosses; fit of hub.

COAL MINING

STEAM SHOVEL, ALBERTA. Coal Mining by Steam Shovel in Alberta, Canada, Geo. Sheppard. Inst. Min. Engrs., Trans. vol. 62, pt. 5, June 1922, pp. 323-331, 11 figs. Geological conditions and description of mining operations used in meeting them.

COLD STORAGE

RESEARCH LABORATORY. Cold Storage Research Laboratory. Ice and Refrigeration, vol. 63, no. 2, Aug. 1922, pp. 93-97, 6 figs. Description of laboratory at Canton, Pa., established for purpose of carrying on experiments and reesarch work in storage of perishable products.

COKE

ANALYSIS. The Analysis of Coke, Arthur Grounds; Iron and Coal Trades Rev., vol. 104, no. 2835, June 30, 1922, p. 977. Sampling, moisture, ash, sulphur, phosphorus, calorific value.

ECONOMY FOR STEAM FUEL. Economy of Coke for Steam Fuel. Gas Age-Rec., vol. 50, no. 4, July 22, 1922, pp. 107-108. Coke at $6 cheaper if properly burned for steam raising than coal at $7.

COKE MANUFACTURE

NON-COKING COALS. Good Coke now Manufactured from Non-Coking Coals of Illinois, with Saving of Byproducts, H. A. Patterson. Coal Age, vol. 22, no. 2, July 13, 1922, pp. 45-50, 5 figs. Seek to coke coal before cementing material is oxidized; heat graduated to suit thickness of bed to be coked; coking time lowered to twelve hours; gas introduced at two levels. (Abstract.) Paper read before Ill. Min. Inst.

THEORY. A Recent Theory of Coking, F. V. Tideswell. Fuel in Science and Practice, vol. 123, no. 3208, June 23, 1922, pp. 101-103. Discussion of theory underlying improved process which claims to include bituminous and non-bituminous non-coking coals in coking coals.

COKE OVENS

HEATING WITH BLUE WATER GAS. Heating Coke Ovens with Blue Water-Gas, J. F. O' Malley. Chem. and Met. Eng., vol. 27, no. 2, July 12, 1922, pp. 75-78, 6 figs. Doubles surplus gas from ovens; eliminates carbon from heating flues and permits uniform oven operation without change of burners.

PATH OF GAS TRAVEL. The Foxwell Theory of the Path of Travel of the Gases in the Coke Oven, Gas World, vol. 76, no. 1976, June 3, 1922, p. 10, 1 fig. Laws controlling path found to be similar to those for nest of capillary tubes. Discussion of application.

COMBUSTION

GAS DISTRIBUTION. Study of Distribution of Combustion Gases. Am. Gas Jl., vol. 117, no. 5, July 29, 1922, pp. 89-91, 7 figs. Description of new method of studying diffusion of heat in various apparatus and distribution of combustion gases by means of properties of colored smoke. Model tests compared with phenomena in apparatus in actual operation. From "High-Pressure Boilers" by H. Thoma, Berlin.

SPONTANEOUS. Spontaneous Combustion, Walter L. Wedger. Safety, vol. 9, no. 7, July 1922, pp. 163-168, 1 fig. Various causes and attempts at prevention. Apparatus for testing tendency of cloth. From paper read before Mass. Safety Council of Nat. Safety Council.

COMPASSES

GYROSCOPIC. Theory of the Gyroscopic Compass (Théorie du Compas gyroscopique), P. Lemaire, Technique Moderne, vol. 14, no. 5, May 1922, pp. 202-205, 2 figs. Describes construction and operation and makes calculations in connection with it.

COMPRESSED AIR

STORAGE. Compressed-Air Power Storage (Kraft-Speicheurngs-Anlagen mittels komprimierter Luft), W. E. Trümpler. Schweizerische Bauzeitung, vol. 79, no. 17, Apr. 29, 1922, pp. 222-224, 7 figs. Discusses pneumatic accumulation in place of hydraulic accumulation by compressing air into heat-insulated storage tanks ready for any power use.

CONCRETE

PNEUMATIC PLACING. The Pneumatic Placing of Concrete, Sidney Mornington. Compressed Air Mag. vol. 27, no. 7, July 1922, pp. 191-194, 6 figs. Compressed air solves two difficult problems in lining of tunnels; particularly adapted for use in inaccessible places and also obviates obstruction of traffic.

WEAR TESTS. Wear Tests of Concrete, Duff A. Abrams, Lewis Inst. Structural Materials Research Laboratory, Bul. 10, Dec. 1921, 25 pp., 17 figs. Eleven series of tests on wear as affected by quantities of mixing water; cement; grading of aggregate, hydrated lime, relation of compressive strength of air; age; curing conditions, etc.

CONDENSERS, STEAM

DESIGN. Steam Condensing Plant, D. L. Hall Beama, vol. 10, no. 6, June 1922, pp. 427-436, 4 figs. Items to which careful consideration must be given in designing surface condensers and jet condensers; air leakage and air pumps; condensate [illegible]

CONVERTERS

ROTARY. Rotary Converters and Their Characteristics in Railway Electrification (Les commutatrices et leurs caractéristiques particulières pour leur adaptation à l'électrification des chemins de fer). Industrie Electrique, vol. 31, no. 718, May 25, 1922, pp. 191-194. Frequency; type of machine; importance of a [illegible], etc.

ROTARY ADJUSTABLE-SPEED. Rotary Converter Adjustable Speed Sets, L. H. Hook and F. R. Burt. Power Plant Eng., vol. 26, no. 13, July 1, 1922, pp. 659-663, 8 figs. Application to rail rerolling mills of Calumet Steel Co. (Abstract.) Paper read before Assn. Iron and Steel Elec. Engrs.

CORROSION

PREVENTION. Fighting Corrosion as a Major Source of Waste in Industry, R. H. Hubbell. Jl. Elec. and West. Industry, vol. 49, no. 1, July 1, 1922, pp. 9-11, 7 figs. Choice of proper coating; paints that injure metal.

Mechanism of Metallic Oxidation at High Temperatures, N. B. Pilling and R. E. Bedworth. Chem. and Met. Eng., vol. 27, no. 2, July 12, 1922, pp. 72-74. Rapidity due to combination of physical properties of oxide and its ability to absorb and diffuse oxygen rather than to any property of metal itself. Paper read before Am. Inst. Min. and Metallurgical Engrs.

Oxididation of Steels and Their Use in Degasification of Water (Sur l'oxydabilité des aciers et leur utilisation au dégazage de l'eau), G. Paris. Chaleur et Industrie, vol. 3, no. 25, May 1922, pp. 1259-1261, 1 fig. Discusses dependence of oxididation of steels on their crystalline structure and proposes special alloys for fixing oxygen in water.

CRANES

TRAVELING. Lifting Apparatus (Appareils de levage), Legrand-Ribet. Outillage, vol. 6, nos. 24, and 25 June 17 and 24, 1922, pp. 765-767, and 787-791, 9 figs. June 17: Calculations and specifications of an electric traveling crane of 10,000 kg. capacity at 20m. radius of action, with hoisting speed of 6 m. per min. June 24: Describes frame-work of crane and calculations for it.

CUTTING TOOLS

See Alloys, Diamond.

D

DAMS

CORE-WALL CONSTRUCTION. Core-Wall Construction in Deep Trench at Wanaque Dam, Arthur H. Pratt. Eng. News-Rec., vol. 89, no. 3, July 20, 1922, pp. 92-95, 7 figs. Trenching and concreting plant and methods for trench 900 ft. long, 90 ft. deep, and 20 ft. wide.

HETCH HETCHY, SAN FRANCISCO. The Hetch Hetchy Dam. Pub. Wks., vol. 53, no. 2, July 8, 1922, pp. 21-23, 5 figs. San Francisco's 135-billion-gallon concrete dam ,430 ft. high, 298 to 900 ft. wide, and 117 ft. below bed of stream.

MASONRY. Hollow Triangular Masonry Dams With Counterforts at Regular Intervals (Barrage triangulaires evides en maçonnerie à contreforts régulièrement espacés), R. Tavernier. Annales de l'Energie, vol. 2, nos. 2 and 3, Mar.-Apr. and May-June 1922, pp. 41-46 and 85-94, 5 figs. Mar.-Apr. Discusses conditions of stability and makes calculations. May.-June: Gives tables and diagrams and shows how to use them for determining thickness of counterforts.

MULTIPLE-ARCH. Multiple-Arch Dam on the Tirso, Sardinia [Barrage à voutes multiples, sur le Tirso, à San Chiara d'Ula (Sardaigne)]. Génie Civil, vol. 81, no. 2084, July 22, 1922, pp. 77-82, 12 figs. Describes construction work in course of completion for hydroelectric plant producing 30,000 hp. which power is to be used especially for mining purposes.

DIES

SELF-OPENING, CHASERS FOR. Making Chasers for self-opening dies. Am. Mach. Vol. 57, No. 5, Aug. 3, 1922, pp. 169-174, 16 figs. Mining blocks to form and size; cutting threads by means of hobs; hand and machine tapping methods.

DIESEL ENGINES

DESIGN. Variations in Modern Diesel-Engine Design, Thos. Orchard Lisle. Soc. Automotive Engrs. Jl., vol. 11, no. 1, July 1922, pp. 92-106, 36 figs. Unfavorable comments on tendency to depart from original Diesel designs.

VALVES. Care of Valves on Diesel Engines, L. R. Ford. Power, vol. 56, no. 6, Aug. 8, 1922, pp. 204-206, 4 figs. General discussion.

DIRECTION FINDERS

NAVIGATION. Radio Direction Finding, F. W. Dunmore. Pacific Mar. Rev., vol. 19, no. 7, July 1922, pp. 404-407. Methods of radio direction finding as aid to navigation; relative advantages of locating finder on shore and on shipboard.

DRILLING MACHINES

DESIGN. Effect of Design on Drilling Machine Efficiency, F. E. Johnson. Machy. (N.Y.), vol. 28, no. 12, Aug. 1922, pp. 964-967, 6 figs. Important factors in design and operation. Suggestions for improving operative conditions.

DUST

COLLECTION. Designing a Dust-Collecting System, H. M. Nichols. Wood-Worker, vol. 41, no. 4, June 1922, pp. 50-51. Principles which must be considered in planning efficient exhaust system for woodworking plant.

DYNAMOMETERS

BRAKE. Measuring Electric Power by the Brake Dynamometer (Mesure de la puissance des moteurs électriques au moyen des dynamos dynamomètres), M. Marre. Electricien, vol. 53, no. 1300, May 15, 1922, pp. 222-227, 8 figs. Construction and operation of brake dynamometer, its application in testing, friction losses, etc.

E

ECONOMIZERS

PERFORMANCE. Notes on Economizer Performance, A. W. Binns. Power Plant Eng., vol. 26, no. 14, July 15, 1922, pp. 694-697, 5 figs. Losses, methods of testing, obtaining standards and maintenance.

ELECTRIC CIRCUITS

SUPER-REGENERATIVE. A Further Development of the Armstrong Circuit, Edgar H. Felix. Wireless World, vol. 10, no. 17, July 22, 1922, pp. 503-506, 3 figs. Description of super-regenerative circuit and its adjustments.

ELECTRIC FURNACES

Brass and Bronze. Electric Melting Furnaces for Brass and Bronze, Howard McLean and John M. Boyd. West Machy World, vol 13, no 7, July 1922, pp. 244-246, 4 figs. Commercial uses for electric furnace and description of various types; some considerations of comparative melting costs.

Resistance. Wire and Ribbon Wound Resistance Furnaces, Charles C. Bidwell. Sibley Jl. of Eng., vol 36, no 6, June 1922, pp 119-121 and 129. Temperature range determines choice of resistor refactory and thermal insulation; temperature distribution determines shape of furnace, manner of winding, heating elements and placing thermal insulation

Single-Phase. Single-Phase Electric Furnace, H. P. Abel, A. A. Liardel and W. West. Iron & Steel of Canada, vol. 5, no. 7, July 1922, pp. 128-130. Advantages of single-phase furnaces; drawback of bad effect of power factors; details of construction and operation.

Steel. A New French Electric Furnace for Steel Foundry, R. Sylvany. Can. Foundryman, vol. 13, no. 7, July 1922, pp. 28-29. Constructed with idea of insuring good purification by direct passage and uniform distribution of current through metal and slag.

Fiat Electric Steel Furnace, Dr. Alfredo Stromboli. Chem. and Met. Eng., vol 27, no 1, July 5, 1922, pp 28-30, 5 figs. Description of fast furnace of large output with tight roof maintained by special economizer.

Sweden. Electric Smelting and Blast-Furnace Installations in Porjus (Sweden) (De elektriska smältverks- och masugnsanläggningarna i Porjus) Gunnar Herlin. Jernkontorets Annaler, vol. 106, no. 4, 1922, pp. 99-132, 22 figs. Detailed description of plant layout, buildings, electrical and other equipment, furnaces, etc.

ELECTRIC METERS

Ohmmeters and Capacimeters. Direct-Reading A.C. Ohmmeters and Capacimeters (Ohmmètres et capacimètres à courant alternatif à lecture directe), R. Barthelemy. Revue Générale de l'Electricité, vol. 11, no. 24, June 17, 1922, pp. 891-894, 4 figs. Direct measurement of a.c. capacities and weak resistances. Describes ohmmeters and capacimeters made by Fabrication des Compteur-Co., including two types of capacimeters, one machining several microfarads, and other permitting direct reading of small capacities, used especially in high frequencies.

Outdoor. Cost of Outdoor Metering Installations, Halbert R. Thomas. Elec. World vol. 80, no. 3, July 15, 1922, pp. 119-121, 3 figs. Data for 2,200-volt, 10,000-volt, and 15,000-volt installations of Southern California Edison Co.; features of construction.

Testing. An Arrangement for D.C. Meter Testing, J. B. Willingham. Elec. Rev., vol. 91, no. 2331, July 28, 1922, pp. 114-116, 2 figs. Description of testing board for d.c. meters and resistances for d.c. meter testing.

ELECTRIC MOTORS

Induction. Synchronized Asynchronous Motors (Les Machines asynchrones synchronisées), E. Manc. Technique Moderne, vol. 14, no. 6, June 1922, pp. 250-255, 17 figs. Discusses starting and operating characteristics of this motor used with view to reducing price of kw-hr by raising power factor.

Power Required. A Method of Determining Resultant Input from Individual Duty Cycles and of Determining Temperature Rating, Bassett Jones. Gen. Elec. Rev. vol. 25, no. 7, July 1922, pp. 405-417, 10 figs. Comprehensive mathematical method based on theory of probabilities which will furnish complete analysis of all data necessary to make intelligent selection of generating and transmission equipment for group of motors.

ELECTRIC RAILWAYS

Austria. Electric Working of Austrian Railways (Der elektrische Betrieb auf den Oesterreichischen Bundesbahnen), E. E. Seefehlner. Elektrotechnische Zeit., special no., May 28, 1922, pp. 41-44, 5 figs. Discusses hydroelectric developments and describes new single-phase a.c. locomotives 1C + C1.

Napa Valley, California. The Napa Valley Route Elec. Ry. Jl., vol. 60, no. 1, July 1, 1922, pp. 7-8, 5 figs. San Francisco, Napa & Calistoga Ry., is successful single-phase California electric system; in connection with boat line it offers through service to San Francisco.

Temperature Effect on Power Consumption. Relation Between Temperature and Power Used by Electric Cars, A. W. Baumgarten. Elec. Ry. Jl., vol. 60, no. 3, July 15, 1922, pp. 77-78, 3 figs. Tests indicate that more power is used during cold weather; present methods of lubrication appear to be responsible for large part of increase.

ELECTRIC TRANSMISSION LINES

Calculation. Alignment Charts for the Mechanical Calculation of Overhead Electric Transmission Lines (Nomogrammes pour les calculs mécaniques des lignes aériennes de transmission d'énergie électrique), A. Joitel. Revue Générale de l'Electricité, vol. 12, no. 1, July 8, 1922, pp. 5-14, 6 figs. Calculation in connection with conductors, length, voltages, etc., gives examples.

Mechanical Calculation of Overhead Electric Transmission Lines (Note sur les calculs mécaniques des lignes aériennes de transmission d'énergie électrique), A. Joitel. Revue Générale de l'Electricité, vol. 11, no. 26, July 1, 1922, pp. 949-957, 5 figs. Calculation of conductors, their cross-section, voltages, excess voltages; explains method of calculation.

Mechanical Calculation of Transmission Lines (Calcul mécanique des lignes aériennes), A. Auric. Technique Moderne, vol. 14, no. 5, May 1922, pp. 200-202, 2 figs. Mechanical and electrical properties of aluminum, copper, aluminum steel, and steel. Develops formulas and gives examples of calculations.

Crossing of High- and Low-Tension. Crossings of High-Tension and Low-Tension Lines (Krydsning mellem Höjspaendings-Luftledninger og Svagströms-Luftledninger). Teknisk Tidsskrift (Elektroteknikeren), vol. 18, nos. 11 and 12, May 31 and June 14, 1922, pp. 69-76 and 77-80, 10 figs. May 31: Gives rules formulated by Danish Electricity Commission to be observed in construction of lines, including general and safety rules. June 14: Comment by Gunnar Kjaer.

Economical Construction. Economical Transmission Line Construction, E. V. Pannell. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. of Japan), no. 407, June 1922, pp. 452-469, 10 figs. Copper, aluminum and aluminum steel tried out on 130-kv. line carrying 60,000 kw. over 150 miles. General conclusion favors latter.

60,000-Volt. 60,000-Volt Transmission Line From Cape Volturne to Naples (La linea di transmissione a 60,000 volt da Capo Volturno a Napoli con isolatri sospesi), Elettrotecnica, vol. 9, no. 16, June 5, 1922, pp. 365-366, 3 figs. Line equipment, insulators, conductors, poles. etc.

ELECTRIC WELDING

Electropercussive. Review of Electro-Percussive Welding, D. F. Miner. Am. Welding Soc. Jl., vol. 1, no. 7, July 1922, pp. 27-36, 36 figs. Description of process and examples of welding.

Theories of. Theories of Electric Welding. Practical Engr., vol. 66, no. 1845, July 6, 1922, pp. 5-6. Electrodes of future; carbon; brittleness; harmful elements.

ELECTRIC WELDING, ARC

Cyc-arc. The "Cyc-arc" Process of Automatic Electric Welding in Ship Work, L. J. Steele and H. Martin. Electrician, vol. 89, no. 2306, July 28, 1922, pp. 98-99, 3 figs. Recent developments. Success in making mild-steel welds.

Monel Metal. Arc Welding Monel Metal, P. D. Merica and J. G. Schoener. Welding Engr., vol. 7, no. 7, July 1922, pp. 42-44 and 46, 6 figs. Use of metallic deoxidizers has resulted in sound, strong, and moderately ductile welds. From paper read before Am. Welding Soc.

ELECTRICAL APPARATUS

Temperature Measurement. Determination of Temperature of Electrical Apparatus and Cables in Service, E. J. Rutan. Am. Inst. Elec. Engrs., Jl. vol. 41, no. 6, June 1922, pp. 464-469, 7 figs. Discussion of methods applicable to light and power company work and characteristics of measuring apparatus.

ELECTRICAL MACHINERY

Rating Standards. Questions Relating to Standards of Rating, with Particular Reference to Large Machines Using Class B Insulation, F. D. Newbury. Am. Inst. Elec. Engrs. Jl., vol. 41, no. 7, July 1922, pp. 527-529. Basic principles of rating; limiting temperatures for class B insulation; consideration of performance standards from testing and operating instructions; application of embedded detector method of temperature measurement.

Temperature Measurement. Measuring the Temperature of Electric Machinery (Misura delle Temperature nel macchinario elettrico), G. Keinath. Elettrotecnica, vol. 9, no. 20, July 15, 1922, pp. 443-446, 8 figs. Importance of measuring temperature; where and how to measure it; causes of errors in measurement.

ELECTRICITY

Matter and. Electricity and Matter, Ernest Rutherford. Electrician, vol. 88, no. 2301, June 23, 1922, pp. 742-743. Kelvin Lecture in which review of recent advances in art, knowldege, and relations between electricity and matter is given. Consideration of constitution of atoms. (Abstract.) Lecture before Instn. Elec. Engrs.

Tribo-Electricity. The Nature of Tribo-electricity or Electricity of Friction and Other Kindred Matters, Elihu Thomson. Genl. Elec. Rev., vol. 25, no. 7, July 1922, pp. 418-421. Review of work of pioneers and results of recent investigations into electricity of friction. Based on Lecture before A.I.E.E.

ELECTROCHEMICAL INDUSTRY

Methods and Future. The Electrochemical Industries — Their Methods and Future (Les Industries Electro-Chimiques — Leurs méthodes, leur avenir), Charles Blanchet. Revue de l'Ingénieur et Index Technique, vol. 29, nos. 1 and 2, July and Aug. 1921, pp. 11-16 and 51-62, and France Belgique (Formerly Revue de l'Ingénieur et Index Technique), vol. 1, nos. 3, 4, 5 and 6, Mar., Apr., May and June 1922, pp. 118-128, 189-198, 255-266 and 318-331, 9 figs. July: Electric furnace products; when to use electric furnace. Aug.: Types of electrode furnaces; consumption of current. Mar.: Electrolysis and electrolytic methods. Apr.: Griesheim-Elektron process; Allen-Moore and Nelson electrolyzers. May: Raw materials and principal products of electrochemical industry; consumption of power and anodes; electrolysis of heavy metal salts. June: Production of electrolytic iron; refining of nickel; manufacture organic products by electrolysis; modern production of aluminum.

ELECTROLYSIS

Water Mains. A History of the Corrosion of the 36-inch Steel Force Maine at Akron, Ohio, G. Gale Dixon, and Investigation of Electrolysis on Steel Force Maine at Akron, Ohio, Victor B. Phillips. New England Water Works Assn. Jl., vol. 36, no. 2, June 1922, pp. 157-169, and 179-180, and (discussion) 181-188, 7 figs. First Article: Mention of several well known cases; details of severe corrosion after 5 years on one-mile stretch of 11-mile lockbar steel force main at Akron. Second Article: Investigation of following causes of corrosion: railway current, soil corrosion, small local galvanic currents.

ELECTROMAGNETIC WAVES

Theory. Address to the Wireless Society of London, Sir Oliver J. Lodge. Wireless World, vol. 10, no. 14, July 1, 1922, pp. 407-415, 6 figs. Discusses ether in connection with electric and electromagnetic waves, including Maxwell's theory, Hertzian waves, and author's own work.

EMERY PAPER

Manufacture. Improving Emery Paper (Metod för förbättring av smärgelpapper), C. Benedicks and E. Sörberg. Jerkontorets Annaler, vol. 106, no. 5, 1922, pp. 178-185, 10 figs. Describes production under pressure and gives results obtained.

ENGINEERING SCHOOLS

Curricula, Criticism of. Engineering Schools Fall Short of Modern Needs, John H. Dunlap. Eng. News-Rec., vol, 89, no. 6, August 10, 1922, pp. 221-226. Criticisms of present methods; suggests longer course for engineering degree. Author is secretary of Am. Soc. Civil Engrs.

ENGINEHOUSES

Concrete-Unit. Concrete-Unit Roundhouses on the Pennsylvania R.R. Eng. News-Rec., vol. 89, no. 3, July 20, 1922, pp. 110-112, 3 figs. Large buildings framed of precast members; walls of brick and steel sash; casting yard and unit erection methods.

Southern Pacific. Southern Pacific Builds Unique Engine Houses. Ry. Age, vol. 73, no. 3, July 15, 1922, pp. 105-106, 2 figs. Rectangular concrete structures are provided with lead tracks at each end to expedite use.

EVAPORATION

Problems. The General Problem of Evaporation, J. W. Hinchley. Soc. Chem. Industry Jl., vol. 41, no. 14, July 31, 1922, pp. 242T-246T, 3 figs. Study of evaporation below boiling point of liquid evaporated and evaporation at boiling point.

EXCAVATION

Cost Estimation. Estimating the Cost of Excavating, Chas. F. Dingman. Contract Rec., vol. 36, no. 27, July 5, 1922, pp. 662-664. Factors involved and production units applying thereto; details of method of computing estimate of excavating operations.

EXCAVATORS

Pneumatic Clay Diggers. Pneumatic Clay Diggers Speed Sewer Tunnel Excavation. Contract Rec. vol. 36, no. 24, June 14, 1922, pp. 559-561, 1 fig. Development of air-driven tools, eliminating picking or blasting, makes possible record progress in tunnel driving.

EXTRUSION OF METALS

Process. Extrusion of Metals (Quelques lois expérimentales de l'écrouissage), L. Poitrinal. Technique Moderne, vol. 14, no. 5, May 1922, pp. 193-199, 6 figs. Different ways of deformation; determination of parameters required; extrusion by compression, traction and compression and traction simultaneously.

F

FACTORIES

Location. Industrial Plants and Their Location, F. Theo Gnædinger. Eng. Inst. Canada Jl., vol. 5, no. 7, July 1922, pp. 354-358, 4 figs. General survey of principal features to be considered in locating, designing and constructing industrial plant.

FATIGUE

Industrial. Fatigue in Industry (Le Problème de la fatigue dans l'Industrie), Jean Waldsburger. Vie Technique et Industrielle, vol. 3, nos. 31 and 32, Apr. and May 1922, pp. 25-27 and 95-97, 5 figs. Apr.: Research work of Prof. Kent, in England on study of fatigue in men and women workers, and instruments used for measurements. May: Research work of J. M. Lahy, in France.

FEEDWATER HEATERS

Locomotive. Practical Advantages of Locomotive Feed Water Heating. Ry. Rev., vol. 70, no. 23, June 10, 1922, pp. 825-830, 6 figs. Maintenance and operation of locomotive feedwater heaters on 14 railroads. Int. Ry. Fuel Assn. report.

FIRE PREVENTION

Water Works Co-operation. How the Water Works Should Aid in Fire Fighting, Clarence Goldsmith. Fire and Water Eng., vol. 72, no. 1, July 5, 1922, pp. 7-8. Suggestions as to active co-operation between water and fire departments; water-works employees should answer alarms; hydrant inspection; matter of adequate pressure.

FLOW OF WATER

Measurement. Methods and Apparatus for the Photometric Gaging of the Flow of Water (Procédés et appareillage pour le jaugeage photométrique de faibles cours d'eau), Paul P. E. Papadopoulo-Santo Rini. Annales de l'Energie, vol. 2, no. 3, May-June 1922, pp. 97-101, 11 figs. Describes method consisting of introduction of liquid color at one point and photometric determination of color on water at a given distance at a certain time.

The California Pipe Method of Water Measurement, Blake R. Vanleer. Eng. News-Rec., vol. 80, no. 5, Aug. 3, 1922, pp. 190-192, 3 figs. Description of apparatus used and its operation; tables and charts employed.

FLUE-GAS ANALYSIS

Apparatus for. A New Flue Gas Tester, Max Moeller. Eng. Progress, vol. 3, no. 7; July 1922, pp. 151-152, 3 figs. Instrument based on variation in heat conductivity of flue gases produced by alteration of CO_2 content by electrical means.

Automatic Carbon Dioxide Indicator for Flue Gas, R. B. MacMullin. Jl. Indus. and Eng. Chem., vol. 14, no. 7, July 1922, pp. 628-629, 2 figs. Description of instrument accurate to 0.02 per cent, which will record continuously for two days or more without need of refilling scrubber or readjusting zero point.

FORGINGS

Brass. Brass Forgings, C. G. Heiby. Metal Industry (Lond.), vol. 21, no. 2, July 14, 1922, pp. 25-27. Description of process; sand-cast blanks; chill-cast blanks, composition of metal, physical properties.

Hammers, Pneumatic. "Single-Blow" Pneumatic Forging Hammers, W. H. Snow. Engineering, vol. 114, no. 2952, July 28, 1922, pp. 98-101, 9 figs. Discussion of efficiency of operation, special reference to weight and duration of blow.

Steel for. Scientific selection of Materials for Forgings. Am. Mach., vol. 57, no. 6, Aug. 10, 1922, pp. 211-215, 10 figs. Selection of steel; its testing and heat treatment.

FOUNDRIES

Compressed Air in. Compressed Air in the Foundry, L. W. Schnitzer. Compressed Air Mag., vol. 27, no. 7, July 1922, pp. 185-188, 8 figs. Pneumatic devices perform many useful operations in foundry; reduce costs and increase production.

Layout. Modern Tendencies in Foundry Installation (Tendances modernes présidant à l'installation des Fonderies), M. Thomas. Fonderie Moderne, no. 5, May 1922 pp. 129-141, 4 figs. Foundries for heavy, medium, and mechanical castings; foundry sand; etc.

Malleable-Iron. Brass Firm Makes Malleables, Pat Dwyer. Foundry, vol. 50, no. 13, July 1, 1922, pp. 523-528, 10 figs. Powdered coal equipment for [illegible] 100,000 sq. ft. of floor space and all modern improvements in sanitation, safety devices, dust exhaust system, etc.

Planning a New Malleable Shop, E. Touceda. Iron Trade Rev., vol. 71, no. 4, July 27, 1922, pp. 243-248, 3 figs. Consideration governing site selection and plant [illegible] equipment. (Abstract) Exchange paper before Inst. British Foundrymen.

Safety. Safety Work in Foundries, R. W. Patmore. Metal Industry (Lond.), vol. 20, no. 25, and vol. 21, no. 1, June 23 and July 7, 1922, pp. 584-585 and 3-4. Also Foundry Trade Journal, vol. 25, no. 305, June 22, 1922, pp. 464-467. Analysis of causes of major and minor accidents in foundry and suggestions for [illegible]. Presented at Inst. British Foundrymen.

FRAMES

Kinematic Theory of [illegible] Framework (Théorie cinématique des [illegible]), [illegible] vol. 81, no. 2, July 8, 1922, pp. 40-43, 18 figs. Develops formulas and [illegible] calculations.

FUEL ECONOMY

Power Plants. Fuel Economy in Steam Power Plants, John B. C. Kershaw. Beama vol. 11, no. 1, July 1922, pp. 474-481, 3 figs. Composition and constitution of natural and artificial fuels, and chemistry of conbustion process.

Fuel Economy and Production Expenses, Allen M. Perry. Elec. World, vol. 80, no. 3, July 15, 1922, pp. 115-118. Data given for electric plants burning coal, oil, gas and hogged fuel; careful analysis of data permits interesting comparisons between results obtained.

FUELS

Garbage. Burning Garbage Under the Boiler (Die Verwertung von Müll durch Verbrennung), H. Hermann. Gesundheits-Ingenieur, vol. 45, nos. 2 and 26, May 27 and June 30, 1922, pp. 274-278 and 339-343, 12 figs. May 27: Furnaces fired with garbage and other refuse, especially for hot water and heating purposes. June 30: Garbage incinerating plants, their operation and equipment.

Sawdust. Sawdust as Fuel. Elec., Rev., vol. 89, no. 2282, Aug. 19, 1922, pp. 236-238, 8 figs. Details of plant installed by John Sadd & Sons, Ltd., Maldon, Essex, for production of gas from sawdust.

See also coal, coke, oil fuels, peat, pulverized coal.

FURNACES, HEAT-TREATING

Continuous. Continuous Furnaces and Their Application, P. J. Myall and L. A. Mekler. Forging and Heat Treating, vol. 8, no. 7, July 1922, pp. 322-326, 5 figs. Classification of continuous furnaces; type of furnace recommended for various operations; writers believe there should be ten continuous furnaces for one now in operation.

Scale Formation. Furnace Atmospheres and Their Relation to the Formation of Scale, George C. McCormick. Am. Soc. for Steel Treating Trans., vol. 2, no. 11, Aug. 1922, pp. 1006-1012, 3 figs. Experimental data and procedure during investigation of scaling activity of oxidizing, neutral and reducing atmospheres during heat treatment of steel.

FURNACES, BOILER

Air Preheaters. Air Preheaters for Boiler Furnaces. Engineering, vol. 114, no. 2949, July 7, 1922, pp. 24-27, 10 figs. Description of apparatus built by Ljüngstrom Steam Turbine Co.

FURNACES, METALLURGICAL

Aluminum-Melting. Aluminum and Aluminum-Alloy Melting Furnaces, Robt. J. Anderson. Can. Foundryman, vol. 13, no. 7, July 1922, pp. 19-23, 3 figs. Review of work undertaken by U.S. Bur. Mines to decrease metal and fuel losses in melting.

G

GALVANIZING

Weight of Coating. Determination of Spelter Coating on Sheets, D. M. Strickland. Raw Material, vol. 5, no. 6, July 1922, pp. 227-228, 1 fig. Simple and accurate method which may be applied to all shapes and sizes of specimens. Portable equipment for field tests. Paper read at annual mtg. Am. Soc. for Testing Mtls.

GAS BURNERS

Efficiency. Effect of B.t.u. on Burner Efficiency, Berry, Brumbaugh, Eiseman, Moulton and Shawn. Gas Age-Rec., vol. 50, no. 2, July 8, 1922, pp. 41-44 and 46-48, 16 figs. Investigation made by Public Service Commission of Maryland to determine most economic and satisfactory heating value standard for Baltimore. Laboratory tests made by Bur. of Standards in this connection to determine relative efficiency of gases of different heating value and adaptability of existing appliances for gases differing in heating value and composition. Advance publication of paper to be made Technologic Paper of Bur. of Standards.

GAS ENGINES

Blast-Furnace Gas. The Nurnberg Gas Engine (Die Nürnberger Gasmaschine), J. Schmidt. Elektrotechnischer Anzeiger, vol. 39, nos. 72, 73 and 74. May 6, 9 and 10, 1922, pp. 601-602, 613-614 and 619-620, 5 figs. Describes 4-stroke, two-cylinder tandem engine, 700 hp. at 125 r.p.m. (normal size 2,000 hp.), for more economic utilization of blast-furnace gas; consumes 2200 to 2400 German heat units per b.hp.-hr., at full load; application of tandem gas engines for driving dynamos.

GAS HOLDERS

Waterless. A Waterless Gasholder, Ed. Bonnet. Gas Jl., vol. 159, no. 3090, Aug. 2, 1922, pp. 268-269, 3 figs. Details of "dry" holders made by Augsburg-Nuremburg Machine Factory (Man.) Germany. Advantages; results of tests. Translated from paper read before Société Technique de l'Industrie du Gaz en France.

GAS INDUSTRY

Canada. The Gas Industry in Canada. Gas Jl., vol. 159, no. 3087, July 12, 1922, pp. 92-93, 1 fig. Statistics of gas consumption and description of vertical retort installations at Vancouver and Victoria.

GAS PRODUCERS

Ash-Fusion. Ash Fusion Gas Producer, M. A. Fichet. Am. Gas Jl., vol. 116, no. 24, June 17, 1922. pp. 550-552, 2 figs. Producer resembling small blast furnace in which complete combustion is attained by burning coal to fusion of ash. From Journal des Usines à Gaz, 1922, pp. 1-7.

Electric. Gasification of Fuels by Means of the Electric Current (Vergasung von Brennstoffen mit Hilfe des elektrischen Stromes), Gwosdz. Wärme, vol. 45, no. 20, May 19, 1922, pp. 247-250, 1 fig. Application of electric current to gas producers; describes Stassano, Girod, Holengren, and other types of apparatus.

GASES

Hydraulic Compression. Production of Pure Gases by the Principle of Hydraulic Compression (Gewinnung reiner Gase unter Anwendung des hydraulischen Kompressionprinzips), C. Heirich. Zeit. für komprimierte u. flüssige Gase, vol. 22, nos. 1, 2 and 3, 1922, pp. 3-7, 21-22 and 43-44, 1 fig. Principles and operation of hydrocompressor; gives cost data of a plant; use of hydraulic compressors in Linde liquefaction and rectification process for production of liquid or gaseous oxygen.

GEAR CUTTING

BEVEL. Cutting Bevel Gears, Franklin D. Jones. Machy. (N.Y.), vol. 28, no. 12, Aug. 1922, pp. 968-971, 7 figs. Principal adjustments required in setting up Gleason bevel-gear generators and time required for cutting gears of different sizes and pitches.

HIGH-SPEED. Producing Gears in Quantity at High Speed, J. H. Rodgers. Can. Machy., vol. 28, no. 1, July 6, 1922, pp. 33-35, 4 figs. Modern gear cutters very efficient; multiple fixtures reduce non-productive time; automatic operation practically eliminates possiblity of error; special method for bevel gears.

GEARS

GEAR-TOOTH COMPARATOR. A New Instrument for Checking Gear Tooth Profiles and Spacing. Automotive Industries, vol. 47, no. 4, July 27, 1922, p. 171, 3 figs. Describes Odontometer for comparing uniformity or determining interchangeability of gears. Applicable to gears of any pressure angle; can be applied while gear is still in machine.

GIRDERS

CALCULATION. Calculation of Girders on Two-Supports Partly Fitted (Calcul général des pièces à deux appuis à encastrement partiel), Louis Gellusseau. Génie Civil, vol. 80, nos. 14, 15, 16, 17, 18, 24 and 25, Apr. 8, 15, 22, 29, May 6, June 17 and 24, 1922, pp. 315-318, 335-339, 359-361, 375-378, 401,403, 546-548, and 564-567, 32 figs. Discusses reinforced-concrete construction; detailed definition of "encastrement"; develops formulas and makes calculations for string boards, rectangular frames, circular and parabolic arches, girders with constant and variable cross-sections, etc.

GRINDING

BEARINGS. Grinding in the Automotive Industry. Machy. (N.Y.), vol. 28, no. 12, Aug. 1922, pp. 946-951, 11 figs. Methods of grinding steel balls and ball bearing races; grinding roller bearing cups, cones and rollers.

H

HARDNESS

TESTING. Hardness Testing Methods (Sur les Méthodes d'essai de dureté des corps), Georges Moreau. Revue Générale de l'Electricité, vol. 12, no. 3, July 22, 1922, pp. 106-111, 3 figs. Describes new method of testing materials, being improvement on Brinell method, i.e., dynamic hardness which is defined as relation between pressure exerted by ball during penetration on surface of impression.

The Testing of Metals for Hardness, S. P. Rockwell. Am. Soc. for Steel Treating Trans., vol. 2, no. 11, Aug. 1922, pp. 1013-1033, 27 figs. Results of tests made on standard Brinell, scleroscope and Rockwell hardness-testing machines.

HEAT STORAGE

APPARATUS. Heat Storage Apparatus, C. Boileau. Elec. Times, vol. 62, no. 1603, July 6, 1922, pp. 7-9. Raising of central-station load factors by electric heat storage. From L'Electricien.

HEAT TRANSMISSION

NON-CONDUCTING MATERIALS. The Transmission of Heat Through and the Efficiency of Non-Conducting Materials, Masao Kinoshita. Domestic Eng. (English), vol. 42, no. 42, June 1922, pp. 116-120, 5 figs. Mathematical consideration (1) in which distribution of temperature in system of bodies considered remains unchanged, (2) in which temperature distribution changes from time to time.

REFRACTORY MATERIALS. The Thermal Conductivity of Refractory Materials at High Temperatures, A. T. Green. Gas World, vol. 77, no. 1908, July 1, 1922, pp. 13-18, 2 figs. Review of previous work; Fourier's linear-diffusion equation; measurement of rate of rise of temperature for isothermal plane at known distance from hot face; texture; porosity; results. Paper read before Instn. Gas Engrs.

HIGHWAYS

MOTOR TRUCK REGULATION. Motor Truck Regulations to Reduce Highway Wear and Tear, C. W. Cornell. Contract Rec., vol. 36, no. 27, July 5, 1922, pp. 667-669. Maximum loads and speeds need to be defined if impact effects are to be minimized; danger of overloading and overspeeding.

PENNSYLVANIA STATE ORGANIZATION. Pennsylvania State Highway Organization. Pub. Works, vol. 53, no. 1, July 1, 1922, pp. 1-5, 3 figs. Rational classification of responsibilities and operation by interlocking system of executive management construction and maintenance division, supplemented by township and automobile division and auditing and accounting departments, totaling more than 500 staff employees required in 1921 for expenditure of $43,000,000.

HYDRAULIC TURBINES

QUEENSTON-CHIPPAWA PLANT. 55,000-Hp. Turbines for the Queenston Power Station, Ontario. Engineering, vol. 114, no. 2950, July 14, 1922, pp. 31-35, 19 figs. Description of turbines of Queenston-Chippawa development with illustration.

HYDROELECTRIC DEVELOPMENTS

CANADIAN PROGRESS. Hydro-Electric Progress in Canada. Universal Engr., vol. 35, no. 6, June 1922, pp. 24-27. Brief review of development work in individual provinces and of progress in investigation and plans.

INDIA. The Hydro-Electric Survey of India, J. W. Meares. Beama, vol. 10, no. 6, June 1922, pp. 409-411. 350,000 hp. developed or under construction; 1½ million hp. investigated by Survey; 1½ million in known sites not yet investigated; probably 4 to 10 million more.

QUEENSTON-CHIPPAWA, CANADA. Queenston-Chippawa Developments of the Hydro-Electric Power Commission of Ontario, F. A. Gaby. Am. Int. Elec. Engrs. Jl., vol. 41, no. 7, July 1922, pp. 508-526, 29 figs. General description of entire development on Canadian side of Niagara River which will have ultimate capacity of approximately 650,000 hp.

TUGALO RIVER. Water Power Development on the Tugalo River. Eng. World, vol. 21, no. 1, July 1922, pp. 7-8, 5 figs. Georgia Ry. and Power Co. 50,000-Kw. development costing $1,600,000 to be finished next year.

HYDROELECTRIC PLANTS

FRANCE. Hydroelectric Plant at Mouthier L'Usine génératrice hydroélectrique de la Loue à Monthier), J. Reyval. Revue Générale de l'Electricité, vol. 11, no. 19, May 19, 1922, pp. 691-714, 21 figs. Describes generating station at Mouthier on the Loue; total power 16,000 hp.; generating equipment; overhead lines; transformers; stations, etc.

Hydroelectric Plant of the Paul Girod Steel Works at Ugines, Savoie (Les Usines hydro-électriques de la Compagnie des Forges et Aciéries électriques Paul Girod à Ugines (Savoie)], V. Sylvestre. Houille Blanche, vol. 21, nos. 65-66, May-June 1922, pp. 73-83, 10 figs. Describes civil-engineering work in connection with construction of dams and reservoirs; pressure piping; Pelton wheels; etc.

GERMANY. Concrete and Reinforced-Concrete Works at the Isar (Beton- und Eisenbetonarbeiten an der Mittleren Isar), Hans Stanglmayr. Bauingenieur, vol. 3, no. 11, June 15, 1922, pp. 334-342, 9 figs. Reviews number of hydroelectric power works on the river vicinity of Munich, and gives details of construction work.

New Hydroelectric Plants in Bavaria and Thuringia (Neuere Wasserkraftanlagen in Bayern und Thuringen). Schwenk. Bauingenieur, vol. 3, nos. 8, 9, 10 and 11, Apr. 30, May 15, 31 and June 15, 1922, pp. 230-234, 267-273, 300-307 and 330-334, 40 figs. Apr. 30: Civil engineering features of Wisenttal power plant and electric equipment, including Francis double-spiral turbines by Escher, Wyss & Co., and d.c. generators by Siemens-Schuckert. May 15: Describes power plant at Ziegenrück, on river Saale, its constructional features and equipment. May 31: Describes power plant at Hausen; hydraulic features, turbine equipment, etc. June 15: Describes power plant No. 2 at Munich, South, and its equipment, including two units of two coupled Francis turbines each, having head of 4.4 m., 1760 hp. at 125 r.p.m., and 80 per cent efficiency.

ITALY. Hydroelectric Plant of the Barbellino (L'impianto idroelettrico del Barbellino), F. Zanon. Industria, vol. 36, no. 11, June 15, 1922, pp. 201-208, 9 figs. Hydraulic construction work; dams and reservoirs of the lakes of Barbellino, Malgina and Valmorta; power piping; list of central stations drawing their water power from these lakes.

SWEDEN. Haugesund Electric Power Station (Haugesundhalvöens og Karmöys elektrisitetsforsyningsanlaeg), O. Aas-Jörgensen. Teknisk Ukeblad, vol. 69, no. 27, July 7, 1922, pp. 252-255, 9 figs. Construction work and equipment of this high tension station with 60,000 volts capacity.

SWITZERLAND. An Extra-High Head Hydro-Electric Plant. Engineer, vol. 134, no. 3474, July 28, 1922, pp. 88-90, 9 figs. Description of Fully plant in Switzerland, operating under head of 1600.7 m., or 5416 ft.

I

ICE MANUFACTURE

CLEAR ICE. Making of Clear Ice, John E. Starr. Refrig. World, vol. 57, no. 7, July 1922, pp. 11-12 and 14. Increase to ice-making capacity and cold-storage space obtained by remodeling and modernizing plant and equipment.

IGNITION

ANGLE OF CYLINDER AXES. Angle of Cylinder Axes for Uniform Ignition (Gabelwinkel für gleichmässige Zündfolge bei mehrreiheigen Verkehrsmotoren), H. Schrön. Motorwagen, vol. 25, nos. 16 and 17, June 10 and 20, 1922, pp. 307-312 and 329-333, 107 figs. Describes angle of cylinder axes in connection with crankshaft arrangements for multiple-cylinder motors. Concludes that construction with cylinders opposite each other leaves free choice of angle but complicates crankshaft; normal construction simplifies crankshaft.

HIGH-TENSION SPARK. High Tension Spark-Ignition in Internal-Combustion Engines, J. D. Morgan. Instn. Mech. Engrs. Proc., no. 2, 1922, pp. 303-315, 6 figs. What is expected of spark-generators and discussion of spark and conditions effecting its production.

IMPACT TESTING

ALLOY STEELS. Significance of the Impact Test, F. C. Langenberg and N. Richardson. Forging and Heat Treating, vol. 8, no. 7, July 1922, pp. 309-312. Typical test data on certain alloy steels and ordnances steels are recorded, illustrating author's conclusions and furnishing opportunity for comparison of static and dynamic tests. Paper from Symposium before Am. Soc. for Testing Matls.

INDUSTRIAL MANAGEMENT

FORD'S FOUR PRODUCTION PRINCIPLES. Ford's Four Production Principles, Samuel Crowther. Factory, vol. 29, no. 1, July 1922, pp. 15-17. Never letting well enough alone; always apportioning responsibility definitely; holding foremen not for costs but for production; treating interest charges as decreased profit.

STABILIZING PROFITS BY CHARTS. Charting as an Aid in Stabilizing Profits, Percy A. Bivins. Indus. Management, vol. 63, nos. 5 and 6, and vol. 64, no. 1, May, June and July 1922, pp. 257-265, 355-361 and 33-42, 29 figs. Enabling executives to apply graphic methods to problem of profit stabilization.

See also time study.

INSPECTION

See optical instruments.

INSTRUMENTS

SCIENTIFIC, MECHANICAL DESIGN. The Mechanical Design of Scientific Instruments. Engineering vol. 113, nos. 2945, 2946, 2947 and 2948, June 9, 16, 23 and 30, 1922, pp. 729-730, 763-764, 794, and 828-829, 24 figs. Consideration in design of qualitative and quantitative instruments used in many branches of physical engineering and chemical sciences. Abstract of three Cantor Lectures delivered before Royal Soc. of Arts.

INSULATING MATERIALS

RESEARCH METHODS. Directions for the Study of Hard Composite Dielectrics (Insulating Materials), Instn. Elec. Engrs. Jl., vol. 60, no. 309, May 1922, pp. 565-574, 19 figs. Methods of test for use in investigation of mechanical and electrical properties, and suitability for different classes of service. Report from British Elec. and Allied Industries Research Assn.

INSULATORS, ELECTRIC

OVERPOTENTIAL TESTS. An Overpotential Test for Insulators, G. W. Lapp. Am. Inst. Elec. Engrs. Jl. vol. 41, no. 7, July 1922, pp. 491-495, 5 figs. Endeavour to establish by specific test that each insulator has liberal initial factor of safety and will be proof against deterioration is cause of test described.

INTERNAL-COMBUSTION ENGINES

Maximum Pressures. Comparing Maximum Pressures in Internal Combustion Engines, Stanwood W. Sparrow and Stephen M. Lee. Nat. Advisory Committee for Aeronautics Tech. Notes no. 101, June 1922, 4 pp., 3 figs. Thin metal diaphragms form satisfactory means; diaphragm is clamped between two washers in spark-plug shell and its thickness is chosen such that when subjected to explosion pressure exposed portion will be sheared from rim in short time.

See also automobile engines; diesel engines; gas engines; ignition; oil engines; semi diesel engines;

IRON

Puddled. Make Puddled Iron Mechanically, E. C. Kreutzberg. Iron Trade Rev., vol. 71, no. 6, Aug. 10, 1922, pp. 365-366, 9 figs. Description of puddler developed at Eastern plant producing 1500-lb. puddle balls at rate of one per hr.

IRON AND STEEL

Fiber in. Fibre in Iron and Steel, F. F. McIntosh. Am. Soc. for Steel Treating, Trans., vol. 2, no. 10, July 1922, pp. 856-863 and (discussion) 864-868, 9 figs. Importance of fibre in performance of iron or steel and factors which govern formation and character.

IRON CASTINGS

Manufacture Direct from Ore. Making High-Grade Castings Direct from the Ore, F. H. Bell. Can. Foundryman, vol. 13, no. 7, July 1922, pp. 17-18, 2 figs. Ore melted in ordinary blast furnace is kept in vacuum thermos container until chemical analysis is taken after which it is mixed with cupola iron.

Rolls. Casting Rolls (Walzenguss), Carl Irresberger. Giesserei Zeitung, vol. 19, nos. 23, 24, 25 and 26, June 6, 13, 20 and 27, 1922, pp. 342-345, 354-358, 371-374 and 381-386, 55 figs. Processes of casting steel rolls; tempered and untempered cast-iron rolls; molds; annealing furnaces; hardening and depth of penetration; hollow rolls.

IRRIGATION

Canals, Graphical Determination. Dimensions of Irrigation Canals Graphically Determined, P. Baumann. Can. Engr., vol. 43, no. 2, July 11, 1922, pp. 137-138, 2 figs. Value of graphical methods for practical proportioning; slope and required discharge being known, area, depth of water required and velocity readily found.

Efficiency. The Efficiency of Irrigation, G.E. P. Smith. Contract Rec., vol. 36, no. 28, July 12, 1922, pp. 697-699. Water losses and ways of reducing them; distribution; duty of water.

Return-Flow. Return-Flow Water from Irrigation Developments, R. I. Meeker. Eng. News-Rec., vol. 89, no. 3, July 20, 1922, pp. 105-108. Discussion of return seepage water from irrigation to water diverted; statistics of Colorado Valleys indicate one acre-foot per acre recoverable, maximum in summer and fall.

J

JAPANNING

Methods. Japanning, S. R. Gerber. Metal Industry (N.Y.), vol. 20, nos. 6 and 7, June and July 1922, pp. 225-227 and 161-163, 5 figs. Description of methods by which rule-of-thumb operations of an old art were changed to standard operations.

K

KEROSENE

Vegetable and Animal Oils as Sources. Catalytic Transformation of Vegetable and Animal Oils Into Kerosene (Transformation catalytique des huiles végétales et animales en pétrole), Alphonse Mailhe. Annales de Chimie, vol. 17, May-June 1922, pp. 304-332. Concludes that it is easy to reduce hydrocarbons from animal and vegetable oils, and that resulting hydrocarbons are in nature of mixed kerosenes very much like Borneo kerosene which has similar composition.

L

LABOUR

Craftsmen Councils. Brief History of Craftsmen Movement in Cleveland. Universal Engr., vol. 36, no. 2, Aug. 1922, pp. 42, 44 and 46, 1 fig. Organization of craftsmen councils by groups of masons engaged in same line of industry.

LABORATORIES

[illegible]. Technical [illegible] of the Postal Telegraph Office (Le [illegible] télégraphes), Jacques Boyer. Nature, no. 2512, May 27, 1922, pp. 325-330, 8 figs. Describes Paris official laboratory in which telegraph, telephone and other instruments of the service are tested.

[illegible] Laboratory (Un laboratoire d'essais à 500,000 volts), H. de Raemy. Revue Générale de l'Electricité, vol. 11, no. [illegible], 1922, pp. [illegible] new laboratory of Ateliers de Constructions électriques de Delle, at Villeurbanne, which is especially [illegible] for transmission lines.

LADLES

Stopper. Development in Design of Casting Ladle Bungs. Metal Industry (Lond.), vol. 20, no. 26, June 30, 1922, pp. 621-622, 6 figs. Discussion of design which should make connection between bung rod and bung absolutely certain and easy to make. From Stahl u. Eisen.

LIGHTING

Glareless. Light Without Glare, Ward Harrison. Am. Inst. Elec. Engrs. Jl., vol. 41, no. 8, Aug. 1922, pp. 609-615, 8 figs. Discussion of features determining satisfactory illumination without glare. Includes tables from Illumination Eng. Soc. Code of Indus. Lighting in which for first time light sources are modified.

Industrial. Good Lighting an Essential in the Efficient Conduct of Business, J. H. O'Hara. Elec. News, vol. 31, no. 13, July 1, 1922, pp. 36-39. Expenditure of one-half of one per cent of pay roll increases output five per cent. Saving equal to ten times expense. Practical example. Paper read before C.E.A. convention.

Office Buildings. Indirect Lighting in City Office Building, G. F. Evans & J. W. Morrison. Elec. World, vol. 80, no. 2, July 8, 1922, pp. 61-62, 6 figs. Dixie terminal building in Cincinnati uses system with 8 to 15 foot-candles; arcade illumination eliminates hanging fixtures; aids to maintenance included in design.

Safety. Illumination and the Worker, G. Bertram. Regar. Safety, vol. 9, no. 7, July 1922, pp. 156-160, 4 figs. Value of correct use in making for safe conditions in industry.

LIGHTNING ARRESTERS

Types. Lightning Arresters, H. Cotton. Beama, vol. 10, nos. 5, 6 and 7, May, June and July 1922, pp. 358-364, 418-426 and 497-504, 28 figs. Lightning phenomena and the different ways in which overvoltages are produced; earthing choking coil; condensers; water jet, horn gap, electrolytic, and oxide film arresters; protection of telephone circuits.

LIGNITE

Carbonization. Modern Methods of Treating Lignite and Its Derivatives (Procédés modernes pour le traitement du lignite et de ses dérivés). Chaleur et Industrie, vol. 3, no. 25, May 1922, pp. 1274-1276, 2 figs. Discusses carbonization; Fischer rotary furnace.

LIME

Plants. New Lime Plant is Last Word in Modern Efficiency, William B. Eastwood. Cement, Mill and Quarry, vol. 21, no. 2, July 20, 1922, pp. 35-41 and 44, 14 figs. Mining, crushing, screening, calcining, hydrating and shipping are continuous without waste or climatic interruption.

LIQUIDS

Inflammable, Storage of. Storing Inflammable Liquids (Lagerung feuergefährlicher Flüssigkeiten). Zeit. des Bayerischen Revisions-Vereins, vol. 26, no. 12, June 30, 1922, pp. 100-102, 1 fig. Bavarian safety regulations for storage of petroleum, benzene, gasoline, etc., especially use of protective gas.

LOCOMOTIVE BOILERS

Circulation Effect on Efficiency. Effect of Circulation on Locomotive Boiler Efficiency, F. G. Lister. Steam, vol. 30, no. 1, July 1922, pp. 7-10. Recent attempts to create more rapid and unrestricted circulation thereby attaining more nearly uniform temperature throughout and reducing equal expansion and contraction of all parts. Paper read before Int. Ry. Fuel Assn.

LOCOMOTIVES

Design and Construction. Report on Locomotive Construction. Ry. Age, (Daily), vol. 72, no. 24d, June 21, 1922, pp. 1631-1639. Various developments of year and résumé of 11 reports including recommendations (A.R.A. Mech. Div. Proc.).

Drifting Valves. When a Locomotive Drifts. Ry. Jl., vol. 28, no. 8, Aug. 1922, pp. 21-22, 3 figs. Description of Ripken automatic drifting valve.

Electric. *See Electric Locomotive.*

Failure Causes and Remedies. Why Engines Fail, Frank C. Packard. Central Ry. Club Proc., vol. 30, no. 3, May 1922, pp. 1187-1198 and (discussion) 1198-1217. Analysis of failure and causes; losses caused thereby and argument for placing of full responsibility.

Fuel Consumption. Effect of Tonnage and Speed on Fuel Consumption, J. E. Davenport. Ry. Age, vol. 73, no. 2, July 8, 1922, pp. 71-75, 8 figs. Ten miles per hr. affects fuel rate; economical tonnage for various speeds, effect of grade and car weight. (Abstract). Paper read before Int. Ry. Fuel Assn.

Increasing Mileage of. Increasing Locomotive Mileage — A Chemical Problem First, W. H. Hobbs. Ry. Rev., vol. 71, no. 1, July 1, 1922, pp. 11-12. Why better boiler feedwater is essential to increase in productive time of locomotive.

Mountain Type. A Mountain Type Locomotive for High Capacity. Ry. Mech. Engr., vol. 96, no. 7, July 1922, pp. 381-385, 11 figs. New Union Pacific locomotive is lightest per unit of power of any 4-8-2-yet built, weighing 345,000 lb. and having maximum tractive effort of 54,800 lb. ***See also Ry. Rev., vol. 70, no. 23, June 10, 1922, pp. 816 826, 16 figs, partly on supp. plate.***

Oil-Burning. Oil Fuel for Locomotives on the Taltal Railway of Chile, E. H. Revill. Ry. Gaz., vol. 36, no. 26, June 30, 1922, pp. 1030-1034, 6 figs. Comparison of oil and coal as fuel; economies which have been effected by use of oil; design of oil-fuel apparatus burners.

Operation. Work of the Commission for the Utilization of Fuel — 6th Report (Travaux de la Commission d'Utilisation du Combustible — Sixième Rapport). Bul. de la Société d'Encouragement pour l'industrie Nationale, vol. 134, no. 6, June 1922, pp. 565-599. Report of First Sub-Committee. Efficiency of locomotives; steam consumption and distribution; feedwater preheating; operation of locomotives.

Steam-Turbine. The Ljungström Turbine Locomotive (Ljungströms turbinlokomotiv), Fredrik Ljungstrom. Teknisk Tidskrift, vol. 52, nos. 21, 22, 23, and 25, May 27, June 3, 10 and 23, 1922, pp. 331-333, 348-351, 363-367 and 396-400, 31 figs. Experimental work, and construction and operation of locomotives driven by steam turbines. Particulars of saving resulting.

Turbo-Condensing Turbo-Condensing Locomotive Development in Europe. Ry. Rev., vol. 71, no. 7, Aug. 12, 1922, pp. 201-207, 9 figs. Details of Ljungstrom turbine-condensing locomotive placed in service on Swedish State Railways.

LUBRICATING OILS

Analysis. Technical Examination of Lubricating Oil and Grease, F. W. Watson and H. D. Bell. Chem., Met. and Min. Soc. of So. Africa Jl., vol. 22, no. 11, pp. 211-219. Analytical methods and data. Results of tests.

Coolers for. Tubular Oil Cooler. Engineering vol. 114, no. 2951, July 21, 1922, p. 89, 6 figs. Describes marine cooler having 250 ft. cooling space, and which will deal with $1\frac{1}{2}$ million B.t.u. per hr. Constructed by Serck Radiators, Ltd.

LUBRICATION

Mechanism of. The Mechanism of Lubrication, Robt. E. Wilson and D. P. Barnard, 4th. Soc. Automotive Engrs., Jl., vol. 11, no. 1, July 1922, pp. 49-60, 11 figs. Presenting best available data to afford basis for predicting effect of different variables under any specified conditions.

Oil Drops. What Determines the Size of the Oil Drop, W. F. Osborne. Power, vol. 56, no. 7, Aug. 15, 1922, pp. 251-252. Discussion of conditions affecting size of oil drops going to engine cylinder.

M

MACHINE TOOLS

Gear Drive. Methods of Machine Tool Design, A. L. De Leeuw. Am. Mach., vol. 57, no. 6, Aug. 10, 1922, pp. 223-227, 12 figs. Comparative merits of cone and tumbler quick gear change device.

MACHINING

Deformation During. Avoiding Deformation During Machining, A. Whitehead. Engineer, vol. 134, no. 3474, July 28, 1922, pp. 98-99, 3 figs. Discusses as example, chucking of a ball race, machining small piston, and holding small armature.

MAGNESIUM ALLOYS

Engineering Uses. Magnesium Alloys in Engineering. Practical Engr., vol. 65, no. 1844, June 29, 1922, pp. 404-405, 2 figs. Electron containing 80 per cent magnesium for automobile pistons; general physical characteristics and precautions in molding.

MALLEABLE IRON

Drilling Data. Malleable-Iron Drilling Data, H. A. Schwartz and W. W. Flagle. Soc. Automotive Engrs. Jl., vol. 11, no. 1, July 1922, pp. 81-87, 12 figs. Drill tests of five factors that influence machining properties of malleable iron.

MATERIALS

Testing. Testing Materials for Shipbuilding, Leon Guillet. Engineering, vol. 114, no. 2950, July 14, 1922, pp. 57-58, 6 figs. Methods of testing. Tensile, falling weight, ball hardness, punching, wearing, alternating, and physical tests, and macrographic investigations.

MEASURING INSTRUMENTS

End Measurement. Accurate End Measurement on Measuring Machines Using a Screw, H. Baker. Engineer, vol. 134, no. 3474, July 28, 1922, pp. 81-83, 6 figs. Experiments relating to attempts to measure correctly to one ten-thousandth of a millimeter. Description of machine used and methods.

Hollow Membrane. Measuring and Regulating by Means of A Hollow Membrane (Messen und Regeln mit Hilfe der Hohlmembran), E. Stach. Glückauf, vol. 58, no. 26, July 1, 1922, pp. 807-813, 10 figs. Requirements of measuring and recording instruments as to construction and sensitiveness; shows that hollow metals membrane recorder gives better results than wet measuring instruments.

METAL SPRAYING

Metals for. Metals and Alloys Suitable for Spraying (Für Spritzguss geeignete Metalle und Legierungen), F. Reinboth. Metall-Technik, vol. 48, no. 24, June 8, 1922, pp. 266-267. Composition of various alloys and their choice for a given purpose which requires given physical or electrical properties.

Schoop Process. The Schoop Metal Spraying Process With Special Reference to Its Application in Shipbuilding (Das Schoopsche Metallspritzverfahren), M. U. Schoop. Schiffbau, vol. 23, no. 38, June 21, 1922, pp. 1106-1107, 1 fig. Various uses of metallizing pistol for covering chains, anchors, etc., with zinc, ship bottoms and propellers with copper, etc.

METALS

Electroanalysis of Alloys. Electro-Analysis of Metals and Alloys, Kling and Lassieur. Chem. Trade Jl. and Chem. Engr., vol. 71, no. 1835, July 21, 1922, pp. 73-74. Description of new rapid method of electrolytic analysis applicable to wide range of metals. Translated from Annales de Chimie Analytique, June 15, 1922.

Hardening. On the Theory of the Hardening of Metals, Kotaro Honda. Science Reports Tôhoku Imperial Univ., 1st series, vol. 11, no. 1, Apr. 1922, pp. 19-28. Martensite being homogeneous solid solution, is hard principally because of nature of atomic forces; consideration of hardness due to crystalline structure of metals.

Spinning. Metal Spinning and Spinning Tools, Edward Heller. Machy. (N.Y.), vol. 28, no. 12, Aug. 1922, pp. 972-976, 9 figs. Description of machinery and methods for various types of spinning.

MILLING MACHINES

Aligning and Inspecting. Aligning and Inspecting Milling Machines. Machy. Lond., vol 20, no. 511, July 13, 1922, pp. 441-444, 6 figs. Methods employed by manufacturers of Cleveland milling machine.

MINERAL RESOURCES

Lead-Zinc near Great Slave Lake. Lead-Zinc deposits Near Great Slave Lake, Northwest Territory, C. B. Dawson. Can. Min. Jl., vol. 43, no. 23, June 9, 1922, p. 358. Investigations have shown rich prospects when improvements in transportation have been accomplished.

MINERALS

Barytes. Marketing of Barytes, S. W. Thompson. Eng. and Min. Jl., Press, vol. 114, no. 3, July 15, 1922, pp. 109-110. Mining of mineral has increased greatly during last 5 years; Georgia and Missouri are principal domestic sources; manufacture of lithopone, an "Infant Industry" takes half output; used in rubber and paint.

MOLDING MACHINES

Types. Molding Machines (La staffatura a scosse ed alcuni tipi staffatrici), P. A. Sordelli. Industria, vol. 36, no. 11, June 15, 1922, pp. 211-214, 9 figs. Describes various types of molding machines with pneumatic stripping arrangement, including that of Britannia Foundry, Coventry, and that of Leber & Bröse, and their operation.

MONEL METAL

Tubular Uses. Monel Metal's Merits in Tubular Uses, J. L. Sussman. Raw Material, vol. 5, no. 6, July 1922, pp. 208-210, 6 figs. Manufacture in tube form is step toward solving problem of chemically resistant non-fragile material.

MORTARS

Lime. Hardening of Hydraulic Binders — Quality and Acceptance of Lime (Le durcissement des liants hydrauliques. Qualités et réception des chaux), E. Camerman. Annales de l'Association des Ingénieurs Sortis des Ecoles Spéciales de Gand, vol. 12, no. 1, 1922, pp. 1-15, 1 fig. Discusses in detail question of colloidal solutions; silicate and its part in hardening of hydraulic binders hydraulic lime; tensile strength; specifications.

MOTOR BUSES

Design and Operation. Principles of Motor Bus Design and Operation, David Beecroft. Commercial Vehicle, vol. 26, no. 11, July 1, 1922, pp. 12-14, 3 figs. Principles that apply to big Fifth Avenue buses apply also to all buses everywhere; why design is big factor in successful bus operation. Review of paper presented by Col. Green at Semi- Annual mtg. of S.A.E.

Developments. Characteristics of Present-Day Buses, R. E. Plimpton. Bus Transportation, vol. 1, no. 7, July 1922, pp. 375-378, 3 figs. Requirements for city, inter-city, and country service considered; comfort and convenience factors found in modern bodies; devices for fare collection now being installed. (Abstract.) Paper read before Soc. Automotive Engrs.

MOTOR TRUCKS

Steam. A Steam Six-Wheeler, Motor Transport, vol. 34, no. 904, June 26, 1922, p. 781, 3 figs. Two-wheeled conversion attachment to Ransomes steam wagon which affords enormous carrying capacity.

A Milestone in Steam Design. Motor Transport, vol. 34, no. 904, June 26, 1922, pp. 768-771, 8 figs. New 7-ton Yorkshire employing steam power in conjunction with many of best features of petrol car practice.

Tipping Gears. Tipping Gears for Motor Lorry Bodies, W. Erskine Dommett. Eng. Rev., vol. 35, no. 12, June 1922, pp. 406-412, 15 figs. Manner in which mechanical and hydraulic types have accomplished speed of operation, angle of tilt, ease when manually actuated. lightness, reliability, and low cost.

N

NITRIC ACID

Manufacture, Saltpeter vs. Synthetic Ammonia. Nitric Acid from Saltpeter or Synthetic Ammonia, Guy B. Taylor. Chem. Age (N.Y.), vol. 30, no. 6, June 1922, pp. 244-246, 1 fig. Cost factors and conditions that will determine raw material of nitric acid manufacture.

NITROGEN

Fixation. The Fixed Nitrogen Research Laboratory. Chem. Age (N.Y.), vol. 30, no. 6, June 1922, pp. 266-267, 4 figs. Equipment and facilities of plant at American University, Wash. D.C., and government work carried on there.

Synthetic, Products. Synthetic Nitrogen Products and the Ammonia Obtained as By-Product in Coal Distillation (Les produits azotés synthétiques, et l'ammoniaque obtenus comme sous-produits de distillation de la houille), A. Grebel. Génie Civil, vol. 80, no. 25, June 24, 1922, pp. 567-570. Influence of different phases of recovery and treatment of ammonia on final yield of sulphate.

NON-FERROUS METALS

Gas Absorption and Oxidation. Gas Absorption and Oxidation, B. Woyski and John W. Boeck. Foundry, vol. 50, no. 14, July 15, 1922, pp. 571-573, 2 figs. Defects in non ferrous metals caused by gas absorption often erroneously attributed to oxidation; defective metal brought back to normal by proper melting practice; oxides of low gravity remain in metal. Paper read before Am. Inst. Min. and Met. Engrs.

NUMBERS

DUO-DECIMAL SYSTEM. Standardization of Numbers (Die Normung des Zahlenmasses), Alfred Sieber. Maschinenbau, vol 1, no 5, June 10, 1922, pp. 280-284, 4 figs. Disadvantages of decimal system and advantages of duo-decimal system.

O

OIL

BRIQUETTING. Solid Oil With Peat Vehicle, Wm. A. Hall. Petroleum Times, vol. 8, no 184, July 15, 1922, p 90. Brief description of method of producing solid oil with peat as vehicle.
DIELECTRIC STRENGTH. Three Thousand Tests on the Dielectric Strength of Oil, J. L. R. Hayden and W. N. Eddy. Am. Inst. Elec. Engrs. Jl. vol. 41, no. 7, July 1922, pp. 495-499, 7 figs. Three groups with standard insulating oil and small sphere, large sphere, and sphere-needle gap; one with commercial, another with chemically pure benzol, and last with air.
PROTECTION FROM EVAPORATION. Durable Foam Seal Stops Evaporation and Reduces Fire Risk. Paul Truesdell. Nat. Petroleum News, vol. 14, no. 28, July 12, 1922, pp. 43-44, 1 fig. Sealite, compound containing 50 per cent air, cornstarch, glycerine and gelatine and other ingredients, when poured over top of tank of oil, spreads over surface forming floating seal which prevents evaporation and fire.

OILS

ROAD. Road Oils and Their Properties as Demonstrated by Current Tests, C. M. Baskin. Can. Engr., vol. 43, no. 6, Aug. 8, 1922, pp. 238-241, 2 figs. Data of tests to establish value of oils for road oiling purposes.

OIL ENGINES

DESIGN. The Oil Engine of To-day, Chas. E. Lucke. Power, vol. 56, no. 7, Aug. 15, 1922, pp. 241-243, 2 figs. Discussion of recent improvements in general design that have made oil engine thoroughly reliable, including fuel charging and cylinder cooling.
HEAVY-OIL. Present State of Heavy-Oil Engines (Etat actuel de la Question des Moteurs à Huile Lourde.) Marcel Bochet. Mémoires et Compte Rendu des Travaux de la Société des Ingénieurs Civils de France, vol. 75, nos 1-3, Jan.-Mar. 1922, pp. 87-105, 15 figs. partly on supp. plates. Discusses marine engines used in various shipyards; describes semi-Diesel engine and its operation.
OPERATION. Oil Engine Hints, Bert Bare. Power Plant Eng., vol. 26, no. 14, July 15, 1922, pp. 704-707, 2 figs. Hot ignition; missing; hunting; failure to start; loss of compression; compression card.

OIL FUELS

VEGETABLE. Using Vegetable Oils for Fuels (Utilisation des huiles végétales comme combustibles industriels), Maurice Leduc. Chaleur et Industrie, vol. 3, no. 25, May 1922, pp. 1277-1280. Their calorific power; French vegetable oils; unlimited production; use in oil-burning installations.

OIL SHALES

VALUE OF. Factors Influencing the Value of Oil-Shale Lands, Dean E. Winchester. Eng. and Min. Jl. Press, vol. 114, no. 2, July 8, 1922, pp. 61-66, 3 figs. Careful analysis of factors other than recoverable oil which affect value of a deposit.

OFFICE MANAGEMENT

STAFF TRAINING. Scientific Organization of Work at the Factory (Contribution au problème de l'organisation scientifique du travail dans les ateliers), Gaston Vidal. Arts et Métiers, vol. 75, no. 20, May 1922, pp. 129-141, 12 figs. Activities of National Schools of Arts et Métiers in training office workers.

OPTICAL INSTRUMENTS

SCREW AND GEAR INSPECTION. Inspection by Optical Projection. Machy. (N.Y.), vol 28, no 12, Aug. 1922, pp 984-988, 6 figs. Description of Methods with particular data on screw and gear inspection.

P

PAINTS

PHYSICAL PROPERTIES. Some Physical Properties of Paints. P. H. Walker and J. G. Thompson. Ry. Rev., vol. 71, no. 3, July 15, 1922, pp. 76-81, 2 figs. Investigations by U.S. Bur. Standards presented at convention of Am. Soc. for Testing Matl.
SULPHATE PULP LINED DIGESTERS. Sulphate Pulp Made in Lined Digesters, P. C. Austin. Paper, vol 30, no 16, June 21, 1922, pp 11 and 16. Prevention of leaks, improved yield and steam economy among advantages. Paper read before joint convention of Cost Assn of Paper Industry and Am. Pulp and Paper Mill Superintendent's Assn.

PAPER MANUFACTURE

STARCH, USE OF. The Use of Starch in Paper Manufacture, W. A. Nivling. Paper Mill, vol. 46, no. 26, July 8, 1922, pp. 4-6 and 8, 11 figs. Consideration of [illegible] differences in sizing operation. Paper read at Superintendents' [illegible].

PAVEMENTS

COSTS. Effect of Initial [illegible] Ultimate Costs, W. R. Rosengarten. Highway Engr. and Contractor, vol. 7, no. 1, July 1922, pp. 39-42, 5 figs. [illegible] asphalt in building modern highways.

WHEEL LOAD DISTRIBUTION. Distribution of Wheel Load on Pavement Sections, H. F. Clemmer and C. A. Hogentogler. Eng. and Contracting, vol. 58, no. 1, July 5, 1922, pp. 5-9, 4 figs. Results of research investigation at Bates experimental road and general deductions therefrom.

PAVEMENTS, ASPHALTIC CONCRETE

ADVANTAGES. Development of Asphaltic Concrete, R. G. Davidson. Contract Rec. vol 36, no. 26, June 28, 1922, pp. 608-612. Merits of this type of pavement; evolution of bituminous road and improvements in methods of construction.

PAVEMENTS, CONCRETE

CONSTRUCTION IN HOT WEATHER. Concrete Pavement Construction in Hot Weather. Contract Rec., vol. 36, no. 29, July 19, 1922, pp. 708-710, 3 figs. Measures to be taken to ensure satisfactory results in summer season; protection against evaporation of necessary moisture is chief essential.

PEAT

BOILER FIRING. Experience With Peat Firing of Steam Boilers (Erfahrungen über die Verheizung von Torf im Dampfkesselbetriebe), Ph. Stauf. Zeit. des Bayerischeff Revisions-Vereins, vol. 26, no. 13, July 15, 1922, pp. 103-106, 4 figs. Composition and calorific value of peat; suitability of furnaces for peat; comparative figures as to cost.

PILE DRIVERS

HAMMER BLOW. The Efficiency of the Hammer Blow, and Its Effects with Reference to Piling, A. Hiley. Engineering, vol. 113, nos. 2944, 2945 and 2946, June 2, and 16, 1922, pp. 673-674, 711-714, and 745-746, 8 figs. June 2: Scientific means of determining specifications for pile drivers. June 9: Determination of losses of efficiency and means of reducing them. June 16: Considerations governing efficiency when using extractor hammers.

PIPE, CAST-IRON

ANALYSIS AND SELECTION. Getting Best Results with Cast Iron Pipe, F. A. McInnis. Fire and Water Engr., vol. 72, no. 5, Aug. 2, 1922, pp. 221-222. Practical suggestion as to selection of pipe including analyses as to sulphur content made in Boston and elsewhere.

PIPE, CONCRETE

CULVERT. How the Burlington Builds Concrete Culvert Pipe. Ry. Maintenance Engr., vol. 18, no. 7, July 1922, pp. 230-234, 9 figs. Operations involved; steel and wood forms; making of cages; handwork on reinforcement; improved loading methods.

PIPE LINES

DESIGN. Pipe Line (Rohrleitungen), M. Fränkl. Maschinenbau, vol. 1, no. 6, June 24, 1922, pp. 343-346, 5 figs. Essential points in pipe-line installations; most economic kind of pipe; most suitable design of a given installation.

PIPE, WOOD

NOTES ON. Some Observations Concerning Wood Pipe, J. W. Ledoux. Am. Water Works Assn. Jl., vol. 9, no. 4, July 1922, pp. 549-569. Cost design in particular; formula for strength; water hammer; discharging capacity; comparison of wooden and cast-iron pipes.

POLES, WOODEN

PRESERVATIVE TREATMENT. Adds Life to Southern Pine, P. R. Hicks. Telephone Engr., vol. 26, no. 7, July 1922, pp. 16-19, 3 figs. Pressure creosoted southern pine poles good for many years of thrifty service says noted expert on pole preservation; tells processes and records.

PORCELAIN

TENSILE STRENGTH. The Tensile Strength of Porcelain, F. H. Riddle and J. S. Laird. Am. Ceramic Soc. Jl., vol. 5, no. 7, July 1922, pp. 385-393, 6 figs. Method of accurate determination; ratio of tensile to compression strength; judging of quality.

POWER FACTOR

CENTRAL STATION. Power-Factor Problem of the Central Station, C. W. Drake. Elec. Jl., vol. 19, no. 7, July 1922, pp. 284-289, 5 figs. Induction motor characteristics; overmotoring; possible improvement in power factor of squirrel cage motors; apparatus which will supply necessary reactive kva.; comparative costs of various methods.

POWER PLANTS

BIRMINGHAM, NECHELLS STATION. Electricity Supply in Birmingham. Electrician, vol. 88, no. 2301, June 23, 1922, pp. 744-750, 7 figs. Details of 105,000-kw. ultimate capacity station started before war and now reaching completion.
DEVELOPMENT. Notes from Report of Prime Movers Committee of N.E.L.A. Power Plant Eng., vol. 26, no. 14, July 15, 1922, pp. 697-703, 9 figs. Résumé of development in power-plant engineering during past year.
STEAM CONDITIONS. The Choice of Steam Conditions in Modern Power Stations, L. C. Kemp. Electrician, vol. 88, no. 2302, June 30, 1922, pp. 774-777, 4 figs. Investigation indicating that more careful selection of steam conditions should be encouraged.

POWER TRANSMISSION

Radiotelegraphic. The Problem of Radiotelegraphic Power Transmission (Étude sur le problème de la télémécanique par T. S. F.), Maurice Guéritot. Onde Electrique, vol. 1, no. 3, Mar. 1922, pp. 141-151, 3 figs. Reviews work done in transmitting power by radio to perform certain work at a distance, especially French investigations during war, and discusses difficulties of control at a distance.

PRECIPITATION

Electrical. Electrical Engineering Features of the Electrical Precipitation Process, G. H. Horne, Am. Inst. Elec. Engrs. Jl. vol. 41, no. 7, July 1922, pp. 552-558, 11 figs. Development of transformers, source of power, methods of rectification, relation between precipitation and impressed voltage; power consumption.

Electrical. Recent Conclusions Pertaining to Electrical Precipitation, Walter A. Schmidt. Am. Inst. Elec. Engrs. Jl., vol. 41, no. 7, July 1922, pp. 547-552, 6 figs. Presenting comprehensive conclusions from Investigations of recent years. Bibliography.

PULVERIZED COAL

Explosion Hazard. Pulverized Coal Is Dangerous on the Surface as Well as Underground; Precautions to be Taken in Handling It, L. D. Tracy. Coal Age, vol. 22, no. 5, Aug. 3, 1922, pp. 161-168, 5 figs. Precautions to prevent explosion, particularly with reference to driers and electrical devices; data on self-ignition. From paper read before Fire Chief's Club of Ohio.

Feeding. Principles of Feeding Pulverized Fuel, M. W. Arrowood. Combustion, vol. 7, no. 1, July 1922, pp. 31-34, 47, 6 figs. Consideration of proper method of injection to obtain best conditions at various points in furnace.

R

RADIO COMMUNICATION

Waves, Direction and Intensity of European. The Direction and Intensity of Waves from European Stations, Greenleaf W. Pickard. Inst. Radio Engrs. Proc. vol. 10, no. 3, June 1922, pp. 161-174, 7 figs. Deviation of radio goniometric readings from true bearing of distance and nearby stations measured with coil antenna and receiver. Intensity measured by resistance network. Bibliography.

RADIO TELEGRAPHY

Developments. Radio Telegraphy, Guglielmo Marconi. Am. Inst. Elec. Engrs. Jl., vol. 41, no. 8, Aug. 1922, pp. 561-570, 12 figs. Discussion of recent developments including phenomenal static and travel of electric waves. Also observation of short electric waves under 20 meters with particular reference to unidirectional transmission.

Transmitter Performance. Performance of a Radio-Telegraphic Transmitter with Special Reference to New Installation at North Foreland, Norman Lea. Wireless World, vol. 10, no. 13, June 24, 1922, pp. 384-388, 10 figs. Description of instrument; determination of losses including those in motor alternator, transformer, low-frequency choke, condenser, main spark gap, aerial, etc.

RADIOTELEPHONY

Loud-Speaking Apparatus. Talking to Thousands by Telephone. Telephony, vol. 83, no. 1, July 1, 1922, pp. 21-23, 8 figs. Description of equipment by which officials in New York and San Francisco talked to 25,000 employees of West. Elec. Co. at Hawthorne, Chicago, Ill.

RAILS

Bull-Head. Specification for Bull-Head Rails. Iron and Coal Trades Rev., vol. 105, no. 2836, July 7, 1922, p. 5. Specifications issued by British Eng. Standards Assn.

Wear. The Wavy Wear of Rails (Usure ondulatoire des Rails), M. E. Resal. Industrie des Tramways, Chemins de fer et Transports Publics Automobiles, vol. 16, no. 181, Jan. 1922, pp. 10-17, 13 figs. Discusses question in connection with rolling of metal which may be responsible for wave formation, and advises experiments to be made, especially to prove connection.

RAILWAY ELECTRIFICATION

France. Electrification in France, M. Sabouret, Elec. Ry. and Tramway Jl., vol. 46, nos. 1130 and 1136, May 12 and June 16, 1922, pp. 212-214 and 278-280, 5 figs. Report of chief engr. of Orleans Ry. Co. to Internat. Ry. Congress at Rome showing plans for 5000 miles to be electrified.

Main-Line Railroads. Electrification of Main Line Railroads, S. T. Dodd. Gen. Elec. Rev., vol. 25, no. 7, July 1922, pp. 439-440. Outstanding features of accomplished and contemplated installations.

Trend of Development. The Electrification of Railways, F. Rowlinson. Beama, vol. 10, nos. 5 and 6, May and June 1922, pp. 349-357 and 437-444, 12 figs. Outstanding features of successful installation and facts to be considered in prospective ones.

RAILWAY OPERATION

Service of Supply. The Origin and Development of the Service of Supply, George G. Yeomans. Ry. Rev., vol. 70, nos. 23 and 24, vol. 71, no. 1, June 10, 17 and July 1, 1922, pp. 868-869, 923-927 and 12-15. Short history of most recent fundamental development in railway organization.

Train Control. British Approve Automatic Train Control. Ry. Age, vol. 73, no. 4, July 22, 1922, pp. 149-153, 2 figs. Ministry of Transport Committee recommends intermittent contact type; disapproves of speed control.

RAILWAY REPAIR SHOPS

Santa Fe Ry. Santa Fe Competes Modern Shops at Albuquerque. Ry. Age, vol. 73, no. 6, Aug. 5, 1922, pp. 237-242, 10 figs. Description of locomotive repair building.

RAILWAY SHOPS

Canadian Pacific at Angus. How Shop Output is increased and Costs Reduced at Angus. Ry. Rev., vol. 70, no. 23, June 10, 1922, pp. 854-865, 19 figs. Organization and equipment and expression of value of effective shop scheduling system.

Car. Equipment and Operation of a Modern Steel Car Plant, Geo. A. Richardson. Ry. Rev., vol. 70, no. 24, June 17, 1922, pp. 913-918, 8 figs. Plant of Cambria Steel Co., Johnstown, Pa., which is integral part of steel manufacturing organization; capable of building 50 all-steel cars a day.

RAILWAY SIGNALING

Locomotive Cab Signals. On the Question of Locomotive Cab Signals, Faustino Villa. Int. Ry. Assn. Bul., vol. 4, no. 5-6, May-June 1922, pp. 821-862, 17 figs. Classification and functions; mechanical, electrical and electro-mechanical repeating apparatus.

RAILWAY SWITCHES

Remote Operation. Remote Operation of Switches on the New Haven. Ry. Age, vol. 73, no. 6, Aug. 5, 1922, pp. 251-252, 6 figs. Satisfactory results are reported after 40 years experience with 28 low-voltage machines.

RAILWAY TERMINALS

Operation. Terminal Stations for Passengers, L. Maccallini. Int. Ry. Assn. Bul., vol. 4, nos 5-6, May-June 1922, pp. 753-761. Best arrangements to reduce number of movements of engines and empty cars.

RAILWAY TIES

Reinforced-Concrete. Note on Some Recent Types of Reinforced Concrete Sleepers, R. Desprets. Int. Ry. Assn. Bul., vol. 4, no. 7, July 1922, pp. 950-971, 6 figs. Investigation of Calot type tried by Paris-Orleans Ry. Co. and Vagneux type tried by Paris-Lyons-Mediterranean Ry. Co. Latter is less expensive.

RAILWAY TRACK

Effect of Rolling Stock on. Action and Reaction Between Rolling Stock and Track (Considérations générales sur les actions réciproques de la voie et du matériel roulant et sur le calcul des rails), R. Desprets. Annales des Travaux Publics de Belgique, vol. 13, no. 2, Apr. 1922, pp. 233-272, 6 figs. Analyzes forces and stresses, vertical, longitudinal and lateral action, and makes calculations of rails on this basis.

REAMERS

Standardization. Standardizing Shell Reamers and Arbors, H. S. Kartsher. Machy (N.Y.), vol. 28, no. 11, July 1922, pp. 892-895, 7 figs. Standard dimensions governing fits, and gages used for inspection.

REFRACTORIES

Fireclay. Fireclay Refractories; C. E. Bales. Nat. Engr., vol. 26, no. 7, July 1922, pp. 300-303, 3 figs. Origin and occurrence of fireclay; mining and preparation for use; relation to boiler practice. Paper read before Kentucky No. 1, N.A.S.E.

Research. Report of the Refractory Materials Research Committee. Gas Jl., vol. 158, no. 3085, June 28, 1922, pp. 840-851 and (discussion) 851-852, 4 figs. Revision of British specification. Standardization of After-Contraction Test, by D. A. Jones. Thermal Conductivity of Refractory Materials at High Temperatures, by A. T. Green.

REFRIGERATING MACHINES

Turbo-Compressor. A New Refrigerating Machine. Ice and Refrigeration, vol. 63, no. 1, July 1922, pp. 43-45, 2 figs. Novel turbo-compressor newly discovered low-pressure refrigerating fluid demonstrated before gathering of 300 engineers at plant of Carrier Engr. Corp., Newark, N.J.; machines especially adapted for producing cold water required in cooling air for industrial purposes.

RELAYS

Overload. Overload Inverse-Time-Limit Relay With A Definite Adjustable Minimum. Elec. Rev., vol. 90, no. 2, 324, June 9, 1922, pp. 825-826. Description of instrument which has inverse-time-limit characteristics up to certain current value, but for higher current values up to short circuit conditions, fixed time limit.

Protective. Trend in Relay Protection. Elec. World, vol. 80, no. 2, July 8, 1922, pp. 66-68, 2 figs. Protective devices committee of A.I.E.E. finds that differential schemes are becoming most popular. All classes may be grouped under four divisions; great diversity in practice found.

RIVETING

Hammers for. Operations with Riveting Hammers. Machy. (Lond.), vol. 20, no. 511, July 13, 1922, pp. 453-455, 6 figs. Examples of cold-heading and rivet-setting operations performed on high-speed riveting hammers.

ROAD MATERIALS

Field Tests. Field Testing of Materials in Highway Construction, John H. Bateman, Eng. and Contracting, vol. 58, no. 1, July 5, 1922, p. 10. Sand tests: determination of organic matter in sand; tests of water for concrete; concrete consistency determination. (Abstract) Paper read before conference on Highway Engineering at Univ. of Mich.

ROADS

Bates Experimental. Bates Experimental Road Tests. Highway Engr. and Contractor, vol. 7, no. 1, July 1922, pp. 27-35, 26 figs. Reports of Progress made in Illinois in testing to destruction various types of pavements.

SURFACES. Design of Rigid Type Road Surfaces. A. T. Goldbeck. Can Engr., vol 43, no 6, Aug 8, 1922, pp. 227-230, 5 figs. Effect of moisture content of subgrade; stresses produced by warping of road slab; temperature and shrinkage effects; reinforcement against longitudinal cracking; sometimes better to use longitudinal joint.

ROADS, MACADAM

RESURFACING WITH TAR MACADAM. Machine Built Tar Penetration Macadam Roads of St. Louis County, Missouri. Georges H. Martin. Eng. and Contracting, vol 58, no 1, July 5, 1922, pp 19-20, 2 figs. Repairing of roads tributary to St. Louis by applying material on top of old roads.

ROLLING MILLS

REVERSING PASSES. Layout and Arrangement of Reversing Passes in Rolling Mills (Unterwerke für Umkehrwalzenstrassen), H. Baclesse. Elektrotechnische Rundschau, vol. 39, no. 1, Jan. 31, 1922, pp. 1-5, 9 figs. Electric equipment and its advantageous location and arrangement.

S

SCAFFOLDS

SUSPENDED. Suspended Scaffolds for Building Construction. Contractors' and Engrs.' Monthly, vol. 4, no. 6, June 1922, pp. 45-46, 2 figs. Description of "Little Wonder" suspended scaffold, which is claimed to reduce possibilities of accidents.

SEMI-DIESEL ENGINES

CONSTRUCTION AND APPLICATION. The Semi-Diesel Engine, Its Construction and Application (Les moteurs semi-Diesel, état actuel de leur construction et de leur utilisation), Adrien Schubert. Bul. de la Société d'Encouragement pour l'Industrie Nationale, vol. 134, no. 5, May 1922, pp. 418-505, 78 figs. Indicator diagrams; efficiency; fuel injection; water injection; ignition; starting; fuels, including vegetable oils; present types. Bibliography.

SEMI-STEEL

PROPERTIES AND USE. Semi-Steel, J. Cameron. Metal Industry (Lond.), vol. 30, no. 26, June 30, 1922, pp. 623-629, 6 figs. Definition, field for use, tests and raw materials for production, heat treatment. Paper read before Instn. British Foundrymen. See also Foundry Trade Jl., vol. 25, no. 305, June 29, 1922, pp. 495-500, 6 figs.

SEWAGE DISPOSAL

ACTIVATED SLUDGE. Operation and Dewatering at Largest Activated-Sludge Plants at Houston, Texas Eng. News-Rec., vol. 69, no. 4, July 27, 1922, pp. 132-137, 4 figs. Ten and five in. g.d. sewage works. Description operating curves and cost for 1920 and 1921; acid conditioning tests.

SEWERS

DESIGN. Sewers (Egouts Publics), Ch. Dubosch. Annales des Travaux Publics de Belgique, vol. 22, nos. 2, 3, 4 and 5, Apr. June, Aug. and Oct. 1921, pp. 259-305, 411-444, 627-666 and 831-865, 70 figs. partly on supp. plates. Apr.: Reviews history of sewer construction; collection and removal of sewage; flowi n sewers; outfalls. June: Layout and leveling of sewer systems; rainfall and surface water collection; pumps; Aug. and Oct.: Cross sections of channels, their construction.

SHELLAC

ORIGIN, UTILIZATION AND EXAMINATION. Shellac, Its Origin, Utilization and Examination (Der Schellack, seine Entstehung, Verarbeitung und Untersuchung), Hans Wolff. Chemiker-Zeitung, vol. 46, nos. 35 and 38, Mar. 23 and 30, 1922, pp. 265-266 and 291-293, 2 figs. Mar. 23: Production: types on market; bleaching and solubility. Mar. 30: Chemical composition; properties; uses.

SHIPS, CONCRETE

AMERICAN DIESEL-ENGINED. Concrete Construction by the U.S. War Department. Motorship, vol. 7, no. 8, Aug. 1922, pp. 613-618, 12 figs. Description of some America built concrete Diesel-powered ships, 43 in number.

MOTORSHIPS. U. S. War Department's Concrete Motorship Fleet. Motorship, vol. 7, no. 7, July 1922, p. 515, 1 fig. First details of 7 successful Winton Diesel-Engined twin-screw passenger and cargo vessels.

SILVER METALLURGY

ROASTING, MECHANICAL. Evolution of Mechanical Roasting in Silver-Lead Smelting, Leonard S. Austin. Min. and Metallurgy, no 188, Aug 1922, pp 27-29. Recovery of old speiss bottoms; uses of Brown-O'Hara furnace; sinter speeds up blast furnace work.

SMOKE ABATEMENT

PARIS. The Smoke Question in Industrial Centers (La Question des fumées dans les agglomérations industrielles). Journal des Usines à Gaz, vol. 46, no 11, June 5, 1922, pp 161-167, 2 figs. Gives text of Paris police regulations to prevent smoking and progress in their application.

SOLDERS

ALUMINUM. Tests of Aluminum Solders, Automotive Industries, vol. 47, no. 4, July 27, 1922, p. 168. Data on tests on soldered joints made at McCook [illegible]

METALLURGICAL INVESTIGATION. A Metallurgical Investigation of Solders, Wallace Dent Williams. Raw Material, vol. 5, no. 6, July 1922, pp. 216-223, 6 figs. Fusibility; scratch hardness; low melting point for white metals; silver solders; autogeneous soldering; borax substitutes.

SPRINGS

HELICAL. A Coiling and Heat Treating Plant for Helical Springs, William J. Merten. Am. Soc. for Steel Treating Trans., vol. 2, no. 11, Aug. 1922, pp. 977-983, 5 figs. Main features of plant for insuring maximum economy of labor and materials consistent with securing high-grade product.

STACKS

KILN, DESIGN OF. Stability and Design of a Kiln Stack, T. W. Garve. Am. Ceramic Soc. Jl., vol. 5, no. 7, July 1922, pp. 455-467, 9 figs. Advantages of stack draft compared with fan draft and calculations for stability; practical requirements in stack building.

STEAM ACCUMULATORS

RUTHS. Steam Accumulators (Dampfspeicher), Johannes Ruths. Zeit. des Vereines deutscher Ingenieure, vol. 66, nos. 21, 22 and 24, May 27, June 3 and 17, 1922, pp. 509-513, 537-542 and 597-605, 62 figs. May 27: Construction and applicaton of Ruths accumulator; possibility of equalizing pressures with various boiler types; plants already built; use of these accumulators in new constructions or extensions of present plants. June 3: Cooling losses; water level indicators; superheat accumulators. June 17: Existing installations of steam accumulators for equalizing variations in steam for boiling and heating, and for equalizing power and steam variations.

STEAM ENGINES

FLYWHEEL, DEGREE OF IRREGULARITY. Graphical Determination of the Degree of irregularity of an Engine (Calcul graphique du degré d'irrégularité d'une machine), G. Laville. Revue Générale de l'Electricité, vol. 12, no. 3, July 22, 1922, pp. 85-91, 10 figs. Method for determining moment of inertia of flywheel of machines as function of degree of irregularity.

STEAM METERS

CHEMICAL MEASUREMENT. Measuring Steam by Chemical Means (Het meten van stoom langs chemischen weg), J. Rutten. Chemisch Weekblach, vol. 19, no. 21, May 27, 1922, pp. 229-232, 1 fig. Chemical method for measuring steam at factories where steam is largely used in various departments, which gives much more exact results than ordinary metering systems.

STEAM TURBINES

DESIGN. Modern Steam Turbines (Les Turbines à vapeur modernes), Alb. Schlag. Revue Universelle des Mines, vol. 13, nos. 2, 3, 4 and 5, Apr. 15, May 1, 15 and June 1, 1922, pp. 95-100, 189-198, 265-272 and 351-358, 15 figs. Apr. 15: Actual state of steam-turbine industry; reaction and impulse types. May 1: Principal factors influencing construction of large turbines; security of operation; efficiency; dimensions; weight and cost, etc. May 15: Power of turbines at a given speed; accidents with large turbines; lubrication.

DISKS, CALCULATION OF. Contribution to the Exact Calculation of Steam Turbine Disks with Variable Thickness (Beitrag zur genaren Berechnung der Dampfturbinenscheibenräder mit veränderlicher Dicke), Alexander Fischer. Zeit. des Oesterr. Ingenieur- u. Architekten Vereites, vol. 74, nos. 9-10 and 15-16, Mar. 3 and Apr. 14, 1922, pp. 46-49 and 71-73, 2 figs. Presents solution of the Stodola differential equation of radial displacement of rotating disks.

REFRIGERATING PLANTS. Steam Turbine in the Refrigerating Plant, W. F. Schaphorst. Refrigeration, vol. 30, no. 2, Apr. 1922, pp. 27-28 and 42-44. Sixteen advantages over other type of prime movers.

STEEL

ALLOY. *See alloy steel.*

BALL. Ball Steel, Hilton G. Freeland. Am. Soc. for Steel Treating Trans., vol. 2, no. 10, July 1922, pp. 898-911 and (discussion) 911-917, 5 figs. Ball manufacturer's problems arising from quality of steel received, and effect on final product.

CEMENTITE SPHEROIDIZING. Spheroidizing of Cementite in Steel, H. C. Ibsen. Forging and Heat Treating, vol. 8, no. 7, July 1922, pp. 300-303, 9 figs. Results of tests on 1 per cent carbon steel show that long-time anneal is not necessary to obtain spheroidized structure; such steel reveals increased ductility and shock-resisting value.

CHROMIUM. *See chromium steel.*

CRYSTALLIZATION, DELAYED. On Delayed Crystallization in the Carbon Steels: The Formation of Pearlite, Troostite and Martensite, A. F. Hallimond. Engineering, vol. 113, no. 2946, June 16, 1922, pp. 767-769, 1 fig. Development of principles which explain delayed critical points and corresponding structure in terms of supersaturation theory. Paper read before Iron and Steel Inst.

ROCK-DRILL. Breakage and Heat Treatment of Rock Drill Steel. Eng. World, vol. 21, no. 1, July 1922, pp. 39-40. Progress report to members of Advisory Board to Bur. of Mines and Bur. of Standards.

RUSTLESS. Investigation of Rustless Steels (Några undersökningar på rostfritt stål), Bengt Kjerrman. Jernkontorets Annaler, vol. 107, no. 4, 1922, pp. 133-149, 7 figs. Development of rust and acid-resisting steels, their thermic-microscopic examination.

TOOL. *See tool steel.*

STEEL, HEAT TREATMENT OF

ELECTRIC-FURNACE. The Electric Furnace as it affects Over-All Cost of Heat Treated Parts, C. L. Ipsen. Am. Soc. for Steel Treating Trans., vol. 2, no. 11, Aug. 1922, pp. 984-989, 9 figs. Points out advantages and economy of electric furnaces.

HIGH-SPEED STEEL. The Toughness of High Speed Steels as Affected by Their Treatment, Marcus A. Grossman. Am. Soc. for Steel Treating Trans., vol. 2, no. 11, Aug. 1922, pp. 1001-1005, 5 figs. Results of measurements on high-speed steels of 18 per cent and 13 per cent tungsten type, hardened at temperatures ranging from 1700 deg. to 2250 deg. Fahr.

STEEL MANUFACTURE

Direct Method. A Direct Method of Steel Manufacture. Metal Industry Lond.) vol 21, no 1, July 7, 1922, pp 9 and 11-12, 3 figs Discussion of Bourcoud process and possibility of using oil, lignites and other fuels, data on costs

STEEL WORKS

Power Systems. Power Systems and the Steel Industry, E. C Stone Iron and Steel Elec. Engrs Assn , vol 4, no 6, June 1922, pp 279-301 and discussion 302-320, 4 figs. Requirements for thoroughly reliable source of power supply, and consideration.

STOKERS

Underfeed, Low-Grade Fuel. The Underfeed Stoker Successfully Burns Low-Grade Fuel. Elec. Ry. Jl., vol. 60, no. 7, Aug. 12, 1922, pp. 221-225, 9-figs. High-ash, clinkering coal burned in specially designed underfeed stokers; operation features by flexibility, high efficiency, capacities up to 350 per cent.

STORAGE BATTERIES

Charging, Balancer Set For Balancer Set for Battery Charging, H M Phillips. Power Plant Eng., vol. 26, no. 13, July 1, 1922, pp. 657-659, 4 figs. Connections, characteristics, and calculation of current, voltage and power requirements.

STREAM POLUTION

Problem. Some Phases of the streams Pollution Problem, J. K. Hoskins. Am. Water Works Assn., vol. 9, no. 4, July 1922, pp. 570-581, 1 fig. General discussion with particular reference to maker of pollution and methods of determination.

STRESSES

Influence Lines. Influence Lines and Their Application (Les lignes d'influence et leur application), Guillemin. Revue Universelle des Mines, vol. 13, nos. 5 and 6, June 1 and 15, 1922, pp. 329-350 and 531-429, 19 figs. Stresses in framework; hyperstatic construction; influence lines of stresses; determination of maximum flexure in section of a beam under direct load supported at each end; influence lines in latticed beams and arches.

Optical Determination. The determination of Poisson's Ratio and of the absolute Stress-variation of Refractive Index, F. Twyman and J. W. Perry. Physical Soc. of Lond. Proc., vol. 34, Part 4, June 15, 1922, pp. 151-154, 3 figs. Ready method of determining stress-optical coefficients by Hilger interferometer. Simultaneous determination of Young's modulus and Poisson's ratio.

Recorder, Iron And Steel. When Steel Beams Stretch, P. J. Risdon. Sci. Am., July 1922, p. 32, 2 figs. Fereday-Palmer stress recorder which automatically magnifies stretch or compression of steel work in a given length and records corresponding stress per sq. in.

SUBSTATIONS

Automatic. How Resistance Is Used in Railway Automatic Substations, C. A. Butcher. Elec. Ry. Jl. ,vol. 60, no. 7, Aug. 12, 1922, pp. 227-230. Analysis of conditions which affect selections of details of equipment for automatic control of substations

Hydroelectric. Enlarging the Brantford Hydro Station. Elec. News. vol. 31, no. 13, July 1, 1922, pp. 42-44, 5 figs. Some unique features in installation where maximum capacity in minimum space was main problem.

Railway. Noiseless Substation for Los Angeles Railway, George E. Campbell. Elec. Ry. Jl., vol. 60, no. 2, July 8, 1922, pp. 37-38, 4 fig. By means of circuitous route for sound-laden air designers were able to muffle noise from machinery; building is of massive design and harmonizes architecturally with neighborhood.

SUPERHEATED STEAM

Power Plants. Superheated Steam a Factor in Power Plant Economy, R. A. Holme. Eng. World, vol. 21 no. 1, July 1922, pp. 35-38, 1fig. Capacity and efficiency of equipment increased at moderate cost by installation of superheaters; savings in connection with all types of prime movers; advanced practice at Hell Gate.

SURVEYING

Triangulation. The Value of Geodetic Control in City Survey Work, Hugh C. Mitchell. Eng. News-Rec., vol. 89, no. 3, July 20, 1922, pp. 101-103. One triangulation should serve exacting demands; accuracy and permanence invaluable; survey standards that should be maintened.

SWITCHGEAR

Design And Manufacture. Recent Tendencies in Switchgear Design and Manufacture, J. R. Cowie. Electrician vol. 88, no. 2302, June 30, 1922, pp. 778-782, 4 figs. Outstanding features of armour clad and cell-structure types.

T

TANKS

Calibration. A Rapid and Accurate Method for the Calculation of Storage Tanks, J. W. McDavid. Chem. & Met. Eng., vol. 27, no. 4, July 26, 1922,pp. 157-158, 1 fig. Description of apparatus for calibration of tanks.

TELEPHONY

Automatic. Relay Automatic Telephone Company's System at Fleetwood Exchange, A. B. Eason. Post Office Elec. Engrs. Jl., vol. 15, no. 2, July 1922. pp. 112-133, 13 figs. Description of principles of Relay Automatic System, and equipment installed for ultimate capacity of 920 lines.

Loud-speaker Apparatus Loud Speaking Telephone Apparatus. Telegraph and Telephone Age, vol 940 no 14, July 16, 1922, pp 321-322 Description of apparatus for making voice audible to large audience and data of electric energy required under various conditions.

TESTING MACHINES

Metals, Toughness And Hardness. Toughness in Relation to Hardness of Metals, E. F Lake Forging & Heat Treating, vol. 8, no. 7, July 1922, pp 313-315, 5 figs Discusses importance of testing machine which will show "tough-hardness" or wearing qualities by means of quickly performed test; importance of related data.

THERMIT WELDING

Process Thermit Welding, J H Deppeler Am. Welding Soc Jl., vol. 1, no. 6 June 1922, pp. 33-36. Value of this type in all heavy operations.

TIDAL POWER

Utilization. Utilization of Tidal Power (Note sur l'utilisation des Marées), G. Boisnier. Houille Blanche, vol. 21, nos. 63-64 and 65-66, Mar.-Apr. and May-June 1922, pp. 45-50 and 86-88, 5 figs. Means of recovering power of tides and the various systems that have been proposed.

TOLERANCES

Screw Threads. Screw Tolerances (Gewindetoleranzen), G. Berndt. Werkstatts Technik, vol. 16, no. 12, June 15, 1922, pp. 349-356. A compilation of material from all countries on tolerances for bolts, nuts, etc.

TOOL STEEL

Standardization. Tool Steel—Shall it be Standardized?, Roy H. Davies. Raw Material, vol. 5, no. 6, July 1922, pp. 233-235. Arguments pro and con substitution of analyses for tool steel brands. Presented at Convention of Nat. Assn. Purchasing Agents.

TOOLS

Press. Press Tool Operation in the Manufacture of Buckle Fittings, Albert Hind. Machy. (Lond.), vol. 20, no. 511, July 13, 1922, pp. 449-452, 4 figs. Details and operation of press tools for manufacture of metal brace or buckle fittings.

Straight-Form, Calculation. The Calculation of Straight-form Tools having Top Machy. (Lond.), vol. 20, no. 510, July 6, 1922, pp. 416-418, 4 figs. Method of using data given in Machinery's Handbook for figuring top rake on tools which are to cut through and hard materials.

TRANSFORMERS

Oil Tests. Tests for Transformer Oils, E. T. Delbridge. Oil News, vol. 10, no. 13, July 5, 1922, pp. 35-36. Yearly consumption of transformer oil valued at $2,000,000; functions of transformer oil; durability and stability important qualities; durability tests.

Testing for. A 350,000-Volt Testing Transformer (Transformateur d'essais à 350,000 volts), R. Massot and P. Bunet. Revue Générale de l'Electricité, vol. 11, no. 20, May 20, 1922, pp. 752-757, 5 figs. Describes apparatus built by Ateliers de Constructions électriques de Lyon et du Dauphine, and discusses its operation at their laboratory.

TUNNELLING

Hetch Hetchy Aqueduct. Driving an Eighteen-Mile Tunnel Through the Sierra Nevada, Arthur B. Parsons. Eng. and Min. Jl., Press., vol. 114, no. 3, July 15, 1922, pp. 96-108, 15 figs., partly on supp. plates. Details of methods used in operations on mountain division of Hetch Hetchy aqueduct that is to supply San Francisco with water; organization of work; record established for rapid progress; costs.

Shield Method. Driving a Concrete-Block Sewer Tunnel by Shield; some Troubles and Their Remedies. Eng. News-Rec., vol. 89, no. 5, August 3, 1922,pp. 174-176, 4 figs. Record of experience in water-bearing sand at Flushing; traveling platform for supporting leading ring; new equipment sets blocks accurately to place in first operation.

TUNNELS

Conversion to Open Cut. Eliminating a Tunnel Without Interrupting Traffic Eng. News-Rec., vol. 89, no. 5, Aug. 3, 1922, pp. 182-185, 6 figs Bessemer and Lake Erie R.R. convert tunnel into deep open cut and builds bridge over first lift of cut; no work trains on main tracks.

TURBO-COMPRESSORS

High-Speed Airplane. Turbo-Compressors for High-Speed Aviation, A. Rateau. Engineering, vol. 114, nos. 2951 and 2952, July 21 and 28, 1922, pp. 91-94 and 123-125, 9 figs. Discussion of design; specific pressures and weights of air under normal atmospheric conditions. Paper read before Instn. Mech. Engrs.

TURBO-GENERATORS

Oscillations Calculation. Calculation of Oscillations in Turbo-Generators (Berechnung der Schwingungserscheinungen an Turbodynamos), Jos. Geiger. Zeit. des Vereines deutscher Ingenieure, vol. 66, no. 26, July 1, 1922, pp. 667-669, 6 figs. Simple methods for precalculation of vibrations of foundations of turbo-generators.

V

VACUUM TUBES

Triode Valves. On the Electro-magnetic Screening of a Triode Oscillator, R. L. Smith-Rose. Physical Soc. of Long. Proc., vol. 34, part 4, June 15, 1922, pp. 127-138, 5 figs. Enclosing valve set in metal box of suitable thickness for frequency used and hermetically sealing all joints. More convenient arrangement for use of continuous-wave wireless direction finding.

VISCOSITY

Determination. Viscosity Determination by Means of Orifices and Tubes. W. N. Bond. Physical Soc. of Lond. Proc., vol. 34, Part 4, June 15, 1922, pp. 139-144, 1 fig. Investigation of corrections applicable to determination of viscosity due to abnormal flow at ends of tubes. Expression for end-corrections.

Determination in CO_2, N_2O, CO and N_2. Viscous Properties of CO_2, N_2O, CO and N_2, C. J. Smith. Physical Soc. of Lond. Proc., vol. 34, Part 4, June 15, 1922, pp. 155-165, 2 figs. Direct comparisons by observing time required by mercury pellet across equal volumes of gas through capillary tube. Mean area of collision deduced from Chapman's formula.

VOLTAGES

Standardization. Standardization of Voltages in Transmission Lines and A.C. Three-Phase Distribution (Remarques sur la normalisation des tensions électriques des réseaux de transmission et de distribution d'énergie par courant alternatif triphasé), Ch. Lavenchy. Revue Générale de l'Electricité, vol. 11, no. 25, June 24, 1922, pp. 926-928, 1 fig. Discusses geometric and arithmetic progressions in voltages and gives tabulation of number of series of values in use.

W

WATER GAS

Research. Seventh Report of the Research Sub-Committee of the Gas Investigation Committee of the Institution of Gas Engineers. Gas Jl., vol. 158, no. 3085, June 28, pp. 800-825 and (discussion) 825-827, 10 figs. Investigation into thermal and chemical efficiencies of manufacture of different grades of gas by various processes. Work carried out at Windsor St. Works of Birmingham Gas Dept. to determine efficiency of production of carburetted water gas of calorific value of about 485 B.t.u. gross per cu. ft.; describes installation. See also Gas World, vol. 76, no. 1979, June 24, 1922, pp. 529-542, 5 figs.

WATER POWER

Resources Index Inventory System. Water Resources Index Inventory Filing System. Can. Engr., vol. 42, no. 27, July 4, 1922, pp. 667-671, 3 figs. Method developed by Dominion Water Power Branch for recording,c ollating and analyzing water resources data; cooperative investigations with provincial organizations; both graphical and written records.

WATER PURIFICATION

Denitrification by Bacteria. Denitrification by Bacteria. Pub. Works, vol. 53, no. 1, July 1, 1922, pp. 12-13. Abstract of report by K. Scheringa on work of Netherlands Central Laboratory. In making water analysis, nitrogen determination should be made as promptly as possible.

Microscopic Organisms, Destruction of. Prevention of Tastes and Odors Due to Microscopic Organisms, William W. Brush. Eng. and Contracting, vol. 62, no. 24, June 14, 1922, pp. 560-561, 2 figs. Successful use of copper sulphate and chlorine in treatment of New York's water supply. From paper read before Am. Water Works Assn.

WATER SUPPLY

Extension of Boston Water District. Proposed Extension of the Metropolitan Water District, X. H. Goodenough. New England Water Works Assn. Jl. vol. 36, no. 2, June 1922, pp. 189-256 and (discussion) 256-261, 15 figs. Consideration of all factors from which prediction of increases can be made and best means of meeting them.

New York Catskill Mountain. New York Catskill Mountain Water Supply, A. A. Northrop. Universal Engr., vol. 35, no. 6, June 1922, pp. 17-25, 12 figs. Outstanding features of problem and description of solution of various phases.

WATER TREATMENT

Copper Sulphate. Copper Sulphate Treatment for Preventing Alga. Growth in Lakes and Reservoirs, N. L. Huff. Eng. and Contracting, vol. 68, no. 2, July 12, 1922, pp. 33-36, 3 figs. Experiences at Fairmount, Minn. Blue-green scum formers. Method and amount of chemical required; results and precautions.

WATERPROOFING

Electric. Waterproofing by Electricity, Ismar Ginsberg. Color Trade Jl., vol. 11, no. 1, July 1922, pp. 1-6, 7 figs. Application of electro-osmosis in injection of waterproofing element within very thin internal structure of fibers of a material.

WATERWAYS

St. Lawrence River. Possibilities of St. Lawrence Seaway, Wm. L. Saunders. Can. Engr., vol. 43, no. 2, July 11, 1922, pp. 128-130. Comparisons with other waterways; project economically sound; lower rates for water-borne freight power feature; would serve large population. From address before joint mtg. of A.I.E.E. and A.S.M.E.

WELDING

Pure Iron for. Manufacture and Use of Commercially Pure Iron in Gas and Electric Welding, C. A. McCune. Am. Welding Soc. Jl., vol. 1, no. 6, June 1922, pp. 8-23, 19 figs. Five characteristics of wires for successful welding.

See also electric welding; electric welding, arc, thermit welding.

WELDS

Testing. The Scientific Side of Welding, E. Atkins, Welding Engr., vol. 7, nos. 5, 6 and 7, May, June and July 1922, pp. 28-29, 32; 22-25, 28; 32, 34-36, 38; 67 figs. partly on p. 39. May: Comparison of microstructure of iron and steel with microstructure of welded metal. June : Microscopic investigation of defects in welds; hammered welds; influences of impure gas. July: Resistance welds; contact and spot welding; welding wire for iron and steel. Lecture before British Acetylene and Welding Assn.

WIRE MANUFACTURE

Wet-Drawing Machines. Works of the Lancashire Wire Company, Limited. Iron and Coal Trades Rev., vol. 105, no. 2836, July 7, 1922, pp. 1-2, 5 figs. Illustrated description of design of wet-drawing machines in wire mill.

WOOD

Destruction by Marine Borers. Destruction by Marine Borers. Is the Port of New York in Danger? Mun. Engrs. Jl., vol. 8, Second Quarter, 1922, pp. 57-80, 7 figs. Discussion. Probability of infection, and hydrographic, biological and engineering investigations.

X

X-RAYS

Analysis of Materials. The X-Ray Examination of Materials, J. F. Driver. Elec. Rev., vol. 90, no. 2323, June 2, 1922, pp. 784-785, 11 figs. Use of Coolidge tube, 200,000 volts and 45 milliamperes makes possible examination of 4-in. cast iron. (Abstract.) Lecture before Nottingham Soc. of Engrs.

Engineering Index

This Index is prepared by the American Society of Mechanical Engineers.

In this department will be published from month to month the titles of current engineering papers with the authors and source and a brief extract of the more important. It is designed to give the members of The Institute a survey of all impotant articles relating to every branch of engineering profession.

PHOTOSTATIC PRINTS

Photostatic copies of the articles listed in this section, or others on engineering subjects, may be obtained from the Engineering Societies Library.

Price of each print (up to 11 by 14 in. size) 25 cents, plus postage. Where possible, two pages, up to 7 by 9 in. size, will be photographed on one print. Larger magazines require a print per page. Bills will be mailed with the prints.

The Library is also prepared to translate articles, to compile lists of references on engineering subjects and render assistance in similar ways. Charges are made, sufficient to cover the cost of this work. Correspondence is invited. Information concerning the charge for any specific service will be given those interested. In asking for information please be definite, so that the investigator may understand clearly what is desired.

The Engineering Societies Library is under the management of the United Engineering Society, which administers it as a public reference library of engineering. It is maintained jointly by the American Society of Civil Engineers; the American Institute of Mining and Metallurgical Engineers; the American Society of Mechanical Engineers and the American Institute of Electrical Engineers. It contains 150,000 volumes on engineering and allied subjects, and receives currently most of the important periodicals in its field.

Orders and correspondence should be addressed to

Harrison W. Craver, Director

Engineering Societies Library,

29 West Thirty-ninth Street, New York, N.Y.

A

ABRASIVE WHEELS

Breakage, Causes of. Grinding Wheel Breakage and Its Causes, Harold E. Jenks. Am. Mach., vol. 57, nos. 3 and 4, July 20 and 27, 1922, pp. 98-100 and 144-146, 6 figs. What produces stresses resulting in wheel breakage; effect of overspeeding. Details of correctly mounted wheel; necessity for balance; whywheels are weakened by balancing weights.

Grinding Tests. Factors Affecting Wheel Action, H. W. Wagner. Abrasive Industry, vol. 3, no. 8, Aug. 1922, pp. 244-246, 2 figs. Account of tests conducted to determine grinding performance of wheels with various materials.

AERONAUTICS

Standardization. Aeronautical Standardization. Aviation, vol. 12, nos. 20 and 21, May 15 and 22, 1922, pp. 564-566 and 596-598, 2 figs. Standardization of materials, parts and tools desirable for mass production in emergencies suggested by two engineers experienced in factory as well as theoretical knowledge.

AIR

Pollution. Atmospheric Pollution, John B. B. Kershaw. Engineer, vol. 134, no. 3471, July 7, 1922, pp. 2-4, 1 fig. Observations made in 12 cities and towns, in which 31 soot and dust gages were installed, contained in report of Advisory Committee on Atmospheric Pollution. Also abstract of paper on Suspended Impurity in the Air, by J. C. Owens, containing description of instrument for measurement of suspended atmospheric pollution.

AIR COMPRESSORS

Rotary. New Rotary Air Compressor, E. Loewenstein. Mech. Eng., vol. 44, no. 9, Sept. 1922, p. 598, 2 figs. Describes new type with springless abutment blades. Results of tests undertaken at Goettingen Inst., Germany. Translated from Deutsche Optische Wochenschrift, vol. 8, no. 22, May 28, 1922, pp. 413-414.

Planche Rotary Compressor, Lucien Fournier. Mech. Eng., vol. 44, no. 6, June 1922, pp. 385-386, 8 figs. Describes rotary compressor, designed by French engineer, with disk piston moving in a conchoid. Translated from Génie Civil, vol. 80, no. 12, Mar. 25, 1922, pp. 275-277.

AIR PUMPS

Condensation. Investigations of Condensation Air Pumps (Untersuchungen an Kondensations-Luftpumpen), K. Hoefer. Forschungsarbeiten auf dem Gebiete des Ingenieurwesens, no. 253, 1922, 92 pp. 48 figs. Investigations to determine relative efficiency of piston, steam-jet and water-jet air pumps with regard to economy, safety in operation, weight and space requirement. Results demonstrate advantages of steam-jet air pumps.

Radojet Dry-Air. The "Radojet" Air-Pump. Mech. World, vol. 72, no. 1860, Aug. 25, 1922, pp. 130-131, 4 figs. Describes dry-air pump which can be used in place of any other type of air pump. It is an ejector combination comprising tubular ejector in first stage and radial-flow ejector in second stage.

AIRPLANE ENGINES

Valve Lift. Variation in Volumetric Efficiency of an Engine with Valve Lift, T. E. Tillinghast. Air Service Information Circular, vol. 4, no. 356, June 15, 1922, 11 pp., 7 figs. Experiments to determine (a) effect of changes in valve lift on volumetric efficiency, (b) effect of changes in compression ratio on volumetric efficiency, and (c) effect of changes in valve lift on engine performance.

AIRPLANE PROPELLERS

Design. Notes on Propeller Design, Max M. Munk. Aerial Age, vol. 15, nos. 8, 10, 12 and 13, May 1, 15, 29 and June 5, 1922, pp. 178-179, 225-226, 274-275 and 298-299, 1 fig. May 1: Energy losses of propeller. May 15: Distribution of thrust over propeller blade. May 29: Aerodynamical equations of propeller blade elements. June 5: Summary.

Stresses. Stresses in Airscrews due to Varying Engine Torque, John Case. Aeronautical Jl., vol. 26, no. 140, Aug. 1922, pp. 321-324. General analysis; values of constants; approximate calculations; bending moment due to acceleration; example.

AIRPLANES

Design, Economical. Aerodynamical Efficiency and the Reduction of Air Transport Costs, Bregnet. Aeronautical Jl., vol. 26, no. 140, Aug. 1922, pp. 307-313 and (discussion) 313-318. How to design airplanes which should reduce present rates of aerial freight by more than one-half.

Pressure Distribution. The Pressure Distribution over the Horizontal Tail Surfaces of an Airplane, 111, F. H. Norton and W. G. Brown. Nat. Advisory Committee for Aeronautics, report no. 148, 1922, 26 pp., 33 figs. Deals with distribution of pressure during accelerated flight of full-sized airplane, for purpose of determining magnitude of tail and fuselage stresses in stunting.

Structural Safety. Structural Safety During Curved Flight, Adolph Rohrbach. Nat. Advisory Committee for Aeronautics Tech. Notes, no. 107, Aug. 1922, 18 pp., 9 figs. Includes appendix with graphic determination of airplane speeds during rectilinear and curved flight, and propeller efficiency according to experiments with models. Translated from German.

ALCOHOL

Internal-Combustion Engines. Alcohol for Internal Combustion Engines. Engineers. vol. 133, no. 3463, May 12, 1922, p. 534. Account of experiments carried out with 95 volumes per cent alcohol by Empire Motor Fuels Committee.

ALLOY STEELS

Decomposition of Martensite. The Decomposition of Martensite into Troostite in Alloy Steel, Howard Scott. Blast Furnace and Steel Plant, vol. 10, no. 8, Aug. 1922, pp. 421-424, 3 figs. Effect of alloying elements on decomposition of martensite to troostite was determined by means of heating curves. Published by permission of Director of Bur. of Standards.

ALLOYS

Aluminum. *See Aluminum Alloys; Duralumin.*
Iron-Carbon. *See Iron Alloys.*
Nickel. *See Nickel Alloys; Monel Metal.*

ALUMINUM

Castings. Molds for Aluminum Castings. Am. Mach., vol. 56, no. 24, June 15, 1922, pp. 896-898. Brass foundry practice modified for light, brittle aluminum; advantages of green sand cores; die castings stronger; how to test aluminum castings.

ALUMINUM ALLOYS

Castings. Notes on Aluminum Alloys for Casting. Chem. and Met. Eng., vol. 27, no. 10, Sept. 6, 1922, pp. 501-503. Useful foundry alloys contain relatively low percentages of copper, zinc or both; tabulation of physical properties of aluminum alloys used in America and other common metals and alloys.

Copper-Silicon-Aluminum. Physical Properties of Some Copper-Silicon-Aluminum Alloys When Sand Cast, E. H. Dix and A. J. Lyon. Am. Soc. for Testing Matls. advance paper for meeting June 26-30, 1922, 17 pp. 15 figs. Results of investigation conducted by Engineering Division of Air Service, covering alloys of 3, 6 and 9 per cent silicon with 0, 2, 4 and 6 per cent copper, and with 2 per cent copper and 1 per cent manganese are summarized.

Molding. Molding Practice for Aluminum Alloys. Chem. and Met. Eng., vol. 27, no. 11, Sept. 13, 1922, pp. 555-557. Notes on what is considered best practice. From sales dept. condensed data prepared by Tech. Dept., Aluminum Co. of America.

ASPHALT

Specifications. Asphalt Specifications, Larcy M. Law. Can. Eng., vol. 43, no. 3, July 18, 1922, pp. 156-158. Includes specifications for test, in particular new penetration test. Also melting point and ductility standards. Paper read before convention of Am. Road Builders' Assn.

AUTOMOBILE ENGINES

Cooling Systems. Advantages of Evaporating Type of Cooling System, A. Ludlow Clayden. Automotive Industries, vol. 47, no. 11, Sept. 14, 1922, pp. 509-511, 2 figs. Describes steam-cooling system. Promises to be lighter, simpler and more efficient than conventional types; less likely to permit overheating and loss of water; no thermostats required; smaller radiator can be used.

HEAVY-FUEL. The Use of Crude Oil for Fuel in Automobile Engines (Verwendung von Rohöl als Betriebsstoff für Fahrzeugmotoren), Gustav Kunzel. Motorwagen, vol. 25, nos. 19-20, July 10-20, 1922, pp. 371-372, 2 figs. Describes carburetor which is recommended for use of heavy crude oils.

IGNITION. See Ignition.

OVERHEAD CAMSHAFT EFFICIENCY. Do Overhead Camshafts Increase Efficiency in Engine Operation? P. M. Heldt. Automotive Industries, vol. 46, nos. 21 and 22, May 25 and June 1, 1922, pp. 1109-1144 and 1158-1161, 22 figs. Design leads to symmetrical engine of easy accessibility which need not be noisy. Used by four American makers and common in European practice. Read before Soc. Automotive Engrs.

AUTOMOBILE FUELS

See Alcohol, Gasoline.

AUTOMOBILES

CAMPING CARS. Designing Camping Cars and Trailers, Herry W. Perry. Automotive Industries, vol. 47, no. 7, Aug. 17, 1922, pp. 324-327, 4 figs. Ideas about design of suitable trailer camping outfits.

B

BALANCING MACHINES

DYNAMIC. Dynamic Balancing Machine. Machy. (Lond.), vol. 20, no. 515, Aug. 10, 1922, pp. 574-577, 5 figs. Describes Lawaczeck & Hermann machine; attainment of balance at all speeds; first test of balance; plane of unbalance; sensitiveness of machine.

MARTIN. Balancing of High-Speed Machine Parts (Het uitbalanceeren van snel roteerende machinedeelen), W. Hamilton Martin. Ingenieur, vol. 37, no. 30, July 29, 1922, pp. 587-593, 7 figs. Static and dynamic balancing of rotating parts; Martin balancing machines.

BELTING

LEATHER. New Federal Specification for Leather Belting. Belting, vol. 21, no. 2' Aug. 1922, pp. 15-19, 1 fig. Adoption by Government intended to set first regular standards for users of products, manufacturers and distributors.

BEARINGS, BALL

POWER CONSUMPTION. Tests on the Power Consumption of Ball and Journal Bearings for Driving Gear Shafts (Versuche über den Energiebedart von Kugel- und Gleitlagern an Triebwerkswellen) M. Gohlke. Maschinenbau, vol. 1, no. 7, July 8, 1922, pp. 447-451, 7 figs. Results of tests show that ball bearings save about 50 per cent of work of friction of shaft, have longer life and lighter starting.

BLASTING

COMMINUTED SMOKELESS POWDER. Comminuted Smokeless Powder as a Blasting Agent, C. E. Munroe and Spencer P. Howell. U.S. Bur. of Mines Reports of Investigations, no. 2386, Aug. 1922, 19 pp. Describes physical and chemical properties; gives precautions to be observed in handling and packing it, and in preparing cartridges and boreholes in its use. Results of field tests in blasting stumps, boulders, and ditches.

FAILURE OF CENTER SHOTS. Failure of Center Shots in Blasting. L. C. Illsley and A. B. Hooker. U.S. Bur. of Mines Reports of investigations, no. 2384, Aug. 1922, 10 pp. Tests made by electric section of Bur. of Mines, which may be helpful in understanding probable cause of misfiring of center shots.

BLAST FURNACES

RECONSTRUCTION. Rebuilding Emporium Blast Furnace. Iron Trade Rev., vol. 71, no. 10, Sept. 7, 1922, pp. 651-653, 3 figs. Emporium Iron Co. discards hand-filling system and installs modern mechanical equipment. New construction includes storage bins, skip hoist, furnace top and pig-casting machine.

BLOWERS

FORCED-DRAFT FURNACES. Tests on a Forced-Draft Furnace (Versuche an einer Unterwindfeuerung), E. Philipp. Feuerungstechnik, vol. 10, no. 20, July 15, 1922, pp. 224-226, 3 figs. Describes Schlotter blowers, built by Siemens-Schukert Works, with air duct in axial direction; and installation in Wiesbaden electricity works equipped with these ventilators.

BOILER FEEDWATER

SOFTENING. Softening Boiler-Feed Water with Zeolites. Power, vol. 56, no. 11, Sept. 12, 1922, pp. 412-414, 4 figs. How zeolites remove hardness; details of operation data on typical installation, combination lime-zeolite treatment for water high in temporary hardness.

BOILER HOUSES

SUGAR-REFINING CO. The Boiler House of the American Sugar Refining Company at Baltimore, Maryland, E. B. Powell. Mech. Eng., vol. 44, no. 8, Aug. 1922, pp. 509-512, 4 figs. General features of plant; boilers, feedwater system; instruments; combustion equipment. (Abridgment). See also Steam, vol. 30, no. 3, Sept. 1922, pp. [illegible].

BOILER OPERATION

HEAT LOSSES. The Control of Boiler Operation, E. A. Uehling. Mech. Eng., vol. 44, no. 7, July, [illegible] simplified formulas for use in calculating chimney, combustion and absorption losses. Proposed fuel unit for bituminous coal [illegible].

BOILER PLANTS

PERFORMANCE TESTS. Fuel Economy from Old Plant Equipment, A. R. Mumford. U. S. Bur. of Mines [illegible] Gives results of tests [illegible]

REBUILDING. Rebuilding a [illegible] Plant Without Interrupting the Service, Alfred Iddles and J. Walter May. Power, vol. 56, no. 11, Sept. 12, 1922, pp. 402-408, 11 figs. Modern boiler plant, containing five water-tube boilers, each of [illegible] old plant, without interfering with capacity of plant and without interrupting service supplied to [illegible].

STIRLING. The Stirling Boiler Plants of the Gennevilliers Central Station (Les chaufferies Stirling de la centrale de Gennevilliers), Jean Labadié. Revue Industrielle vol. 52, nos. 8 and 9, June and July 1922, pp. 249-255 and 285-291, 14 figs. Notes on boilers, furnaces economizers, stoking arrangements, etc., and their operation.

BOILERS

HIGH-PRESSURE. High-Pressure Boilers for the Waukegan Power Station. Power, vol. 56, no. 11, Sept. 12, 1922, pp. 417-418, 1 fig. Boilers, each having 14,086 sq. ft. of water-heating surface of new design for 400-lb. pressure, which allows use of metal thicknesses in pressure parts no greater than in boilers designed for ordinary pressures.

PRACTICE IN 1922. Boiler Practice. Assn. Iron and Steel Elec. Engrs., vol. 4, no. 9, Sept. 1922, pp. 521-543, 3 figs. Symposium of following articles; The Trend of Boiler Development, J. B. Crane. Boiler Practices of 1922, R. E. Butler. The Modern Sectional Header Boiler, R. M. Rush. Heine Boiler Practice in 1922, E. R. Fish and Alfred Cotton.

TESTS, ACCURACY OF. The Accuracy of Boiler Tests, Alfred Cotton. Mech. Eng., vol. 44, no. 7, July 1922, pp. 427-430 and (discussion) p. 437, 1 fig. Points out unavoidable inaccuracies involved in reports of boiler tests and absurdity of assigning values carried out to one-hundredth of one per cent to items which cannot possibly be measured so closely. Discusses factors entering into boiler-test computations. (Abridgment.)

BOILERS, WATER-TUBE

IMPROVEMENTS. Improved Water-Tube Boilers. Engineer, vol. 134, no. 3477, Aug. 18, 1922, pp. 166-168, 6 figs. Details of and alterations in Nesdrum water-tube boilers built by Richardsons, Westgarth & Co., Middlesbrough.

BORING TOOLS

PRESSURE. Chart for Determining the Pressure Exerted by Boring Tools, J. B. Conway. Mech. World, vol. 72, no. 1860, Aug. 25, 1922, pp. 127-128, 1 fig. For purpose of determining end thrust and cutting pressure exerted by one- and two-lipped boring tools.

BRASS

DEZINCIFICATION. The Dezincification of Brass, Ralph B. Abrams. Am. Electrochem. Soc. advance paper for meeting, Sept. 21-23, 1922, no. 1, 12 pp. Account and results of investigation.

PROPERTIES. The Nature of Brass, A. E. White. Engrs. Soc. of West. Pa. Proc., vol. 38, no. 1, Feb. 1922, pp. 7-25 and (discussion) 25-34, 24 figs. Properties of brasses and extent to which these properties are varied by cold working and by different degrees of annealing; fundamental laws under which grain growth in metals may occur.

BRICK

CONCRETE. Report of Committee C-3 on Brick. Am. Soc. for Testing Matls. advance paper for meeting June 26-30, 1922, 9 pp., 3 figs. Proposed tentative specifications for concrete building brick.

FURNACES, MALLEABLE. Bricks for Malleable Furnaces, H. G. Schurecht. Foundry, vol. 50, no. 17, Sept. 1, 1922, pp. 707-710, 7 figs. Results of laboratory tests. Load and softening tests are not reliable criterions of behavior of brick in service, whereas spalling tests bears close relation to service test. From paper read before Am. Foundrymen's Assn.

POROSITY, DETERMINATION. A Simple Control Porosimeter, G. A. Bole and F. C. Jackson. Brick and Clay Rec., vol. 61, no. 5, Sept. 5, 1922, pp. 314-315, 2 figs. Apparatus for quickly and accurately determining porosity of any clay ware; planned for paving brick, but serviceable for any product.

BRIDGE DESIGN

CIRCULAR BRIDGES. The Design of Circular Bridges — Bridges with Continuous Spans. Ferro-Concrete, vol. 8, nos. 9 and 10, Mar. and Apr., 1922, pp. 255-261 and 285-288, 2 figs. Theoretical design and formulas.

BRIDGE ERECTION

FLOATING ERECTOR. Telescoping Tower on Scow Shifts Arch Centers. Eng. News-Rec., vol. 89, no. 8, Aug. 24, 1922, pp. 300-301, 3 figs. Ten. steel centers used for spans of new Harrisburg bridge across Sysquehanna; set up twice under each of 46 arches; scow trips of 3,000 ft. with 60-ton centers assembled.

BRIDGES, CONCRETE

ARCH. Special Form Work for Black Street Bridge, Hamilton, Ont. Eng. and Contracting, vol. 58, no. 8, Aug. 23, 1922, pp. 173-175, 3 figs. Details of 7-span concrete arch structure, 654 ft. between abutments, built by Miami Conservancy District. (Abstract.) Miami Conservancy Bul., July, 1922.

BRIDGES, LIFT

BASCULE. Bascule Highway Bridge, Port Dover, Ontario, E. H. Darling. Can. Engr., vol. 43, no. 9, Aug. 29, 1922, pp. 295-297, 9 figs. Plate girder bascule span and two reinforced-concrete spans; total length, 142 ft. Construction details.

BRIDGES, HIGHWAY

CONCRETE. Design and Construction of Six-Span Reinforced Concrete Highway Bridge Crossing Wabash River at Attica, Indiana, H. A. Hanapel. Mun. and County Eng., vol. 63, no. 2, Aug. 1922, pp. 37-44, 4 figs. Total length, 986 ft.; solid arches with 12-in. sidewalls and counterfeits supporting cantilevered brackets and 6-in. sidewalk; roadway provides 20-ft. driveway with 5-ft. sidewalk on each side.

STEEL. Annapolis River Bridge, Annapolis Royal, N.S., E. M. Archibald. Can. Engr., vol. 43, no. 4, July 25, 1922, pp. 171-173, 5 figs. Highway structure of 11 through-truss riveted spans erected on ice piers ten years old. Disintegration of piers through combination of sea water, frost and erosion. Superstructure floated into position on scows.

SUSPENSION. Building the Rondout Creek Highway Suspension Bridge, W. E. Joyce and M. Bebarfald. Eng. News-Rec., vol. 89, no. 11, Sept. 14, 1922, pp. 424-428, 7 figs. Concrete-floor highway bridge of 705-ft. span; stiffening trusses continuous over three spans; method of spinning 9¼-in. wire cables.

BRIDGES, RAILWAY

LOCOMOTIVE LOADINGS. Locomotive Loadings for Railway Bridges, D. B. Steinman. Am. Soc. Civ. Engrs. Proc., vol. 48, no. 5, May 1922, pp. 1043-1073, 14 figs. and 9 plates. Presents new loading system based on study of stress-producing effects of modern heavy locomotives.

Steel. The New Regulations of the German State Railway for the Design and Calculation of Steel Railway Bridges, Fr Voss Bauingenieur, vol 3, no. 14, July 31, 1922, pp 441-444, 5 figs General regulation for calculation of strength and drawings; assumed loads; permissible stresses

BRONZES

Manganese. Manganese Bronze, F. A. Livermore, Foundry Trade Jl., vol. 26, no. 310, July 27, 1922, pp. 83-84 Practical suggestions as to manufacture and tests of physical properties

BUILDING CONSTRUCTION

Brickwork, Cost Estimating. Estimating the Cost of Brickwork, Chas. F. Dingman Contract Rec., vol 36, no. 34, Aug 23, 1922, pp 834-839 How a bid should be computed. Factors involved in brick laying. Data covering labour operations. Why brickwork material estimates vary.

Labour-Cost Estimation Estimating Labor Costs on Building Construction, Gordon M Tamblyn. Eng and Contracting, vol 58, no 4, July 26, 1922, pp. 88-91. Writer suggests a few particular points found to be of great help in making estimates, which tend to lessen danger of overlooking or duplicating items. Presents so-called labour constants and gives examples of their use. Introductory chapter to Building Labour Calculator.

Progress Chart. Cutting Costs with the Progress Chart, H. N. Snow. Contract Rec., vol. 36, no. 31, Aug. 2, 1922, pp. 785-786, 2 figs. Use in Building operations and method of handling.

Waste Elimination. How to Eliminate Waste in Construction Industry, D. Kinckerbacker Boyd. Eng. and Contracting, vol. 58, no. 4, July 26, 1922, pp. 82-84, 1 fig. Practical suggestions for large savings. Paper presented before Am. Construction Council.

C

CABLES, ELECTRIC

Aluminum. Aluminum Overhead Transmission Lines. Elec. Rev., vol. 91, no. 2334, Aug. 18, 1922, pp. 220-222, 5 figs. Describes particular advantages of steel-cored aluminum after referring briefly to chief characteristics of plain aluminum cables.

CABLEWAYS

Suspended Cars. Suspended Elevators and Ferries (Schwebelift und Schwebefähre), Richard Petersen. Verkehrstechnik, vol. 39, no. 31, Aug. 4, 1922, pp. 401-405, 5 figs. Describes new German patents for conveyance of passengers and freight between two stations whose beeline connections is high over surface of earth. Suspended elevators connect station on cliff with one in valley, whereas suspended ferries connect two sides of a deep valley. Results of model tests.

CARWHEELS

Chilled-iron, The Griffin Wheel (Das Griffinrad). Emil Rüker. Glasers Annalen, vol. 91, no. 3, Aug. 1, 1922, pp. 33-43. Statistics on fracture of tire and life of wheels. Investigation of speed limits, maintenance costs, influence of continuous braking of trains. Experiences in practice and workshop. Bibliography.

CARS

Self-Propelled. Self-Propelled Cars on Steam Railways. Can. Ry. and Mar. World, no. 294, Aug. 1922, pp. 417-419, 4 figs. Description of equipment on Can. Nat. Rys. This equipment is both of American and Canadian origin.

CARS, FREIGHT

Design. Some Factors to be Considered in Freight Car Design, H. W. Williams. Ry. Rev., vol. 71, no. 9, Aug. 26, 1922, pp. 269-271. Evolution of design leading toward standardization and reduction in weight.

CARS, REFRIGERATOR

Design and Operation. Some Notes on Railway Refrigerator Cars, W. H. Winterrowd. Mech. Eng., vol. 44, no. 7, July 1922, pp. 419-426, 13 figs. Facts relating to principles of railway refrigerator-car operation and information about various types of cars and methods of design and construction. (Abridgment.)

Mechanical Refrigeration of. Refrigeration of Railroad Cars, W. M. Baxter. Mech. Eng., vol. 44, no. 9, Sept. 1922, pp. 570-574, 8 figs. Technical, economic and operating aspects of various attempts to employ mechanical refrigeration in railroad refrigerator cars with details of proposed dense-air system for that purpose. (Abridgment.)

Santa Fe Railway. New Designs of Refrigerator Cars for the Santa Fe. Ry. Age, vol. 73, no. 5, July 29, 1922, pp. 189-193, 10 figs. Include two similar types, one with movable, other with stationary bulkheads. See also Ry. Mech. Engr., vol. 96, no. 8, Aug. 1922, pp. 455-459, 10 figs.

CARS, TANK

Acid. Tank Cars for Transportation of Muriatic Acid, J. M. Rowland. Chem. Age, vol. 30, no. 7, July 1922, pp. 299-301, 3 figs. Description of construction of car and discussion of lining with particular reference to unvulcanized para rubber linings.

CASE-HARDENING

Localized. Problems in Localized Case Hardening, R. A. Millholland. Iron Age, vol. 110, no. 5, Aug. 3, 1922, pp. 265-266. Low-carbon machine steel used; after carburization and annealing, material to be removed machinable and not distorted in subsequent hardening.

Prevention. Methods for Locally Preventing Case Hardening, Jean Galibourg and Marcel Ballay. Iron Age, vol. 110, no. 3, July 20, 1922, pp. 136-137. Protective layers applied with brush and coating with copper compared by French authorities. Translated from Revue de Métallurgie, Apr. 1922.

CAST IRON

Chemical Composition. Cast Iron and Its Chemical Composition, O. Smalley. Engineering, vol. 114, no. 2957, Sept. 1, 1922, pp. 277-281, 22 figs. Notes on semi-steel; oxygen in cast iron; casting temperatures; solidity of cast-iron; effect of composition on strength of cast-iron hot, etc. Paper read before British Foundrymen's Assn.

Electric-Furnace Production. Cast Iron as Produced in the Electric Furnace, and Some of Its Problems, George K. Elliott. Chem. and Met. Eng., vol. 27, no. 3, July 19, 1922, pp. 116-120. Basic electric furnace is useful to refine cupola-melted iron, reducing sulphur and gases to any extent desired, and producing easily machinable castings, very tough and strong, and with minimum of defectives from dirt or blowholes. Paper read before Am. Electrochem. Soc.

Low Temperature, Influence of. Some Influences of Low Temperature on the Strength and Other Properties of Cast Iron, A. Campion. Foundry Trade Jl., vol. 26, no. 308, July 13, 1922, pp. 32-36, 2 figs. Results of tests made on irons of different qualities and compositions; on repeated heating and cooling, changes of weight were found.

Melting. Heat Factors Govern Melting, Y. A. Dyer. Foundry, vol. 50, no. 16, Aug. 15, 1922, pp. 661-662. Importance of thermophysics in melting, superheating, pouring and cooling iron illustrated by effects enumerated and study of results obtained from combustion of coke in cupola.

Nickel-Chromium, Effect of. Effect of Nickel-Chromium on Cast Iron, Richard Moldenke. Am. Inst. Min. & Met. Engrs. Trans., no. 1187-S, Sept. 1922, 23 pp., 12 figs.; and (abstract) in Min. & Metallurgy, no. 189, Sept. 1922, pp. 54-55, 3 figs. Describes making of pig iron from Mayari iron ores of Cuba, and gives tables of results of tests, series of curves showing interrelation of elements involved, and summary of conclusions derived.

Specifications. Report of Committee A-3 on Cast Iron. Am. Soc. for Testing Matls. advance paper for meeting June 26-30, 1922, 14 pp., 2 figs. Proposed tentative specifications for chilled cast iron wheels, foundry pig iron and high-test gray-iron castings.

Steel Scrap in Cupola. Steel Scrap in Cupola Iron Mixtures, E. J. Lowry. Iron Age, vol. 110, no. 6, Aug. 10, 1922, pp. 337-338, 3 figs. Strength of product and percentages of scrap. Experiments and results. Effect on hardness.

CASTING

Centrifugal. Centrifugal Casting, Leon Cammen. Mech. Eng., vol. 44, no. 8, Aug. 1922, pp. 500-504, 4 figs. Résumé of development and discussion of design and operating problems of centrifugal-casting processes and their field of application. Manufacture of plates by this process. (Abridgment.)

CELLULOSE

Wood. Contributions to Chemistry of Wood Cellulose, Louis E. Wise and Walter C. Russell. Jl. Indus. & Eng. Chem., vol. 14, no. 4, Apr. 1922, pp. 285-287. Compares chemical properties of wood cellulose and cotton cellulose by means of spruce pulp, which yields appreciable amounts of cellulose octacetate on acetolysis, as does cotton.

CENTRAL STATIONS

Superpower. The Gennevilliers Plant and the Distribution of Electric Energy in the Paris District (L'Usine de Gennevilliers et la distribution de l'énergie électrique dans la région Parisienne), F. Loppé. Industrie Électrique, vol. 31, no. 722, July 25, 1922, pp. 265-276, 10 figs. Describes buildings, boiler house, 50,000-hp. turbo-alternators, 50,000-hp. turbines, etc.

CEMENT MILLS

Iron and Steel, Application of. Iron and Steel Application to the Cement Industry, W. R. Shimer. Cement, Mill & Quarry, vol. 21, no. 2, July 20, 1922, pp. 31-34. Special steel recommended; heat-treated steel for shovels, gyratories, and in places where wear is encountered.

CHIMNEYS

Compound. The Nast System of Compound Chimneys (Die schalungslose Verbundbauweise "Nast"), Paul Frei. Beton u. Eisen, vol. 21, nos. 5 and 6, Mar. 18 and Apr. 5, 1922, pp. 78-81 and 90-91, 7 figs. Mar. 18: Construction of reinforced-concrete stacks; improvements introduced by patent of B. Nast. Apr. 5: Describes chimneys 62 to 117 m. high at Oppau works, all of which passed through explosion unharmed.

CHROMIUM STEEL

Corrosion, Resistance to. Resistance to Corrosion of Various Types of Chromium Steels, Henry S. Rowdon and Alexander I. Krynitsky. Chem. & Met. Eng., vol. 27, no. 4, July 26, 1922, pp. 171-173. Abstract of research carried out at Bur. of Standards. Corrosion in air differs from that in dilute hydrochloric acid.

Solidification, Speed of. The Influence of Speed of Solidification on Double-Carbide Steels (Ueber den Einfluss der Ertsarrungsgeschwindigkeit auf die Doppel-Karbidstähle) P. Oberhoffer. Stahl u. Eisen, vol. 42, no. 32, Aug. 10, 1922, pp. 1240-1242, 6 figs. Results of tests carried out on a series of chrome steels.

CIRCUIT BREAKERS

Oil. Considerations Relating to the Design of Oil Circuit Breakers, D. R. Davies. Electrician, vols. 88 and 89, nos. 2300, 2303 and 2307, June 16, July 7 and Aug. 4, 1922, pp. 712-714, 6-8 and 124-125, 10 figs. Methods for reducing losses; estimating maximum temperature rise of small conductors during short circuit. Repulsive effects produced by large currents in oil circuit breakers. Summary of factors limiting ultimate interrupting capacity.

CITY PLANNING

Problems. The Engineer and the Town Plan, James Ewing. Eng. Jl. (Eng. Inst. Can.), vol. 5, no. 8, Aug. 1922, pp. 412-414 and (discussion), pp. 415-417. Importance of planning for future; transportation and street-traffic problem zoning; parks and playgrounds.

CLAY

Industries and Mining. Clay-Working Industries, Clay, and Silica Brick in 1919 and 1920, Jefferson Middleton. U. S. Geol. Surv., 11:33, Aug. 14, 1922, pp. 323-359, 1 fig. Deals with products of clay-working industries as well as clay mining.

CLAY PRODUCTS

Soluble Salts in. Soluble Salts in Clay Wares, C. W. Parmelee. Brick & Clay Rec., vol. 61, nos. 4 and 5, Aug. 22 and Sept. 5, 1922, pp. 249-252 and 316-318. Discussion of standard terms on deposits formed on surface of burned clay; suggestions for overcoming this defect and explanation of why barium compounds are used. Address before Am. Face Brick Assn.

COAL

Carbonization. The Carbonization of Coal, R. Lessing. Fuel in Sci. & Practice, vol. 124, no. 3214, Aug. 25, 1922, pp. 137-149, 8 figs. Notes on destructive distillation of coal; volatile products of carbonization; influence of flue gases; effect of catalysis; use of steam during carbonization; carbonization in gas works and coke ovens; low-temperature carbonization; complete gasification; etc. Lecture delivered in Dept. of Fuel Technology at Sheffield University.

Spontaneous Combustion. Factors in the Spontaneous Combustion of Coal, O. P. Hood. U. S. Bur. of Mines Tech. Paper, no. 311, 1922, 9 pp., 8 figs. Notes on size of coal, temperature at time of storage, freshness of coal surface, rise of temperature to danger point, dissipation of heat generated, etc. Publications on heating and deterioration of stored coal.

COAL HANDLING

Haulage, Hoisting and Dumping. Cambria Steel Co. Drops Coal Down Well, Loads It at Bottom and Hauls It to Ovens, George A. Richardson. Coal Age, vol. 22, no. 9, Aug. 31, 1922, pp. 313-317, 7 figs. Coal is passed down 110-ft. shaft from upper bed to lower and is reloaded for 2-mile run to Rosedale ovens; electrically actuated gates load through measuring hopper.

Pit Car Loaders. Mechanical Pit Car Loaders, Reginald Trautschold. Coal Industry, vol. 5, no. 6, June 1922, pp. 283-285, 4 figs. Mechanical loading device will operate to greatly reduce mining costs of given proper chance, but good management is essential to success; types of loaders and operating data.

Turntables, Use of. Enlisting the Turntable in Mechanical Coal Loading, E. N. Zern. Coal Age, vol. 22, no. 8, Aug. 24, 1922, pp. 283-285, 2 figs. Turntable is located on room track opposite line of crosscuts which intersect five consecutive rooms and give a storage road for cars near loading machine.

COAL MINING

Safety Methods. Keeping Up to Date in Safety Methods in Coal Mining, D. Harrington. U. S. Bur. of Mines Reports of Investigations, no. 2372, July 1922, 2 pp. Recommendations for safe methods.

COAL STORAGE

Cable Drag-Scraper Method. Coal Handling by Drag Scraper, C. W. Ross. Gas Age-Rec., vol. 50, no. 8, Aug. 19, 1922, pp. 230-232, 6 figs. Suggestions for storage so as to prevent spontaneous combustion; methods of storing; cable drag-scraper storing system.

Experiments. Experiments in Coal Preservation, M. Forrières. Gas Jl., vol. 159, no. 3092, Aug. 16, 1922, pp. 375-376 Results of very complete laboratoy experiments carried out with view of determining behaviour of similar coals, stored with free access to air circulation, with restricted air circulation, and under water.

COKE MANUFACTURE

By-Product. By-product Coking, F. W. Sperr, Jr. Jl. Indus. & Eng. Chem., vol. 14, no. 9, Sept. 1922, pp. 844-846. Property and process of coking; by-product formation; properties and utilization of coke; materials of plant construction.

COLD STORAGE

Research. The Low Temperature Research Station at Cambridge, L. F. Newman. British Cold Storage & Ice Assn., vol. 18, no. 2, 1921-1922, pp. 5-17 and (discussion) 18-28 Investigation of entire problem of cold-storage losses and description of new station.

COLUMNS

Reinforced-Concrete. Slenderness-Ratio and Strength of Concrete Columns, F. E. Giesecke. Eng. News-Rec., vol. 89, no. 7, Aug. 17, 1922, pp. 274-276, 7 figs. Effect of length found to be negligible; influence of water ratio and mixing; buckling controlled by eccentric loading.

COMBUSTION

Maximum Temperature Calculation. Rapid Calculation of Theoretical Maximum Temperatures, George Granger Brown. Chem. & Met. Eng., vol. 27, no. 10, Sept. 6, 1922, pp. 497-500, 3 figs. Four methods for computing temperature developed by a reaction; graphical, by trial, algebraic, and slide rule. From paper read before Am. Chem. Soc.

CONCRETE

Aggregate, Limestone. Report of Tests on Limestone Aggregate. Concrete Products, 23, no. 2, Aug. 1922, pp. 59-61, 3 figs. Results of tests made by Eng. Research Laboratory, Univ. Texas, with soft limestone having unit compressive strength of about 6,000 lb., in comparison with harder limestone having unit compressive strength of about 18,000 lb., showing that 28-day strength of concrete made with soft was as great as that made with harder.

Alkali Effects. Drain Tile Tests Show Concrete Affected by Alkali. Eng. News-Rec., vol. 89, no. 5, Aug. 3, 1922, p. 181. Report of observations on test tile placed in 1913 in alkali soils through 1920.

Gas Water, Effect. Destructive Action of Gas Water on Concrete (Zerstörender Angriff auf Beton durch Gaswasser), Robert Mezger. Bauingenieur, vol. 3, no. 13, July 15, 1922, pp. 408-412. Results of experiences in gas works of Stuttgart, Germany. Measures for protecting concrete.

Mixtures, Design of. Design of Concrete Mixture Without Use of Abrams' Tables, H. C. Boyden. Eng. & Contracting, vol. 58, no. 4, July 26, 1922, pp. 91-93, 3 figs. Present information for solution of problems liable to come up in design of concrete mixtures.

Products, Tests on. Need for Tests on Concrete Products, Wallace R. Harris. Concrete Products, vol. 23, no. 1, July 1922, pp. 39-40. Development of industry requires exact knowledge of physical properties.

Quality Control. Controlling Quality of 400,000 Cu. Yds. of Concrete, Roderick B. Young. Concrete, vol. 21, no. 1, July 1922, pp. 3-6, 3 figs. Saving 50,650 barrels of cement and obtaining specified strengths at 28 days by definite control of proportions on Queenston-Chippewa hydro-electric development.

CONCRETE BLOCKS

Manufacturing Methods, Equipment. Modern Equipment Reduces Labour Costs, Raymond P. Bigelow. Concrete Products, vol. 23, no. 1, July 1922, pp. 33-35, 4 figs. Ways and means adopted to obtain maximum production in concrete products plant of Garland Block & Sand Co., Youngstown, Ohio.

CONCRETE CONSTRUCTION

Cost Estimate. Estimating the Cost of Plain Concrete Work in Buildings, Chas. F. Dingman. Contract Rec., vol. 30, July 26, 1922, pp. 726-730. Methods of calculating quantities and figuring costs; analysis of factors involved in forming and concreting operations.

Forms. How to Make Forms for Concrete Buildings, Wm. F. Lockhardt. Concrete, vol. 20, nos. 2, 3, 4, 5 and 6, Feb., Mar., Apr., May, June, July and Aug. 1922, pp. 56-58, 113-115, 164-169, 191-197, 239-242, 14-16 and 44-46, 51 figs. Feb.: Footings. Mar.: Walls. Apr.: Columns. May: Beams and girders. June and July: Flat slabs. Aug.: Belt courses and cornices.

CONCRETE CONSTRUCTION, REINFORCED

Water-Holding Structures. Concrete for Water-Holding Structures, H. C. Ritchie. Contract Rec., vol. 36, nos. 33 and 34, Aug. 16 and 23, 1922, pp. 818-821 and 844-846. Special problems in use of material for such purposes. States that it is possible to so use concrete as to make it waterproof of itself. Economy of reinforced concrete in capital cost and concrete. Discussion. Paper read before (Brit.) Instn. Water Engrs.

CONCRETE, REINFORCED

Diagrams. Simplified Reinforced Concrete Diagrams, Eugene F. Delery. La. Eng. Soc. Proc., vol. 8, no. 3, June 1922, pp. 119-137, 3 figs. Presents charts developed by author with object of securing simple, yet comprehensive, set of curves for rapid calculations and comparisons for varying conditions of stress in both steel and concrete.

Inspection Rules for. Report of Committee C-2 on Reinforced Concrete. Am. Soc. for Testing Matls. advance paper for meeting June 26-30, 1922, 8 pp. Proposed tentative rules for inspection of concrete and reinforced-concrete work.

Slabs. Design of Reinforced Concrete Slabs, Howard Harding. Engrs. & Eng., vol. 39, no. 6, Aug. 1922, pp. 302-306, 6 figs. Describes use of diagram for graphic solution of reinforced concrete slabs. Paper read before Rochester Eng. Soc.

CONDENSERS, STEAM

Air Extractors. Tests on Delas Air Extractor. Iron & Coal Trades Rev., vol. 105, no. 2839, July 28, 1922, pp. 116-117, 5 figs. Inventor has stabilized extractor by method of introducing external cold-water circulation instead of atmospheric air into divergent.

Surface. Surface Condensing Plant. Engineer, vol. 134, no. 3473, July 21, 1922, pp. 70-72, 9 figs. Described new installation in Pinkston power station of Mirrlees Watson surface condenser, designed to work with 10,000-kw. 1500-rev. turbo-generator, and capable of maintaining vacuum of 27.8 in., with cooling water at 75 deg. fahr. when dealing with 185,000 lb. of steam per hr.

COPPER ORE

Heap Leaching. Heap Leaching of Low-Grade Copper Ores, Joseph Irving. Eng. & Min. Jl.-Press, vol. 113, nos. 17 and 18, Apr. 29 and May 6, 1922, pp. 714-721 and 774-777, 10 figs. Success of process in Spain led to trials in Bisbee district, Arizona. Over 70 per cent of copper extracted from ore containing 27 lb. per ton.

CORROSION

Metals and Alloys. Preliminary Notes on Corrosion, Wilder D. Bancroft. Am. Soc. for Testing Matls. advance paper for meeting June 26-30, 1922, 5 pp. Points out desirability of developing rapid method for studying corrosion.

Prevention by Deoxidizing Metals. Prevention of Corrosion of Metals by Water in a Closed System, Perry West. Jl. Indus. & Engr. Chem., vol. 14, no. 7, July 1922, pp. 601-607, 7 figs. Metals rust to appreciable degree only when in contact with both water and free oxygen. Removal of this oxygen will in most cases practically stop corrosion, and in other cases materially reduce corrosion caused by other agencies.

COST ACCOUNTING

Factory. Cost Accounting and Factory Efficiency, George P. Comer. Chem. & Met. Eng., vol. 27, no. 9, Aug. 30, 1922, pp. 417-421. Control of production; basic schemes of distribution; essential elements of cost; departmental cost sheet; costs of idle equipment; cost and sales summary; uniform cost systems.

Rolling-Stock Production. Railway Carriage and Wagon Building Costs. Ry. Engr., vol. 43, no. 511, Aug. 1922, pp. 289-294, 17 figs. New system installed at works of Midland Ry., Derby, for ascertaining and checking rolling-stock production costs.

CRANES

Cableway. Cableway Cranes (Kabelkrane), Friedrich Riedig. Fördertechnik u. Frachtverkehr, vol. 15, no. 15, July 21, 1922, pp. 195-201, 15 figs. Use of cableway cranes for building of bridges, dams, harbors, canals, etc.; for loading of bulk goods; and for shipbuilding. Efficiency of such cranes and comparison with loading bridges.

Workshop. The Louden-King Push-and-Pull Crane, George F. Zimmer. Eng. and Indus. Management, vol. 8, no. 3, Aug. 24, 1922, pp. 95-97, 7 figs. Overhead, hand-operated crane for loads up to 1000 lb.

CUPOLAS

Hot-Blast. Utilizing Heat of the Cupola to Warm the Blast. Can. Foundryman, vol. 13, no. 8, Aug. 1922, pp. 18-19, 3 figs. By having cast-iron jacket above melting zone, air is heated from waste heat of fuel, before passing into fire.

CUTTING TOOLS

Diamond. Diamond Tools as Cost Reducers. Machy. (N.Y.), vol. 29, no. 1, Sept. 1922, pp. 33-37, 7 figs. Gives brief description of preparation of diamonds for commercial use, indicates how they are set in holders, and furnishes information regarding their cost. Multiple-stone diamond dresser for emery wheels.

CYLINDERS

Metal-Faced Cores. Using Metal Faced Cores in Cylinders. Foundry, vol. 50, no. 16, Aug. 15, 1922, pp. 684-685, 4 figs. Patent claim of T. P. Greenhow is based on method of application and preparation employed to cover metal face of core to prevent metal from chilling. Method has been applied at plant of Buick-Motor Co., Flint, Mich.

Welded, Testing. Tests on Welded C[illegible] [illegible] and H. J. B[illegible]. Mech. Eng., vol. 44, no. 9, Sept. 1922, [illegible] 14 figs. Describes [illegible]

D

DAMS

Arch Calculation. Calculation of Arch Dams (Notes sur le calcul des barrages en voute), G. Pigeaud. Génie Civil, vol. 81, no. 5, July 29, 1922, pp. 106-108, 1 fig. Effect of temperature; calculation of masonry dams; examples.

Cataluna, Spain. Building the Highest Dam in Europe, Willis Ranney. Eng. News-Rec., vol. 89, no. 7, Aug. 17, 1922, pp. 260-267, 9 figs. Features of Camarasa hydroelectric development in Cataluna, Spain. Built at high speed under war conditions. Dam 333 ft. high with gravity section of sand-cement concrete.

Sukkur, India. The Sukkur Barrage. Engineer, vol. 134, no. 3478, Aug. 25, 1922, pp. 190-191, 3 figs. Details of proposed dam in province of Sind, India, which will hold up water to height of over 18 ft. by means of Stoney sluices; superstructure will be of masonry.

DIE CASTING

Aluminum Bronze. Aluminum-Bronze Die Castings. Machy. (Lond.), vol. 20, no. 509, June 29, 1922, pp. 377-380, 6 figs. Die-cast and sand-cast pieces compared. Metal, dies, and methods used in process.

Operations and Equipment. Die Casting in a Small Shop. Eng. Production, vol. 5, no. 97, Aug. 10, 1922, pp. 128-132, 8 figs. Operations and equipment.

DIELECTRICS

Corona in Air Spaces. Corona in Air Spaces in a Dielectric, J. E. Shrader. Am. Inst. Elec. Engrs., vol. 41, no. 9, Sept. 1922, pp. 702-709, 14 figs. Results of investigation of various materials both with air spaces excluded as much as possible and with air spaces of definite thickness, extent, and location at atmospheric pressure.

DIESEL ENGINES

Double-Acting Type. Design of Novel Diesel. Practical Engr., vol. 66, no. 1864, July 13, 1922, p. 26. Engine consists of two cylinders bolted together in middle and free to reciprocate relatively to covers.

Nordberg Small-Hp. Diesel Engine for Small Plants. Power, vol. 56, no. 5, Aug. 1, 1922, pp. 163-165, 6 figs. Discusses motives prompting Nordberg Mfg. Co. to design Diesel engines of small powers and describes important details of design.

DISTILLATION

Evaporation of. Evaporation and Distillation. Chem. Trade Jl., vol. 71, no. 1836, July 14, 1922, pp. 35-40. Abstract of papers on ammoniacal liquor stills, tar distillation, general problem of evaporation, and distillation of glycerine. Read before Soc. Chem. Industry.

DRILLING MACHINES

Drill Heads, Multi-Spindle. Adjustable Multi-Spindle Drill Heads. Eng. Production, vol. 5, no. 93, July 13, 1922, pp. 28-29, 4 figs. Description of drill head in which spindles can be adjusted for height so that when setting up it is not necessary for drills to be of equal length.

DROP FORGING

Methods. Drop Forging. Eng. Production, vol. 5, no. 98, Aug. 17, 1922, pp. 157-163, 21 figs. Methods, equipment and products of Thomas Smith's Stamping Works, Ltd., Coventry, England.

DRYDOCKS

Floating. A Reinforced Concrete Floating Dry Dock. Eng. and Contracting, vol. 58, no. 9, Aug. 30, 1922, p. 211, 1 fig. Describes 2000-ton drydock recently completed and launched by Cooperative Edilizia della Regione Gjilia at Trieste. From Génie Civil.

DRY KILNS

Lumber Piling. The Value of Drykiln Efficiency Tests. Wood-Worker, vol. 41, no. 6, Aug. 1922, pp. 39-40, 4 figs. Results of series of tests made by Vancouver Lumber Co., Ltd., Vancouver, B.C., to determine most efficient methods of piling lumber in dry kilns.

DURALUMIN

Properties and Methods of Using. Properties and Methods of Using Duralumin. Automotive Industries, vol. 47, no. 8, Aug. 24, 1922, pp. 370-376, 10 figs. This aluminum alloy has about same ultimate strength as structural steel but weighs one third as much; can be heat-treated, rolled, stamped, cast, forged, welded and readily machined; possesses characteristics which render it valuable to automotive industry.

E

ECONOMIZERS

Operation. Economizers and Economizer Operation, Frank H. Prouty. Power House, vol. 15, Aug. 5, 1922, pp. 25-26. Status in American practice. Progress in structural details. Modifications in soot-cleaning arrangements. Operating features.

EDUCATION, ENGINEERING

Petroleum Engineering. Petroleum Education, Edwin DeBarr and Fred W. Padgett. Chem. and Met. Eng., vol. 27, no. 3, July 19, 1922, pp. 125-127. Attempted outline of specialized courses for prospective graduates in petroleum engineering. Paper read before Am. Chem. Soc.

ELECTRIC CIRCUITS

Underground Construction. Underground Construction Suggestions, William S. Jones. Elec. World, vol. 80, no. 10, Sept. 2, 1922, pp. 481-485, 6 figs. Material specifications and installation requirements that can be applied to advantage where better or more elaborate standards have not been adopted.

ELECTRIC DRIVE

Metal Works. Electrification of the International Nickel Company's Works for Monel Metal, F. C. Watson. Assn. Iron and Steel Elec. Engrs., vol. 4, no. 9, Sept. 1922, pp. 415-454, 12 figs. Details of electric power-supply equipment of Huntington Works in West Virginia.

ELECTRIC GENERATORS

Capacity and Load. Relation Connected Loads Should Bear to Generator Capacity. Coal Age, vol. 21, no. 25, June 22, 1922, pp. 1037-1040, 13 figs. Fans have low demand factor and high power factor; pumps even in Illinois have low demand rate; locomotives on a run may use less than 40 per cent of their full duty. (Abstract) Paper read before joint meeting of Am. Inst. Elec. Engrs., West. Soc. of Engrs., Am. Inst. Min. and Met. Engrs., and Assn. Iron and Steel Elec. Engrs.

ELECTRIC GENERATORS, A.C.

45,000-Kv-a. Design of 45,000-Kv-a Generators, Queenston Plant, R. A. McCarty and H. U. Hart. Am. Inst. Elec. Engrs., vol. 41, no. 9, Sept. 1922, pp. 698-701, 6 figs. Deals with problems involved in design of armature winding, upper bearing bracket, and rotating spider. Gives tabulation of major dimensions and weights of generators.

Stator Windings. Probable Values of Conventional Allowance for A-C. Generators Stator Windings, F. D. Newbury. Am. Inst. Elec. Engrs. Jl., vol. 41, no. 9, Sept. 1922, pp. 636-645, 10 figs. Attempt is made to determine experimentally value of conventional allowance for described method of measurement when applied to given class of a.c. machine stator windings for given temperature limits.

ELECTRIC GENERATORS, D.C.

Parallel Operation. Parallel Operation of Commutating Pole Machines, C. B. Hathaway. Power Plant Eng., vol. 26, no. 17, Sept. 1, 1922, pp. 859-861, 10 figs. Review of principles involved in paralleling machines with particular reference to those of commutating-pole type.

ELECTRIC FURNACES

Acid. Notes on Acid Electric Furnace Practice, Charles W. Francis. Iron Age, vol. 110, no. 6, Aug. 10, 1922, pp. 345-346. Basic scrap and how to charge it; making a new bottom; when to tap and how to pour; alloy additions in furnace.

Basic. Notes on Basic Electric Furnace Operation, Charles W. Francis. Iron Age, vol. 110, no. 7, Aug. 17, 1922, pp. 421-422. Grade of lime necessary; reducing phosphorus and sulphur; high and low tap voltages.

Circulation of Molten Metal. The Circulation of Molten Metal by Means of Electrodynamic Forces, Oscar Brophy. Chem. and Met. Eng., vol. 27, no. 10, Sept. 6, 1922, p. 489, 1 fig. Discusses the three important electrodynamic forces that may be used to circulate molten metal, viz., pinch, effect, corner effect, and motor effect.

Foundries. Economy Features of Electric Foundry, Charles W. Francis. Iron Age, vol. 110, no. 5, Aug. 3, 1922, pp. 277-278. Locating furnace and supply bins; handling materials; caring for electrodes.

The Electric Furnace for the Foundry, Charles W. Francis. Iron Age, vol. 110, no. 4, July 27, 1922, pp. 201-202. Considerations in choosing proper unit for making steel castings. Place of acid and basic operations.

Induction. A New Induction Furnace, J. Murray Weed. Am. Electrochem. Soc. advance paper, no. 5, for meeting, Sept. 21-23, 1922, pp. 27-34, 3 figs. Describes induction furnace for melting non-ferrous metals, in which secondary consists of molten charge which is distinct from melting pot.

Induction Furnace for Melting Non-Ferrous Metals. Metal Industry (N.Y.), vol. 20, no. 8, Aug. 1922, pp. 312-313, 2 figs. New type developed by Gen. Elec. Co.

Smelting Pig Iron. Electric Smelting of Pig Iron in Sweden. Engineer, vol. 134, no. 3471, July 7, 1922, pp. 5-6, 4 figs. Describes Swedish electric furnace which is a combination of blast-furnace shaft with an electric hearth.

Steel. Costs of Electric Steel Melting, Charles Wellman Francis. Iron Age, vol. 110, no. 9, Aug. 31, 1922, pp. 525-526. Comparison of methods shows basic higher than acid; power charge, electrodes and labor chief controlling items.

Furnace Has Sealed Electrodes, G. Vitali. Iron Trade Rev., vol. 71, no. 9, Aug. 31, 1922, pp. 585-586, 2 figs. Units in electric steel plant of Fiat establishment in Italy embody radical changes in design of electrodes. Use 130-volt current for melting and 75-volt for refining operation. Translated from Stahl u. Eisen.

ELECTRIC LOCOMOTIVES

Design. Electric Locomotives, Vincent L. Raven. Electrician, vol. 89, no. 2304, July 14, 1922, pp. 36-38, 2 figs. Requirements for which any locomotive must be designed, the various designs which have been worked out to meet these requirements, and advantages and disadvantages of the various designs which have been completed. Paper read before Instn. Mech. Engrs. See also Ry. Engr., vol. 43, no. 510, July 1922, pp. 252-256, 2 figs.

Passenger, N.E. Ry. High Speed Electric Passenger Locomotive, North Eastern Railway. Ry. Engr., vol. 43, no. 511, Aug. 1922, pp. 296-297 and 313, 3 figs. Characteristics: Wheel arrangement, 4-6-4-; electric system, d.c.; voltage, 1500; overall length, 53 ft. 6 in.; overall width, 8 ft. 10 in.; driving wheel diam. 6 ft. 8 in.; rigid wheelbase, 16 ft.; weight, 102 tons; horse power, 1300; speed 51.5 m.p.h.

ELECTRIC METERS

Panelboards. Meter Panelboards for Large Consumers, Vernon I. E. Wiegand. Elec. World, vol. 80, no. 9, Aug. 26, 1922, pp. 415-417, 4 figs. Theft proof and fool-proof method of measuring simultaneous demands of primary customers at several substations and of metering power factor of two customers at same place.

ELECTRIC MOTORS

Circuits, Laying Out. Considerations in Laying Out Motor Circuits, Marin Phillips. Power, vol. 56, no. 9, Aug. 29, 1922, pp. 320-322, 1 fig. How to lay out and make a motor installation that is safe and reliable. Explains construction of motor panel board and gives tables for sizes of wires, switches, fuses and conduits.

Control. Electric Motor Control. Power Plant Eng., vol. 26, no. 16, Sept. 15, 1922, pp. 905-909, 8 figs. Various methods of starting and speed control of a.c. and d.c. motors.

ELECTRIC MOTORS, A.C.

Locating Faults. Locating and Repairing Alternating Current Motor Troubles, Marin Phillips. Power Plant Eng., vol. 26, no. 17, Sept. 1, 1922, pp. 856-858, 7 figs. Hints on practical methods of locating faults in induction motors.

ELECTRIC PLANTS

Development. Generating Station Development, David B. Rushmore and R. Pragst. Ass. Iron and Steel Elec. Engrs., vol. 4, no. 9, Sept. 1922, pp. 461-477, 7 figs. Reviews growth and development of generating stations, and discusses principle types of apparatus of which they are composed.

Performance Diagrams. The Operating Results of a Modern Power Station. Engineering, vol. 114, no. 2957, Sept. 1, 1922, pp. 270-272, 3 figs. Presents full set of diagrams relating to performance of Glasgow Corporation station at Dalmarnock over period of four consecutive weeks.

ELECTRIC RAILWAYS

Equipment N.Y., N.H. & H. New Single Phase Equipment for the New Haven, Walter H. Smith. Ry. Elec. Engr., vol. 13, no. 8, Aug. 1922, pp. 259-262, 8 figs. Dimensions and equipment of new motor cars, employing four 175-hp. Westinghouse-type 409-D single-phase, 25-cycle, series motors. Two master controllers installed in trail cars permit operation from any car in train.

Multiple-Unit Equipment. New Multiple-Unit Equipment for Long Island R.R., R.H. Freeland. Ry. Rev., vol. 71, no. 3, July 15, 1922, pp. 81-83, 3 figs. Improved Westinghouse control adds to desirability of multiple-unit system for suburban operation.

ELECTRIC TRANSMISSION LINES

Rebuilding. Rebuilding a Transmission System, J. P. Jollyman. Elec. World, vol. 80, no. 12, Sept. 16, 1922, pp. 599-603, 10 figs. Account of changes made in transmission system of Pacific Gas and Elec. Co.

220,000-Volt. The Purpose and Problems of 220,000-Volt Transmission, J. P. Jollyman. Jl. Elec. and West. Industry, vol. 49, no. 4, Aug. 15, 1922, pp. 131-133, 5 figs. Why transmission of energy at 220,000 volts was chosen for Pit River system by Pacific Gas and Elec. Co. Details of insulators, synchronous condensers, etc.

ELECTRICAL MACHINERY

Construction. The Present-Day Construction of Electrical Machinery, L. Fleishmann. Elecn., vol. 89, no. 2311, Sept. 1, 1922, pp. 236-239, 5 figs. Deals with waterwheel and turbo-generators; rotor construction; improvements in stator design; precautions with deep slots; parallel operation; heating problem; temperature distribution; starting synchronous and induction motors; variable-speed a.c. motors; rotary converters; d.c. machines; d.c. and a.c. traction motors; mercury rectifiers, transformers, etc. Translated from Elektrotechnische zeit,. vol. 42, p. 961, 1922.

ELECTRIC WELDING

Welding Car. Construction and Use of an Electric Welding Car (Construction et emploi d'un poste mobile de soudure électrique), Jacques Schopfer. Industrie des Tramways, vol. 16, no. 184, Apr. 1922, pp. 87-93, 10 figs. Construction and equipment of car which runs along street tracks and is used for welding worn street rails.

ELECTRIC WELDING, ARC

Locomotive Work. Use and Abuse in Electric Arc Welding in Locomotive Work, C. W. Roberts. Am. Welding Soc. Jl., vol. 1, no. 7, July 1922, pp. 9-19, 19 figs. General description and practical data.

ELECTRIC WELDING, RESISTANCE

Nomenclature. Terms Used in Electric Welding. Ry. Jl., vol. 28, no. 9, Sept. 1922, pp. 18-19. Nomenclature report made by resistance welding committee of Am. Bur. of Welding.

EMPLOYMENT MANAGEMENT

Employee Suggestion Plans. Employee Suggestion Plans. Sanford DeHart. Am. Mach., vol. 57, no. 10, Sept. 7, 1922, pp. 365-367. Reward for suggestions in money and promotion. How priority of suggestions is determined. Some successful plans in practice.

Personnel Records. Visualizing Potential Occupations, Ralph W Immel. Management Eng., vol. 3, no. 3, Sept. 1922, pp. 143-146, 2 figs. Describes and illustrates form of personnel record sheet.

ENGINEERING

Status of Profession. The Proper Status of the Engineering Profession, R. A. Hart. Chem. and Met. Eng., vol. 27, no. 6, Aug. 9, 1922, pp. 245-248. Sees forth ideals toward which individual engineers must strive, and examines critically shortcomings of present day engineer.

ENGINEERING SOCIETIES

Federated American Engineering Societies. A Lay View of the Function of the Federated American Engineering Societies. Min. and Metallurgy, no. 189, Sept. 1922, pp. [illegible] [illegible] entitled Science and Engineering of Prof. Cassius J. Keyser's work, Mathematical Philosophy.

ENGINEHOUSES

Turntables. Twin Span Turntable Reduces Load on Centre. Ry. Age. vol. 73, no. 9, Aug. 26, 1922, pp. 383-385, 5 figs. Describes turntable having two separate girder [illegible] centre [illegible] becomes largely independent [illegible] of circular rail.

EVAPORATION

Liquid to Gas. The [illegible] Gas, W. K. Lewis. Mech. Eng., vol. 44, no. 7, July 1922, pp. 445-446. Investigates mechanism of evaporation of liquid in [illegible] scrubbers, humidifiers, dehumidifiers, water coolers, air driers, etc. Establishes formula for calculating humidity of air from wet- and dry-bulb thermometer readings. (Abridgment.)

EXHAUST STEAM

Utilization. Exhaust-Steam Utilization (Abwärme-Verwertung), M. Hottinger. Schweizerische Bauzeitung, vol. 80, nos. 3, 4 and 5, July 15, 22 and 29, 1922, pp. 31-32, 37-41 and 52-54, 17 figs. July 15: Heat balance of a steam engine plant; diagrams and tables on steam consumption of turbines and piston engines. July 22: Utilization of waste and intermediary steam. July 29: Exhaust-steam utilization from steam hammers and similar arrangements.

EXPLOSIVES

Experimental Demonstrations. A Visit to the Plant of the Novel Industries, Ltd., at Ardeer, Scotland, Ellwood Hendrick. Chem. and Met. Eng., vol. 27, no. 7, Aug. 16, 1922, pp. 297-298, 2 figs. Three experiments showed difference between explosion caused by rapid burning and one due to rapid detonation. Demonstrations of properties and practical applications of explosives.

F

FEEDWATER HEATERS

Locomotive. Feed Water Heaters for Locomotives. Boiler Maker, vol. 22, no. 7, July 1922, pp. 196-197. Statistical data on use and tests of locomotive feed-water heaters. From report before Am. Ry. Assn.

Feed Water Heating and Boiler Circulating Apparatus for Locomotives. Ry. Gaz., vol. 37, no. 6, Aug. 11, 1922, pp. 198-202, 10 figs. Describes systems for heating boiler feedwater by flue gases and exhaust steam, either separately or in combination.

FELDSPAR

Quarries and Deposits. Feldspar Quarries and Deposits. Can. Min. Jl., vol. 43, no. 32, Aug. 11, 1922, pp. 518-523 and 527, 9 figs. Three articles: Richardson Feldspar Quarry, by J. C. Murray; Feldspar Deposits of the Ottawa District, by N. B. Davis; Storrington Feldspar Quarry.

FILTERS, SAND

Slow. Slow Sand Filtration Plant for Hartford, Conn., Caleb Mills Saville. Eng. News-Rec., vol. 89, no. 10, Sept. 7, 1922, pp. 380-384, 2 figs. Slow rather than rapid filters chosen after careful study in which color was chief mooted question. Costs compared with rapid filters at Cambridge.

FLAME PROPAGATION

Vapor-Air Mixtures. Limits for the Propagation of Flame in Vapour-Air Mixtures, Albert G. White. Chem. Soc. Jl., vol. 122, July 1922, pp. 1244-1270, 2 figs. Mixtures of air and one vapor at ordinary temperature and pressure.

FLOOD CONTROL

Problems. Flood Problems. Am. Soc. Civ. Engrs. Proc., vol. 48, no. 5, May 1922, pp. 1092-1225 and (discussion) pp. 1226-1247, 43 figs. Symposium containing following papers: Flood Conditions in Canada, J. G. Sullivan. Floods on Small Streams Caused by Rainfall of Cloudburst Type, Gerard H. Matthes. Standing Waves in Rivers, Nathan C. Grover. Flood Problems in China, John R. Freeman. Flood Control of Mississippi River, J. A. Ockerson. Flood Problems in Arid Region, Arthur P. Davis. Some Factors Affecting Problem of Flood Control, C. E. Grunsky. Flood Control in the Miami Valley Ohio, Charles H. Paul. Missouri River Bank Protection at Omaha, Nebraska. Roy N. Towl.

FLOW OF FLUIDS

Condensation in Return Pipes. Theory for the Flow of Condensation in Return Pipes, R. V. Frost. Am. Soc. Heat and Vent. Engrs. Jl., vol. 28, no. 6, Sept. 1922, pp. 655-659 and (discussion) pp. 659-663. Factors affecting proportions of return pipes.

FLOW OF GASES

Venturi Tubes. Venturi Tubes and Orifices for Bulk Gas Measurement, Johnstone-Taylor. Am. Gas Jl., vol. 117, no. 7, Aug. 12, 1922, pp. 139-141 and 144, 4 figs. With special reference to British practice.

FLOW OF LIQUIDS

Cones. Liquids Flowing Through Cones, W. N. Bond. Physical Coc. of Lond. Proc., vol. 34, part 5, Aug. 15, 1922, pp. 187-196, 7 figs. Consideration of pressure gradient in liquid that flows through conical tube. Results of experiments.

Laminary and Turbulent. Investigations of Laminary and Turbulent Flow (Untersuchungen über laminare und turbulente Strömung), L. Schiller. Forschungsarbeiten auf dem Gebiete des Ingenieur-wesens, no. 248, 1922, 36 pp., 29 figs. Results of investigations carried out in Inst. for Applied Mechanics of University of Göttingen.

FLOW OF WATER

Channels. The Flow of Water in Open Channels (Ueber die Bewegung des Wassers in Offenen Gerinnen), Armin Schoklitsch. Schweizerische Bauzeitung, vol. 80, no. 5, July 29, 1922, pp. 47-50, 7 figs. Results of author's measurements of pulsations. Behavior of flowing water in vicinity of wall and on surface.

The Correlation of Momentum and Energy Changes in Steady Flow With Varying Velocity and the Application of the Former to Problems of Unsteady Flow or Surges, in Open Channels, Raymond D. Johnson. Engrs. and Eng., vol. 39, no. 7, July 1922, pp. 233-240, 9 figs.

FORGING

Header Machine. Header Machine Makes Forgings, H. E. Diller. Iron Trade Rev., vol. 71, no. 10, Sept. 7, 1922, pp. 643-645 and 650, 7 figs. Intricate parts formerly made on power hammer now are pressed into shape on an upsetting machine. Pole piece is forged in one operation and ring gear in three.

FOUNDATIONS

Concrete Stresses. Stresses in Concrete Foundations (Die Beanspruchungen in Betonfundamenten), W. Gehler. Bauingenieur, vol. 3, nos. 14 and 15, July 31 and Aug. 15, 1922, pp. 421-427 and 456-462, 23 figs. The sliding surfaces of concrete bodies are investigated and calculated with aid of the Mohr stress diagram. Based on model tests with concrete blocks, origin of cracks in structures is explained and safety measures are recommended.

Pressure Transmission through Soils. Transmission of Pressure through Solids and Soils and the Related Engineering Phenomena, George Paaswell. Am. Soc. Civ. Engrs. Proc., vol. 48, no. 5, May 1922, pp. 1075-1089, 8 figs. It is shown that, in restricted sense, present-day rule-of-thumb methods of assumed stress paths hold true. Deals with two types of materials, namely, true granular, such as ordinary soils, and concrete aggregates, such as rock soils and concrete materials.

FOUNDRIES

Bronze. The Bronze Foundry (La Fonderie de Bronze), Derdinger. Fonderie Moderne, no. 7, July 1922, pp. 9-20 and (discussion) 21-24, 11 figs. Detailed discussion of organization of modern bronze foundry; layout, equipment, furnaces, sand, alloys, treatment of slag, illumination, etc.

FREIGHT HANDLING

Terminal. Terminal Relief by Direct Freight Delivery. Ry. Age, vol. 73, no. 12, Sept. 16, 1922, pp. 514-516. Successful system necessitates complete co-operation of railroad shipper and responsible trucking medium. Abstract of talks before Soc. Terminal Engrs.

Veri-Direct Method. The Veri-Direct Method of Loading, L.C.L. Freight, C. G. Johnson. Railroad Herald, vol. 26, no. 9, Aug. 1922, pp. 29-33. Also discusses veri-check record of handling inbound freight effective at larger stations on Ohio region of Erie Railroad.

FUELS

Colloidal. Colloidal Fuel, Lindon W. Bates. Steam, vol. 30, no. 2, Aug. 1922, pp. 41-44. Outline of nature of colloidal fuel and its relation to railway systems of United States.

Heating Values. Thermo-Calorimetric Heating values of Fuels, J. Hudler. Mech. Eng., vol. 44, no. 9, Sept. 1922, pp. 596-597, 3 figs. Author indicates method for determining heating value of fuels which he claims is superior to straight calorimeter method. Translated from Zeit. des Vereines deutscher Ingenieure, vol. 66, no. 20, May 20, 1922, pp. 495-497.

Refuse. Power from Refuse in Britain, C. H. S. Tupholme. Power Plant Eng., vol. 26, no. 17, Sept. 1, 1922, pp. 853-854. Producer gas made from factory and dust-bin used in gas engines and boiler furnaces.

Wood Waste, Gasification of. Utilization of Wood Refuse through Gasification (Verwertung der Holzabfälle durch Vergasung), Hans Neumann. Zeit. des Vereines deutscher Ingenieure, vol. 66, nos. 31-32, Aug. 12, 1922, pp. 757-763, 23 figs. Review of wood-gasification plants; the Deutzer double producer with tar-washing plant and practical results obtained therewith; wood-gasification plant of the Liusen Woxna Works. Relative economy of wood-burning furnaces and wood-gasification plants for power supply of saw mills with regard to waste-heat utilization, tar recovery and wood residue.

See also Pulverized Coal.

FURNACES, BOILER

Air Spraying of Fuel. Air-Spraying the Fuel. Practical Engr., vol. 66, no. 1848 July 27, 1922, pp. 52-53, 2 figs. Describes apparatus known as air-spray for ensuring complete combustion of fuel.

Plate Thickness. Chart for Boiler-furnace Plate Thickness, Arnold A. Arnold. Mech. World, vol. 72, no. 1859, Aug. 18, 1922, pp. 118-119, 2 figs. Presents chart based on formulas applicable to plain furnaces or boiler flues given in latest rules for boiler strengths issued by (Brit.) Board of Trade under title, Standard Conditions for the Design and Construction of Marine Boilers.

Volumetric Dimensions. The Volumetric Dimensions of Boiler Furnaces. Engineer, vol. 134, no. 3479, Sept. 1, 1922, pp. 217-218. Notes on large combustion chambers and use of pulverized fuel; question of furnace volume and boiler design.

FURNACES, HEATING

Continuous. Continuous Heating Furnaces for Steel, W. E. Groume-Grjimailo. Iron Age, vol. 110, no. 8, Apr. 24, 1922, pp. 465-467, 8 figs. Importance of careful attention to roof slope; flow of gases outlined to prevent uneven heating of ingots or billets. (Abstract.) From The Flow of Gases in Furnaces, Wiley & Co., translated by A. D. Williams.

Regenerative. Regeneratively Fired Heating Furnaces, W.-E. Groume-Grjimailo. Iron Age, vol. 110, no. 9, Aug. 31, 1922, pp. 537-538, 4 figs. Conditions necessary for freeing hearth of waste gases. Good and bad examples. Translated from The Flow of Gases in Furnaces, published by Wiley & Co.

FURNACES, METALLURGICAL

Heat Losses. Calculating Heat Losses in Furnaces, O. I. Hansen. Blast Furnace and Steel Plant, vol. 10, no. 8, Aug. 1922, pp. 437-440, 1 fig. New method for determination of heat losses due to incomplete combustion. Translated from Danish.

Types. Metallurgical Furnaces (Les Fours métalliques), Sigma. Métallurgie, vol. 54, nos. 11 and 12, Mar. 16 and 23, 1922, pp. 401-402 and 437-439. Mar. 16: Furnaces for solid, liquid and gaseous fuel; electric, blast, and reverberatory furnaces. Mar. 23: Recuperation in various types.

G

GAGES

Screw-Thread. Heat Treatment of Screw Gauges Eng. Production, vol. 5, no. 97, Aug. 10, 1922, p. 138. Résumé of experimental work conducted over period of nine months with view to determining best conditions for production of hardened screw gages to satisfy stringent tests of Nat. Physical Laboratory.

Some Notes on Hardening Various Screw Gauges, F. A. Livermore. Can. Machy., vol. 28, no. 2, July 13, 1922, pp. 26-27. Results of experimental work; effort to obtain process that will eliminate warpage and change of shape; methods of heat treating and quenching; expansion and contraction.

GALVANIZING

Heat Transmission. Heat Transmission in the Hot-Galvanizing Process—II, J. D. Keller. Blast Furnace and Steel Plant, vol. 10, no. 8, Aug. 1922, pp. 407-411, 4 figs. Describes temperature distribution of process.

GAS DISTRIBUTION

High-Pressure. High-Pressure-Gas-Distribution System of the Western United Gas and Electric Co., C. W. Melcher. Compressed Air Mag., vol. 27, no. 9, Sept. 1922, pp. 251-254, 4 figs. Details of system installed at Joliet, Ill.

GAS HOLDERS

Hamilton, Ont. Five million Foot Gas Holder, Hamilton, Ontario, H. E. Gingrich. Can. Engr., vol. 43, no. 8, Aug. 22, 1922, pp. 271-273, 2 figs. Recently completed structure for United Gas and Fuel Co. Ltd., 214 ft. in diameter, 192 ft. 4 in. high; water tank 32 ft. 4 in. deep holding, 8,655,040 gal.

GAS PRODUCERS

Ash-Fusion. An Ash-Fusion Producer, M. Rivière Gas Jl., vol. 159, no. 3093, Aug. 23, 1922, pp. 424-425, 1 fig. Describes Marconnet producer for gasification of coke breeze. Translated from paper read before Société Technique du Gaz.

Körting. The New Körting Gas Producers (Die neuen Körting-Gaserzeuger), H. Pradel. Wärme, vol. 45, no. 29, July 28, 1922, pp. 356-357, 4 figs. Details of two new types of producers for burning of low-grade fuel, for suction-gas operation, and with tar-recovery plant. One is revolving-grate type.

GAS TURBINES

Hepburn-Forbes System. The Internal Combustion Turbine, W. A. D. Forbes. Engineer, vol. 134, no. 3479, Sept. 1, 1922, pp. 224-225, 2 figs. Comparison of types and efficiencies. Description of new system of operation proposed by author and H. A. Hepburn, based on new theory of nozzle action and involving use of novel type of pump, known as kinetic compressor.

Problem. The Problem of the Internal Combustion Turbine. Mar. Engr. and Nav. Architect, vol. 45, no. 539, Aug. 1922, pp. 297-299, 1 fig. Comparison of temperature conditions in internal-combustion turbine and reciprocating engine. Internal-combustion turbine a possible economic intermediary between and Diesel engines.

GASOLINE

Synthetic. Progress in Synthetic-Gasoline Production, Roy Cross. Mech. Eng., vol. 44, no. 9, Sept. 1922, pp. 593-595 and 621, 3 figs. Particulars regarding processes employed. Results or tests of improved synthetic-crude system. Comparative costs of manufacturing gasoline by different processes. (Abridgment.)

GEAR CUTTING

Hobbing. Rapid Production of Gears by Hobbing Process. Can. Machy., vol. 28, no. 7, Aug. 17, 1922, pp. 26-27, 6 figs. Continuous cutting movement; one passage of hob completes gear; even distribution of generated heat; special arbors for different types of blanks; automatic indexing.

GEARS

Calculation. Calculation of Wheel Gears (Breechnung von Rädergetrieben), Rud. Böttger. Maschinenbau, vol. 1, no. 7, July 8, 1922, pp. 426-430, 7 figs. Equations are developed for calculation of pressure at pitch line of spiral gears.

Calculation of Tooth Wheels (Berechnung von Zahnrädern). Zeit. für die gesamte Giessereipraxis, vol. 43, nos. 28 and 29, July 22 and 29, 1922, pp. 391-393 and 408-409, 4 figs. Dimensions of teeth and their parts, and of wheels. Calculations.

Helical and Spur. Helical Gears and Spur Gears — III, W. G. Dunkley. Machy. (Lond.), vol. 20, no. 515, Aug. 10, 1922, pp. 578-580, 8 figs. Load variation of spur gears compared with helical gears; relative variation in periodical velocity transmission; conditions affecting relative efficiencies; effect of tooth inaccuracies.

Long-Addendum. Lewis Constants Determined for Long Addendum Gears, P. M. Heldt. Automotive Industries, vol. 47, no. 5, Aug. 3, 1922, pp. 219-221, 5 figs. Method of obtaining value of constants for full-strength formula. Long addendum principle of value only in large reduction sets.

Methods of Forming Teeth. Different Methods of Forming Gear Teeth Profiles, C. B. Hamilton, Jr., Can. Machy., vol. 27, no. 21, May 25, 1922, pp. 23-24. Grinding process seldom used except for worms; producing thin gears in punch press; classification according to tooth shape; involute system in general practice.

Pump, Tooth Shapes. Tooth Shapes for Pump Gears, A. Fisher. Machy. (Lond.), vol. 20, no. 517, Aug. 24, 1922, pp. 633-634, 5 figs. Features of design to secure increased capacity.

Teeth, Chamfering Machine. A Gear Tooth Chamfering Machine. Eng. Production, vol. 5, no. 100, Aug. 31, 1922, pp. 194-195, 6 figs. Details of Parkinson machine which deals with gears up to 15-in. diameter by 5 diametral pitch and can mill single or double chamfer.

GOLD DEPOSITS

British Columbia. The Gold-Quartz Veins of Bridge River District, B.C., and Their Relationship to Similar Ore-Deposits in the Western Cordilleras, W. S. McCann. Economic Geology, vol. 17, no. 5, Aug. 1922, pp. 350-369, 4 figs. Describes gold-quartz deposits of region and their resemblance to those of Southeastern Alaska and Grass Valley, Cal.

GRINDING

Iron and Steel. Investigates Grinding of Steel, H. W. Wagner. Iron Trade Rev., vol. 71, no. 7, Aug. 17, 1922, pp. 444-446, 2 figs. Tests show effects of heat and mechanical treatment and chemical composition of iron and steel on grinding-wheel action. Finds manganese steel grinds readily when forced despite toughness.

Small-Tool Industry. Grinding in the Small Tool Industry. Machy. (N.Y.), vol. 29, no. 1, Sept. 1922, pp. 45-51, 19 figs. Grinding straightedges; sharpening cutters; grinding plug gages, micrometer parts, twist drills, taps and dies, lathe and planer tools.

GYPSUM

Specifications. Report of Committee C-II on Gypsum. Am. Soc. for Testing Matls. advance paper for meeting June 26-30, 1922, 11 pp. Proposed revised tentative specifications for gypsum wall board, gypsum plaster board, and definitions of terms relating to gypsum industry.

H

HANDLING MATERIALS

Iron and Steel Industry. Material-Handling Equipment as Used in the Iron and Steel Industry, F. L. Leach. Mech. Engr., vol. 44, no. 8, Aug. 1922, pp. 493-499, 14 figs. Describes handling machinery and apparatus used in manufacture of steel. (Abstract.)

Rotary Tank Cars. Handling Bulk Materials of Various Kinds by Compressed Air and Rotary Tank Cars Rudolph Weleker. Compressed Air Mag., vol. 27, no. 8, Aug. 1922, pp. 230-232, 3 figs. Design of rotary tank car. Detail of methods of loading and discharge.

HARBOR IMPROVEMENTS

NEW ENGLAND COAST. Shore Protection and Harbor Development Work on the New England Coast, Frank W. Hodgdon. Am. Soc. Civ. Engrs. Proc., vol. 48, no. 6, Aug. 1922, pp. 1429-1434 and discussion pp. 1439-1449. Review of work done to prevent further erosion.

HARMONIC ANALYSIS

WAVE FORMS. Harmonic Analysis by Selected Co-Ordinates, Albert E. Clayton. Elecn., vol. 89, no. 2309, Aug. 18, 1922, pp. 176-179, 6 figs. New form of schedule for analysis of wave forms.

HEAT

CONDUCTIVITY. The Derivation of True Thermal Conductivity Coefficient from Overall Test Results, P. Nicholls. Am. Soc. Heat and Vent. Engrs. Jl., vol. 28, no. 6, Sept. 1922, pp. 665-677 and discussion pp. 677-682, 8 figs. Method is developed for deriving curve of conductivity coefficient against temperature. Report of cooperative work of this Society and U. S. Bur. of Mines Experiment Station, Pittsburgh.

HEAT PUMPS

PROCESS AND APPLICATIONS. The Heat Pump, T. B. Morley. Engineer, vol. 134, no. 3472, July 14, 1922, pp. 27-29, 5 figs. In heat-pump process vapor from evaporator is taken to a compressor, in which its pressure, and thence also its temperature are raised to such a degree that the compressed vapor may serve as heating medium in evaporator. Details and application of heat pump.

HEAT TRANSMISSION

BUILDINGS, MEASURING FLOW IN. Measuring the Flow of Heat in Buildings By Means of Resistance Wires, F. E. Giesecke. Heat and Vent. Mag., Vol. 19, no. 8, Aug. 1922, pp. 29-31, 5 figs. Account of tests made in cold-storage building of Lone Star Ice Co., Austin, Tex.

HEATING AND VENTILATING

DETROIT JUNIOR HIGH SCHOOL. Mechanical Equipment of the Intermediate or Junior High School in Detroit, H. W. Anderson. Heat and Vent. Mag., vol. 19, no. 7, July 1922, pp. 38-43, 9 figs. Details of "projection" method of air distribution, with ceiling fresh air outlets, as adopted in Barbour schools. From paper and before Am. Soc. Heat and Vent. Engr.

HEATING, HOT-WATER

STEAM-JET APPARATUS. Investigations of Steam-Jet Apparatus (Untersuchungen an Dampfstrahlapparaten), F. Heinl. Forschungsarbeiten auf dem Gebiete des Ingenieurwesens, no. 256, 1922, 23 pp., 21 figs. Investigations to determine following questions; degree of water heating obtained under most favourable working conditions with given steam-supply conditions and discharge pressure; behavior of steam-jet apparatus with change of their normal water volume.

HEATING, STEAM

EXHAUST STEAM FOR. Recent Data on Exhaust Steam for Heating. Heat. and Vent. Mag., vol. 19, no. 7, July 1922, pp. 35-38, 17 figs. Records of operation in office buildings and hotels in New York City made basis of new coal consumption charts.

HELICOPTERS

THEORY. The Problem of the Helicopter, Edward P. Warner. Nat. Advisory Committee for Aeronautics Technical Notes, no. 4, May 1920, 18 pp., 2 figs. and 2 blue prints. Theory of direct-lefting screw propeller; safety of helicopters in forced descents; horizontal travel; stability and control of helicopter; results of tests.

HIGHWAYS

DESIGN, CONSTRUCTION AND MAINTENANCE. The Design, Construction and Maintenance of Highways in Relation to the Development of Mechanically Propelled Vehicular Traffic, C. H. Bressey. Inst. of Transport Jl., vol. 3, no. 5, July 1922, pp. 348-357 and (discussion) 357-368.

HYDRAULIC TURBINES

DESIGN. The Hydraulic Turbine in Evolution, H. Birchard Taylor and Lewis F. Moody. Engrs. and Eng., vol. 39, no. 7, July 1922, pp. 241-259, 15 figs. Problems created by turbine evolution; some mechanical and hydraulic problems in design of high-speed turbines; efficiencies attained in turbines now developed; analysis of flow in high-speed turbines; influence of turbine speed on setting and station structure.

MANITOBA POWER CO. Turbines for the Great Falls Development of the Manitoba Power Company, H. S. VanPatter. Eng. Jl., (Eng. Inst. Can.), vol. 5, no. 9, Sept. 1922, pp. 461-464, 5 figs. Special features of 28,000-hp. I. P. Morris turbines installed in this plant.

WATER ADMISSION WITH SHOCK. Loss Caused by Shock with Admission of Water in Turbine Blade (Der "Stossverlust" des Wassers beim Eintritt in Schaufelsysteme, D. Thoma. Schweizerische Bauzeitung, vol. 80, no. 8, Aug. 19, 1922, pp. 83-84, 4 figs. Formula is derived for calculation of loss of hydraulic [illegible] head.

HYDROELECTRIC DEVELOPMENTS

CAMERON FALLS, CANADA. Hydro-Electric Development at Cameron Falls, Nipigon River, Ontario. Elec, News, vol. 31, no. 15, Aug. 1, 1922, pp. 40-44, 10 figs. Power House and electrical equipment. First two units of ultimate capacity totaling 75,000 hp. installed. See also Contract Rec., vol. 36, no. 31, Aug. 2, 1922, pp. [illegible]

ECONOMICS. Economics of Water-Power Development, Curtis A. Mees. Mech. [illegible] Discusses production, main[illegible] hazard and unrecoverable losses.

QUEENSTON-CHIPPAWA, CANADA. Queenston-Chippawa Power Development. Engr and Eng., vol. 39, no. 8, Aug. 1922, pp. 292-301, 8 figs. Article on general and [illegible] features by Edgar T. J. Brandon.

HYDROELECTRIC PLANTS

CANADA. Nipigon Hydro-Electric Power Development. Can. Engr., vol. 43, [illegible] plant at Cameron Falls [illegible]

DESIGN. Hydroelectric Power-Plant Design, J. A. Sirnit. Mech. Engr., vol. 44, no. 8, Aug. 1922, pp. 505-508, 8 figs. Describes Thurlow backwater suppressor utilizing waste water for removal of high tail water from discharge opening during flood periods. Describes two testing models and design of draft-tube orifice. Details of construction and equipment of plant of Ala. Power Co. at Mitchell Dam, Ala.

HAZARDS. Hazards in Hydroelectric Plants, Alex. E. Bauhan. Gen. Elec. Rev., vol. 25, no. 9, 1922, pp. 526-537, 10 figs. Some hydraulic and mechanical hazards present in operation of low-head hydroelectric plant and precautions which may be taken to avoid them.

QUEENSTON-CHIPPAWA, Canada. Queenston-Chippawa Development. Power Plant Eng., vol. 26, no. 15, Aug. 1, 1922, pp. 760-767, 12 figs. General description including generator units and accessories.

The Queenston-Chippawa 600,000-Hp. Hydro-Electric Station. Power, vol. 56, no. 8, Aug. 22, 1922, pp. 270-278, 19 figs. Describes headworks, penstocks, power house and electrical equipment.

WINNIPEG, CAN. Extensions to the Hydro-Electric System of the City of Winnipeg E. V. Caton. Eng. Jl., (Eng. Inst. Can.), vol. 5, no. 9, Sept. 1922, pp. 441-444, 4 figs. Additional units installed in Point du Bois, plant, on Winnipeg River.

I

IMPACT TESTING

DEVELOPMENT. Symposium on Impact Testing of Materials. Am. Soc. for Testing Matls. advance paper for meeting June 26-30, 1922, 107 pp., 34 figs. Review of development of impact testing of materials and discussion of significance and value of impact test.

INDUSTRIAL MANAGEMENT

BEDAUX METHODS. Application of Bedaux Management Methods in the Robbins & Myers Plants, L. C. Morrow. Am. Mach., vol. 57, nos. 7 and 8, Aug. 17 and 24, 1922, pp. 249-255 and 294-298, 12 figs. Aug. 17: Estimating, manufacturing, inspection and salvage; reports and graphs. Aug. 24: Time studies; premium for inspection; reports and graphs.

PLANNING DEPARTMENT. Practical Work Planning, G. M. Bryceson. Eng. Production, vol. 5, no. 100, Aug. 31, 1922, pp. 206-209, 7 figs. System for determining and recording machine-hour capacity of each department and subdividing this into machine-hour capacity for each type of machine in the various sections.

PRODUCTION RECORDS. Records as a Basis for Management, B. A. Franklin. Management Eng., vol. 3, no. 3, Sept. 1922, pp. 133-137. Discusses task of executive; pictures of costs, prices and profits; specifications for a record; standards or measuring rules; scope of records; records of information and control.

INDUSTRIAL ORGANIZATION

PUBLIC OFFICE. Organizing a Public Office to Conduct a $20,000,000 Building Program, Norris M. Perris. Management Eng., vol. 3, no. 3, Sept. 1922, pp. 147-153, 1 fig. It is claimed that saving of $30,000 in a $330,000 pay-roll was made in one year by increasing quantity production, and salaries were increased 25 per cent. Presents plan of new organization.

INDUSTRIAL RELATIONS

DELCO POLICY. An Industrial Relations Policy that Makes Production Cost Less, Harry Tipper. Automotive Industries, vol. 47, no. 10, Sept. 7, 1922, pp. 473-476, 2 figs. Practice of Dayton Eng. Laboratories Co. Personal grievances are constructively met by interview and adjustment. Social activities encouraged, but operated entirely by employees. Small items and trifles considered important.

INDUSTRIAL TRUCKS

GAS-OPERATED. A Gas-Operated Industrial Truck with Elevating Platform, Ry. Age, vol. 73, no. 6, Aug. 5, 1922, p. 263, 2 figs. Has platform 54 in. by 26 in. with 11 in. minimum height above floor, which can be raised to 16 in. by lifting mechanism.

INSULATING MATERIALS

THERMAL CONDUCTIVITY. Measurement of The Thermal Conductivity of Liquids, Insulating Materials and Metals (Messung des Wärmeleitvermögens von Flüssigkeiten, Isolierstoffen und Metallen), Max Jakob. Zeit. des Vereines deutscher Ingenieure, vol. 66, no. 27, July 8, 1922, pp. 688-693, 4 figs. Measurements on liquids and poor heat conductors (solid); and on metals and alloys.

INTERCHANGEABLE MANUFACTURE

INSPECTION. Control of Quantity Production (Vérification d'une fabrication de pièces en grande série), Danty-Lafrance. Vie Technique et Industrielle, vol. 3, nos. 33 and 34, June and July 1922, pp. 154-158 and 245-248, 7 figs. Necessity for rigid control and inspection in manufacture of interchangeable parts; tolerances allowable; inspection of general forms and threads; control of work done by inspecting staff.

INTERNAL-COMBUSTION ENGINES

COMPOUND. Compound the Combustion Engine, Mech. Eng., vol. 44, no. 8, Aug. 1922, pp. 525-527 and 554, 1 fig. Discussion of paper by Elmer A. Sperry, presented before A.S.M.E.

FRICTIONAL LOSSES. A New Method for Determining Engine Friction Losses Automotive Industries, vol. 47, no. 8, Aug. 24, 1922, p. 369. Method developed by G. Lumet based on idea that friction couple varies with engine torque and consequently with mean effective pressure.

FUEL DETONATION. Detonation Characteristics of Blends of Aromatic and Paraffin Hydrocarbons, Thos. Midgley, Jr., and T. A. Boyd. Jl. Indus. and Eng. Chem., vol. 14, no. 7, July 1922, pp. 589-593, 3 figs. Results obtained in careful measurement of effects of various concentrations of benzene, toluene, or xylene upon detonation tendency of paraffin fuels in badly carbonized or high compression engines.

IGNITION. See *Ignition*.

STEEL-PLANT POWER GENERATION. Internal Combustion Engines for Power Generation in Steel Plants, D. M. Petty. Assn. Iron and Steel Elec. Engrs., vol. 4, no. 9. Sept. 1922, pp. 569-571, 5 figs. Describes 4-cylinder, 4 cycle double-acting gas engine and 4.6 or 8-cylinder, 2 cycle Diesel oil engine. Analysis of first cost and cost of operation.

IRON

Rustproofing. The Rustproofing of Iron (Wesen und Ziele des Eisenschutzes), Leo Ivanovsky. Eisenbau, vol. 13, no. 7, July 25, 1922, pp. 153-162. With special consideration of so-called self-protection of iron, that is, treatment of iron in its natural state so as to render it rustproof.

IRON ALLOYS

Iron-Carbon. Conditions of Stable Equilibrium in Iron-Carbon Alloys, H. A. Schwartz, H. R. Payne, A. F. Gorton and M. M. Austin. Am. Inst. Min. & Met. Engrs. Trans., no. 1181-S, Aug. 1922, 12 pp., 6 figs. and abstract in Min. & Metallurgy, no. 188, Aug. 1922, pp. 38-39, 1 fig. Study of Single, impure, iron-carbon alloy carried out in Research Laboratory of Nat. Malleable Castings Co.

IRON CASTINGS

Casting Without Feeding Heads. British Opinions on Making Castings without Feeding Heads. Foundry Trade Jl., vol. 26, no. 313, Aug. 17, 1922, pp. 136-139. Discussion of E. Ronceray's paper published in same journal, June 1.

Making Castings without Feeding Heads, S. G. Smith. Foundry Trade Jl., vol. 26, no. 313, Aug. 17, 1922, pp. 140-141, 1 fig. Refers to paper by E. Ronceray published in same journal, June 1, and discusses possibility of partially or wholly dispensing with feeders, feeding heads and dross heads.

IRON, ORE

Canada. Canada's Iron Ore Problem, G. C. MacKenzie. Can. Min. Jl., vol. 43, no. 30, July 28, 1922, pp. 482-485. Beneficiation of Ontario iron ores including conversion of hematite to magnetite, metalizing iron ores, electric smelting, smelting of titaniferous magnetite.

IRRIGATION

British Columbia. Irrigation in British Columbia, Ernest A. Cleveland. Eng. Jl. (Eng. Inst. Can.), vol. 5, no. 8, Aug. 1922, pp. 417-422 and (discussion) p. 423. Review of irrigation in Province from earliest undertaking to present extensive systems.

J

JIGS

Manufacture. Some Small Jigs. Engineer, vol. 133, no. 3464, May 19, 1922, pp. 542-545, 12 figs. Methods employed in small tool works of C. A. Vandervell & Co., Brighton, England.

L

LATHES

Auto-Lathes. Reducing Costs on Chucking Work, A. H. Lloyd. Eng. Production, vol. 5, no. 93, July 13, 1922, pp. 26-27, 5 figs. Auto-lathes and their tool equipment.

Driving-Wheel. Driving Wheel Lathe Tests, G. T. R., Stratford Shops. Can. Ry. & Mar. World, no. 294, Aug. 1922, p. 422, 1 fig. Data of tests at Grand Trunk shops, Stratford, Ont., of 90-in. heavy driving wheel lathe. Results given in form of table.

LEAD

Smelting. Lead Smelting Practice at Trail, J. Buchanan. Can. Min. Jl., vol. 43, no. 32, Aug. 11, 1922, pp. 531-533. Evolution of double sintering; sintering of fine materials; improving friable sinter; hood and hanging charges; recent metallurgical innovations.

LIGHTING

Street. Improved Street Lighting That Assures Greater Safety to Traffic, Earl A. Anderson and O. F. Haas. Elec. World, vol. 80, no. 5, July 29, 1922, pp. 221-224, 5 figs. Nature of fixtures employed and illumination produced in East Cleveland, Ohio. Both series and multiple circuits adopted.

LIGNITES

Importance to British Empire. Lignites and Brown Coals and their Importance to the British Empire, William A. Bone. Combustion, vol. 7, no. 3, Sept. 1922, pp. 138-146, 1 fig. Address before Roy Soc. of Arts.

LIME

Specifications. Report of Committee C-7 on Lime. Am. Soc. for Testing Matls., advance paper for meeting June 26-30, 1922, 29 pp., 1 fig. Proposed tentative definitions of terms relating to lime; methods of sampling, inspection, packing and marking lime and lime products; determination for available lime in quicklime and hydrated lime; specifications for quicklime and hydrated lime for structural purposes, manufacture of paper, sulfite pulp, varnish; use in textile industry, and manufacture of silica brick.

LIQUID AIR

Manufacture and Applications. Liquid Air. Its Manufacture and Applications. Chem. Trade Jl. & Chem. Engr., vol. 71, nos. 1839 and 1840, Aug. 18 and 25, 1922, pp. 189-191 and 221-223, 1 fig. Aug. 18: Theoretical considerations; properties of liquid air; manufacturing methods. Aug. 25: Production of oxygen and nitrogen, argon, helium, neon, and hydrogen; liquid air in explosives manufacture; recent uses.

LOCOMOTIVE BOILERS

Design and Maintenance. Design and Maintenance of Locomotive Boilers. Ry. Age (Daily), vol. 72, no. 24e, June 22, 1922, pp. 1687-1690 and (discussion) 1690-1696, 4 figs. Comparison of radial stay and Belpaire types of construction; investigation of dry pipe situation. A. R. A. Mech. Div. Committee recommendations.

Design and Maintenance of Locomotive Boilers, Boiler Maker, vol. 22, no. 8, Aug. 1922, pp. 223-226, 3 figs. Comparison of radial stay and Belpaire types. Report read before Am. Ry. Assn.

Mountain-Type Locomotives. Boiler of Union Pacific Mountain Type Locomotive. Boiler Maker, vol. 22, no. 8, Aug. 1922, pp. 217-222, 9 figs. High boiler capacity obtained in 4-8-2 locomotive which is lightest per unit of power ever built.

LOCOMOTIVES

Accessories. New Locomotive Specialties Developed on the Union Pacific. Ry. Rev., vol. 71, no. 3, July 15, 1922, pp. 73-76, 5 figs. Fuller low-water alarm; Fetters drifting valve for superheater locomotives; outside joint for maintaining air-tight joint at intersection of outside steam pipe and smoke box.

Booster. Dynamometer Tests of the Locomotive Booster. Ry. Age, vol. 73, no. 12, Sept. 16, 1922, pp. 511-514, 8 figs. Describes booster tested, and test equipment. Severe tests demonstrate reliability at heavy loads and high speeds; maximum drawbar pull 11,000 lb.

Booster for Tender Trucks Developed on D. & H. Ry. Age, vol. 73, no. 4, July 22, 1922, pp. 145-147, 6 figs. Utilization of excess boiler capacity and weight of tender as sources of revenue tractive power.

Electric. See *Electric Locomotives*.

Fireless. Fireless Locomotives. Times Trade & Eng. Supp., vol. 10, no. 215, Aug. 19, 1922, p. 465, 2 figs. Osmotic storage of energy. Refers to apparatus invented by Honigmann about 40 years ago, and recent improvement in arrangement proposed by Dr. Schreber. Boilers described might be used in passenger steamers over short distances or for driving of single cars on railway lines with light traffic.

Gasoline Switching. Gasoline Switching Locomotive with Hydraulic Drive. Ry. Age, vol. 73, no. 8, Aug. 19, 1922, pp. 323-326, 7 figs. Universal oil transmission governs speed and direction and gives remarkable flexibility of control.

Internal-Combustion. A French Petrol Locomotive. Engineer, vol. 133, no. 3461, Apr. 28, 1922, p. 476, 2 figs. Details of Renault 19-ton gasoline locomotive. Translated from Génie Civil.

Rod Testing. How Locomotive Rods are Tested and Machined at Lima. Ry. Rev., vol. 71, no. 8, Aug. 19, 1922, pp. 231-234, 6 figs. New testing machine eliminates defective rods and use of special jigs insures uniform dimensions.

Steam-Turbine. Turbine Locomotives (La locomotive à turbines), J. Netter. Nature, no. 2514, June 10, 1922, pp. 365-367, 4 figs. Describes type manufactured in 1914 in Milan, and another type made by Escher Wiss & Co., Zurich, Switzerland, with special tender for necessary cooling apparatus for condenser.

The Ljungström Turbine Locomotive. Engineering, vol. 114, nos. 2951, 2953, 2954 and 2955. July 21, Aug. 4, 11 and 18, 1922, pp. 64-70, 26 figs.; 131-133, 29 figs. partly on supp. plate; 163-168, 27 figs. and 198-203, 19 figs. Motive power is condensing steam turbine developing 1800 hp. which drives 3 pairs of coupled wheels by means of double-reduction gearing. Forced lubrication to all working parts.

Switching. Petrol Shunting Locomotive at Kelso, North British Railway. Ry. Gaz., vol. 37, no. 1, July 7, 1922, p. 17, 3 figs. Description of four-wheeled locomotive with 40 b.hp. engine with roller chains to axle.

Works. The Locomotive Works of Sir W. G. Armstrong Whitworth & Co., Ltd. Eng. Production, vol. 5, nos. 93 and 94, July 13 and 20, 1922, pp. 31-36 and 61-65, 21 figs. Description of plant and working methods.

LUBRICATING OILS

Storing and Clarifying. Storing and Clarifying Oil in Shops. Am. Mach., vol. 57, no. 4, July 27, 1922, pp. 125-127. Methods used in 12 well-known plants. Tanks, separators, mixtures and other details.

Wax Extraction. Wax Extraction by Centrifugal Force. Oil & Gas Jl., vol. 21, no. 7, July 13, 1922, pp. 14 and 92-93, 3 figs. Separating wax crystals from lubricating oils; latest developments by Maryland Refining Co.

LUBRICATION

Tests. Lubrication Tests, H. T. Newbigin. Engineering, vol. 114, no. 2957, Sept. 1, 1922, pp. 260-261, 7 figs. Describes tests made with segmental, pivoted blocks or pads, of Mitchell type, running against a plane surface thereby providing mechanical conditions necessary for formation of true-pressure oil films.

M

MACHINE-TOOL INDUSTRY

Sweden. The Machine Tool Industry in Sweden. Machy. (N.Y.), vol. 29, no. 1, Sept. 1922, pp. 31-32. Notes on leading machine-tool building plants and their products.

MACHINE TOOLS

Design and Manufacture. Machine Tools; Their Design and Manufacture, Joseph Horner. Engineering, vol. 114, no. 2956, Aug. 25, 1922, pp. 231-233. Notes on increased complication of machine tools; changing aspects of tooling; problem of increased output; automatic movements; materials; manufacture; jigs; tolerances, interchangeability; shop drawings; etc.

MALLEABLE CASTINGS

Manufacture. Making Malleable Castings, Enrique Touceda. Foundry, vol. 50, nos. 14, 15 and 16, July 15, Aug. 1 and 15, 1922, pp. 583-593, 622-626 and 676-680, 16 figs. July 15: Suggestions covering principles governing layout of American malleable foundry; how air furnaces are designed; suggestions for bungs and grades. Aug. 1: Metallurgical problems encountered in melting; finishing castings. Aug. 15: Tests showing effect of size of grates in distribution of metal; causes of picture-frame structure. (Abstract.) Paper read before Inst. Brit. Foundrymen.

MALLEABLE IRON

Advantages. Malleable Cast Iron, Enrique Touceda. Am. Mach., vol. 57, no. 9, Aug. 31, 1922, pp. 321-325, 7 figs. Poor qualities of pure cast iron; factors that make malleable cast iron superior; soundness, strength and good machineability attained.

METAL SPRAYING

Schoop Process. Protective Coatings of Sprayed Metal, Robert G. Skerrett. Iron Age, vol. 110, no. 5, Aug. 3, 1922, pp. 286-287, 2 figs. Late developments with Schoop process abroad; examples of applications and operating features; spraying pistol operated electrically. Article, based on European information, does not refer to developments of Schoop process in United States.

METALLOGRAPHY

Institute, Sweden. The Metallographical Institute (Metallografiska institutet), Carl Benedicks. Jernkontorets Annaler, vol. 106, no. 6, 1922, pp. 203-220, 7 figs. Description of institute, its buildings, departments and equipment; review of its work.

MICROSCOPIC, MACROGRAPHY AND. Recent Progress in Microscopic Metallography and Macrography (Les récents progrès de la Métallographie microscopique et de la macrographie), Léon Guillet. Revue Universelle des Mines, vol. 14, no. 1, July 1, 1922, pp. 1-17 (Metallurgical Section). Methods of microscopic metallography and macrography; examination and preparation of photographs; requirements of apparatus; results obtained.

METALS

ACID-RESISTING. Acid-Resisting Metals and Alloys, George A. Drysdale. Mech. Eng., vol. 44, no. 9, Sept. 1922, pp. 579-580 and 621. Account of research work carried out on various non-ferrous metals and alloys, with especial reference to their use in manufacture of mine pumps and chemical apparatus.

FATIGUE OF. Fatigue or Progressive Failure of Metals under Repeated Stress, H. F. Moore, J. B. Kommers and T. M. Jasper. Am. Soc. for Testing Matls. advance paper for meeting June 26-30, 1922, 23 pp., 21 figs. Discusses testing practice used in making repeated-stress tests, with especial reference to testing machines, test specimens and methods used in joint investigation of fatigue of metals now in progress. Recent test results are presented.

Fatigue of Metals, C. F. Stromeyer. S. Wales Inst. Engrs. Proc., vol. 38, no. 3, July 20, 1922, pp. 285-308 and (discussion) pp. 308-331, 2 figs. Description of fatigue-testing machine and results of tests.

HEAT-TEMPERATURE CURVES. Heat-Temperature Curves of Metals, Joseph F. Shagden. Iron Age, vol. 110, no. 4, July 27, 1922, pp. 218-222, 5 figs. Basis for average and instantaneous specific heat values provided by German laboratory tests. New specific heats for molten metal.

PROPERTIES. Deformation and Rupture of Solids (Déformation et rupture des solides), Mesnager. Revue de Métallurgie, vol. 19, nos. 6 and 7, June and July 1922, pp. 365-378 and 425-436, 37 figs. June: Elastic limit of mild steel and copper and experiments made in this connection. July: Rupture of fragile solids; difference between permanent deformation and rupture; experiments made by Dr. Karman at Göttingen on resistance of materials.

TEARING TESTS. Tearing Tests on Metals, Henry L. Heathecote and C. G. Whinfrey. Chem. & Met. Eng., vol. 27, no. 7, Aug. 16, 1922, pp. 310-311, 2 figs. Methods and results of testing metals for resistance to tearing.

TENSILE STRENGTH. Tensile Strength of Plastic Metals, Friedrich Koerber. Mech. Eng., vol. 44, no. 6, June 1922, pp. 392-393, 2 figs. Presents method for computing tensile strength of metals from curve of "true" stresses; discusses mechanism of tensile rupture test and proposes theory of tensile stresses based on assumption of slip and torsion effects of crystalline elements in metal. Translated from Stahl u. Eisen, vol. 42, no. 10, Mar. 9, 1922, pp. 365-370.

X-RAY INVESTIGATION. X-Ray Investigations on Metals, R. Glockner. Iron & Coal Trades Rev., vol. 105, no. 2841, Aug. 11, 1922, p. 186, 2 figs. Suggestions based on writer's own work and work by other investigators. Translated from Stahl u. Eisen.

MILLING CUTTERS

HELICAL. Construction of Milling Cutters. Practical Engr., vol. 66, no. 1846, July 13, 1922, p. 19, 1 fig. Describes Kendal & Gent cutter, a steel forging in which plain helical grooves are milled; blades are bent in special machine.

MINE RESCUE APPARATUS

ROTHERHAM. The "Rotherham" Rescue Apparatus, E. C. Elliston. Colliery Guardian, vol. 124, no. 3215, Aug. 11, 1922, pp. 329-330, 4 figs. Describes first liquid-air apparatus to be approved by (Brit.) Mines Dept. of Board of Trade. Consists of liquid-air container work on back, breathing bag worn in front, two short flexible rubber tubes, exhaust valve and purifier.

MOLDING METHODS

INGOT MOLDS. Molding and Casting of Ingot Molds (Formen und Giessen von Blockformen), Carl Irresberger. Stahl u. Eisen, vol. 42, nos. 17 and 26, Apr. 27, and June 29, 1922, pp. 649-654 and 1013-1016, 29 figs. Apr. 27: Describes Kunze method adopted some 12 years ago which has been very successful. June 29: Process of Penn Mold and Mfg. Co., Dover, O.

MONEL METAL

MANIPULATION AND USE. Monel Metal, S. E. Briggs. West. Machy. World, vol. 13, no. 8, Aug. 1922, pp. 276-277 and 282, 5 figs. Physical properties; directions for manipulation and use.

MUNICIPAL ENGINEERING

CITY MAPS. Applying Efficiency to the Production of City Maps, S. M. Cotten. Eng. News-Rec., vol. 89, no. 8, Aug. 24, 1922, pp. 312-314, 1 fig. Sectional tracings, embodying primary data, printed in duplicate.

N

NATURAL GAS

GASOLINE FROM. The Absorption of Gasoline from Natural Gas, R. C. Cantelo. Can. Chem. & Metallurgy, vol. 6, no. 8 and Aug. and Sept. 1922, pp. 177-179 and 196-200, 1 fig. Aug.: Methods of testing natural gas from gasoline content. Theory and development of absorption process. Sept.: Calculating amount of absorbent necessary for complete removal of gasoline from gas. Results of experiments.

NICKEL ALLOYS

NICKEL-CHROMIUM. Exhaust Valves of Nickel-Chromium Alloy. Motorship, vol. 7, no. 9, Sept. 1922, p. 679, 4 figs. Describes nichrome, an alloy produced by Driver, Harris Co., Harrison, N. J., said to be practically immune to pitting, warping and other destructive forces.

PROPERTIES. Some Nickel Alloys. Metal Industry (Lond.), vol. 21, nos. 4 and 6, July 28 and Aug. 11, 1922, pp. 78-82 and 129-130, 5 figs. Properties and chief features of more important ferrous and non-ferrous nickel alloys.

NICKEL-CHROME STEEL

MANUFACTURE. The Making, Forging and Heat Treating of Nickel Chromium Steels, Harry Brearley. Forging & Heat Treating, vol. 8, no. 8, Aug. 1922, pp. 341-345, 2 figs. Characteristics and nature of nickel-chromium steels; causes of failure and remedy therefor; comparison of nickel and nickel-chromium steels. Lecture before Assn. Drop. Forgers & Stampers.

[illegible]

ABSORPTION TOWERS. Nitric Acid Absorption Towers, J. A. Hall, A. Jaques and M. S. Leslie. Soc. Chem. Industry Jl., vol. 41, no. 16, Aug. 31, 1922, pp. 285T-293T, 4 figs. Results of experimental work carried out in connection with development of mathematical expressions to be used for design of absorption towers for nitrous gases from different sources. Construction and work- [illegible]

NOMENCLATURE

A.S.T.M. COMMITTEE REPORT. Report of Committee E-8 on Nomenclature and Definitions. Am. Soc. for Testing Matls. advance paper for meeting June 26-30, 1922, 11 pp. Report on tentative definitions.

NON-FERROUS METALS

A.S.T.M. COMMITTEE REPORT. Report of Committee B-2 on Non-Ferrous Metals and Alloys. Am. Soc. for Testing Matls. advance paper for meeting June 26-30, 1922, 23 pp., 2 figs. Includes notes on physical properties of A.S.T.M. tentative standard white metal bearing alloys, by John R. Freeman, Jr. Proposed tentative specifications for copper pipe, brass pipe, and seamless admiralty condenser tubes and ferrule stock.

GAS ABSORPTION AND OXIDATION. Gas Absorption and Oxidation of Non-Ferrous Metals, B. Woyski and John W. Boeck. Metal Industry (N. Y.), vol. 20, nos. 7 and 8, July and Aug. 1922, pp. 267-268 and 307-308, 2 figs. Discussion of furnace atmospheres and their relation to condition of metal.

NOZZLE

AERATOR. The Sacramento Floating Type of Aerator Nozzle, Narry N. Jenks. Eng. News-Rec., vol. 89, no. 10, Sept. 7, 1922, pp. 384-386, 8 figs. Central cone of low-head aerator floats on issuing water film; permits passage of trash and gives uniform spray.

O

OIL

WORLD SUPPLY. The Oil Supply of the World, David White. Mech. Eng., vol. 44, no. 9, Sept. 1922, pp. 567-569. Estimates of oil resources of various regions of earth. Economic future as to oil in United States. Measures necessary to be taken in order to increase and conserve domestic supply. (Abridgment.)

OIL ENGINES

BROTHERHOOD-STILL. The "Brotherhood-Still" Oil Engine. Oil Eng. & Finance, vol. 1, no. 24, June 24, 1922, pp. 777-778, 1 fig. Compound steam and internal-combustion engine containing double-action piston with usual air exhaust and admission valves showing phenomenal fuel consumption.

FULLAGAR LAND-TYPE. The Fullagar Oil Engine for Land Purposes. Engineer, vol. 133, no. 3461, Apr. 28, 1922, pp. 466-468, 7 figs. partly on p. 470. Describes land-type engine built on Fullagar system, which is said to have all advantages of marine type, chief among them being excellent balancing of reciprocating parts. See also English Elec. Jl., vol. 2, no. 2, Apr.-July, pp. 61-67, 8 figs.

OIL FUEL

BURNERS. Navy Testing Plant Perfects Oil Burner, Charles E. Kern. Oil & Gas Jl., vol. 21, no. 5, June 29, 1922, pp. 11 and 100. Mechanical pressure of oil atomizes it giving rapid whirling motion inside burner which causes expansion into cone that disintegrates into fine oil mist.

DISTRIBUTION IN INDUSTRIAL PLANTS. Distribution of Fuel Oil in Industrial Plants, J. A. Brown. Forging & Heat Treating, vol. 8, no. 8, Aug. 1922, pp. 336-340, 4 figs. Character of fuel oil defined in terms of temperature, gravity and viscosity; effect of pipe size, velocity and viscosity on friction head; analysis of cost service.

OPEN-HEARTH FURNACES

PROGRESS. Progress in the Open-Hearth Process, Willis McKee. Iron Age, vol. 110, no. 3, July 20, 1922, pp. 147-149, 2 figs. Results from blowtorch furnace; its principles and advantages. Steel-encased regenerators. (Abstract.) Paper read before Am. Foundrymen's Assn.

TALBOT PROCESS. The Talbot Process Compared with other Processes. Iron & Coal Trades Rev., vol. 105, no. 2840, Aug. 4, 1922, p. 146. Conclusions regarding advantages of Talbot process over other open-hearth steel-making processes. Translated from Stahl u. Eisen.

ORE CONCENTRATION

PRACTICE. Concentrating Practice of the Broken Hill South Limited, Broken Hill, New South Wales, Australia. Australasian Inst. Min. & Metallurgy Proc., no. 44, 1921, advance proof, 293 pp., 26 figs. Notes on concentrating plant and slime flotation plant. Describes milling practice which may be regarded as typical for recovery of galena in form of concentrate from Broken Hill ores.

ORE DEPOSITS

BRITISH COLUMBIA. The British Columbia Batholith and Related Ore Deposits, Philip D. Wilson and F. M. Warren. Am. Inst. Min. & Met. Engrs. Trans., no. 1183-M, Aug., 16 pp. and (abstract) in Min. & Metallurgy, no. 188, Aug. 1922, Notes on deposits and production statistics.

ORE SAMPLING

MECHANICAL. Mechanical Sampling of Ore, Charles D. Demond and A. C. Halferdahl. Eng. & Min. J.-Press, vol. 114, no. 7, Aug. 12, 1922, pp. 280-284. Discusses studies and tests made with view to securing accuracy through standardizing operations. Results in three mills prove erratic. Standards for base and precious-metal ores proposed.

ORE TREATMENT

LEACHING WITH SULPHUR DIOXIDE. Leaching Ore With Sulphur Dioxide, Joseph Irving, Jr. Eng. & Min.-Jl.-Press, vol. 114, no. 9, Aug. 26, 1922, pp. 360-364, 7 figs. Experiments at Nevada-Douglas Consolidated Copper Co.'s mines indicate practicability of extracting copper by means of sulphur-dioxide gas; equipment used; detailed data showing results of tests.

OXY-ACETYLENE CUTTING

PRODUCTION COSTS. Oxygen for Cutting Purposes. Eng. Production, vol. 5, no. 98, Aug. 17, 1922, p. 152. Comparative data on production costs.

OXY-ACETYLENE WELDING

INGOT-IRON COMPOSITION. Composition of Ingot Iron for Effective Autogenous Welding (Beschaffenheit des Flusseisens für gute Schmelzflammen-Schweissung), C. Diegel. Forschungsarbeiten auf dem Gebiete des Ingenieurwesens, no. 246, 1922, 44 pp., 146 figs. on supp. plates. Experiments to determine effect of 0.27 per cent Si and 0.25 per cent Ni, which show that Si is injurious while Ni is not.

P

PACKINGS

Labyrinth. Steam Loss in Labyrinth Packings. Dampfverlust in Labyringthdichtungen, A Winkhaus. Zeit des Vereines deutscher Ingenieure, vol. 66, no 33-34, Aug 26, 1922, pp 804-807, 9 figs. Determination of discharge and its application to calculation of a labyrinth.

PAINTS

Accelerated Weathering. Accelerated Weathering of Paints on Wood and Metal Surfaces, Harley A Nelson. Am Soc for Testing Matls advance paper for meeting June 26-30, 1922, 15 pp., 6 figs. Describes effort to reproduce directly on typical surfaces not only changes in some one physical property, but all of more common paint failues observed on painted wood and metal structures.

Black Pigments. The Manufacture and Use of Black Pigments, H. L. Blachford. Can. Chem. & Metallurgy, vol. 6, nos. 7 and 8, July and Aug. 1922, pp. 156-158 and 180-181. Definition, manufacture and uses of carbon, lamp, bone, charcoal and various other blacks.

Specifications. Report of Committee D-1 on Preservative Coatings for Structural Materials. Am. Soc. for Testing Matls. advance paper for meeting June 26-30, 1922, 60 pp., 1 fig. Proposed revised tentative definitions of terms relating to paint specifications; specifications for raw or refined soya bean and perilla oil and raw tung oil; methods of analysis of yellow and orange pigments, blue pigments and chrome green; report on varnish; specifications for carbon black, lampblack, bone black, chrome yellow and chrome green.

Physical Properties. Some Physical Properties of Paints, P. H. Walker and J. G. Thompson. Am. Soc. for Testing Matls. advance paper for meeting June 26-30, 1922, 19 pp., 6 figs. Results of investigations on plastometer measurements, preparation of paint films, effect of varying composition on paint films, thinning power of turpentine, and aging of basic carbonate white lead paints before application.

PAPER MANUFACTURE

Improvements. Recent Advances in Pulp and Paper, Clarence J West. Jl. Indus. & Eng. Chem., vol. 14, no. 9, Sept. 1922, pp. 858-860. Deals with raw materials; improvements in processes; analytical methods; beating, bleaching, and sizing.

Strawboard Wastes. The Treatment and Disposal of Strawboard Wastes, H. B. Hommon. Am. Soc. Civ. Engrs. Proc., vol. 48, no. 6, Aug. 1922, pp. 1397-1402. Complete account of studies made at American Strawboard Mill, Noblesville, Ind., for developing methods to treat wastes resulting from manufacture of paper from staw.

PAPER MILLS

Electric Drive. Sectional Paper Machine Drive, Stephen A. Staege. Paper, vol. 30, nos. 17 and 18, June 28 and July 5, 1922, pp. 9-11 and 17. Electrical way of individual motors has simplified equipment and proved best.

Steam Utilization. Steam Utilization in a Modern Newsprint Mill, S. W. Slater and J. E. A. Warner, Mech. Eng., vol. 44, no. 9, Sept. 1922, pp. 587-592. 6 figs. Analysis of conditions obtaining in modern paper mill manufacturing newsprint, dealing with selection of prime mover, electric vs. rope drive for paper machines, drying of paper, ventilation requirements, etc. (Abridgment.)

Wastes. Wastes from Pulp and Paper Mills Chemically Considered, H. W. Clark. Am. Soc. Civ. Engrs. Proc., vol. 48, no. 6, Aug. 1922, pp. 1393-1396. Writer states it is often possible to remove 70 per cent or more of primary polluting matters of paper-mill wastes. Apparently only wastes recovered with profit as yet are those from soda-pulp process and wastes from paper machine.

PEAT

Manufacturing Plant. The Anrep-Moore Machine Peat Manufacturing Plant. Can. Min. Jl., vol. 43, no. 31, Aug. 4, 1922, pp. 500-502, 2 figs. Describes plant developed by Joint Peat Committee at Alfred, Ont., and its operation.

PILES

Composite. The Raymond Composite Pile, Albert E. Cummings. Wisconsin Engr., vol. 26, no. 8, May 1922, pp. 139-141 and 152, 2 figs. Consists essentially of upper or heavier section of standard Raymond concrete pile superimposed upon wooden pile. Tests made to determine relative strengths of various types of composite pile joints.

PIPE

Pressure. Power Piping for Hydraulic Plants (Conduites forcées pour usines hydrauliques), Auguste Bouchayer. Revue Universelle des Mines, vol. 14, no. 1, July 1, 1922, pp. 1-12 (Civil Engineering Section), 5 figs. Discusses replacing of metal pipes by reinforced-concrete; riveted and welded pipes; arrangements for high and low heads; underground conduits; etc.

PIPE, CAST-IRON

Cement-Lined. Cement-Lined Cast-Iron Pipe at Charleston, S.C., J. E. Gibson. Eng. News-Rec., vol. 89, no. 10, Sept. 7, 1922, pp. 387-390, 3 figs. Tuberculation of tar-coated cast-iron pipe at Charleston and elsewhere; 70 years' experience with cement-lined sheet pipe in many cities suggests cement lining for cast iron; lining method.

PIPE, STEEL

Bending Large. Bending Large Pipe, Charles O. Herb. Machy. (N.Y.), vol. 29, no. 1, Sept. 1922, pp. 1-7, 8 figs. Procedure in hand-bending large-sized wrought-iron and steel pipe while hot and packed with sand.

PIPE, WROUGHT IRON

Heat Losses. Heat Losses from Bare and Covered W. I. Pipe at Temperatures up to 800 Deg. Fahr., R. H. Heilman. Mech. Engr., vol. 44, no. 7, July 1922, pp. 435-437, 3 figs. Presents findings of experimental investigation conducted in Mellon Inst. of Indus. Research of University of Pittsburgh. Empirical formulas are presented whereby loss from insulated pipes of any diameter may be readily calculated. (Abridgment.)

PISTON RINGS

Design. Piston-Rings and Ring Grooves, C. R. Manes. Soc. Automotive Engrs. Jl., vol. 11, no. 3, Sept. 1922, pp. 262-264 and (discussion) 228-231, 1 fig. Defines purpose of piston ring for internal-combustion engine and discusses gas and oil leakage, disputing H. H. Platt's views on these two points in recent paper. Advantage of multiple-piece rings over one-piece type. Table giving width and depth for piston-ring grooves.

Engineering and Manufacturing Practice. Piston-Rings, John Magee. Soc. Automotive Engrs. Jl., vol., 11, no. 3, Sept. 1922, pp. 273-274 and (discussion) 228-231. Comments with view to standardization of best engineering and manufacturing practice. States that cast iron is only satisfactory metal suitable for use in internal-combustion engines. Discusses leakage and oil pumping, width and form, and manufacturing difficulties.

PISTONS

Aluminum. Aluminum Pistons, Ferdinand Jehle and Frank Jardine. Soc. Automotive Engrs. Jl., vol. 11, no. 3, Sept. 1922, pp. 225-228 and (discussion) 228-231, 8 figs. Discusses thermal properties, such as actual operating temperature, temperature distribution, and effect of cooling-water temperature and piston material on piston temperature.

Light-Metal Alloys for. Light Metal Alloys for Pistons, Wallace Dent Williams. Raw Material, vol. 5, no. 5, Aug. 1922, pp. 259-266, 24 figs. Cast aluminum alloy pistons; cast and drawn magnesium alloy pistons. Special contrivances used in tests to investigate operating values of various light-metal pistons; influence of crust of soot.

PITOT TUBES

Wind Velocity, Measurement of. On the Use of Very Small Pitot-Tubes for Measuring Wind Velocity, Muriel Barker. Royal Soc. Proc., vol. 101, no. A712, Aug. 1, 1922, pp. 435-445, 5 figs. Account of experiments and results.

PLANERS

Controller, Electric. Electric Control of Planer Table Movement. Can. Machy., vol. 28, no. 7, Aug. 17, 1922, pp. 21-and 39, 2 figs. Describes Cutler-Hammer full-magnetic planer controller, and its operation.

PNEUMATIC TOOLS

Machining and Assembling. Machining and Assembling Operations on Pneumatic Tools, Howard Campbell. Am. Mach., vol. 57, nos. 2, 3, 4 and 5, July 13, 20, 27 and Aug. 3, 1922, pp. 49-51, 101-104, 134-136 and 175-177, 42 figs. July 13: Drilling air-hammer parts; boring, reaming, grinding and lapping piston holes. July 20: Turning and drilling crankshafts for air motors; machining valves. July 27: Milling and grinding operations on connecting rods for air motors; swaging and milling. Aug. 3: Boring and reaming air-motor cylinders; setting valves; testing brake.

POLES, STEEL

Latticed. Latticed Poles for Electric Lines (Pali a traliccio per linee elettriche), Gino Rebora. Elettrotecnica, vol. 9, no. 21, July 25, 1922, pp. 457-467, 24 figs. Calculation and formulas including Tetmayer's and Euler's; examples of practical calculation.

POLES, WOODEN

Preservative Treatment. Preservative Treatment of Poles in Part, P. M. McCullough. Telegraph and Telephone Age, no. 16, Aug. 16, 1922, pp. 372-374. Discusses treatment of cedar poles from practical and theoretical sides. Causes of decay; brush, submersion, butt and perforation treatments.

PORTS

Equipment, Mechanical. Design of a Port to Take Full Advantage of Mechanical Equipment, Carrel R. Thompson. Eng. and Indus. Management, vol. 7, nos. 16 and 17, June 15 and 29, 1922, pp. 513-517 and 554, 4 figs. Design of general cargo pier to take full advantage of miscellaneous freight-handling equipment.

POWER GENERATION

Prime-Movers Statistics. Prime Movers in Central Stations Total 19,737,361-Hp Elec. World, vol. 80, no. 4, July 22, 1922, p. 169. Analysis of development of electric light and power companies indicates total of 13,331,933 hp. in steam motors, of which 87 per cent is for steam turbines; boiler installation totals 4,042,922 hp.

POWER PLANTS

Design. Developments in Power Station Design. Engineer, vol. 133, nos. 3459, 3461, 3463, 3464, 3465, 3466 and 3467, Apr. 14, 28, May 12, 19, 26, June 2 and 9, 1922, pp. 406-409, 8 figs.; 457-459, 7 figs.; 529-532, 12 figs.; 545-547, 11 figs.; 574-578, 14 figs.; 608-610, 13 figs.; and 631-634, 14 figs. Apr. 14: Parsons 10,500 kw. turbo-generator at Carville station. Apr. 28: Hickson-Hargreaves surface condensing plant, ejectair, and jet condenser. May 12: Mirlees-Watson condensing plant built for Bankside station of London Elec. Light Co.; jet condensers with Delas air extractors. May 19: Flow of fluids in pipes; electrical flow meters. May 26: Circular-type condensers of English Elec. Co.; Willan's condensing plant at Dalmarnock. June 2: Air filters for power-house use; water-cooled rotors; design of switchgear. June 9: Transformers; current-limiting reactances; rectifiers.

Economies. Power Plant Economies, George E. Wood. Coal Industry, vol. 5, no. 6, June 1922, pp. 267-270, 5 figs. Practical value of accurate boiler room records; evil results of scale accumulation; losses from soot as high as $15,000 per year; uncovering of air leaks and bad pipe connections.

POWER TRANSMISSION

Paper Mills. Power-Transmission Systems of Three Big Paper Mills, H. Hilman Smith, Jr. Belting, vol. 21, no. 2, Aug. 1922, pp. 21-25, 8 figs. Layouts in Haverhill, Piermont and Chicago divisions of Robert Gair Co. Rubber belts used chiefly.

PRECIPITATION

Electrical. Electrical Precipitation of Solids From Smelter Gases, Ross B. Rathbun. Am. Inst. Elec. Engrs. Jl., vol. 41, no. 9, Sept. 1922, pp. 676-687, 9 figs. Fundamental principles of process in its simplest form are set forth and theory of back ionization and phenomena of discontinuous dielectric is discussed.

PRODUCER GAS

Production and Use. Production of Producer Gas and Use in Open-Hearth Furnaces (Cosidérations sur la production et l'utilisation du gaz pauvre de gazogènes pour le chauffage des fours Martin), G. Husson. Revue de l'Industrie Minérale, no. 38, July 15, 1922, pp. 373-406, 3 figs. Technical value of a gas; theory of gasification of coke; influence of different kinds of coal; handling of different gas producers; etc.

PULLEYS

Automatically Lubricated. Pulleys with Automatic Lubrication, J. H. Blakey. Power Plant Eng., vol. 26, no. 15, Aug. 1, 1922, p. 759, 5 figs. Description of pulley of French origin with automatic lubrication for use especially in cranes which are difficult of access.

PULVERIZED COAL

HAZARDS. Pulverized Fuel and Its Hazards. Steam, vol. 30, no. 3, Sept. 1922, pp. 67-71. Advantages of pulverized fuel, considers types of systems, dryer, [illegible] construction crushing, drying and pulverizing with regard to explosion hazard.

PUMPING

HOT LIQUIDS. The Pumping of Hot Liquids, Wm. Mason. Gas. Jl., vol. 159, no. 3092, Aug. 16, 1922, pp. 374-375, 2 figs. Difficulties are explained and method of circumventing them set forth.

PUMPS, CENTRIFUGAL

DEVELOPMENT AND OPERATION. Centrifugal Pumps, H. Kilian. Fördertechnik u. Frachtverkehr, vol. 15, no. 16, Aug. 4, 1922, pp. 212-216, 7 figs. Notes on development, operation, delivery and suction head, efficiency, power consumption, regulations for erection, attendance, etc.

DREDGING AND SAND PUMPING. Pumps Used in Dredging and for Pumping Sand, E. T. Keenan. Cement, Mill and Quarry, vol. 21, no. 4, Aug. 20, 1922, pp. 29-31, 3 figs. Design of pumps handling sand and rock.

ELECTRICALLY DRIVEN. Electrically Driven High Pressure Centrifugal Pump. Engineer, vol. 133, no. 3465, May 26, 1922, p. 591, 3 figs. partly on p. 584. Capable of delivery 800 gal. per min. at pressure of 1150 lb. per sq. in. Installed in pumping station, Manchester, England.

PYROMETERS

RADIATION. The New Radiation Pyrometer "Pyro" (Das neue Strahlungs-Pyrometer "Pyro"). Zeit. für die gesamte Giessereipraxis, vol. 43, no. 27, July 15, 1922, p. 377. Its advantages, simplicity of operation, and application to high and low temperatures.

R

RADIOTELEGRAPHY

STATIONS. The Trans-Continental Wireless Station of Sainte Assise. Wireless World, vol. 10, no. 22, Aug. 26, 1922, pp. 689-692, 5 figs. Details of equipment.

RAILS

HEAT TREATMENT. The Improvement of Rails and Tyres by Means of Heat Treatment, James Waite. Commonwealth Engr., vol. 9, no. 12, July 1, 1922, pp. 435-438, 4 figs. Notes on Sandberg treatment.

JOINTS. Why Use Base Plate With Welded Rail Joints? Howard H. George. Elec. Ry. Jl., vol. 60, no. 8, Aug. 19, 1922, pp. 265-266. Base plates not needed if correct design of joint plate is worked out additional weight of metal and increased amount of welding do not economically solve problem.

WEAR, MEASUREMENT OF. Determination of Rail. Wear for Valuation Purposes, J. P. Newell. Eng. News-Rec., vol. 89, no. 8, Aug. 24, 1922, pp. 310-312, 3 figs. Cross-sections accurately measured in field; rails rated by scientific analysis of observed deterioration. Describes rail pantograph invented by S. W. Fairweather.

RAILWAY ELECTRIFICATION

BRITISH. British Railways Electrification. Elec. Ry. & Tramway Jl., vol. 46, no. 1136, June 16, 1922, pp. 257-264, 5 figs. South Eastern and Chatham electrification. London Tube; Great Eastern; London and North-Western; London, Brighton and South-Coast, and Metropolitan railways.

LONDON & NORTH WESTERN. Electrification of the London and North Western Railway. Elec. Times, vol. 62, no. 1604, July 13, 1922, pp. 27-28, 2 figs. Data on electrification of suburban lines recently completed by conversion of line from Euston to Willisden. Description of rolling stock, power-generating stations and auxiliaries. Indicators with names of stations carried at each end of train.

RAILWAY MOTOR CARS

DIESEL-ELECTRIC. Swedish Railways Increase Use of Diesel Electrics. Elec. Ry. Jl., vol. 60, no. 6, Aug. 5, 1922, pp. 193-195, 4 figs. Success of small motor cars leads to introduction of those with 160 and 250 hp. capacity; reduction in operating cost and improved service; performance data, dimensions and weights.

GASOLINE. The Gasoline-Driven Motor-Coach for Railroad Service, Charles O. Guernsey. Soc. Automotive Engrs. Jl., vol. 11, no. 3, Sept. 1922, pp. 275-278 and (discussion) 278-280 and 283, 11 figs. Why so little progress has been made in developing railroad equipment operated by gasoline engines and what the filed is for this class of equipment.

RAILWAY OPERATION

FREIGHT RATES. Board of Railway Commissioners' Judgment and Order Reducing Freight Rates, etc. Can. Ry. and Mar. World, no. 294, Aug. 1922, pp. 395-400. D[illegible] of Can. Board of Ry. Commissioners reducing freight rates.

RECLAMATION, DECENTRALIZED. De-Centralized Reclamation on the C.M. & St.P. Railway. Ry. Rev., vol. 71, no. 5, July 29, 1922, pp. 131-137, 8 figs. Policy of road to localize reclamation work wherever possible appears to possess certain advantages both from standpoint of reduced length of haul and wider co-operation enlisted. Account of organization of work and reclamation activities on road during past year.

[illegible] The Report of the Automatic Train Control Committee. Ry. Gaz., vol. 37, no. 7, Aug. 18, 1922, pp. 228-230. Conditions to be satisfied; essential requisites; anticipated cost and summary of recommendations.

Official Report on Train Control for British Railways. Ry. Rev., vol. 71, [illegible] 1922, pp. 115-117 and 140-144. Report of Automatic Train Control Committee advising introduction of control at least at selected points.

RAILWAY SHOPS

[illegible] Railway Shop, F. F. Collins. Ry. Rev., vol. 71, no. 3, July 15, 1922, pp. 69-72, 6 figs. Economy and wide range [illegible] not generally appreciated. Paper read before Assn. of Ry. Elec. Engrs.

RAILWAY SIGNALING

[illegible] Engineer, vol. 134, no. [illegible] automatic signaling between Liverpool, Central and Hamilton-Square stations, effects of which would allow number of block signals sections between stations named to be increased [illegible]

RAILWAY TERMINALS

DESIGN. Factors Governing the Design of Passenger Terminals, A. S. Baldwin. Ry. Age, vol. 73, no. 10, Sept. 2, 1922, pp. 429-435, 1 fig. Analysis of operating conditions which influence plans for large station. Abstracted from report before Int. Ry. Congress in Rome.

RAILWAY TIES

CREOSOTING PLANT. A Sleeper Creosoting Plant. Engineer, vol. 133, no. 3463, May 12, 1922, p. 534, 4 figs. partly on p. 526. Describes creosoting plant built for Kenya, East Africa, comprising two large receptacles, of which lower one is working cylinder, together with necessary pumps and boiler. Capacity is 900 meter-gage sleepers per day of 8 hr.

TREATED, TESTS RESULTS. Treated Tie Records on the C.B. & Q.R.R. Ry. Rev., vol. 71, no. 9, Aug. 26, 1922, pp. 272-274, 1 fig. Results of 12 years of tests, which show that ties treated with creosote are in best condition after 12 years' service and ties treated with mixture of zinc chloride and creosote are giving better service than those treated with zinc chloride alone.

RAILWAY TRACK

TRACK BOLTS, IMPACT LOADS ON. Determining the Impact Loads on Track Bolts. Ry. Age, vol. 73, no. 7, Aug. 12, 1922, pp. 277-278, 4 figs. Tests performed on Philadelphia & Reading to evaluate and compare induced stresses.

RAILWAY YARDS

MONCTON, CAN. Improvements to Moncton Yard and Engine Facilities, S. B. Wass. Eng. Jl., (Eng. Inst. Can.), vol. 5, no. 9, Sept. 1922, pp. 445-450, 2 figs. Construction methods employed to minimize interference with traffic.

RAILWAYS

FOREIGN PRACTICE. Foreign Railway Practice, J. Carlier. Inst. of Transport Jl., vol. 3, no. 5, July 1922, pp. 426-433 and (discussion) 433-436, 1 fig. Remarks on electric traction; notes on some new forms of locomotives, including Heilmann, Ramsay, Zoelly, Société Cockerill, Pieper, Strang, Sulzer Freres, etc.; actual traction tendency.

REFRACTORIES

FIRECLAYS. Manufacture on Fireclay Refractories, Alan G. Wikoff. Chem. and Met. Eng., vol. 27, no. 10, Sept. 6, 1922, pp. 505-509, 7 figs. Outline of plant operations at Evens & Howard Fire Brick Co., St. Louis; forming brick and special shapes, drying, burning.

ZINC SMELTING. Refractories for Zinc Smelting, G. C. Stone. Am. Ceramic Soc. Jl., vol. 5, no. 9, Sept. 1922, pp. 597-601, 2 figs. Deals with roasting furnaces, oxide furnaces, spelter furnace linings, retorts, and condensers.

GLASS. A Critical Review of the Provisional Specifications for Glass Refractory Materials, W. J. Rees. Soc. of Glass Technology Jl., vol. 6, no. 22, Aug. 1922, pp. 181-193 and (discussion) pp. 193-204, 2 figs. Discusses specifications for silica bricks and cement, tank blocks, and pot clays.

THERMAL CONDUCTIVITY. Report of Committee C.8 on Refractories. Am. Soc. for Testing Matls. advance paper for meeting June 26-30, 1922, 14 pp. Status of thermal conductivity in specifications for refractories.

REFRIGERATION

COMPRESSORS. Refrigeration for the Power Plant Engineer, T. H. Fenner. Power House, vol. 15, nos. 10, 11 and 12, May 20, June 5 and 20, 1922, pp. 19-22, 28-29, 31-32 and 34, 12 figs. May 20: Single and double-acting compressor, water jacketing, wet compression and oil sealing, oil separators, condensers and liquid receivers are described. June 5: Expansion valve and its function. June 20: Absorption process; aqua ammonia; parts and operating features of machine.

TWO SUCTION PRESSURES. Refrigeration with Two Suction Pressures, J. H. Macintire. Power, vol. 56, no. 8, Aug. 22, pp. 279-281, 5 figs. Author attempts to show where there will be an advantage in compressing gas using two suction pressures in same cylinder.

REFRIGERATING MACHINES

CO_2 COMPRESSOR. The Carbonic Compressor, H. J. Macintire. Refrig. World, vol. 57, no. 7, July 1922, pp. 16-18, 3 figs. Advantages and disadvantages of CO_2 machines considered with diagram showing horsepower per ton of refrigeration for ammonia and carbon dioxide.

REFRIGERATING PLANTS

AMMONIA LEAKS, LOCATING. Locating Ammonia Leaks in Refrigerating Plants, A. J. Dixon. Southern Engr., vol. 38, no. 1, Sept. 1922, pp. 72-73, 1 fig. Practical pointers regarding simple methods of detecting ammonia leaks in piping, coils and condensers.

RESEARCH

CANADA. Progress of Research in Canada. Can. Engr. vol. 43, no. 5, Aug. 1, 1922, pp. 218-221. Brief account of work of Advisory Council for Scientific and Industrial Research. Included are reports on peat fuel, low grade and sulphide ores, liquefication of helium, industrial fatigue, and utilization of flax straw.

RESERVOIRS

LONDON. New London Service Reservoirs. Engineering, vol. 113, nos. 2942 and 2943, May 19 and 26, 1922, pp. 612-614 and 648, 15 figs. Some features of construction of reservoirs for Metropolitan Water Board in Kent district.

RIVERS

JETTY EXTENSION. Extension of Fraser River Jetty to Improve Entrance. Eng. News-Rec., vol. 89, no. 8, Aug. 24, 1922, pp. 318-320, 2 figs. Problems presented by lower reaches of river of Pacific coast and efforts to solve them.

RIVETING

EFFICIENCY. Experiments to Determine the Changes Taking Place in Sheet Metal During Riveting (Versuche zur Ermittlung der in den Blechen beim Nieten bewirkten Formänderrungen), R. Baumann. Forschungsarbeiten auf dem Gebeite des Ingenieurwesens, no. 252, 1922, 66 pp., 132. figs. Effects of high pressure in riveting; cold, warm and hot riveting; deformation due to pressure of rivet head. Advises not to apply unnecessarily high pressure in riveting.

ROAD CONSTRUCTION

UTILIZING OLD ROAD METAL. Utilizing Existing Road Metal in New Construction, G. F. Schlesinger. Eng. News-Rec., vol. 89, no. 11, Sept. 14, 1922, pp. 428-430, 2 figs. Detail surveys determine usable material; three conditions of old road classification.

ROAD MATERIALS

Tests. Report on Committee D-4 on Road and Paving Materials. Am. Soc. for Testing Matls. advance paper for meeting June 26-30, 1922, 26 pp., 1 fig. Proposed tentative method of test for consistency of Portland cement concrete for pavements or for pavement base; block for road granite block pavements; block for Durax granite pavements; asphalt cement for bituminous macadam pavements and asphalt blocks; etc.

ROADS

Bates Experimental. The Bates Experimental Road. Ill. Dept. of Pub. Works and Buildings Division of Highways Bul. no. 1, June 8 and 17, 1922. Bul. no. 1, 13 pp. 1 fig., including descriptive data on road, by Clifford Older. Bul. no. 3, 8 pp. 10 figs. Bul. no. 4, 7 pp. 10 figs. Results of traffic runs.

Bituminous-Bound. Bituminous Bound Roads, David W. Johnston. Can. Engr., vol. 42, no. 3, July 18, 1922, pp. 162-164. Method of applying bituminous treatment to new road construction and reconstruction of macadam or gravel roads including surface treatment to water bound macadam or gravel road beds.

Drainage for Prairie. Drainage for Prairie Regions, H. R. MacKenzie. Eng. and Contracting, vol. 58, no. 10, Sept. 6, 1922, pp. 236-238. Methods employed in Province of Saskatchewan. Paper presented before Can. Good Roads Assn.

England. Roads and Road-Making in England, J. Haydon Cardew. Surveyor, vol. 33, no. 2, Mar. 1, 1922, pp. 38-43 and discussion, 43-47. Investigation of English roads to determine their adaptability for Australia.

Improving Earth, Clay and Sand. Improving Earth, Clay and Sand Roads, J. D. Robertson. Can. Engr., vol. 42, no. 26, June 27, 1922, pp. 655-656. Physical and soil conditions in Alberta; methods of grading prairie roads and roads in timbered districts; cost of grading. Paper read at Convention of Can. Good Roads Assn.

Prairie. Experiments in Improving Prairie Roads, K. A. Clark. Eng. and Contracting, vol. 58, no. 10, Sept. 6, 1922, pp. 227-228. Investigations being conducted at University of Alberta for utilization of bituminous sand deposits. Paper presented before Can. Good Roads Assn.

Road Construction in Prairie and Timbered Country, J. D. Robertson. Eng. and Contracting, vol. 58, no. 10, Sept. 6, 1922, pp. 230-232. Methods used in Province of Alberta. Paper presented before Can. Good Roads Assn.

ROADS, CONCRETE

Slag. Slag-Concrete Roads — Their Construction and Wear, C. S. Hill. Eng. News-Rec., vol. 89, no. 11, Sept. 14, 1922, pp. 439-440. Conclusions based on inspection of over 100 mi. of concrete road built with slag aggregate and in service from one to nine years. Some difficulties in manipulation and peculiarities of wear.

Test Highway. Concrete Highway Test at Pittsburg, California, Chas. Geiger. Concrete, vol 18, no. 1, July 1922, pp. 23-25, 7 figs. Eliptically shaped roadway 18 ft. wide and 1371 ft. long of plain and reinforced concrete; various conditions such as might be caused by weather and usage, and results of same.

ROLLING MILLS

Electrically Driven. New Development in Rolling Mill Drive, A. K. Bushman. Blast Furnace and Steel Plant, vol. 10, no. 9, Sept. 1922, pp. 467-469, 3 figs. Describes new electric drive for hot strip mill of Trumbull Steel Co. at Warren, Ohio.

Plate Mills, Motor Drive for. Special Drive Designed for Plate Mill, F. D. Egan. Blast Furnace and Steel Plant, vol. 10, no. 9, Sept. 1922, pp. 461-463, 3 figs. Describes main motor drive for new 100-in. 3-high plate mill for Nat. Stamping and Enameling Co., rated 3,000 hp., 40 deg. cent., 2,200 volt, 3 phase, 60 cycle, 236 r.p.m.

Sheet Mills. Boscarelli System of Sheet Rolling. Iron and Coal Trades Rev., vol. 105, no. 2842, Aug. 18, 1922, pp. 220-221, 10 figs. partly on p. 222. Advantages claimed are (1) saving in labour and fuel; (2) thickness of sheets more uniform, and thinner sheets can be rolled; and (3) increased production.

RUST PREVENTION

Parker Process. Parkerizing — A Rustproofing Process, L. C. Morrow. Am. Mach., vol. 57, no. 10, Sept. 7, 1922, pp. 361-364, 6 figs. Describes process and application. Kinds of parts treated. Apparatus and equipment required.

S

SANITATION

Motorized Laboratory for Resort. Motorized Laboratory for Resort Sanitation Work, W. C. Brockway and George C. Stucky. Eng. News-Rec., vol. 89, no. 11, Sept 14, 1922, pp. 430-432, 2 figs. Describes laboratory, car consisting of a stock chassis on which is mounted a bus body 12 ft. long, 5 ft. wide and 6½ ft. high. [illegible]

Underground. Underground Hygiene and Sanitation, R. R. Sayers. U.S. Bur. of Mines Reports of Investigations, no. 2391, Aug. 1922, 11 pp. Consideration of safe practices with drinking water; safe methods of sewage disposal; safe practices in ventilation.

SCREW MACHINES

Automatic. Automatic Production of Parts, C. A. Handschin. West. Machy. World vol. 13, no. 8, Aug. 1922, pp. 279-282, 4 figs. Notes on use of modern screw machines and design of cams for automatic duplication of special forms.

Economical Production on Automatics. Eng. Production, vol. 5, no. 99, Aug. 24, 1922, pp. 172-176, 22 figs. Principles underlying efficient tooling and caming of automatic screw machines. Examples of automatic production illustrating uses of standard Brown & Sharpe tools.

SCREW THREADS

Measurement. Work at the National Physical Laboratory — II. Machy. (Lond.), vol. 20, no. 514. Aug. 3, 1922, pp. 558-561, 7 figs. Internal effective diameter measurement of screw threads.

SEMI-STEEL

French Opinion of. A French Opinion of Semi-Steel. Foundry Trade Jl., vol. 26, no. 313, Aug. 17, 1922, pp. 128-129, 2 figs. Communication by E. Ronceray on J. Cameron's paper on semi-steel.

Metallurgy. The Metallurgy of Semi-Steel, David McLain. Foundry Trade Jl., vol. 26, no. 312, Aug. 10, 1922, pp. 110-114, 8 figs. Discusses potentialities, merits and developments.

Production and Applicability. Melting Steel and Cast Iron together in the Cupola, J. Hogg. Foundry Trade Jl., vol. 26, no. 134, Aug. 24, 1922, pp. 160-162. Practical details based on author's experience; applicability of semi-steel.

SEWAGE DISPOSAL

Activated Sludge. Disposal of Activated Sludge, R. H. Eagles. Public Works, vol. 53, no. 6, Aug. 1922, pp. 111-112. Use of sulphur dioxide gas has been tested at Houston, Indianapolis and Gastonia and appears to produce ionic condition favourable to dewatering, prevent putrefaction and increase ammonia content.

Large Activated-Sludge Plant for Chicago Sanitary District. Eng. News-Rec., vol. 89, no. 8, Aug. 24, 1922, p. 324. To serve 800,000 population in 1930. Bar screens, grit chamber, fine screens, Dorr thickeners.

Aeration. Aeration Experiments at Bury, Joshua Bolton. Can. Engr., vol. 43, no. 8, Aug. 22, 1922, pp. 282-283. Development of activated sludge process in England; successful application at Bury; method of dealing with tank effluent; results of analysis. Paper before Instn Managers of Sewage Disposal.

Treatment. Some Recent Experiments in the Process of Sewage Disposal, J. W. Haigh Johnson. Surveyor, vol. 62, no. 1596, Aug. 18, 1922, pp. 103-104. Evolution of sewage treatment; gaseous interchange during purification; rate and intensity of oxidation.

Treatment. Lime vs. Electrolytic. Lime Treatment of Sewage Compared with Direct-Oxidation, Roy S. Lanphear. Eng. News-Rec., vol 89, no. 7, Aug. 17, 1922, pp. 276-278. Study of Easton tests and working and experimental results at Worcester, Mass., with lime alone aga nst electrolytic method.

Treatment-Plant Operation. Operation of Sewage Treatment Plants. Eng. and Contracting, vol. 58, no. 11, Sept. 13, 1922, pp. 249. Useful suggestions given in booklet prepared by Burns & McDonnell, Kansas City, Mo. (Abstract.)

SEWER CONSTRUCTION

Data, 1921-22. Tabulated Sewerage Data. Public Works, vol. 53, no. 6, Aug. 1922 pp. 124-113. From several hundred city engineers in all parts of country, giving amounts and kinds of sewers laid during 1921 and 1922, jointing material used in pipe sewers, and other details.

SHIP PROPULSION

Gas Turbines. The Prospects of Gas Turbine Development for Ship Propulsion. Shipbldg and Shipg. Rec., vol. 20, no. 7, Aug. 17, 1922, pp. 211-212. Lines of investigation; difficulties of high temperatures; efficiency; power and size.

SHIPWORMS

Protection Against. Marine Borers, W. G. Atwood. Am. Soc. Civ. Engrs. Proc., vol. 48, no. 6, Aug. 1922 pp. 1408-1424, 7 figs. Study of teredo and crustacean groups, their destructive work and means of protection.

SPRINGS

Elliptic, Calculation of. The Calculation of Elliptic Springs, W. H. Armstrong. Ry. Mach. Engr., vol. 96, no. 8, Aug. 1922, pp. 438-440. Formulas and tables for rapid determination of capacity and deflexion.

Leaf. Modern Methods of Making Leaf Springs, E. F. Lake. Iron Age, vol. 109, nos. 19 and 20, May 11 and 18, 1922, pp. 1269-1274 and 1343-1346, 12 figs. May 11: Continuous process for automobile springs; preparing plates; automatic hardening, forming and quenching machines. May 18: Tempering furnaces; assembling, testing and inspecting.

STEAM

Flow in Pipes. Capacities of Steam Heating Mains as Affected by Critical Velocities of Steam and Condensate Mixtures, F. C. Houghten and L. Ebin. Am Soc. Heat. and Vent. Engrs. Jl., vol. 28, no. 6, Sept. 1922, pp. 643-648 and (discussion) pp. 649-654, 4 figs. Report of co-operative work of this Society and U.S. Bur. of Mines Experiment Station, Pittsburgh.

The Critical Velocity of Steam in One-Pipe Systems, F. F. Giesecke. Am. Soc. Heat and Vent. Engrs. Jl., vol. 28, no. 6, Sept. 1922, pp. 637-642, 5 figs. The term, one-pipe system, is used to designate steam-heating system in which steam flows in one direction and condensate in opposite direction through same pipe at same time. (Discussion), pp. 649-654.

Pressure-Reducing Valve. A Unique Reducing Valve, C. C. Brown. Power Plant Eng., vol. 26, no. 18, Sept. 15, 1922, pp. 912-913, 4 figs. Describes chronometer valve, a specially designed arrangement for reducing steam pressure, used successfully in large sugar refinery plant.

Properties at High Pressure. Properties of Steam at High Pressures, G. Eichelberg. Mech. Eng., vol. 44, no. 7, July 1922, pp. 447-449, 6 figs. Investigation into values of heat of vaporization of steam. Author attempts to establish relation between exponents in adiabatic equation, heat vaporization, and specific heats of steam, and measure indirectly specific heats of saturated steam by using this relation. Translated from Zeit. des Vereines deutscher Ingenieure, vol. 66, no. 12, Mar. 25, 1922, pp. 275-277.

Raising, Electric. Steam Raising by Electricity. Elec. Rev., vol. 91, no. 2331, July 28, 1922, pp. 140-141, 2 figs. Economic and some mechanical features including description of 18,000-kw. 3-unit electric steam generator.

STEAM ACCUMULATORS

Electric Hot-Water and. Electric Heat-Storage Plants (Elektrische Wärmespeicheranlagen), Zeit. des Vereines deutscher Ingenieure, vol. 66, nos. 33-34, Aug. 26, 1922, pp. 793-796, 8 figs. Description of plants for storage of heat in form of hot water or steam. Calculation and economy of such accumulatios. Information from Sulzer Bros., Winterthur, Switzerland.

STEAM ENGINES

Exhaust Energy, Use of. Using Exhaust Energy in Reciprocating Engines, J. Stumpf and C. C. Trump. Mech. Eng., vol. 44, no. 6, June 1922, pp. 369-372, 15 figs. Theoretical problems are discussed and practical applications to either single-cylinder or multi-cylinder engines are suggested.

Heat Transformers. A New and a Long Life to the Steam Engine, Wm. P. Durtnall. Petroleum Times, vol. 7, no. 180, June 17, 1922, p. 857. Describes paragon heat-transformer which converts small volume of gases at 3,500 deg. to a larger volume in form of perhaps 200-lb. steam at temperature of 720 deg. Fahr. without use of ordinary boilers.

Triple-Expansion, Compounding. The Compounding of a Triple Expansion Engine Engineering, vol. 114, no. 2955, Aug. 18, 1922, pp. 203-206, 11 figs. Details of conversion work carried out on triple-expansion vertical Corliss engine.

Valve Leakage. Experiments on Steam Engine Valve Leakage, J. E. Bycroft. Engineer, vol. 134, no. 3473, July 21, 1922 .pp. 62-63, 5 figs. Results of experiment carried out by author in investigating leakage of steam past a piston drop valve-in-drum designed to supply steam to central exhaust or uni-flow engine.

STEAM PIPING

Testing Coverings. Efficiency of Steam-Pipe Coverings at High Temperatures. Engineering, vol. 114, no. 2953, Aug. 4, 1922, p. 155, 2 figs. Describes apparatus for determining efficiency of steam-pipe coverings designed by C. Jakeman of Nat. Physical Laboratory and constructed there.

STEAM POWER PLANTS

Condensate Disposal. Disposal of Condensate in Power Plants, Charles L. Hubbard. Nat. Engr., vol. 26, no. 9, Sept. 1922, pp. 398-402, 12 figs. Determination of method to be used; examples in use for varied services; operating details.

STEAM TURBINES

Belliss and Morcom. The Belliss and Morcom Steam Turbine. Engineering, vol. 113, nos. 2947 and 2948, June 23 and 30, 1922, pp. 773-776 and 803-805, 36 figs. partly on supp. plate. Review of reciprocating engines and turbines manufactured by this company. Producing turbines from 10 kw to 10,000 kw. Destructive factors.

Blades, Machining. Machining Turbine Blades. Machy. (Lond.), vol. 20, no. 514, Aug. 3, 1922, pp. 537-543 and 547. Machines and methods employed in works of Wm. Beardmore & Co., Ltd., Dalmuir.

High Pressure and Superheat. Possibilities of High Pressure and Superheat for Steam Turbines, J. A. Polson. Power Plant Eng., vol. 26, no. 18, Sept. 15, 1922, pp. 893-896, 3 figs. Theoretical discussion of problems from standpoints of constant heat content, constant temperature, and constant pressure.

Operation. Steam Turbine Operation, L. W. Heller, Assn. Iron and Steel Elec. Engrs. vol. 4, no. 9, Sept. 1922, pp. 673-699, 14 figs. Discusses methods used by the Duquwanw Light Co., Pittsburgh, in operation of steam-generating equipment on their system.

Trip Valves and Emergency Governors. Steam-Turbine Emergency Governors and Trip Valves, A. D. Palmer. Power, vol. 56, no. 9, Aug. 29, 1922, pp. 324-326, 8 figs. Different types are described.

STEEL

Alloy. *See Alloy Steels.*

Carbon. Treatment of Carbon Steels, Dean Harvey, Am. Mach., vol. 57, no. 10, Sept. 7, 1922, pp. 378-379. What various chemical compositions and treatments in steel making produce. Properties and uses of some steels. Methods of working.

Chromium. *See Chromium Steel.*

Cold-Drawn. Advantages and Limitations of Cold Drawn Steel in Automotive Work, Walter Rosenhain. Automotive Industries, vol. 47, no. 10, Sept. 7, 1922, pp. 469-472, 8 figs. Cold drawn work produces excellent finish and operations are simple and fool-proof. Necessity for high ductility limits such work to softer grades of material. Notes on soft metals, effects on microstructures, bending, annealing, and alloy steels.

Gases in. Amount of Gases in Steel. Iron Age, vol. 110, no. 9, Aug. 31, 1922, p. 534. Results of some new German methods of analysis on basic Bessemer metal. Translated from article by Oberhoffer and Piwowarsky in Stahl u. Eisen, May 25, 1922.

High-Speed. *See Steel, High-Speed.*

Nickel-Chrome. *See Nickel-Chrome Steel.*

Rate of Loading, Effect of. Effect of Rate of Loading on Tensile Properties of Boiler Plate, H. J. French. Chem. and Met. Eng., vol. 27, no. 7, Aug. 16, 1922, pp. 309-310. Effect of decrease in rate of leading on steel is different above and below blue heat, but little variation in tensile properties was observed when tests were performed 30 times as fast as ordinarily.

Rustless. Rustless Steels (Rostfrei Stähle), Karl Daevew. Stahl u. Eisen, vol. 42, no. 34, Aug. 24, 1922, pp. 1315-1320, 5 figs. Notes on composition, properties, method of treatment and uses.

Semi-Steel. *See Semi-Steel.*

Stainless. Stainless Steel at High Temperatures, H. J. French. Iron Age, vol. 110, no. 7, Aug. 17, 1922, pp. 404-405, 3 figs. Heat treatment which produces greatest strength for use in valves of internal-combustion engines. Published by permission of Bur. of Standards.

Thermal Expansion. Thermal Expansion of a Few Steels, Wilmer Souder and Peter Hidnert. U.S. Bur. of Standards Sci. Papers, vol. 17, no. 433, Apr. 10, 1922, pp. 611-626, 22 figs. Data are given on 28 specimens of iron and steel. Review of previous work on expansion.

STEEL CASTING

Specifications. The Trend of Specifications for Steel Castings, E. R. Young. Blast Furnace and Steel Plant, vol. 10, no. 9, Sept. 1922, pp. 463-466. General discussion covering important features such as chemical composition, physical properties, ductility and testing.

Tensile Properties. Tensile Properties of Steel Castings, Lawford, H. Fry. Am. Soc. for Testing Matls. advance paper for meeting June 26-30, 1922, 23 pp., 8 figs. Study of grades currently used for railroad service.

STEEL, HEAT TREATMENT OF

Annealing. Annealing, Tempering and Reheating (Recuit, Trempé et Revenu), Signa. Métallurgie, vol. 54, nos. 27 and 28, July 6 and 13, 1922, pp. 992-994 and 1029-1030. Discusses operations in detail and their effect on steel.

STEEL, HIGH-SPEED

Heat Treatment. Shrinkage and Expansion of High-Speed Steel Due to Heat-Treatment, Marcus A. Grossmann. Chem. and Met. Eng., vol. 27, no. 11, Sept. 13, 1922, pp. 541-544, 2 figs. Describes tests undertaken to obtain data on amount which should be allowed for shrinkage or expansion. Results throw sidelight on nature of reactions taking place during heat treating.

STEEL MANUFACTURE

Bessemer Converter Plants. Modern Developments in Small Bessemer Converter Plants in Germany, Hubert Hermann. Eng. Progress, vol. 3, no. 8, Aug. 1922, pp. 173-176, 8 figs. Action of small converters; working arrangement [illegible] metallurgical process.

Direct Process. [illegible] Steel Direct from the Ore, Ralph Whitfield. Iron and Coal Trades Rev., vol. 105, no. 2838, July 21, 1922, p. 84, 2 figs. [illegible]

Without Pig Iron. [illegible] Pig Iron, Edwin F. Cone. Iron Age, vol. 110, no. 10, Sept. 7, 1922, pp. 585-586. "Scrap and Carbon" basic open-hearth process as employed at an Eastern plate mill; residual manganese [illegible]

[illegible] Steel Mill [illegible] B. G. [illegible] and W. [illegible] Assn. Iron and Steel Elec. Engrs. [illegible] Sept. 1922, pp. 545-[illegible] Review of [illegible]

Heat Balances. Heat Balances of Blast Furnace and Steel Plants, W. Trinks. Blast Furnace and Steel Plant, vol. 10, no. 9, Sept. 1922, pp. 451-456, 4 figs. Gives chart showing heat balance for uneconomical, average, economical, and ideally operated [illegible] plant.

STOKERS

Bituminous-Coal-Burning. Burning Bituminous Coal on Stokers. Mech. Eng., vol. 44, no. 6, June 1922, pp. 373-374 and 381. Three papers by G. E. Wood, O. J. Richmond, and R. A. Sanders, on stoker operation with soft coal, presented before Joint Fuel Conference of New Haven branch of A.S.M.E., New Haven Chamber of Commerce, and other engineering societies.

Costs and Efficiency. The Stoker from an Operating Viewpoint, Robert E. Dillon. Combustion, vol. 7, no. 3, Sept. 1922, pp. 155-157. Consideration of reliability, maintenance, efficiency, cost of operation, and first cost. (Abstract.) Paper presented at Stoker Mfrs. Assn.

Pit-Refuse Utilization. Utilization of Pit Refuse for Raising Steam. Iron and Coal Trades Rev., vol. 105, no. 2839, July 28, 1922, pp. 120-121, 1 fig. Description of Bennis stokers for utilization of pit refuse in use at Gordon House Colliery, Durham, England. Results of tests.

Underfeed, for Low-Grade Fuel. Burning a Low Grade of Fuel on Underfeed Stokers Power, Vol. 56, no. 7, Aug. 15, 1922, pp. 247-251, 8 figs. Description of plant in Minneapolis installed under 5,600-sq. ft. boilers. Tuyeres used to prevent clinker formation and steam jets to mix furnace hases.

STONE

Crushing Plant. A Crushing Plant for a Filter. Rock Products, vol. 25, no. 14, July 25, 1922, pp. 15-17,7 figs. Use for crushed stone which may be developed in many communities where stone can be supplied by commercial producers rather than by municipal plant as in this case. Use offers potential market for large quantities of stone.

STONE, CRUSHED

Plant Engineering. Crushing Plant Engineering, Brownell M'Grew. Eng. and Contracting, vol. 58, no. 7, Aug. 16, 1922, pp. 153-154. Discussion of principles. Paper presented before Nat. Crushed Stone Assn.

STREAM POLLUTION

Natural Purification. De Polluted Streams Purify Themselves? J. H. Hoskins. Fire and Water Eng., vol. 72, no. 8, Aug. 23, 1922, pp. 357-358 and 372, 4 figs. Relation results of natural purification bear to stream pollution. Experiments conducted in Illinois River by U.S. Public Health Service. Agencies active in stream purification.

Pulp-Mill Wastes. Pollution of Streams by Pulp-Mill Wastes, George C. Whipple. Am. Soc. Civ. Engrs. Proc., vol. 48, no. 6, Aug. 1922, pp. 1385-1392. Calls attention to certain fact regarding pulp-mill wastes and discusses briefly larger problem of stream pollution by industrial wastes.

STREET RAILWAYS

Two-Car Train. Two-Car Train Weighs 490 lb., per Seat. Elec. Ry. Jl., vol. 60, no. 10, Sept. 2, 1922, pp. 317-319, 10 figs. Experimental two-car unit, built by Twin City Rapid Transit Co., weighs 51,500 lb. and seats 105 passengers; has low-floor, inside-journal bearings, trucks equipped with band brakes and front car heated with resistors.

STRUCTURES

Excess Loads and Stresses. Unusual Engineering Forces as Design Problems, Chas. Evan Fowler. Eng. and Contracting, vol. 57, no. 26, June 28, 1922, pp. 607-611, 8 figs. Discussion of forces resulting from high winds, storm waves, ice packs or jams, earthquakes and geological changes.

SUBSTATIONS

Automatic. Automatic and Remote Controlled Sub-Stations as Applied to Steel Mills, J. K. Ostrander. Assn. Iron and Steel Elec. Engrs., vol. 4, no. 8, Aug. 1922, pp. 365-379 and (discussion) pp. 379-394. Discusses advisability of installation; economy overhand-operated stations; particular applications to steel-mill operation; equipment required.

Automatic, Mine. Two-Unit Automatic Mine Substation Erected to Improve Service and Reduce Mining Cost, H. F. Randolph and C. E. H. von Sothen. Coal Age, vol. 22, no. 7, Aug. 17, 1922, pp. 244-246, 2 figs. Describes motor-generator automatic substation of Star Coal and Coke Co., Red Star, W. Va.; contains two 150-kw. 500- to 550-v. generators driven by 2,200-v. 3-phase 60-cycle synchronous motors fitted with direct-connected exciters.

SURVEYING

Marine. Marine Surveys, E. Latham and P. Harrison. Engineer, vol. 133, no. 3466, June 2, 1922, pp. 614-615, 7 figs. Deals with leveling, soundings, and current observations.

River Triangulations. Detroit River Triangulations for Fixing Span Length of Detroit-Windsor Bridge, H. F. Johnson. Eng. and Contracting, vol. 59, no. 4, July 26, 1922, pp. 81-82, 6 figs. Describes methods employed in making accurate triangulations connecting angle points of American and Canadian harbour lines.

T

TAPERS

Standard. Standard Tapers, Luther D. Burlingame. A.m Mach., vol. 57, no. 4, July 27, 1922, pp. 130-133, 3 figs. Statement of case for existing standards; suitability of tapers for specific jobs; objections to Jarno taper.

TESTS AND TESTING

Brinell Ball Identation. Some Measurements of the Shape of Brinell Ball Indentation, Fred E. Foss and R. C. Brumfield. Am. Soc. for Testing Matls. advance paper for meeting June 26-30, 1922, 24 pp., 13 figs. Description of methods used in investigation analysis of results obtained and conclusions arrived at.

Methods and Machines. Report of Committee E-1 on Methods of Testing. Am. Soc. for Testing Matls., advance paper meeting June 26-30, 1922, 27 pp., 5 figs. Suggested definitions relating to methods of testing and for verification of testing machines.

THERMIT WELDING

Rails. Development of Thermit Welding (Entwicklungsgeschichte der Thermit-Schienenschweissung und ihre Lehren). Autogene Matallbearbeitung, vol. 15, nos. 12, 13 and 14, June 15, July 1 and 15, 1922, pp. 161-166, 184-188 and 195-197, 12 figs. Methods of welding rails end to end by surrounding joints with liquid thermit mass supplying necessary heat. Apparatus, clamps, ratchet, etc., used.

THERMOMETERS

Specifications. Report of Committee D-15 on Thermometers. Am. Soc. for Testing Matls. advance paper for meeting June 26-30, 1922, 12 pp. Summary of existing specifications, and proposed tentative specifications for A.S.T.M. partial-immersion thermometers.

Transmitting. The "N" and "Z" Transmitting Thermometer. Gas Jl., vol. 159, no. 3087, July 12, 1922, p. 94, 4 figs. Description of thermometer patented by Negretti and Zambra having capillary tube made of high-expansion material.

TILE

Drain. Report of Committee C-6 on Drain Tile. Am. Soc. for Testing Matls. advance paper for meeting June 26-30, 1922, 5 pp. Recommends no changes in standard specifications for drain tile (C4-21).

TIMBER

Douglas Fir. Douglas Fir Invades the East, C. J. Hogue. Elec. Ry. Jl., vol. 60, no. 5, July 29, 1922, pp. 161-163, 2 figs. Range of application of Douglas fir and its comparison with Southern pine; only wood available for large stringers; takes preservatives well.

V

VALVES

Cams and, Behavior of. Cams and Poppet Valves, S. E. Scholes. Gas and Oil Power, vol. 17, no. 203, Aug. 3, 1922, p. 181, 2 figs. Notes on autographic apparatus designed by author for demonstrating valve operation. From paper read before Instn. Automobile Engrs.

VENTILATION

Factory. Modern Factory Ventilation. Eng. Production, vol. 5, no. 100, Aug. 31, 1922, pp. 199-204, 15 figs. Describes plant developed by Ozonair, Ltd., Lond., principal feature of which is impregnation with ozone of all air circulated; also some typical installations.

The Elements of Ventilation in Industrial Works, Frank E. Gooding. Indus. Engr., vol. 80, No. 8, Aug. 1922, pp. 369-377 and 410, 25 figs. Conditions that should be studied when processes are added or changes made.

Katathermometer. Recent Progress of English Investigators in Determining the Relation of Atmospheric Conditions to Fatigue. Heat. and Vent. Mag., vol. 19, no. 8, Aug. 1922, pp. 31-35, 2 figs. What the katathermometer has done in furnishing data for relief of workers in oppressive atmospheres.

VISCOSIMETERS

Redwood. The Redwood Viscometer, Winslow H. Herschel. U.S. Bur. of Standards Technologic Papers, no. 210, Apr. 10, 1922, pp. 227-246, 8 figs. Investigation of two common errors in viscosimetry with following conclusions: that error due to inaccuracy in Meissner formula for average head is negligible in ordinary work; that error due to cooling of oil after leaving outlet tube may be neglected at low temperatures but should be corrected at temperatures near boiling point of water.

W

WAGES

Systems. Wages, Harrington Emerson. Chem. and Met. Eng., vol. 27, no. 9, Aug. 30, 1922, pp. 400-403. Essentials of good wage system, how wages should be measured; how these theories work out in practice illustrated by results obtained in Ford industries.

WASTE HEAT

Utilization. The Utilization of Waste Heat. Mech. Eng., vol. 44, no. 8, Aug. 1922, pp. 513-518, 4 figs. Three papers presented before Lehigh Valley Section of A.S.M.E.: Waste-Heat Boilers, H. B. Smith; Utilization of Waste Heat in the Steel Industry, A. T. Lewis; Utilization of Waste Heat from Rotary Cement Kilns, Joseph Brobston. (Abridgement.)

Utilizing Waste Heat in the Paper Mill, J. O. Ross. Paper, vol. 20, no. 17, June 28, 1922, pp. 7-9. Best forms of machine-room ventilation provide reclamation of waste heat. Read at joint convention of Cost Assn. and Superintendent's Assn.

WATER GAS

Blue Water Gas. Lowe's Plant for the Manufacture of Blue Water Gas in Conjunction with Coal Gas. Gas Jl., vol. 159, no. 3091, Aug. 9, 1922, pp. 324-326, 5 figs. Gives working results of process and details of plant erected at gas works in Auckland, N.Z. Advantages of system.

WATER PIPES

Submerged, Laying. Laying 30-in. Submerged Pipe for Norfolk Water-Works, David A. Decker and John O. Miller. Eng. News-Rec., vol. 89, no. 10, Sept. 7, 1922, pp. 393-395, 4 figs. Integral flexible-joint cast-iron pipe laid from cradle suspended between two barges.

WATER POWER

Paper Industry. Relation of Water Power to the Pulp and Paper Industry in Canada, J. B. Challies and J. T. Johnston. Am. Soc. Civ. Engrs. Proc., vol. 48, no. 6, Aug. 1922, pp. 1403-1407, 1 fig. Importance of industry in Canada; total power installation; electric drive; motive power by Provinces; future power requirements.

WATER TREATMENT

Algae Elimination. Copper Sulphate Treatment for Preventing Algae Growths in Lakes and Reservoirs, N. L. Huff. Can. Engr., vol. 42, no. 9, Aug. 29, 1922, pp. 298-301. There are three classes of fresh-water algae, of which scum formers are most troublesome. Application of copper sulphate and results of treatment.

Prechlorination-Alum. Prechlorination Alum Treatment of Soft Colored Waters, Arthur L. Gammage. Eng. News-Rec., vol. 89, no. 10, Sept. 7, 1922, pp. 391-392. Experiments and seven years' working results show low colored mechanical-filter effluent nearly non-corrosive.

WATER WORKS

Design. Don'ts for Sewerage and Water Works Designers. Pub. Works, vol. 52, no. 25, June 24, 1922, pp. 457-460. Features to be avoided in designing sewerage and water works systems, as set forth by State Board of Health of Minnesota.

WATERPROOFING

Materials for. Report of Committee F-8 on Waterproofing Materials. Am. Soc. for Testing Matls advance paper for meeting June 26-30, 1922, 32 pp., 2 figs. Proposed specifications for asphalt and coal-tar pitch for use in damp-proofing and waterproofing below and above ground level, proposed methods of testing felted and woven fabrics saturated with bituminous substances for use in waterproofing; testing bituminous mastics, grouts and like mixtures; etc.

WATERWAYS

St. Lawrence River. St. Lawrence Waterway is Needed, Anders F. Lindblad. Mar. Rev., vol. 52, no. 8, Aug. 1922, pp. 327-330, 3 figs. Entire country will benefit from providing deep water route from lakes to ocean.

WELDING

Cutting and. Welding and Cutting, F. Horner. Eng. Production, vol. 4, nos. 85, 86, 87, 88, 89, 90 and 91, May 18, 25, June 1, 8, 15, 22 and 29, 1922, pp. 469-473, 487-489, 517-520, 535-538, 565-568, 581-586 and 607-610, and vol. 5, nos. 92, 93, 94, 95, 96 and 97, July 6, 13, 20, 27, Aug. 3 and 10, 1922, pp. 13-17, 37-41, 55-58, 76-82, 112-118 and 133-137, 168 figs. Review of modern methods and appliances.

Forge Welding, Steel for. Steel for Forge Welding, Frank N. Speller. Mech. Eng., vol. 44, no. 7, July 1922, pp. 443-444. Discusses principal factors affecting welding quality af steel, and compares average results of 80 tests made on forge welds of hammer-welded pipe with original material. (Abridgement.)

Problems. Welding Session Develops Salient Facts. Mech. Eng., vol. 44, no. 8, Aug. 1922, pp. 521-523. Gathering under auspices of Am. Welding Soc. and A.S.M.E. Boiler Code Committee emphasizes problems to be met in advancing art of welding.

Tube, Contraction in. Contraction in Tube Welding, Marcel Piette. Welding Engr., vol. 7, no. 8, Aug. 1922, pp. 19-20, 6 figs. Points out that distortion can be avoided by expanding pieces in opposite sense before welding. Translated from Revue de la Soudure Autogène.

See also Electric Welding; Electric Welding, Arc; Electric Welding, Resistance; oxy-Acetylene Welding, Thermit Welding.

WELDS

Testing. Electrical and Magnetic Weld Testing as Applied to Butt-Welded Steel Plates, T. Spooner and I. F. Kinnard. Am. Soc. for Testing Matls. advance paper for meeting June 26-30, 1922, 11 pp., 7 figs. Describes series of laboratory tests applied to are butt-welded steel plates to determine possibility of developing electrical and magnetic tests capable of revealing quality of such welds. See also Iron Age, vol. 110, no. 3, July 20, 1922, pp. 139-141, 6 figs.

WIND TUNNELS

Balances for. The Six-Component Wind Balance, A. F. Zahm. Nat. Advisory Committee for Aeronautics, Report No. 146, 1922, 12 pp., 8 figs. Description of three-dimensional aerodynamic balance capable of rapid and accurate measurement which was installed in 8 by 8 foot tunnel; translation mechanism; measurement of lift, drag, and side drag; rotation mechanism; etc.

WOOD

Fire-Retarding Chemicals for. The Effect of Chemicals on the Ignition Temperature of Wood. W. O. Banfield and W. S. Peck. Can. Chem. and Metallurgy vol. 6, no. 8, Aug. 1922, pp. 172-176, 3 figs. Results of experiments carried out at Univ. of Brit. Columbia. Search for practical fire-retarding chemical.

WOOD PRESERVATION

Aczol for. Aczol—An Interesting Wood Preservative Chem. and Met. Eng., vol. 27, no. 10, Sept. 6, 1922, p. 509. Its ingredients are ammonia, copper, zinc and phenol; successfully used on wood paving.

A.R.E.A. Report. Report of Committee XVII — On Wood Preservation. Am. Ry. Eng. Assn. Bul. vol. 23, no. 245, Mar. 1922, pp. 899-981, 16 figs. Service records; preservative treatment for Douglas Fir, piles and timbers for marine and land structures, methods for storing lumber and piling.

Paint Protection. Paint Protection for Wood, Cornelius T. Myers. Mech. Engr., vol. 44, no. 8, Aug. 1922, pp 519-520 and 545, 2 figs. Notes on moisture in wood and protectiveness of paint. Author points out need for research.

WROUGHT IRON

A.S.T.M. Committee Report. Report of Committee A-2 on Wrought Iron. Am. Soc. for Testing Matls. advance paper for meeting June 26-30, 1922, 3 pp. Proposed revisions of standards and revisions of tentative standards.

Puddling, Mechanical. New Process for Mechanical Puddling. Iron Age, vol. 110, no. 3, July 20, 1922, pp. 143-145, 7 figs. Commercial installation at Titan Works, Newark, N.J., consisting of cupola and ten furnaces. Repeated pourings over a dam the unique principle of new method.

X

X-RAYS

Materials Investigation. The X-Rays and Engineering Investigation, A. Mortimer Codd. Automobile Engr., vol. 12, no. 164, June 1922, pp. 179-181, 7 figs. Discusses apparatus necessary to produce x-rays, and the two methods commonly employed to utilize rays, viz., radiograph and fluroscopy or screening.

WOULD YOU CALL 48 YEARS' SERVICE—CONVEYING ACID LADEN SEWAGE A FAIR TEST OF CONCRETE SEWER PIPE?
WHEN TIME, the destroyer aided by acids, rot and rust, fail to affect Concrete Sewer Pipe after 48 years' active service —no further guarantee is needed of its everlasting dependability when used for drains, culverts or sewerage systems.
Read what Mr. Davenport, City Engineer of Kokomo, Indiana, has to say about it:
"The City of Kokomo is now constructing a large relief sewerage system; some concrete pipe that was placed in 1873, according to the records in the offices here, will be replaced with larger concrete pipe. This sewer has been in use as a combined sanitary and storm sewer, and seems to be in first class condition, showing no defects from acids which have flowed through it. As this pipe has been in service forty-eight years, it is, as far as I know, the oldest concrete pipe carrying sanitary matter".
FRED DAVENPORT, City Engineer, Kokomo, Indiana.
Write for complete information and quotations.

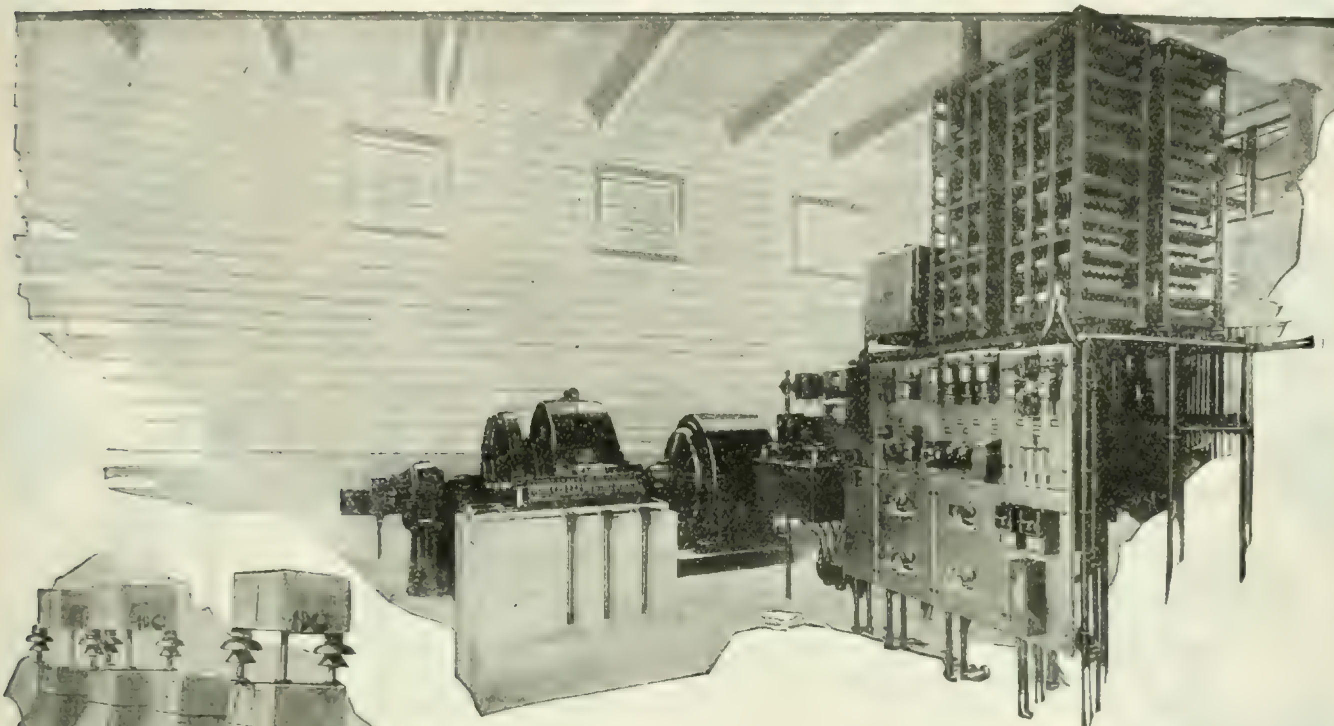
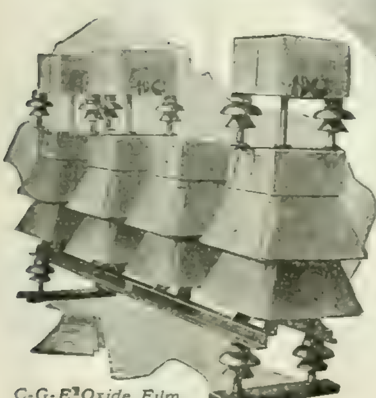
Save Money and Improve Service





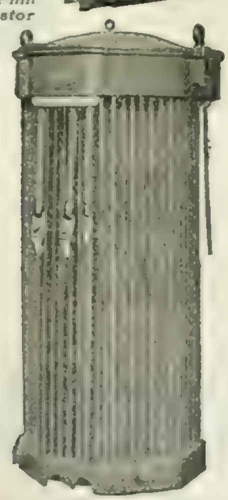
C-G-E Oxide Film Lightning Arrestor

C-G-E Automatic Substations Produce Results.

Automatic Railway Substations start up and shut down as the demand for power appears or disappears. The expense for operators is eliminated so that cost for attendance is minimized.

Automatic Substations can be more closely spaced because of the lower cost of operation. This saves feeder copper and improves the trolley voltage. By shutting down under no load "running light losses" are saved for a large part of the day.

Let the automatic station engineer in the nearest C-G-E office tell you how much your savings would be with C-G-E automatic control.

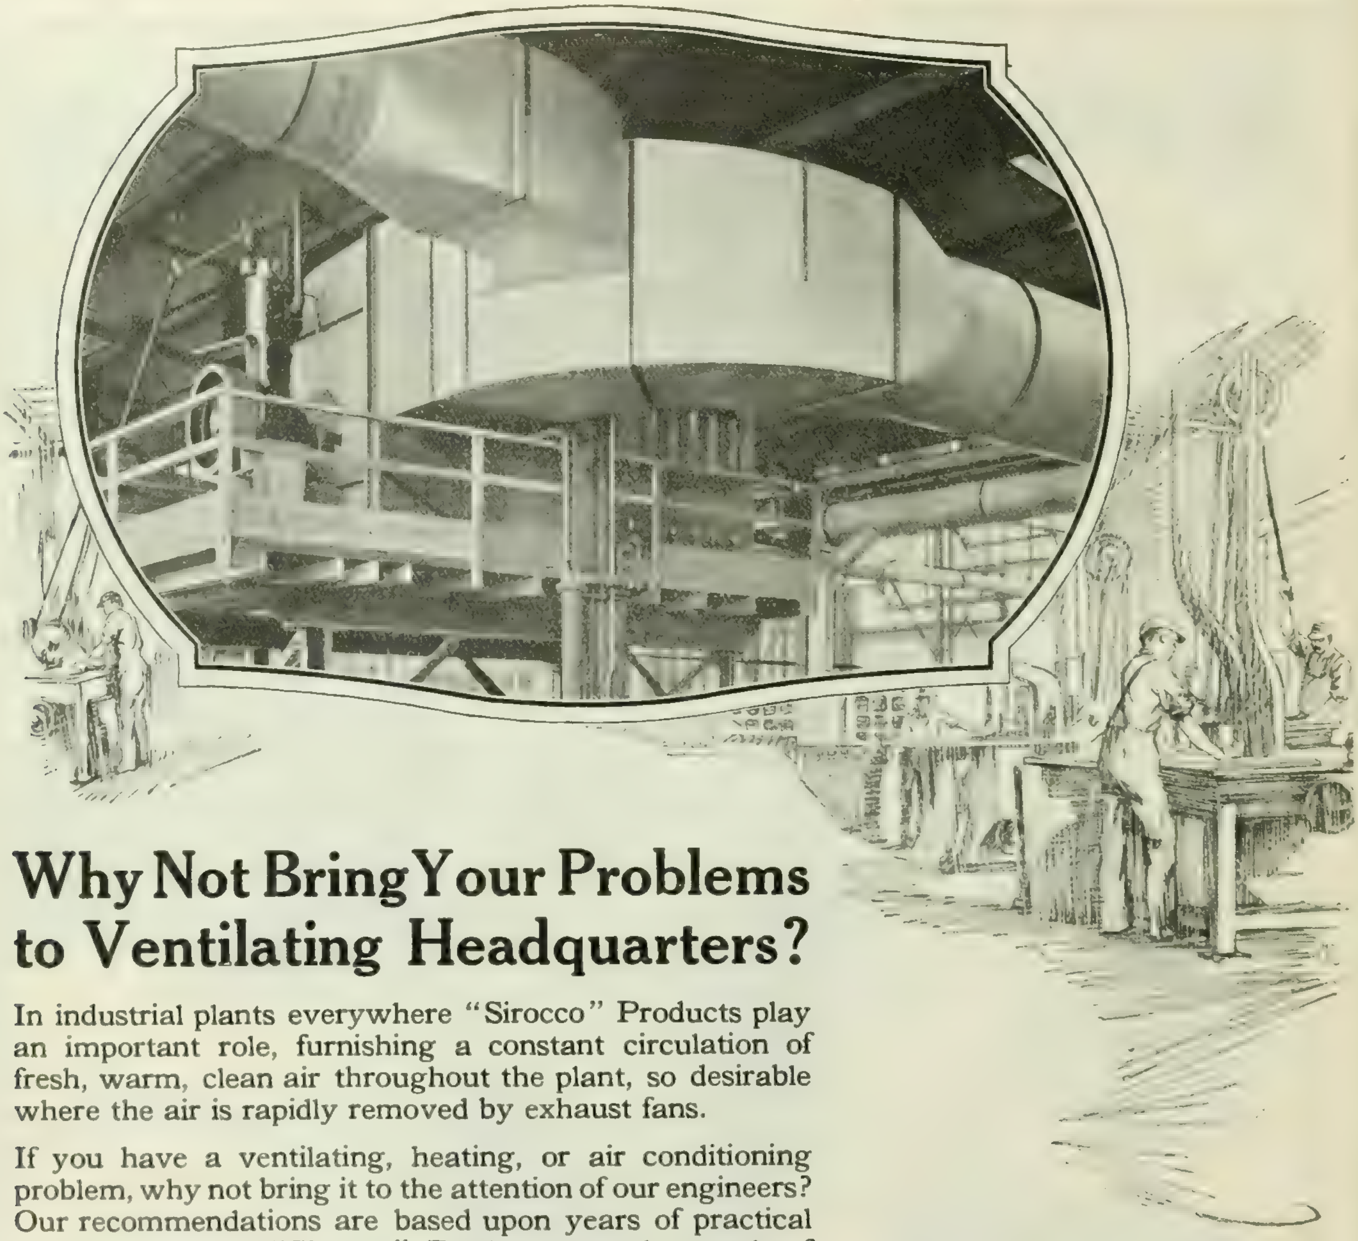


C-G-E Type H Transformer "The Standard of Quality"

Canadian General Electric Co., Limited

HEAD OFFICE TORONTO

Branch Offices: Halifax, Sydney, St. John, Montreal, Quebec, Cobalt, Ottawa, Hamilton, London, Windsor, South Porcupine, Winnipeg, Calgary, Edmonton, Vancouver, Nelson and Victoria.



Engineering Index

This Index is prepared by the American Society of Mechanical Engineers.

In this department will be published from month to month the titles of current engineering papers with the authors and source and a brief extract of the more important. It is designed to give the members of The Institute a survey of all impotant articles relating to every branch of engineering profession.

PHOTOSTATIC PRINTS

Photostatic copies of the articles listed in this section, or others on engineering subjects, may be obtained from the Engineering Societies Library.

Price of each print (up to 11 by 14 in. size) 25 cents, plus postage. Where possible, two pages, up to 7 by 9 in. size, will be photographed on one print. Larger magazines require a print per page. Bills will be mailed with the prints.

The Library is also prepared to translate articles, to compile lists of references on engineering subjects and render assistance in similar ways. Charges are made, sufficient to cover the cost of this work. Correspondence is invited. Information concerning the charge for any specific service will be given those interested. In asking for information please be definite, so that the investigator may understand clearly what is desired.

The Engineering Societies Library is under the management of the United Engineering Society, which administers it as a public reference library of engineering. It is maintained jointly by the American Society of Civil Engineers; the American Institute of Mining and Metallurgical Engineers; the American Society of Mechanical Engineers and the American Institute of Electrical Engineers. It contains 150,000 volumes on engineering and allied subjects, and receives currently most of the important periodicals in its field.

Orders and correspondence should be addressed to

Harrison W. Craver, Director

Engineering Societies Library,

29 West Thirty-ninth Street, New York, N.Y.

A

ACCIDENTS

INDUSTRIAL. Industrial Accidents and Hygiene. Monthly Labor Rev., vol. 15, no. 3, Sept. 1922, pp. 178-195. Problem of dust phthis in granite-stone industry and in printing industry. Heart disease in industry. Safety activity of large motor company. Mine accidents in Alaska, 1921. Fatal accidents in Bulish coal mines 1874-1920.

IRON AND STEEL INDUSTRY. Causes and Prevention of Accidents in the Iron and Steel Industry, 1910-1919, Lucian W. Chaney. U. S. Bur. of Labor Statistics, no. 298, June 1922, 398 pp. 89 figs. Results of study of accidents which have been going on in Bur. of Labor Statistics during last 10 years.

AERONAUTICAL INSTRUMENTS

ALTITUDE. Altitude Instruments. Nat. Advisory Committee on Aeronautics. Aeronautic Instruments, Report No. 126, 1922, 64 pp., 83 figs. Part 1: Altimeters and barographs. Part 11: Precision altimeter design. Part III: Statoscopes and rate-of-climb indicators. Part IV: Aerographs and strut thermometers.

POWER-PLANT INSTRUMENTS. Power Plant Instruments. Nat. Advisory Committee for Aeronautics, Aeronautic Instruments, section 5, report no. 129, 72 pp., 76 figs. Part I: Airplane tachometers. Part II: Testing of airplane tachometers. Part III: Thermometers for aircraft engines. Part IV: Air pressure and oil pressure gages. Part V: Gasoline depth gages and flowmeters for aircraft.

AIR COMPRESSORS

DESIGN. Principles of Design of Air Compressors. William Reavell. Instn. Mech. Engrs. Proc., No. 4, June 1922, pp. 833-854, 15 figs.; also Power House vol. 15, nos. 17 and 18, Sept. 5 and 20, 1922, pp. 22-25 and 22-23, 15 figs. Influence of different types of valves; relation of clearance volume to cylinder volume; efficient cooling; single and multiple-stage compression. Turbo-compressors and their characteristics.

ROTARY. The Planche Rotary Compressor. Engineer, vol. 134. no. 3481, Sept. 15, 1922, p. 280, 7 figs. Describes how compressor of volumetric type and gives particulars of results obtained under test. Translated from Génie Civil.

AIRCRAFT CONSTRUCTION MATERIALS

BRASS, FORGED AND CAST. Investigation of Forged and Cast Brass. Air Service Information Circular, vol. 4, no. 335, Apr. 1, 1922, 6 pp., 8 figs. Investigation to determine suitability of forged brass in gasoline pipe line and tank fittings for service use on airplanes, and to compare soundness of forged and cast brass fittings.

RADIOLOGICAL INSPECTION. Radiological Inspection Work, V. E. Pullin. Aeronautical Jl., vol. 26, no. 144, Sept. 1922, pp. 336-340 and (discussion) 340-348, 11 figs. Shows present position of radiology with regard to its usefulness in according means of inspection of various materials, with special reference to materials and parts used in airplane construction.

AIRPLANES

AEROFOILS. Report of Wind Tunnel Tests on Aerofoils: Dayton-Wright Nos. TT-1 and TT-2, Dayton-Wright Nos. 5 and 6, and Gottingen No. 387. Air Service Information Circular, vol. 4, no. 328, Mar. 15, 1922, 24 pp., 18 figs. Tests of aerofoils to determine lift, drag, L/D center of pressure, and moments about leading edge.

DESIGN. Airplane Design and Performance Improvements Since the Armistice, C. N. Monteith. Soc. Automotive Engrs., Jl., vol. 11, no. 4, Oct. 1922, pp. 320-322. Outline of various features of airplane-development investigation that have been prosecuted. Discusses four specific requirements for increasing speed, rate of climb and ability to reach great altitudes. Notes on variable-area and variable-camber wings; all-metal construction.

PRESSURE DISTRIBUTION. Pressure Distribution Over the Rudder and Fin of an Airplane in Flight, F. H. Norton and W. G. Brown. Nat. Advisory Committee for Aeronautics, Report no. 149, 1922, 9 pp., 10 figs. Investigation carried out to determine leads which occur on vertical tail surfaces under various conditions of flight.

RIBS, TRUSSED. Design of Large Trussed Ribs. Air Service Information Circular, vol. 4, no. 312, Mar. 15, 1922, 17 pp., 10 figs. Describes satisfactory methods of design. Includes appendix in which example is worked out in detail, namely a duralumin trussed rib for 4760-lb. corps observation airplane.

ALLOY STEELS

EXPERIMENTAL PRODUCTION. Experimental Production of Alloy Steels, H. W. Gillett and E. L. Mack. U. S. Bur. of Mines, Bul., no. 199, 1922, 79 pp., 10 figs. Deals with preparation of ingots on any of the series of steels. Describes indirect-arc furnace used in experiments. Photomicrographs.

PHYSICAL PROPERTIES. Standardization of Methods Leading to Comparative Physical Properties of Alloy Steels, R. M. Bird. Am. Soc. for Steel Treating, Trans., vol. 2, no. 12, Sept. 1922, pp. 1213-1218, 15 figs. Describes procedure adopted at Bethlehem plant of Bethlehem Steel Co. which is said to yield more truly comparable results than previous systems.

ALLOYS

ALUMINUM. *See Aluminum Alloys.*

BEARING METALS. *See Bearing Metals.*

NICKEL. *See Nickel Alloys.*

SHRINKAGE-TESTING APPARATUS. New Forms of Apparatus for Determining the Linear Shrinkage and for Bottom-Pouring of Cast Metals and Alloys, Accompanied by Data on the Shrinkage and Hardness of Cast Copper-Zinc Alloys, F. Johnson and W. Grantley Jones. Inst. Metals advance paper for meeting Sept. 20-22, 1922, 28 pp., 11 figs.

STUDY OF. The Art of Alloying, W. Guertier. Brass World, vol. 17, nos. 8 and 9, Aug. and Sept. 1922, pp. 229-234 and 257-259, 10 figs. Method of production by fusion of technically possible and impossible alloys. Account of mixed crystal formations and their importance. Description of appearance of compounds and their effects. Physical properties as affected by increasing miscible ratios. Chart for constructive purposes and design of utilizable alloys. Translated from Zeit. fr Metalkunde, no. 9, June 1921.

WHITE METALS. White Metals, A. H. Mundey. C. C. Bissett and J. Cartland. Inst. Metals advance paper for meeting Sept. 20-22, 1922, 25 pp. 10 figs. Review of principal classes of white metals, their composition and physical properties, chiefly in relation to their uses and manufacture. Deals with anti-friction alloys and other white metals, Photomicrographs. See also Engineering, vol. 114, no. 2962, Oct. 6, 1922, pp. 411-443, 10 figs.

ALUMINUM

OVERHEATING, EFFECTS OF. The Effects of Over-Heating and Repeated Melting on Aluminum. W. Rosenhain and J. D. Crogan. Inst. Metals advance paper for meeting Sept. 20-22, 1922, 11 pp., 3 figs. Investigation to determine whether certain forms of treatment in melting and remelting of aluminum would bring about in metal deterioration approximating condition generally described as "burnt" aluminum. Part of research carried out for Aeronautics Research Committee. See also Engineering, vol. 114, no. 2961, Sept. 29, 1922, pp. 414-415, 3 figs.

ALUMINUM ALLOYS

ALUMINUM-COPPER. The Copper-Rich Aluminum-Copper Alloys, David Stockdale. Inst. Metals advance paper for meeting Sept. 20-22, 1922, 14 pp., 37 figs. Two general methods of making investigations were used — the taking of cooling curves and micro-examination of quenched specimens. See (abstract) in Engineering, vol. 114, no. 2961, Sept. 29, 1922, pp. 396-398, 7 figs.

ALUMINUM-SILICON. Properties and Manufacture of Aluminum-Silicon Alloys, Junius D. Edwards. Chem. & Met. Eng., vol. 27, no. 13, Sept. 27, 1922, pp. 654-655, 1 fig. Presents values for number of physical properties of aluminum-silicon alloys, pertinent to their commercial application.

ANALYSIS. The Complete Analysis of Aluminum Alloys, E. W. Sheel. Metal Industry (Lond.), vol. 21, no. 9, Sept. 1, 1922, pp. 193-194. Describes process which has been used in laboratory under author's supervision, and with which he claims to have obtained excellent results. Determination of silicon, copper, tin, zinc, magnesium, iron, manganese and nickel.

CASTINGS. Inclusions in Aluminum-Alloy Sand Castings, R. J. Anderson. U. S. Bur. of Mines, Tech. Paper, no. 290, 1922, 25 pp., 23 figs. Investigation of hard spots in connection with Bureau's work on casting losses in aluminum-alloy foundry practice. Notes on experiences at foundries; kinds and characteristics of hard spots, causes and factors affecting occurrence, composition and identification. Photomicrographs.
See also Duralumin.

AMMONIA

COAL, RECOVERY FROM. Ammonia from Coal, John W. Cobb. Fuel in Sic. & Practice, vol. 124, no. 3221, Sept. 22, 1922, pp. 167-174, 6 figs. Review of development and experiments. Author deals briefly with so-called synthetic process.

SPECIFIC HEAT. Measurement of Specific Heat of Superheated Ammonia, E. E. Mueller. Refrig. Eng., vol. 9, no. 1, July 1922, pp. 1-3, 4 figs. Results of measurements to determine specific heat at constant pressure to an accuracy comparable with other total heat elements already determined, namely, latent heat of vaporization and specific heat of liquid.

AMMONIA COMPRESSORS

FEATHER-VALVE. Feather Valve Compressors of Three Types, Construction and Operation, F. L. Fairbanks. Refrig. Eng., vol. 9, no. 3, Sept. 1922, pp. 85-90 and (discussion) 90-92, 94, and 101-102, 11 figs. Test data of Boyle compressor, alone, Boyle compressor with booster, motors-driven compressor, and uniflow steam-engine-driven compressor.

AMMONIA CONDENSERS

LARGE The Advantages of a Large Ammonia Condenser, L. C. Miller. Power, vol. 56, no. 15, Oct. 10, 1922, pp. 568-570. Includes tables showing capacity of double-pipe condensers. Operating with high pressures.

ARCHES

CONCRETE-GROINED. The Comparison of Concrete Groined Arches as an Aid in Their Design, Philip O. Macqueen. Am. Soc. Civ. Engrs. Proc., vol. 48, no. 8, Oct. 1922, pp. 1665-1671, 4 figs. Study of proportions of typical concrete groined arches which have been used successfully for reservoir roofs.

ARMATURES

WINDING D. C. Some Ways to Locate and Remove Troubles. When Winding D. C. Armatures, Marin Phillips. Indus. Engr., vol. 60, no. 9, Sept. 1922, pp. 435-441 and 458, 5 figs. What tests to make and some practical hints on correct methods of winding and connecting coils so as to prevent trouble with details of how to remedy defects which may develop.

ASPHALT

INDUSTRY. Development of the Asphalt Industry in the United States, Provost Hubbard. Can. Engr., vol. 43, no. 12, Sept. 19, 1922, pp. 365-366. Varieties and tonnages of asphalts imported; growth of petroleum asphalt industry; properties and uses.

AUTOMOBILE ENGINES

AIR-COOLED. Air Cooled Engines Not Inherently More Economical, A. Ludlow Clayden. Automotive Industries, vol. 47, no. 12, Sept. 21, 1922, pp. 569-570. Maximum desirable mean cylinder temperature not known. Lack of data on this and other factors accounts largely for numerical superiority of designs using water cooling. Data on area of cooling fins.

CYLINDERS. *See Cylinders, Machining*

IGNITION *See Ignition*

PISTON PINS. Tubing vs. Solid Stock as Material for Piston Pins, C. B. Fraser. Automotive Industries, vol. 47, no. 15, Oct. 12, 1922, pp. 713-719. Comparison of manufacturing costs difficult. Experience shows solid stock cheaper in small pins. No difference in quality when same grade of steel is used.

AUTOMOBILE FUELS

ALCOHOL. Motor Tests with Alcohol, Roy Alden. Oil News, vol. 10, no. 17, Sept. 5, 1922, p. 37. Exhaustive tests in India on single-cylinder engine show alcohol makes better motor fuel than gasoline; detonation eliminated. (Abstract.) Report of Imperial Motor Transport Council of India.

VAPORIZATION. Vaporization of Motor-Fuels, P. S. Tice. Soc. Automotive Engrs. Jl., vol. 11, no. 4, Oct. 1922, pp. 307-314 and (discussion) 314-319 and 332, 7 figs. Summary of conditions surrounding and controlling fuel vaporization in cycle of operation of throttle-controlled internal-combustion engines, fitted with intake manifold and carburetor.
See also Gasoline.

AUTOMOBILES

SUSPENSIONS. The Problem of Suspension, Louis Coatalen. Autocar, vol. 49, no. 1405, Sept. 22, 1922, pp. 537-541, 3 figs. Describes simple but ingenious method of ascertaining spring action, which may lead to extremely important results.

TECHNICAL STUDIES. Studies of the Automobile, G. B. Upton. Sibley Jl., vol. 35, nos. 4.5.6 and 9.10, Apr., May-June and Sept.-Oct. 1921 and vol. 36, nos. 4, 5 and 6, Apr., May and June 1922, pp. 58-60 and 71, 80-81 and 10, 120-124, 58-65 and 74, 78-90 and 100, and 108-118, 17 figs. Apr.: Past- and problem of present time. May-June: Load-carrying capacity of tires on hard roads. Sept.-Oct.; Tractive resistances of sand and soft soils. Apr., May and June; Power required to run a car.

TRANSMISSIONS. New Electric Transmission Provides for Direct Drive. Automotive Industries, vol. 47, no. 15, Oct. 12, 1922, pp. 711-714, 5 figs. Sperry transmission has five speeds forward, two in reverse and electric braking. Direct drive obtained by automatic, electrically operated friction clutch.

AVIATION

CANADA. Some Technical Aspects of Aviation in Canada, E. W. Stedman. Aeronautical Jl., vol. 26, no. 141, Sept. 1922, pp. 349-375, 24 figs. Discusses different kinds of work that can be carried out by aircraft in Canada; country to be traversed; type of machine; winter flying; engine cooling, lubrication and starting propellers; protection of crew; temperature effects on rigging and instruments; [illegible]ing on snow.

AXLES

MANUFACTURE. Manufacturing Car and Locomotive Axles, Nathan S. Frohman. Am. Mach., vol. 57, no. 13, Sept. 28, 1922, pp. 473-477, 11 figs. Steel specifications and machining operations; inspection and tests; forging under hydraulic presses; hollow boring and heat treating. Methods employed by Pollak Steel Co.

B

BALANCING MACHINES

ROTATIVE BODIES. New Principles in Rotative Balance, Amos F. Moyer. Soc. Automotive Engrs. Jl., vol. 11, no. 4, Oct. 1922, pp. 368-372, 9 figs. Describes balancing machine by B. L. Newkirk, of research department of Gen. Elec. Co., for measuring directly resultants for two separate ends of rotative body, without necessity of separating the standing from running balance.

BEARING METALS

GENELITE. Genelite — A New Bearing Material, E. G. Gilson. Machy. (N. Y.), vol. 29, no. 2, Oct. 1922, pp. 123-124, 2 figs. Bronze material containing graphite evenly distributed throughout entire mass.

BEARINGS

ANTI-FRICTION. New Anti-Friction Bearings. Times Trade & Eng. Supp., vol. 11, no. 220, Sept. 23, 1922, p. 41, 1 fig. Describes new form of bearing invented by German engineer which is being introduced on large scale for industrial and railway purposes; consists of white metal in which special stones are embedded.

BEARINGS, BALL

ADVANTAGES AND APPLICATIONS. Ball Bearings Their Advantages and Principal Applications in Brazil (Os mancaes de espheras, suas vantagens e principaes applicaces no Brazil), Leopoldo Franca. Revista Brasileira de Engenharia, vol. 4, no. 1, July 1922, pp. 18-24, 8 figs. Stribeck and SKF types; reducing accidents. etc.

ROLLER AND. Ball and Roller Bearings With Details of Their Installation, C. A. Van Brunt. Indus. Engr., vol. 80, no. 9, Sept. 1922, pp. 420-429 and 459-460, 34 figs. The various designs and construction and directions for installing them on lineshafts and machines.

BEARINGS, ROLLER

CONTACT TYPE. Rolling Contact Bearings, Tobias Dantzig. West. Machy. World, vol. 13, nos. 6 and 7, June and July 1922, pp. 216-217, 247-248. Classification of anti-friction bearings; ideal bearing, efficiency and capacity. Principles of design and construction.

ROLLER INSPECTION. Inspecting Bearing Rollers by Machine. Machy. (N. Y.), vol. 29, no. 2, Oct. 1922, pp. 94-95, 3 figs. Describes machine developed by Bock Bearing Co., Toledo, O., which automatically inspects and sorts rollers at rate of 3000 per hr.

TAPERED. Can Tapered Roller Bearings be Run at High Speeds. T. V. Buckwalter. Machy. (N. Y.), vol. 29, no. 2, Oct. 1922, p. 107. Results obtained in running tapered roller bearings economically and efficiently at speeds exceeding 10,000 r.p.m.

BELT DRIVE

MAINTENANCE-COST REDUCTION. Overcoming Heavy Costs of Belt Maintenance, J. H. Rodgers. Power House, vol. 15, nos. 13 and 14, July 5 and 20, 1922, pp. 29-31 and 21-22 and 24, 11 figs. Transmission problems should be in charge of competent man; inspection should be made regularly; importance of proper alignment; lacing of joints should be carefully performed.

BLAST-FURNACE GAS

TREATMENT. Blast Furnace Gas. Gas & Oil Power, vol. 17, nos. 203 and 204, Aug. 3 and Sept. 7, 1922, pp. 179-180 and 197-198, 3 figs. Its treatment for use with gas engines.

BLAST FURNACES

ELECTRIC-POWER APPLICATION. Utilization of Electric Power About the Blast Furnace, Gordon Fox. Elec. Jl., vol. 19, no. 9, Sept. 1922, pp. 369-371, 3 figs. Deals with application of electric power to blowing, pumping, material handling and accessories.

MODERN PRACTICE. The Bases of Modern Blast-Furnace Practice, A. K. Reese. Engineering, vol. 114, no. 2958, Sept. 8, 1922, pp. 312-316, 2 figs. Writer discusses four prime factors in modern blast-furnace practice, namely, (1) preparation of materials; (2) furnace design; (3) auxiliary equipment; and (4) method of operation. Paper read before Iron & Steel Inst.

BOILER FEEDWATER

ANALYSIS AND PURIFICATION. Rapid Analysis, Purification and Control of Industrial Waters (Analyse rapide, épuration et contrôle des eaux industrielles). P. de Vadder. Outillage, vol. 6, no. 39, Sept. 30, 1922, pp. 1280-1282. Analysis, of boiler feedwater; temporary and permanent hardness; water softening.

DEGASIFICATION. Corrosion — Its Cause and Cure. Power, vol. 56, no. 14, Oct. 3, 1922, pp. 532-533, 2 figs. Discusses corrosion as found in power plants and describes Kestner process and degasser, as example of European corrosion method of removing oxygen from boiler feedwater.

The Degasification of Boiler Feedwater, J. R. McDermet. Mech. Eng., vol. 44, no. 10, Oct. 1922, pp. 648-650, 7 figs. Fundamental laws governing separation of dissolved gases from water by air-tension control, and extent of their application to conventional types of feedwater-heating equipment.

TREATMENT. Corrosion of Walls in Steam Generators (Intorno alle corrosioni delle pareti interne dei generatori di vapore), Giuseppe Gianoli. Industria, vol. 36, no. 14, July 31, 1922, pp. 261-262. Tests made by Rauch on effect of sodium chromate and bichromate on feedwater.

Extensive Boiler-Water Treating on C. M. & St. P. Ry., C. Herschel Koyl. Eng. News-Rec., vol. 89, no. 14, Oct. 5, 1922, pp. 560-562, 4 figs. Chemical treatment in bad-water district improves operating conditions. Savings soon pay for numerous plants.

Solving the Feed-Water Problems at New Orleans, O. P. Adams and Paul F. Hoots. Power, vol. 56, no. 16, Oct. 17, 1922, pp. 596-599, 2 figs. The 50,000-kw. plant of New Orleans Railway & Light Co., uses Mississippi River water for makeup with practically no trouble from scale or priming, although boilers operate at high rating. This is accomplished by lime-soda-copper as treatment in steam-heated tank and by using periodic water tests.

BOILER OPERATION

Fuel Burning and. The Economic Operation of Boilers and Burning of Fuels. Frank G. Parker. Pacific Mar. Rev., vol. 19, no. 10, Oct. 1922, pp. 564-567. Analysis of heat transfer problems and of combustion factors governing furnace tube and stack design. Paper read before Am. Soc. Mar. Engrs.

Low-Draft Maintenance. The Draft Over the Fire, E. M. Eliot. Power, vol. 56, nos. 12 and 14, Sept. 19 and Oct. 3, 1922, pp. 446-448 and 523-526, 5 figs. Sept. 19: Importance of maintaining constant low draft over fire in case of boilers operating under forced draft. Oct. 3: How to find actual saving obtainable by various methods of maintaining it.

BOILER PLANTS

Heppenstall Co., Pittsburgh. Modern Steam Generating Plant, R. F. Keifer. Blast Furnace & Steel Plant, vol. 10, Oct. 1922, pp. 509-519, 8 figs. Details of boiler plant of Heppenstall Forge & Knife Co.; description of building, coal bunker; coal-handling equipment; coal crusher; boilers; feedwater pumps and treatment.

BOILERS

Bent-Tube vs. Straight-Tube. Bent Tube vs. Straight Tube Boilers, Walter N. Flanagan. Assn. Iron & Steel Elec. Engrs., vol. 4, no. 7, July 1922, pp. 321-343 and (discussion) pp. 344-355, 12 figs. Presents principles involved in selection and observations of author.

Calculation. Application of Stefan's Law to Boiler Calculation (Aplicactión de la ley de Stefan al calculo de calderas), Vicente Burgaleta. Anales de la Associación de Ingenieros del Instituto Católico de Artes e Industrias, vol. 1, no. 1, Jan. 1922, pp. 39-45, 5 figs. Advocates its substitution for formulas formerly used; application to locomotives, etc.

High Pressures. Very High Pressures in Modern Practice. Power Houses, vol. 15, no. 19, Oct. 5, 1922, pp. 23-24, 1 fig. Central station of public-service company uses boiler pressure of 400 lb. per sq. in., marking new advance in engineering practice on American continent.

Waste-Heat. British Practice in Waste Heat Utilization, C. H. S. Tupholme. Power Plant Eng., vol. 26, no. 20, Oct. 15, 1922, pp. 994-996, 2 figs. Information on waste-heat boilers, including details of new improved Spencer-Hopwood deep-nest boiler and new Kirke patent gas-fired boiler. Uses for gas-fired boiler.

BORING MACHINES

Automatic. Automatic Boring and Facing Machine. Machy. (Lond.), vol. 20, no. 522, Sept. 28, 1922, pp. 787-790, 7 figs. Details of machine developed by Butterworth & Co. for automatically performing boring, facing and similar turning operations that can be confined to tools mounted in a turret heat.

BRASS

Hardness. The Hardness of the Brasses, and Some Experiments on Its Measurement by Means of a Strainless Indentation, F. W. Harris. Inst. Metals advance paper for meeting Sept. 20-22, 1922, 27 pp., 12 figs. Tests to determine position of hardness-composition curve at certain points in phase field.

BRIDGE ERECTION

Cold-Weather Concreting. Building a Five Span Concrete Bridge in Cold Weather, G. F. Scales. Eng. News-Rec., vol. 89, no. 14, Oct. 5, 1922, p. 563, 1 fig. Manure protection raised temperature during first 72 hours. Simple but effective methods used in placing protection.

BRIDGES

Specification for Girder. Girder Bridges. British Eng. Standards Assn., no. 153, July 1922, 37 pp., 8 figs. British standard specification for materials and workmanship.

Transporter, Buenos Aires. Riachuelo Transporter Bridge, Buenos Aires, J. P. Risdon. Engineering, vol. 114, nos. 2955, 2956, 2958, 2960 and 2962, Aug. 18, 25, Sept. 8, 22, and Oct. 6, 1922, pp. 193-196, 22 figs. partly on supp. plate; 227-228, 29 figs. partly on supp. plate and p. 238; 287-290, 67 figs. partly on supp. plate; 354-356, 12 figs.; and 424-427, 2 figs. Object of bridge is to facilitate heavy road traffic to Buenos Aires Southern Dock; its provides for clear width of waterway of 175 ft. 6 in.; span is 254 ft. 3 in.; overall length of superstructure, 300 ft. 9 in. Car is suspended by rigid, trussed frame of light design, from overhead trolley bogies running upon rails supported on special rail bearer girders.

BRIDGES, CONCRETE

Falsework for Arch. Special Trussed Falsework for Concrete Arch, Merrill Butler. Eng. News-Rec., vol. 89, no. 12, Sept. 21, 1922, pp. 468-469, 3 figs. Design made in attempt to do away with support to river bed subsequently provided with supporting tower.

Beams, Load Distribution. Distribution of Load Between Beams in Reinforced-Concrete Bridges (La répartition des charges entre les poutres dans les ponts en beton armé), Maximilien Thullie. Génie Civil, vol. 81, no. 8, Aug. 19, 1922, pp. 174-178, 14 figs. Calculation; examples in determining influence lines.

BRIDGES, RAILWAY

Design. Present-Day Problems and Tendencies in Railway Bridge Design, Conrad Gribble. Engineering, vol. 114, no. 2958, Sept. 8, 1922, pp. 307. Discusses problem of secondary stresses, rivets and problems arising out of railway amalgamations. Paper read before Brit. Assn.

Strength. The Strength of Railway Bridges, A. C. Cookson and J. S. Nicholas. Engineering, vol. 114, no. 2958, Sept. 8, 1922, pp. 293-296, 9 figs. With special reference to proposals of Ministry of Transport. Paper read before Brit. Assn.

BRUSHES

Carbon. Parallel Sided Carbon Brushes for D. C. Commutator Machines. British Eng. Standards Assn., No. 96, July 1922, 8 pp., 2 figs. British standard specification.

BUSES

Design. Some Fundamental Characteristics of Present-Day Buses, R. E. Plimpton. Soc. Automotive Engrs. Jl., vol. 11, no. 2, Aug. 1922, pp. 163-172, 12 figs. Enumeration of distinctive features of buses designed for city, inter-city and country service. Discussion of steam and electric motive power, chassis components for bus service, types of bus body, problems of heating, lighting and ventilation, fare-collection devices, etc.

See also Motor Buses

C

CABLES, ELECTRIC

Steel-Aluminum. Steel Aluminum for Overhead Lines (Stahlaluminium für Freileitungen), Hch. Schenkel. Elektrotechnische Zeit., vol. 43, no. 37, Sept. 14, 1922, pp. 1153-1156, 2 figs. Investigations show effect of temperature on distribution of forces in the two metals. It is shown that steel-aluminum cable possesses certain advantages over copper.

CABLES, HOISTING

Rubber-Covered vs. Braided. Rubber-Covered vs. Braided Cable for Mine Work. Coal Age, vol. 22, no. 15, Oct. 12, 1922, pp. 583-586, 5 figs. Report of Committee on all-rubber-insulated as compared with ordinary braid-covered cables for portable extensions, locomotive cable and mining-machine cable, presented before W. Va.-Ky. Assn. Mine. Mech. & Elec. Engrs. Engineers detail experience with machine cable, resistors and insulating oils.

CANALS

Locks. The Meuse Lock on the Meuse-Waal Canal, L. R. Rentholt. Engineer, vol. 134, no. 3480 and 3481, Sept. 8 and 15, 1922, pp. 235-238, and 261-264, 15 figs. Details of design and construction. Largest vessels for which lock has been built are of from 2000 to 2400 tons carrying capacity; total length, 1100 ft.; useful length, 860 ft.; width, 52 ft. 6 in.; depth on sills, 12 ft. 6 in. below low water.

CABLEWAYS

Gilboa Dam. Aerial Tramways Serve Mixing Plant at Gilboa Dam, Charles K. Traber. Eng. News-Rec., vol. 89, no. 15, Oct. 5, 1922, pp. 604-606, 4 figs. Rugged country makes surface roads difficult. Air lines reliable and cost less. Lines have surplus capacity. Operation undisturbed by rain or snow.

CARS

Oscillation-Recording Instrument. Oscillation Recording Instruments in Use on the Great Northern Railway. Ry. Gaz., vol. 37, no. 10, Sept. 8, 1922, pp. 314-316, 8 figs. Details of device known as "Enregistreur Hallade," and illustration of records made therewith.

Recording Riding Qualities of Cars, F. Crocker. Ry. Rev., vol. 71, no. 14, Sept. 30, 1922, pp. 437-439, 12 figs. Describes instrument devised by author for recording oscillations. Investigation conducted on English railway equipment of car-riding qualities.

CARS, FREIGHT

Steel. The Design of Modern Steel Freight Car Equipment, John A. Pilcher. Ry. Rev., vol. 71, no. 15, Oct. 7, 1922, pp. 467-475, 7 figs. General principles that should govern in steel freight car design; suggestions for improving certain features in design; continual addition of material to enable cars to withstand rough handling detracts from earning power. Paper read before Ry. Club of Pittsburgh.

CARS, PASSENGER

Heating. A Thermostatic Control of Car Heating. Ry. & Locomotive Eng., vol. 35, no. 9, Sept. 1922, pp. 234-236, 8 figs. Electrothermostatic control developed by Vapor Car Heating Co., Chicago, principle of which consists in use of electric current whose circuit is made or broken by thermometer placed in car to regulate flow of steam to heating pipe.

CASE-HARDENING

Carburizing and Decarburizing. Carburizing and Decarburizing in Case Hardening, H. B. Knowlton. Am. Soc. for Steel Treating Trans., vol. 2, no. 12, Sept. 1922, pp. 1155-1166, 16 figs. Discussion of carburizing and decarburizing actions which make for success or failure of case-hardening method in commercial practice. Photomicrographs.

Failures Due to Improper Steel. Irregularities in Case Hardened Work Caused by Improperly Made Steel, E. W. Ehn. Am. Soc. for Steel Treating Trans., vol. 2, no. 12, Sept. 1922, pp. 1177-1202, 55 figs. Gives experiences which are results of research work during last few years in metallurgical department of the Timken Roller Bearing Co. Photomicrographs.

Materials for, Tests of. Tests of Carburizing Materials, O. A. Knight and T. C. Kern. Forging & Heat Treating, vol. 8, no. 9, Sept. 1922, pp. 420-425. Results of exhaustive series of tests on five commercial compounds, indicating decided superiority of one.

CAST IRON

Growth during Repeated Heatings. On the Growth of Gray Cast Iron during Repeated Heatings and Coolings, Tario Kikuta. Science Reports of Tôhoku Imperial Univ., 1st series, vol. 11, no. 1, Apr. 1922, pp. 1-17, 16 figs. partly on supp. plates. Three periods of growth: (1) due to decomposition of cementite; (2) due to resisting effect of gas pressure to contraction; (3) yielding to pressure of occluded gases at high temperatures. 57th Report of Iron & Steel Research Inst.

Tensile Tests. Tensile Tests of Cast Iron at Various Temperatures, J. F. Harper and R. S. Mac Pherran. Iron Age, vol. 110, no. 13, Sept. 28, 1922, pp. 793-794, 5 figs. Results of work done on annealed bars in special apparatus. Comparison with steel under similar conditions.

CASTING

Centrifugal. Chromium Alloy Steel Cast Centrifugally, L. Cammen, Iron Age, vol. 110, no. 11, Sept. 14, 1922, p. 655, 1 fig. Annealed, it has same structure as mechanically worked metal, from ingots cast in stationary molds; dendritic structure absent and grain structure small.

McConway Centrifugally Cast Steel. Foundry Trade Jl., vol. 26, no. 319 Sept. 28, 1922, pp. 257-258, 1 fig. Describes new process for production of steel disks by centrifugal and hydraulic methods direct from molten steel.

CASTINGS

Silicon-Iron. Silicon-Iron Acid-Resisting Castings, Wm. Mason. Metal Industry (Lond.), vol. 21, no. 14, Oct. 6, 1922, pp. 323-325, 6 figs. Discusses nature and uses of silicon-iron acid-resisting alloys, extensive substitution of parts made of it for earthenware in chemical plant, and scope for manufacture of castings.

CELLULOSE

Wood and Cotton. Comparison of Wood Cellulose and Cotton Cellulose, S. A. Mahood and D. E. Cable. Jl. Indus. & Eng. Chem., vol. 14, no. 8, Aug. 1922, pp. 727-731. Data recorded show that wood cellulose most nearly corresponding to cotton, taking purified linters as standard, is obtained by recooking "easy bleaching" sulphite pulp with soda and bleaching with 2 per cent bleach.

CEMENT GUN

Fire Tests. Fire Tests of Gunite Walls Eng. and Contracting, vol. 58, no. 13, Sept. 27, 1922, p. 292. Results of tests. (Abstract.) Report of Underwriters' Laboratories, Chicago

CEMENT MANUFACTURE

Iron and Steel, Application of Iron and Steel and Their Application in the Cement Industry, W. R. Shimer. Contract Rec., vol. 36, no. 35, Aug. 30, 1922, pp. 862-865. Notes on obtaining steel at suit purpose. Reasons for failure of steel under certain conditions. Co-operation of cement engineer and steel-plant metallurgist advocated. Paper read before Portland Cement Assn.

CENTRAL STATIONS

Solar-Heat. Solar Heat Central Stations (Centrali elettriche ad energia solare), Carlo Boggia. Industria, vol. 36, no. 13, July 15, 1922, pp. 245-246. Describes method depending on operating turbine with CO_2 from generator heated by sun.

Superpower. The Gennevilliers Electric Power Station. Engineer, vol. 134, nos. 3480, 3481 and 3482, Sept. 8, 15, and 22 1922, pp. 242-243, 1 fig.; 270-272, 7 figs. and 294, 4 figs. on supp. plate. Full description of station, including particulars of Babcock boilers; electric plant and equipment; buildings; etc.

CHIMNEYS

Calculation. Chimney Calculation (Schornsteinberechnung), H. de Grahl. Glasers Annalen, vol. 91, no. 4, Aug. 15, 1922, pp. 54-56 and (discussion) 56-62, 3 figs. Includes table showing comparison of 11 different calculating methods. Hoffman's calculating method and values obtained.

CHROMIUM STEEL

Hardness. Variation of Hardness in Chromium Steels (Härdhetens voriation med värmebehandlingen hos ett kromstal), H. Rowsing and J. Sissener. Jerknontorets Annaler, vol. 107, no. 8, 1922, pp. 382-386, 8 figs. Discusses recent experiments of Portevin and Chevenard.

COAL

Carbonization. Decomposition Processes Applicable to Certain Products of Coal Carbonization, M. J. Bradley. Chem. and Met. Eng., vol. 27, no. 15, Oct. 11, 1922, pp. 737-744, 3 figs. Experimental study in which mixed zylenes were decomposed under varied conditions of temperature, pressure and atmosphere. Effects of different contact surfaces. Identification of many of important decomposition products. (Abstract.) Work carried out at University of Ill.

COAL INDUSTRY

Canada. The Development of the Coal Industry in Canada, F. W. Gray. Can. Inst. Min. and Metallurgy Monthly Bul., no. 126, Oct. 1922, pp. 1051-1069. Notes on anthracite and bituminous supply and demand; Nova Scotia coal; western coal; fuels and sources of power other than coal.

Patent-Fuel Manufacture. Notes on Patent Fuel, Arthur Grounds. Fuel in Sci. & Practice, vol. 124, nos. 3213, 3214 and 3221, July 28, Aug. 25 and Sept. 22, 1922, pp. 119-122, 149-151 and 174-177. July 28: Deals with various binding materials proposed as suitable for agglomeration of fine coal for manufacture of briquettes and ovoid fuel. Aug. 25: Selection of coals for briquetting and grinding of coal and pitch. Sept. 22: Research on manufacture of briquettes.

COAL MINES

Surveying. Surveying Steep Workings with Mining Dials, T. G. Bocking. Colliery Guardian, vol. 124, no. 3219, Sept. 8, 1922, p. 579, 4 figs. Describes Bocking-Owen auxiliary sight for making surveys in coal-mine workings having inclinations up to 75 deg.

COKE OVENS

By-Product. Great Western Colliery Company, Limited. Gas World, vol. 77, no. 1989, Sept. 2, 1922, pp. 12-16, 7 figs. Details of new by-product coke-oven plant.

COLD STORAGE

Freezing Point of Fruits and Vegetables. Freezing Points of Fruits and Vegetables, D. B. Carrick. Ice and Refrigeration, vol. 63, no. 4, Oct. 1922, pp. 180-181. Results of investigations conducted to determine freezing point and freezing injury; description of apparatus and methods used; conditions under which experiments were conducted; data obtained on apples and potatoes.

Humidity Control. Humidity Control in Cold Storage Warehouses, Milton W. Browne. Ice and Refrigeration, vol. 63, nos. 3 and 4, Sept. and Oct. 1922, pp. 140-142 and 181-183, 2 figs. Is as important as temperatures in handling of fruits and [illegible] storage, heating capacity of air depends upon quantity of water vapor mixed with it; absolute and relative humidity; humidity temperature and dewpoint effect; relative humidity, hygrometrical and conversion tables.

COMPRESSED AIR

Reheating. The Reheating of Compressed Air, C. R. Richards and J. N. Vedder. University of Ill., Bul., vol. 19, no. 41 (bul. no. 130), June 5, 1922, 88 pp. 22 figs., 12 tables. Investigation undertaken to determine thermodynamic efficiencies resulting from heat expended in reheating process, efficiency of external and internal combustion [illegible] using air expansively under wide variety of operating [illegible], performance of same engine operating with steam alone, and with mixtures of air and steam.

CONCRETE

Permeability-Testing Apparatus. High-Pressure Apparatus for Testing Permeability of Concrete (Appareil à haute pression pour l'étude de la perméabilité du beton), W. Hugentobler. Bul. Technique de la Suisse Romande, vol. 48, no. 19, Sept. 16, 1922, pp. 223-226, 5 figs. Constructed by Roll, at Clus, Switzerland; results of tests made.

Fire Resistance. The Resistance to Fire of Concrete and Reinforced Concrete, F. C. Lea and R. F. Stradling. Engineering, vol. 114, nos. 2959 and 2960, Sept. 15 and 22, 1922, pp. 341-344 and 380-382, 19 figs. Results obtained from experimental work. Considers possibility of making concrete which shall retain its strength during and after exposure to high temperatures liable to occur in a building fire; possibility of preventing steel from reaching such temperature that its strength is reduced to or below, that required to carry loads in building. Paper read before Brit. Assn.

Tile, Disintegration in Peat. Durability of Concrete Tile in Peat, John T. Stewart. Am. Peat Soc. Jl., vol. 15, no. 3, July 1922, pp. 26-32. Discussion of subject from drainage engineer's standpoint. Description of tile lines at Grand Rapids and Coon Creek.

Sea-Water Action. Tests of Concrete in Sea Water, L. C. Wason. Am. Soc. Civ. Engrs. Proc., vol. 48, no. 7, Sept. 1922, pp. 1597-1604, 4 figs. Based on over 13 years of study of specimens, writer makes tentative deductions on cause of failure of concrete from pier of Charleston Navy Yard, and suggestions for design so as to make future structures as nearly as possible proof against disintegration by sea water.

Sand Test. Colorimetric Test for Concrete Sand Studied, Charles E. Proudley. Eng. News-Rec., vol. 89, no. 15, Oct. 12, 1922, pp. 617-618. Limitations found in standard test for organic impurities in studies by Bur. of Pub. Roads.

CONCRETING

Hetch Hetchy Dam. Pouring 1600 Cu. Yards of Concrete per Day. Contract Rec., vol. 36, no. 41, Oct. 11, 1922, pp. 991-994, 1 fig. Average of 100 yd. per hr. has been maintained on Hetch Hetchy dam.

CONCRETE CONSTRUCTION

Slabs. Moments and Stresses in Slabs, H. M. Westergaard and W. A. Slater. Reprint and Circular Series of Nat. Research Council, no. 32, 124 pp., 65 figs. Information which correlates results of tests of fairly large number of slab structures; results of analysis to help formulation of building regulations for slabs. Reprinted from Proc. Am. Concrete Inst., 1921.

CONCRETE CONSTRUCTION, REINFORCED

Water-Retaining Structures. Reinforced Concrete for Water Retaining Structures, H. C. Ritchie. S. African Eng., vol. 33, no. 7, July 31, 1922, pp. 12-132, 4 figs. Notes on design and construction of dams, recervoirs, conduits, water towers, filter beds, etc. (Abstract.) Paper read before Instn. Water Engrs.

CONDUITS

Pressure. Reinforced-Concrete Pressure Conduits (Conduites forcées en ciment armé), J. Delamarche. Revue Universelle des Mines, vol. 14, no. 5, Sept. 1, 1922, pp. 383-403, 15 figs. Data on principal conduits in service; construction on single and double conduits of 6m. diameter; reinforcing metalwork.

CONDENSERS, STEAM

Performance. Report of an Investigation of Condenser Performance in the St. Louis Water Department, L. A. Day, Am. Water Works Assn. Jl., vol. 9, no. 5, Sept. 1922, pp. 696-702, 1 fig. Study of condensing apparatus with view of increasing vacuum on pumps.

CONVERTERS

Synchronous. Satisfactory Application of Synchronous Converters in Mining Service, J. L. McK. Yradley. Coal Industry, vol. 5, no. 9, Sept. 1922, pp. 383-386, 5 figs. Recent developments.

Rotary. 1,500-Volt 50-Cycle Rotary Converters. Engineer, vol. 134, no. 3480, Sept. 8, 1922, pp. 252-253, 2 figs. Details of converters built by Oerlikon Co., Switzerland.

CONVEYORS

Assembling by. Assembling by Conveyor Warren Ordway. Machy. (N. Y.), vol. 29, no. 2, Oct. 1922, pp. 103-106, 4 figs. Recently developed assembly system for increasing production and reducing manufacturing costs.

Belt. Belt-Conveyor System in Plant of By-Products Coke Corp. (S. Chicago), H. Hilman Smith, Jr., Belting, vol. 21, no. 3, Sept. 1922, pp. 17-22, 7 figs. Many large belts used in handling coal and coke, some in open, others housed. All purchased on guaranteed tonnage basis. Service records of belts.

Belt Conveyors in the Coal Mine, Anton M. Oliver. Coal Industry, vol. 5, Sept. 1922, pp. 405-407, 2 figs. Factors affecting carrying capacity; determination of belt pull and number of plies. Points out that belt specifications should be left to manufacturer.

Gravity. What it Pays to Know About Material Handling, W. T. Spivey. Factory, vol. 29, no. 4, Oct. 1922, pp. 395-397, 450, 452 and 454, 6 figs. Use of gravity roller conveyors.

Workshop, Railless. Railless Conveyances for Work-Shops, Richard Hänchen. Eng. Progress. vol. 3, no. 10, Oct. 1922, pp. 232-235, 11 figs. Advantages of transport without rails; hand-operated conveyances without rails; universal and lifting transport barrows; platform lorries; lefting transport lorries; portable and dirigible shop cranes; electric transport lorries.

COPPER

Elastic Limits under Stress. Elastic Limits of Copper Under Cyclical Stress Variations, H. Gough. Engineering, vol. 114, no. 2958, Sept. 8, 1922, pp. 291-293, 5 figs. Describes author's method and machine for determining fatigue range of stress from test on single specimen. Summary of report to Elasticity and Fatigue Panel of Aeronautical Research Committee.

COPPER METALLURGY

Smelting. Pyritic Smelting at the Siemens-Kwarzchana Copper Works, in the Caucasus, C. Offerhaus. Eng. and Min. Jl.-Press, vol. 114, no. 14, Sept. 30, 1922, pp. 589-596, 8 figs. Plant a modern one, consisting of sintering pots, blast furnaces, converters, and refining furnaces; metallurgical results good and costs low; blast furnace operation.

CORROSION

Iron and Steel. The Corrosion of Iron and Steel, Robert Hadfield. Roy. Soc. Proc., vol. 101, no. A713, Sept. 1, 1922, pp. 472-486, 2 figs. Refers to wastage of world's iron and steel due to corrosion, and describes number of recent experiments carried out by author with regard to copper steel. It is shown that small copper content, say 0.16 to 0.25 per cent, is beneficial, provided condition is that of bare metal exposed to atmospheric corrosion.

COST ACCOUNTING

Alignment Charts. The Graphical Solution of Cost and Production Problems, Ludwig Weindling. Indus. Management, vol. 64, no. 3, Sept. 1922, pp. 151-152, 2 figs. Gives examples of application of alignment charts to solution of cost and production problems.

Factory Expense Distribution. Engineering Methods Applied to Cost Finding, Robert S. Denham. Indus. Management, vol. 64, no. 3, Sept. 1922, pp. 155-159. Factory survey and expense distribution.

CRANES

Double. Double Cranes for Harbours. Eng. Progress, vol. 3, no. 10, Oct. 1922, pp. 213-215, 4 figs. Describes construction of double cranes put on market by German Machine Factory Corp. (Denag), which are particularly suitable for accelerating handling of goods.

Port-Terminal. The Port Terminal Crane, H. McL. Harding. Port and Terminal, vol. 2, no. 8, Sept. 1922, pp. 11-13, 7 figs. Discusses types of dock cranes and advantages of special port-terminal type.

CULVERTS

Concrete, Laying. Laying Concrete Culvert Pipe, Paul Kircher. Ry. Rev., vol. 71, no. 13, Sept. 23, 1922, pp. 407-410, 8 figs. Principles governing successful use of concrete pipe; some features of desirable field practice, including handling.

CUTTING TOOLS

Stress Determination in. An Account of Some Experiments on the Action of Cutting Tools, E. G. Coker and K. C. Chakko. Instn. Mech. Engrs. Proc., vol. 1, no. 3, 1922, pp. 567-592 and (discussions) 593-621, 28 figs. Describes experiments made by aid of polarized light to determine stresses and stress distribution in cutting tools.

CYLINDERS

Machining. Machining the Stutz D. H. Motor Cylinder and Head, Robert Mawson. Can. Machy., vol. 28 no, 14 ,Oct. 5, 1922, pp. 37-38, 9 figs. Jigs and fixtures in used holding parts; twelve cylinders milled at one setting; pieces easily and quickly located by means of sliding supports and spring dowels.

D

DAMS

Model Experiments. Experiments with Models of the Gilboa Dam and Spillway, R. W. Gausmann and C. M. Madden. Am. Soc. Civ. Engrs. Proc., vol. 48, no. 7, Sept. 1922, pp. 1503-1528, 14 figs. Results of experiments made with models to determine carrying capacity of projected spillway channel and satisfactory section of stepped, overfall dam. Discusses application of principles of homology to models in question.

Tieton River, Wash. Construction of the Tieton Dam, W. A. Scott. Eng. World, vol. 21, no. 3, Sept. 1922, pp. 149-151, 5 figs. Details of construction of dam by U.S. Reclamation Service to create storage reservoir of capacity of 202,500 acre-ft. of water and provide for irrigation of additional 100,000 acres of land in Yakima and tributary valleys.

Multiple-Arch. Hydroelectric Plant of Barbellino (L'Impianto idroelettrico del Barbellino), Felice Zanon. Industria, vol. 36, no. 16, Aug. 31, 1922, pp. 302-305, 7 figs. Describes multiple-arch dam 48 m. high, its design and calculation.

Muscle Shoals. Muscle Shoals — The Wilson Dam, Littell McClung. Concrete, vol. 21, no. 3, Sept. 1922, pp. 71-74, 5 figs. To be largest concrete structure of its kind and greatest hydroelectric development in world. Total length 4,500 ft., width on bedrock 101 ft., total ultimate installation will generate 624,000 hp.

DIELECTRICS

Liquid. Arc Action on Some Liquid Insulating Compounds, C. J. Rodman. Am. Electrochem. Soc. advance paper, no. 7, for meeting Sept. 21-23, 1922, pp. 45-50, 4 figs. Liquids possessing high dielectric strength, which havellow viscosity, comparatively high fire and flash points, were subjected to action of electric arc at and below liquid surface. Data obtained have practical application in operation of transformers, circuit breakers, condensers, and similar apparatus.

DIESEL ENGINES

Double-Acting Two-Cycle. New Double-Acting Two-Cycle Diesel Engine. Mar. Engr. & Naval Architect, vol. 45, no. 540, Sept. 1922, pp. 361-365, 5 figs. Describes experimental engine built by North British Diesel Engine Works, whose successful results have encouraged builders to proceed with construction of large unit of 2250 i.hp.; test results.

Hydroelectric Plants, Application to. The Diesel Engine, Its Economic Value Compared With That of Other Prime Movers (Les moteurs Diesel. Leur valeur économique comparée à celle d'autres machines motrices), Alfred Buchi. Bul. Technique de la Suisse Romande, vol. 48, nos. 15, 16, 17 and 20, July 20, Aug. 5, 19 and Sept. 30, 1922, pp. 169-173, 186-189, 193-197 and 229-235, 16 figs. July 20: Application of Diesel engines in hydroelectric plants; cost comparison Aug. 5: Comparison of Diesel engines and hydraulic power for production of alternating current. Aug. 9: Diesel engine is more economical where spare units can be used; hydraulic power is preferable for constant loads. Sept. 30: Most advantageous proportion in distribution of energy to be furnished by a system which has a Diesel-engined central station; calculation of cost of production per kw-hr.

Waste-Heat Utilization. Utilization of Exhaust-Gases, S. Snuyff. Motorship, vol. 7, no. 10, Oct. 1922, pp. 770-771, 1 fig. Investigates possibilities of effective use of Diesel-engine waste heat.

DURALUMIN

Economical Use. The Economical Use of Duralumin as a Substitute for Steel in Compression. Air Service Information Circular, vol. 4, no. 337, Apr. 1, 1922, 11 pp., 6 figs. Report, embodying study of weight ratios for common loads, lengths, and fixities, to enable designer to choose readily between duralumin and steel for lightest weight.

E

EDUCATION, ENGINEERING

Future of. The Future of Engineering Education, Chas. F. Scott. Eng. Education, vol. 13, no. 1, Sept. 1922, pp. 2-9. Points out that it should include preparatory and high school and also first few years after graduation. Lack of intelligent understanding among teachers of preparatory schools and among parents as to what engineering really is. Presidential address.

Mining and Metallurgy. Mining and Metallurgy at Yale University, George J. Young. Eng. & Min. Jl.-Press, vol. 114, no. 16, Oct. 14, 1922, pp. 682-684, 4 figs. Curricula provide for selection of fundamental subjects. Method of presentation given particular attention. Specialization subordinated to broad study.

Post-War. Engineering Education After the War, Arthur M. Greene, Jr. U. S. Bur. of Education, Bul., vol. 50, 1922, 27 pp. Deals with Students' Army Training Corps; proposed schedule of studies for four engineering courses as proposed by Committee on Educational and Special Training; schedule of studies submitted by Rensselaer Polytechnic Inst.; later developments; business administration; junior college; data from replies and catalogues.

ELECTRIC FURNACES

Closed-Crucible. New Type of French Electric Furnace, R. Sylvany. Iron Age, vol. 110, no. 12, Sept. 21, 1922, pp. 763-764. Describes furnace, based on idea of T. Levoz, used during war for production of high-speed steel. Closed crucible with only one opening for charging material and additions for pouring finished metal. Girod, Keller and Hewitt types compared. (Abstract.) Paper before Am. Foundrymen's Assn.

Design. Electric Heat, Its Generation, Propagation and Application to Industrial Processes, E. F. Collins. Am. Electrochem. Soc. advance paper, no. 22, for meeting Sept. 21-23, 1922, pp. 233-260, 13 figs. Discusses more important laws of furnace design. Overall cost of electric heating.

Heroult. The Heroult Furnace and Its Smelting Operation (Der Heroult-Ofen und sein Schmelzbetrieb), K. Kerpely. Giesserei-Zeitung, vol. 19, nos. 34 and 35, Aug. 29 and Sept. 5, 1922, pp. 487-491 and 509-513, 10 figs. Deals with electrical conditions; lining; electric equipment; electrodes; starting fire in furnace; removal of clinker; deoxidation and desulphurization; hot charge.

High-Temperature. Principles of High Temperature Furnace Design, E. L. Smalley. Am. Electro-chem. Soc., advance paper, no. 10, for meeting Sept. 21-23, 1922, pp. 77-88. Discusses attributes which electric furnaces should have, judged from viewpoints of highest quality of products, lowest cost of operation and maintenance, and greatest safety in operation at high temperatures.

Iron Founding. Melt and Anneal Electrically, Herbert R. Simonds. Foundry, vol. 50, no. 15, Aug. 1, 1922, pp. 609-612 and 621, 8 figs. Steel and malleable iron are melted in arc furnace and resistance type is employed for annealing castings.

Refractories for. Refractory Materials for Electric Furnaces, Alfred B. Searle. Beama, vol. 11, no. 4, Oct. 1922, pp. 664-670. Shows what has been done as regards refractory materials for electric furnaces and in what directions further research may usefully be conducted. It is found that newer and, as yet, not fully-developed refractory materials, such as carborundum, fused alumina, zirconium and zircon, may in time replace some of those at present largely used.

ELECTRIC LOCOMOTIVES

High-Speed Passenger. North-Eastern Railway Electrification. Elec. Rev., vol. 91, no. 2340, Sept. 29, 1922, pp. 436-437, 2 figs. Details of first high-speed passenger locomotives for service on British trunk-line railway.

ELECTRIC MOTORS

Control Equipment. Points That Should Be Considered When Installing Motor Control, Herbert Harries. Indus. Engr., vol. 80, no. 9, Sept. 1922, pp. 433-434, 1 fig. Equipment for providing low-voltage release and low-voltage protection for a.c. and d.c. drives.

Railway. The Manufacture of Railway Motors, J. K. Stotz. Elec. Jl., vol. 19, no. 10, Oct. 1922, pp. 429-435, 15 figs. Deals with frame, housings, poles, bearings, brushholders, field coils, armature shafts, commutators, armature coils and winding, motor assembly, etc.

ELECTRIC MOTORS, A.C.

Synchronous. Standardization in the Design and Application of Synchronous Motors Driving Refrigerating Machinery, R. A. McCarty. Refrig. Eng., vol. 9, no. 1, July 1922, pp. 4-6 and 14-15, 8 figs. Deals with type of motor rotor, use of flywheels, amount of flywheel effect for given installation, method of determining displacement of rotor, due to varying torque.

Induction. The Effect of Frequency Changes on the Characteristics of Polyphase Induction Motors, J. K. Kostko. Elecn., vol. 89, no. 2313, Sept. 15, 1922, pp. 286-287, 5 figs. It is shown that for any one of power elements the ratio of values at two different frequencies depends only on ratio of these frequencies and on simple function of constants of motor, so that, with aid of given curves, it is possible to find these ratios without calculation.

ELECTRIC PLANTS

Croydon, England. The Croydon Electricity Undertaking. Elec. Rev., vol. 91, no. 2338, Sept. 15, 1922, pp. 377-381, 10 figs. Notes on installation of two 5000-kw. and one 3000-kw. three-phase-sets, generating at 6300 volts; division of single-phase a.c. network into two; installation of three sets of 1500-kw. Scott-connected transformers; etc.

ELECTRIC POWER

Cost Checking. By Measurement of Current Used and Extended Records Large Savings Can be Made in Power Cost. Coal Age, vol. 22, no. 13, Sept. 28, 1922, pp. 494-496. Points out that importance of cost records grows as power use increases. Need for more recording devices. Report of committee on methods of checking power costs before W. Va.-Ky. Assn. of Mine, Mech. & Elec Engrs.

ELECTRIC SWITCHES

AIR-BREAK. Air Break Switches Reduce Maintenance, H. E. Hoadley. Elec. World, vol. 80, no. 14, Sept. 30, 1922, pp. 703-704, 3 figs. Richland Public Service Co. avoids duplicate oil switches and uses air-break type. Provisions in outdoor substation for future additions.

ELECTRIC TRANSMISSION LINES

DESIGN. Aspects of the Most Economical Transmission Line Design, William T. Taylor Elec. Rev., vol. 91, no. 2336, Sept. 1, 1922, pp. 292-294. Notes on cost of transmission line; electrical efficiency; location of line.

HIGH-TENSION. The International Status of Superpower Systems. Elec. World, vol. 80, no. 16, Oct. 14, 1922, p. 814. Use of high-voltage cables and trend of practice and regulation are discussed at international conference on high-tension transmission held in Paris.

EXTRA-HIGH-PRESSURE. Extra High Pressure Transmission Lines, R. Borlase Matthews. Beama, vol. 11, no. 2, Aug. 1922, pp. 559-562, 5 figs. Consideration of technical features of design and construction.

120,000-VOLT. The 120,000-Volt Transmission Line at Basse-Isere (La ligne de transmission d'énergie à 120.000 volts de la Basse-Isere), E. Duval and S. Boukspoun. Revue Générale de l'Electricité, vol. 12, no. 11, Sept. 16, 1922, pp. 387-397, 18 figs. Construction work; transmission lines; poles; insulators; etc.

ELECTRICITY

MATTER, AND. Electricity and Matter, Ernest Rutherford. Instn. Elec. Engrs., Jl., vol. 60, no. 310, June 1922, pp. 613-618, 1 fig. Review of advances made in recent years in knowledge of relations between electricity and matter. Notes on constitution of atoms of elements.

ELECTRIC RAILWAYS, TRACK

URBAN. Urban Electric Railway Tracks, E. J. McIlrath. Eng. & Contracting, vol. 58, no. 12, Sept. 20, 1922, pp. 279-281. Principles of construction. Paper presented at City Paving Conference, Philadelphia.

ELECTRIC WELDING

SPOT, MACHINE FOR. Things That Can Be Done in High-Speed Welding of Small Parts, E. H. Hubert. Indus. Engr., vol. 80, no. 9, Sept. 1922, pp. 413-415, 5 figs. Describes semi-automatic electric spot welding machine used, with procedure whereby 1000 welds an hour are made in plant of E. N. Garrison Mfg. Co., Bridgeport, Conn.

CABLES, REPLACING. Replacing Cables on a Two to One Traction Elevator Machine, F. A. Annett. Power, vol. 56, no. 10, Sept. 5, 1922, pp. 372-375, 11 figs. Describes method which has been used successfully for number of years in cabling two-to-one traction elevators, eliminating much of hard work generally attendant with such jobs.

EMPLOYMENT MANAGEMENT

PERSONNEL PLANNING. Organization Personnel Planning, B. A. Franklin. Indus. Management, vol. 64, no. 3, Sept. 1922, pp. 181-183. Problem of planning and scheduling personnel work.

SMALL FACTORY. A Small Employment Department for a Small Factory. Factory, vol. 29, no. 4, Oct. 1922, pp. 392-394, 2 figs. Describes plan used by 150-man plant.

ENGINEERS

LICENSING. Engineers in Many Fields Discuss Licensing. Eng. News-Rec., vol. 89, nos. 12 and 15, Sept. 21 and Oct. 12, 1922, pp. 470-472 and 616-617. Extracts from letters commenting on editorial discussion of subject published in same journal, July 6.

ENGINEHOUSES

RECTANGULAR CONCRETE. New Engine House Construction on the Southern Pacific. Ry. Rev., vol. 71, no. 13, Sept. 23, 1922, pp. 405-407, 4 figs. Two rectangular concrete enginehouses, one at Mojave, Cal., and other at Indio, Cal., presenting departure from conventional design.

EVAPORATORS

HIGH- AND LOW-PRESSURE. Evaporators in the Stationary Power Plant. Power vol. 56, no. 12, Sept. 19, 1922, pp. 449-454, 10 figs. Deals withhigh-pressure and low-pressure systems, describing apparatus and showing how layout is determined by heat balance of particular plant.

F

FANS

DESIGN. Fan Blower Design, H. F. Hagen. Am. Soc. Heating & Vent. Engrs., Jl., vol. 28, no. 5, July 1922, pp. 491-504, 9 figs. Describes methods by which forms and proportions of silentvane fan designed by author were determined. Design of fans based on theories of hydrodynamics.

FEEDWATER HEATERS

TESTING. Teet of a Cochrane Open Feed Water Heater, P. J. Searles. Am. Soc. Nav. Engrs. Jl., vol. 34, no. 3, Aug. 1922, pp. 430-437, 2 figs. Describes simple method of test which can be used in any power plant, is easily adaptable to any type of heater, and sufficiently accurate for all practical purposes.

FIRE PREVENTION

EQUIPMENT. Fire Protection for Industrial Plants, Charles L. Hubbard. Southern Engr., vol. 37, no. 6, Aug. 1922, pp. 46-51, 17 figs. Details regarding kind of apparatus to use for protection as applied to any building of similar type.

RECOMMENDATIONS. Fire Prevention and Fire Protection in Relation to the Public Water Supply, Frank C. Jordan. Am. Water Works Assn. Jl., vol. 9, no. 5, Sept. 1922, pp. 731-740 and (discustion) 740-742. Comparison of conditions in America and Europe. Author recommands elimination of shingle roofs, clean-up programs, and makes other suggestions for prevention of fires.

FLOW OF WATER

KUTTER'S FORMULA. Flow in Tennessee Checked Against Hydraulic Formulas, Benjamin E. Hones. Eng. News-Rec., vol. 89, no. 15, Oct. 12, 1922, pp. 610-612, 4 figs. Study of these and Irrawaddy River curves indicates that Ganguillet and Kutter's [illegible] C [illegible] slope and hydraulic radius.

FLOODWAYS, THROUGH. Studies of Flow Through Cleared and Uncleared Floodways, Charles E. Ramser. Eng. News-Rec., vol. 89, no. 15, Oct. 12, 1922, pp. 598-599, 2 figs. Velocities taken by current meter from boat. Difference in discharge capacity 62½ per cent.

FLUE-GAS ANALYSIS

TESTING APPARATUS. Heating-Gas Tester to Dtermine CO_2 Content and Gas Loss Duplex-Mono (Heizgasprüfer auf CO_2-Gehalt und Gasverlust), K. Münzer. Wärme, vol. 45, no. 31, Aug. 11, 1922, pp. 377-379, 9 figs. Describes Duplex-Mono testing apparatus for constant control of flue-gas composition. Test results with original diagrams drawn from practice.

FORGE SHOPS

HEPPENSTALL CO., PITTSBURGH. Works of the Heppenstall Forge and Knife. Forging & Heat Treating, vol. 8, no. 9, Sept. 1922, pp. 388-398, 15 figs.; 399-409, 8 figs.; 410-411, 2 figs.; and 412-413, 2 figs. First article describes modern forge plant designed and equipped to specialize in large and medium-sized forgings. Plan of plant layout shows position of equipment in each department, relation of departments and means of routing during manufacture. Second article, by R. F. Keifer, describes steam-generating plant. Third article describes new oil-fired forge heating furnaces. Fourth article describes offices, laboratories and cafeteria. See also Iron Trade Rev., vol. 71, no. 13, Sept. 28, 1922, pp. 845-851, 9 figs.

FOUNDATIONS

CONCRETE. Concrete Basements and Foundations. Contract Rec., vol. 36, no. 2, Sept. 13, 1922, pp. 909-912, 4 figs. Instruction issued by Portland Cement Assn. concerning use of monolithic concrete or concrete blocks for foundation walls; ensuring watertightness.

FOUNDRIES

BRITISH. A Modern British Foundry. Eng. Production, vol. 5, no. 103, Sept. 21, 1922, pp. 271-275, 13 figs. Notes on plant and methods of Sterling Metals, Ltd., Coventry, England.

FUELS

ECONOMY. Report on Fuel Economy. Colliery Guardian, vol. 124, no. 3220, Sept. 15, 1922, pp. 641-642. Fifth report of committee appointed by Brit. Assn. for investigation of fuel economy, utilization of coal, and smoke prevention. Deals with oil-fuel supplies; chemistry of coal; brown coal and lignites; domestic heating and cooking appliances; steam raising and power production; smoke abatement. See also Iron & Coal Trades Rev., vol. 105, no. 2846, Sept. 15, 1922, pp. 380-381.

PACIFIC COAST PROBLEMS. The Fuel Problems of the Pacific Coast. Mech. Eng., vol. 44, no. 10, Oct. 1922, pp. 655-659. Abridgments of following papers: The Future Fuel Supply of California, C. H. Delany; The Railway Fuel Problem of the Pacific Coast, J. C. Martin; The Marine Fuel Problem for the Pacific Coast, D. Dorward, Jr.; Conservation of the Fuel Supplies of the Pacific Coast, F. H. Sibley.

See also Coal; Oil Fuel; Pulverized Coal.

FURNACES

DOORS. Furnace Doors, H. J. Trupin, Machy. (Lond.), vol. 21, no. 253, Oct. 5, 1922, pp. 20-21, 9 figs. Their design and suitability.

FURNACES, BOILER

FORCED-DRAFT. Cast-Iron Sectional Boilers with Forced-Draft Grates (Gusseiserne Gliederkessel mit Unterwindfeuerung), Mór Réti. Gesundheits-Ingenieur, vol. 45, no. 29, July 22, 1922, pp. 373-376, 4 figs. Writer gives account of successful experiences during two years with use of forced-draft grates attached to different types of sectional boilers, for use of low-grade fuel.

MECHANICAL DRAFT. Mechanical Draft, A. W. Binns. Power Plant Eng., vol. 26, no. 19, Oct. 1, 1922, pp. 939-942, 10 figs. Its control, relation to heat transfer, gas velocity and difficulties experienced in specific installation.

MOIST-FUEL GRATES. Grates for Moist Fuel Zuce Kogan. Power Plant Eng., vol. 26, no. 20, Oct. 15, 1922, pp. 989-993, 10 figs. Practical and theoretical considerations involved in design and operation.

FURNACES, ENAMELING

GAS-FIRED. A New Type of Gas-Fired Vitreous Enameling Furnace, H. H. Clark. Am. Ceramic Soc. Jl., vol. 5, no. 8, Aug. 1922, pp. 478-487, 8 figs. Intermittent-type furnace having working chamber 4 ft. wide, 3 ft. high and 10 ft. long, heated by 10 burners; can be brought to working temperature in less than an hour and will turn out from 12 to 24 loads of work an hour.

The Intermittent Gas-Fired Enameling Furnace, Frederic C. Mackey. Am. Gas Jl., vol. 117, no. 12, Sept. 16, 1922, pp. 245-249 and 256, 7 figs. Compares electricity, gas, coal and oil in vitreous enameling industries, showing advantages of direct-fired gas furnace, figures compiled from production results obtained by using intermittent-type furnace.

FURNACES, HEATING

REGENERATIVE PIT. Pit Reheating and Soaking Pit Furnaces, W.-E. Groume-Grjimailo. Iron Age, vol. 110, no. 16, Oct. 19, 1922, pp. 1013-1014, 4 figs. Removal of waste gas a primary consideration rarely achieved; principles governing rational design. From "The Flow of Gases in Furnaces," Wiley & Co., publishers.

G

GALVANIZING

HOT. Hot Galvanizing, Claude O. Kell. Am. Mach., vol. 57, no. 16, Oct. 19, 1922, pp. 605-607, 3 figs. Methods employed; design and construction of plant with suggested layout; selection and care of equipment.

MODERN. What is the Matter with Modern Galvanizing?, J. A. Singmaster and G. F. Halfacre. Min. & Metallurgy, no. 190, Oct. 1922, pp. 15-16. Results of investigation show waste of materials caused by insufficient coating.

GASES

SPECIFIC GRAVITY. Get Specific Gravity by Effusion, Dyke Wilson. Gas Age-Rec., vol. 50, no. 11, Sept. 9, 1922, pp. 331-322, 1 fig. Describes improved form of effusion apparatus for determination of gas densities and discusses methods of calculation.

GAS ENGINES

Blast-Furnace. British Blast-Furnace Gas Engines. Power, vol. 56, no. 16, Oct. 17 1922, pp. 608-609, 2 figs. Notes on design of large gas engines; large British engines; double-acting engines; ignition systems; future of gas engine in Great Britain.

British Blast-Furnace Gas Engines, F. Johnstone-Taylor. Iron & Coal Trades Rev., vol. 105, no. 2847, Sept. 22, 1922, pp. 422-424, 9 figs. Relation of design to reliability and efficiency. Main field of large gas engines is said to be a connection with driving blowing engines for blast furnaces, and in utilising waste gases therefrom for power production.

GAS PRODUCERS

Preheated-Air. Burning Fuel in Gas Producers With Preheated Air (L'utilisation des combustibles dans les gazogènes à fusion des cendres soufflés au vent chaud), Auguste Dessemond. Revue Universelle des Mines, vol. 14, no. 3, Aug. 1, 1922, pp. 201-214, 6 figs. partly on supp. plate. Describes plant successfully run by Saint Etienne coal mining company for burning coal waste containing over 50 per cent ash.

GAS TURBINES

Hepburn-Forbes. Gas Turbine Controversy. Practical Engr., vol. 66, no. 1857, Sept. 26, 1922, p. 205. In writer's belief, Holzwarth turbine is overrated. Discusses proposed new Hepburn-Forbes system in which sub-atmospheric, single-fluid constant-pressure cycle has been adopted.

GASOLINE

Natural Gas as Source. Design and Operation of a Low-Pressure Absorption Plant W. P. Dykema and A. A. Chenoweth. U. S. Bur. of Mines Tech. Paper, no. 263, 1922, 42 pp., 16 figs. Deals with construction, operating methods, many changes necessitated, and difficulties encountered in recovery of gasoline from rich casing-head natural gas by absorption at low pressure. Describes large plant in Cushing oil field in Oklahoma. Bibliography on natural gas.

GEAR CUTTING

Bevel Gears. Considerations affecting the Design and Operation of Bevel-gear Machines, I. H. Wright. Machy. (Lond.), vol. 21, no. 523, Oct. 5, 1922, pp. 13-15, 7 figs. Templet-formed gear teeth.

Cutting Bevel Gears. Machy. (Lond.), vol. 20, nos. 516 and 520, Aug. 17 and Sept. 14, 1922, pp. 612-615 and 735-738, 12 figs. Aug. 17: Principles governing operations of generating planers and general methods of setting up and adjusting Bilgram machine for cutting bevel gears. Sept. 14; Setting up Gleason bevel gear generators; time required for cutting gears of different sizes and pitches.

Cutting Large Bevel Gears, Franklin D. Jones. Machy. (N. Y.), vol. 29, no. 2, Oct. 1922, pp. 116-122, 15 figs. Methods of stocking out and finishing bevel gears on single and two-tool planers of form-copying or templet types.

GEARS

Bevel. Spiral Bevel Gears, J. H. Wright. British Machine Tool Eng., vol. 2, nos. 14, 15 and 16, Mar.-Apr., May-June and July-Aug. 1922, pp. 460-464, 490-495 and 525-528, 23 figs. Evolutionary forms of Citroen double helical, spiraloid, and spiral-type bevel gears, and their various objections and disadvantages as against true Archimedean spiral bevel. May-June: Explains mechanism of machine for cutting spiral bevel gears of Archimedean spiral type. July-Aug.: Mode o foperation of Smith & Coventry spiral bevel gear planer.

Grinding. Gear Tooth Grinding. Machy. (Lond.), vol. 21, no. 523, Oct. 5, 1922, pp. 10-12, 7 figs. Loading of gear teeth; tooth pressure; importance of accuracy; types of machines.

Hot-Rolled. Producing Spur and Bevel Gears with Hot-Rolled Teeth. Automotive Industries, vol. 47, no. 13, Sept. 28, 1922, pp. 618-621, 5 figs. Describes machines used and methods followed in manufacture of hot-rolled gears by Anderson Rolled Gear Co., Cleveland, Ohio. Herringbone type of bevel gear among varieties made by this process. See also Eng. Production, vol. 5, no. 102, Sept. 14, 1922, pp. 253-257, 11 figs.; and Iron Age, vol. 110, no. 14, Oct. 5, 1922, pp. 861-863, 6 figs.

Teeth, Strength of. Strength of Internal Spur Gear Teeth, Douglas T. Hamilton. Machy. (N.Y.), vol. 29, no. 2, Oct. 1922, pp. 109-111, 5 figs. Brief review of improved method for determining strength. Factors governing strength; determining initial point of tooth contact; application of Lewis formula.

Tooth-Measuring Machine. Machine for Measuring Gear Teeth. Engineering, vol. 114, no. 2961, Sept. 29, 1922, p. 410, 9 figs. partly on p. 411. Describes machine for measuring errors.

GOLD MINING

Thawing Frozen Gravel. Recent Progress in the Thawing of Frozen Gravel in Placer Mining, Charles Janin. U. S. Bur. of Mines, Tech. Paper, no. 309, 1922, 34 pp., 11 figs. Describes methods evolved in working of frozen gravels in Alaska and Yukon Territory.

GRAIN ELEVATORS

Concrete, Reconstruction. Concrete Grain Elevator Rebuilt at Chicago. Eng. News-Rec., vol. 89, no. 12, Sept. 21, 1922, pp. 483-485, 3 figs. Extensive repairs to foundations and bins of 10,000,000-bu. Northwestern elevator wrecked by explosion. New dust-removal apparatus.

GRINDING

Camshafts. Accurate Camshafts Produced by Grinding, R. Harrison. Can. Machy., vol. 28, no. 11, Sept. 14, 1922, pp. 20-22, 5 figs. Treatise on British methods; location of master cams; points to consider in obtaining accurate work.

Foundry and Steel-Mill. Grinding in Foundry and Steel Mill. Machy. (N.Y.), vol. 29, no. 2, 1922, pp. 126-130, 9 figs. Types of grinding machines used in foundries; wheel selection for snagging; arrangement of cleaning room; wheel efficiency and grinding costs; records of wheel costs; billet grinding.

Small Tools. Grinding in the Small Tool Industry. Machy. (Lond.), vol. 20, no. 519, Sept. 7, 1922, pp. 696-702, 19 figs. Grinding straight edges; sharpening cutters; grinding plug gages, micrometer parts, etc.

H

HANDLING MATERIALS

Chemical Plants. Safe Handling of Materials in Chemical Plants. W. G. Whitman. Chem. Age, (N.Y.), vol. 30, no. 9, Sept. 1922, pp. 377-379. Non-chemical hazards; handling of gases and liquids; overflowing tanks; explosions. Paper read before nat. safety Council.

Factories. Handling the Finished Products of Industry, Graham L. Montmogery. Chem. & Met. Eng., vol. 27, no. 16, Oct. 18, 1922, pp. 779-783, 3 figs. Layout of Baltimore refinery of American Sugar Refining Co. Deals with packing bulk sugar in barrels, handling empty and filled barrels, loading bulk sugar in bags, delivering sugar to automatic package equipment, automatic filling of paper cartons, etc.

Tiering Machines. Tiering Machines. Engineering vol. 114, no. 2959, Sept. 15, 1922, pp. 321-325, 8 figs. Describes models of portable elevators developed by Economy Engineering Co. of Chicago. Examples of use of tiering machines.

Unloading Plants. Unloading Appliances, K. Fölsche. Eng. Progress, vol. 3, no. 10, Oct. 1922, pp. 228-230, 4 figs. Describes design and mode of, action of mechanical appliances designed for unloading railway trucks by means of jet of liquid arranged to be directed as required and, evidently, possessing sufficient force to fulfill desired aim.

HARBOR IMPROVEMENT

Toronto, Canada. Toronto Waterfront Improvements, E. L. Cousins. World Ports, vol. 10, no. 11, Sept. 1922, pp. 56-71, 10 figs. Describes improvements made by the Toronto Harbor Commission.

HARDNESS

Testing. An Accurate Method of Determining the Hardness of Metals, with Particular Reference to Those of a high Degree of Hardness, R. L. Smith and G. E. Sandland. Instn. Mech. Engrs. Proc., vol. 1, no. 3, 1922, pp. 623-641, 12 figs. By knowing impression given by standard load, it is claimed to be possible, by means of a formula, to obtain ball-hardness figures, which are proportional to load required to give standard impression; this ball test fails at about 525 Brinell or 550 modified ball hardness. Includes five appendices.

HELIUM

Production. Present State of Production of Helium (L'état actuel de la fabrication de l'hélion), N. Kirilov. Vie Technique et Industrielle, vol. 3, no. 36, Sept. 1922, pp. 370-371, 1 fig. Describes plant and manufacturing processes at Calgary for production of 97 per cent helium.

HIGH VOLTAGES

600,000-Volts. 600,000-Volts of Electricity, C. Francis Harding. Sibley Jl., vol. 36, no. 7, Oct. 1922, pp. 136-140, 5 figs. Discusses what will happen at 600,000 volts. Account and results of series of tests carried out Purdue University to determine corona losses. Equipment has been installed at University to supply 600-kv. at 60-cycles with sufficient capacity to represent practical operating conditions.

HUMIDITY

Equilibria of Common Substances. Humidity Equilibria of Various Common Substances, Robert E. Wilson and Tyler Fuwa. Jl. Indus. & Eng. Chem., vol. 14, no. 10, Oct. 1922, pp. 913-918, 13 figs. Discusses various types of humidity equilibrium curves, and gives curves for various substances arranged in groups of related materials, as follows: natural and artificial textile fibers, pulp and paper fibers, foodstuffs, absorbents, various forms of carbon and inorganic solids.

HYDRAULIC TURBINES

Axial Thrust. Axial Thrust in Turbines (Poussée axiale et Couple moteur dans une turbine), A. Gay. Annales de l'Energie, vol. 2, no. 4, July-Aug. 1922, pp. 133-135, 3 figs. Equations on axial thrust of Francis turbines.

Draft Tubes. Notes on the Draught Tube of a Water Turbine, Otogorô Mivagi. Soc. Mech. Engrs.' Tokyo, Japan — Jl., vol. 25, no. 74, June 1922, pp. 39-50, 4 figs. Investigation of losses of energy; consideration of minimum loss and determination of minimum loss and determination of best form of draft tube.

Pelton Wheels. Experiments on a Pelton Wheel and Needle-Nozzle, A. H. Gibson. Instn. Mech. Engrs. Proc., vol. 1, no. 3, 1922, pp. 643-661, 8 figs. Tests indicate that efficiency of well-designed wheel and nozzle, even of small power, may be surprisingly high.

Problems. The Hydraulic Turbine in Evolution, H. Birchard Taylor and Lewis F. Moody. Mech. Eng., vol. 44, no. 10, Oct. 1922, pp. 633-640, 10 figs. New problems created by turbine evolution. Analysis of flow in high-speed turbine. Correlation of marine propeller with hydraulic turbine. (Abridgment.)

HYDROELECTRIC DEVELOPMENTS

Chile. Hydro-Electric Development in Chile. Engineering, vol. 114, no. 2958, Sept. 8, 1922, pp. 197-198, 6 figs., partly on p. 300. Details of plant under construction in Colorado River valley, which is part of scheme to be developed later.

India. Hydro-Electric Power in India, Arthur T. Arnall. Beama, vol. 11, nos. 1 and 2, July and Aug. 1922, pp. 465-473 and 546-553, 2 figs. July: Survey of water-power resources, including details of rainfall and run-off; problems of storage, irrigation and hydraulic works. Aug.; Characteristic schemes; water power and coal; future development.

Manitoba, Canada. Great Falls Development of Manitoba Power Co., F. H. Martin. Can. Engr., vol. 43, no. 11, Sept. 12, 1922, pp. 337-341, 5 figs. Ultimate development on Winnipeg River of 168,000 hp. planned; power house being built for initial installation of three 28,000-hp. units; operating head 56 ft.; maximun height dam 70 ft.; concrete centercone draft tubes.

HYDROELECTRIC PLANTS

California. Caribou 165,000-Volt Development, J. A. Koontz. Elec. World, vol. 80, no. 13, Sept. 23, 1922, pp. 648-652, 12 figs. Notes on 15,000-hp. impulse wheels, high-voltage lines over exceptionally rugged country and method of handling work and distributing material.

First Pit River Power Project Is Completed. Eng. News-Rec., vol. 89, no. 14, Oct. 5, 1922, pp. 570-571, 3 figs. Highest unit in continuous river development totals 90,000 hp. 202,000-volt power line 202 miles long.

QUEENSTON CHIPPAWA. Queenston-Chippawa Power Development, T. H. Hogg. Engrs. & Eng., vol. 39, no. 9, Sept. 1922, pp. 310-324, 16 figs. Engineering features of development with permanent works designed for installation of 550,000 hp. How maximum efficiency was secured in use of water under 305-ft. head. Details of waterway 13 mi. long with unique type of intake to prevent ice troubles, concrete-lined canal section 8 mi. long, hydraulic turbines of 55,000 hp. cap., etc.

The Queenston-Chippawa Hydro-Electric Development. Elec. Jl., vol. 19, no. 8, Aug. 1922, pp. 312-328, 27 figs. Contains general description, by F. A. Gaby; description of 55,000-hp. turbines, F. H. Rogers; the 45,000-kva. waterwheel generators, H. U. Hart; switching equipment, L. B. Chubbuck.

I

IGNITION

ELECTRIC. The Principles of Electrical Ignition, W. M. Thornton. Beama, vol. 11, no. 2, Aug. 1922, pp. 521-529, 3 figs. Notes on electric ignition by jump sparks; oscillating coil sparks; break spark ignition; condenser discharge sparks.

ILLUMINATION

ENGINEERING. Illumination Engineering, H. Buckley. Beama, vol. 11, no. 3, Sept. 1922, pp. 600-608, 8 figs. Experimental considerations. Notes on photometric, threshold, glare, spectral and flicker sensitivity.

IMPACT TESTING

LOADS ON TRACK BOLTS. Some Interesting Tests of Impact Loads on Track Bolts. Ry. Maintenance Engr., vol. 18, no. 8, Aug. 1922, pp. 279-281, 5 figs. Describes unique method developed to determine stresses induced by train, engine and pull of wrench.

INDUSTRIAL MANAGEMENT

CHARTS. Measuring Growth and Shrinkage by Means of Ratio Charts, Bert E. Holmes. Indus. Management, vol. 64, no. 3, Sept. 1922, pp. 165-168, 3 figs. Said to be simplest means of graphically illustrating rate of increase or decrease in any continuing factor of industrial activities, such as sales, production, inventories, etc. Presents table for quickly placing "rate of change" lines on ratio charts.

Charting as an Aid in Stabilizing Profits, Percy A. Bivine. Indus. Management, vol. 64, nos. 3 and 4, Sept. and Oct. 1922, pp. 175-179 and 213-215. Sept.: Development of graphic service. Oct.: Control, establishment and cost of charting organization.

COST ANALYSIS. Establishing a Rational Basis For Industrial Analyses, Harrington Emerson. Chem. & Met. Eng., vol. 27, no. 13, Sept. 27, 1922, pp. 644-646. Analysis of costs involved in equipment, personnel and materials. Method illustrated from statistics of U. S. railroads.

INSPECTION. Problems and Importance of Factory Inspection, John P. Meade. Monthly Labor Rev., vol. 15, no. 1, July 1922, pp. 13-23. Specific problems connected with inspection work. Paper read before Convention of Governmental Labor Officials of United Stated and Canada.

PRODUCTION CONTROL. Production Control in a Tire Manufacturing Plant, W. B. Mendenhall. India-Rubber World, vol. 66, no. 5, Aug. 1, 1922, pp. 729-732, 4 figs. Notes on what has been done in standardizing and controlling product in one plant. Outline of system employed.

PRODUCTION PLANNING. Effective Production Planning for the Drop Forge Shop, C. Oliver Wellington. Forging & Heat Treating, vol. 8, no. 9, Sept. 1922, pp. 418-420. Describes simple and economical system of profuction planning that controls operation not only of hammer units, but of preparatory and finishing processes during manufacture.

QUALITY CONTROL OF PRODUCTS. Control of Quality of Manufactured Goods as Affected by Size of Plant, G. S. Radford. Management Eng., vol. 3, no. 4, Oct. 1922, pp. 193-198, 4 figs. Outlines methods according to which large factories can more nearly approximate advantages of smaller ones while still retaining favourable opportunities peculiar to strong establishments.

RAW-MATERIAL CONTROL. Control of Raw Material to Suit Output, Gilbert L. Lacher. Iron Age, vol. 110, no. 12, Sept. 21, 1922, pp. 713-716 and 761-762, 9 figs. Management problems solved at Woodstock Typewriter Co. Close co-ordination of purchases and production. Shows forms or cards used in controlling raw and finished materials and movement through processes of manufacture.

INDUSTRIAL RELATIONS

IMPROVEMENTS, SUGGESTIONS FOR. Industrial Relations, Carleton F. Brown. Indus. Management, vol. 64, no. 3, Sept. 1922, pp. 185-188. Suggests principles as forming nucleus for better understanding between capital and labor, and as foundation for development of other policies dictated from time to time by circumstances. Paper read before Indus. Relations Assn.

INSULATORS, HEAT

REFRACTORY. Need for More Refractory Heat Insulators, Robt. D. Pike. Am. Ceramic Soc. Jl., vol. 5, no. 8, Aug. 1922, pp. 554-563, 4 figs. Commercial value of high-temperature thermal insulators, and numerical example of problem in designing flue for conducting hot gases; tentative specifications for refractory and insulating properties, proposed conductometer for measuring thermal conductivity.

2-POINT. New Heat Insulating Material, G. Henry Katz. Am. Soc. Heating & Vent. Engrs. Jl., vol. 28, no. 7, Oct. 1922, pp. 733-738, 2 figs. Describes development structure and composition of 2-Point, made of asbestos and diatomaceous earth, and portrays its effectiveness as heat insulator. Reprinted from Asbestos, June 1922.

INTERNAL-COMBUSTION ENGINES

DESIGN. The Fundamentals of Internal-Combustion-Engine Design, L. H. Pomeroy. Soc. Automotive Engrs. Jl., vol. 11, no. 4, Oct. 1922, pp. 328-332 and (discussion) 354. Factors affecting performance of four-stroke-cycle engines; thermal efficiency and power obtainable from given engine said to be dependent upon compression-ratio, other things being equal; engine speed and friction losses. Author favours short-stroke engine.

ROTARY, FORCES IN. Forces in Rotary Motors, Karl H. White. Mech. Eng., vol. 44, no. 10, Oct. 1922, pp. 643-647 and 654. Deals with determination of forces in rotary motor caused by reciprocation of pistons and connecting rods and by rotation of motor as a whole, in which novel methods of calculation are employed.

See also Automobile Engine; Diesel Engines; Gas Engines; Oil Engines.

IRON

ELECTROLYTIC REDUCTION FROM ORE. The Estelle Process, Axel Estelle. Can. Min. Jl., vol. 43, no. 40, Oct. 6, 1922, pp. 672-675. Author describes his process for electrolytic reduction of iron from its ores and points out its advantages.

MECHANICAL PROPERTIES. Mechanical Properties of Commercial Iron, Zay Jeffries and R. S. Archer. Chem. & Met. Eng., vol. 27, no. 14, Oct. 4, 1922, pp. 694-697, 1 fig. Definitions of various terms used in art of testing materials, and discussion of how various circumstances surrounding test affect results on annealed bars of common structural metals.

IRON ALLOYS

ELECTROLYTIC. The Preparation and the Mechanical Properties of Vacuum-Fused Alloys of Electrolytic Iron with Carbon and Manganese, Robert P. Neville and John R. Cain. Am. Electrochem. Soc. advance paper, no. 20, for meeting Sept. 21-23, 1922, pp. 203-218, 2 figs. Describes preparation and mechanical properties of extensive series of very pure alloys of electrolytic iron, carbon, and manganese, whose composition were so chosen as to bring out specific effects on pure iron of additions of carbon and manganese separately or together.

IRON ORE

BRITISH EMPIRE. The Iron-Ore Reources of the British Empire, Henry Louis. Min. Mag., vol. 27, no. 3, Sept. 1922, pp. 137-143. Includes abstract of report on iron-ore reserves of United Kingdom published by Iron and Steel Committee of Imperial Mineral Resources Bur.

IRRIGATION

DRAINAGE DITCHES, RIO GRANDE. Drainage Ditches for Rio Grande Irrigation Project, L. M. Lawson. Eng. News-Rec., vol. 89, no. 14, Oct. 5, 1922, pp. 574-575, 5 figs. Reclamation of lands spoiled by seepage and alkali from excess irrigation. Cost of contract and force work.

L

LABOR

TWO-SHIFT SYSTEM. The Twelve-Hour Shift in American Industry. Management Eng., vol. 3, no. 4, Oct. 1922, pp. 205-212, 3 figs. Summary report of special committee of Am. Engineering Council, purpose of which is to show extent of two-shift work and experience of those manufacturers who have changed from two-shift operation to some other system.

LIGHTING

GAS, HIGH-PRESSURE. Factory Lighting by High-Pressure Gas, F. C. Tilley. Gas Jl., vol. 159, no. 3094, Aug. 30, 1922, pp. 105-106, 1 fig. Points out advantages of high-pressure gas, and describes special features of Tilley lamps, recommended for use in plants requiring high-temperature heating for double purpose of lighting and heating.

LOCOMOTIVE BOILERS

TUBES. Application and Maintenance of Locomotive Boiler Tubes, G. H. Woodroffe and C. E. Lester. Ry. Rev., vol. 71, no. 10, Sept. 2, 1922, pp. 300-311, 8 figs. Practical suggestions recommended, based on best practice observed on number of railroads.

WATER CIRCULATION. Increasing Locomotive Boiler Efficiency by Proper Circulation of Water, F. G. Lister. Boiler Maker, vol. 22, no. 9, Sept. 1922, pp. 256-257. Notes on Thermic syphon, Harter circulating plate, washout and refiling system. (Abstract.) Paper read before Int. Fuel Assn.

LOCOMOTIVES

BOOSTER. Dynanometer Tests of the Locomotive Booster. Ry. Mech. Engr., vol. 96, no. 10, Oct. 1922, pp. 562-565, 8 figs. Severe trials carried out at Engineering School of Harvard University demonstrate reliability at heavy loads and high speeds. Maximum drawbar pull 11,000 lb.

BRITISH VS. AMERICAN. British and American Locomotive Design and Practice. Come Comparative Comments Thereon from Practical Experience, P. C. Dewhurst. Inst. Mech. Engrs. Proc., vol. 1, no. 3, 1922, pp. 375-423 and (discussions) 424-521, 18 figs. Author discusses comparative methods and practices in regard to structural and detail design, and indicates what in his opinion are best features of two partly opposing systems of locomotive engineering.

DESIGN. Avoidable Waste in Locomotive Operation as Affected by Design, James Partington. Assn. Chinese & Am. Engrs. Jl., vol. 3, no. 4, Apr.-May, 1922, pp. 16-21. Study of design with regard to fuel economy, minimum weight of motive-power equipment, and minimum cost of repairs.

INTERNAL-COMBUSTION. Gasoline Switching Locomotive with Hydraulic Drive. Ry. Mech. Engr., vol. 96, no. 9, Sept. 1922, pp. 503-506, 7 figs. Universal oil transmission governs speed and direction and is said to give remarkable flexibility of control.

MOUNTAIN-TYPE. Service Records of U.P. Mountain Type Locomotives, Ry. Age, vol. 73, no. 16, Oct. 14, 1922, pp. 687-689, 6 figs. Performance indicates that no. 7000 exceeds both theoretical starting and horsepower capacity. Weighs 345,000 lb. and develops 3500 hp. at 50 mi. per hr. See also Ry. Rev., vol. 71, no. 16, Oct. 14, 1922, pp. 509-514, 14 figs.

POWER ESTIMATION. Locomotive Power. E. C. Poultney. Engineer, vol. 134, no. 3480, Sept. 8, 1922, pp. 248-250, 6 figs. Describes method of quickly obtaining probable drawbar pull of any steam locomotive of conventional design at all speeds usual in practice.

Steam Desaturators. Steam Desaturators Applied to Hungarian Motive Power, Desider Ledacs Kiss. Ry. Rev., vol. 71, no. 05, Oct. 1, 1922, pp. 475-478, 6 figs. Describes Stein desaturator, a water intercepting device located in steam dome, successfully applied to large number of foreign locomotives. Improves locomotive efficiency in bad-water district.

LUBRICANTS

Oiliness. The Measurement of the Property of Oilliness, Robert E.Wilson and Daniel P. Barnard. Soc. Automotive Engrs. Jl., vol. 11, no. 2, Aug. 1922, pp. 143-157, 17 figs. Describes variety of possible methods of measuring property of oiliness and of throwing light on mechanism of partial lublication. It is concluded that static-friction test with proper refinements is best single measure of properties of oiliness.

LUBRICATION

Bearings. Bearing Design and Lubrication, William Foot. Elec. Jl., vol. 09, no. 9, Sept. 1922, pp. 367-382, 18 figs. Notes on action of oil films, and of a perfect film; starting conditions; application of lubricant; methods of cooling; oil protection; bearing losses and temperature; insulation of bearing pedestals; protection from dust, dirt and scale.

Plant. The Technical Supervision of Plant Lubrication, Allen F. Brewer. Indus. Management, vol. 64, nos. 3 and 4, Sept. and Oct. 1922, pp. 141-144 and 221-223, 6 figs. Suggestions to plant lubricating engineer. Determination of correct lubricant and minimum amount to use for safe and uninterrupted operation.

M

MACHINE SHOPS

Standardized Equipment. Standardizing machine Shop Equipment, H. L. Wheeler. Am. Mach., vol. 57, no. 14, Oct. 5, 1922, pp. 520-521, 3 figs. Advantages are said to justify cost; successful method of improving old tools; tapers reduced to one standard and two sizes.

MACHINE-TOOLS

Chip Disposal. Chip Disposal, F. Horner. Eng. Production, vol. 5, no. 102, Sept. 14, 1922, pp. 247-251, 17 figs. Notes on shape of edge and chip escape; objection to large chips; packing in slots and holes; interference with machine elements; chip-collecting removing devices; chip accommodation in flutes; guards and receptacles; fixed pans versus portable; storage within machine framings.

MALLEABLE CASTINGS

Handling. Handling Malleable Castings, Herbert R. Simonds. Foundry, vol. 50, no. 18, Sept. 15, 1922, pp. 733-736, 4 figs. Methods adopted in prominent Eastern foundry, including use of lift trucks and raised platforms, which have expedited work and reduced operating expenses.

Standardization. The Status of Standardization of Gray-Iron and Malleable Castings (Bericht über den Stand der Normung von Grau- und Temperguss), Rudolf Stots. Giesserei-Zeitung, vol. 19, no. 37, Sept. 19, 1922, pp. 537-544, 15 figs. Critical discussion of quality regulations for gray-iron castings. Proposals for quality regulations for malleable iron. Foreign standards. Address before Assn. German Foundrymen.

MANGANESE STEEL

Castings. Pearlitic and Sorbitic Manganese Steels, John H. Hall. Iron Age, vol. 110, no. 13, Sept. 28, 1922, pp. 786-788. Plea for castings containing about 1 per cent manganese. Their heat treatment and properties. Review of literature on subject.

MAPPING

Aerial Photography. Air Photos as Plane-Table Sheets Aid Mapping, Harold C. Fiske. Eng. News-Rec., vol. 89, no. 14, Oct. 5, 1922, pp. 552-554, 2 figs. Studies made along Knoxville to Chattanooga section of Mississippi River. Contours accurately sketched in by field party. Method is said to supply wealth of detail.

MARINE BORERS

Research. The Marine Borer: Some New Light. Pacific Mar. Rev., vol. 19, no. 8, Aug. 1922, pp. 452-453, 10 figs. Work of San Francisco Bay marine milling committee leads to complete reversal of ideas regarding pest. Neither fresh water nor sewage immediately destructive.

METALLOGRAPHY

Eutectics, Structure of. The Structure of Eutectics, F. L. Brady. Inst. Metals advance paper for meeting Sept. 20-22, 1922, 45 pp., 32 figs. Notes on eutectic grain; classification of eutectics and form of lamellae; experimental details; bibliography. Photomicrographs.

METALS

Mechanical Properties. Effect of Temperature, Pressure and Structure on Mechanical Properties of Metal, Zay Jeffries and R. S. Archer. Chem. & Met. Eng., vol. 27, no. 15, Oct. 11, 1922, pp. 747-751, 5 figs. Study of mechanical properties of single crystals.

Mechanical Properties As Affected by Grain Size, Zay Jeffries and R. S. Archer. Chem. & Met. Eng., vol. 27, no. 16, Oct. 18, 1922, pp. 789-792, 2 figs. Points out that grain boundaries add certain stiffness to metallic aggregate; fine grain therefore generally involves higher tensile strength and hardness, and greater reduction aera; maximum elongation requires medium grain size.

Polishing. Principle of Metal Polishing, Bradford H. Divine. Machy. (N. Y.), vol. 29, nos. 1 and 2, Sept. and Oct. 1922, pp. 12-13 and 134-135, 2 figs. Sept.: General principles of metal polishing, polishing wheels and abrasives, methods and equipment, and making of polishing wheels. Examples of polishing practice. Oct.: Properties of glue for polishing wheels.

MILLING

Locomotive Main Rods. Milling Locomotive Main Rods. Machy. (N. Y.), vol. 29, no. 2, Oct. 1922, pp. 98-101, 8 figs. Results of tests made to determine possibilities of reducing costs in railroad shops by milling.

MINE LOCOMOTIVES

Types, Comparison of. Relative Merits of Mine Locomotives, C. E. Rogers. Elec. World, vol. 80, no. 14, Sept. 30, 1922, pp. 708-711, 1 fig. Report of committee on relative merits of storage-battery, combination, and conductor-cable-reel gathering locomotives. (Abstract.) Report read before W.-Va.-Ky. Assn. of Mine, Mech, & Elec. Engrs.

MINES

Ventilation. Metal Mine Ventilation in the Southwest, Chas. A. Mitke. Am. Inst. Min. & Met. Engrs. Trans., no. 1191-M, Oct. 1922, 27 pp.; also (abstract) in Min. & Metallurgy, no. 190, Oct. 1922, pp. 35-36. Describes ventilation systems and their need, especially in deep mines containing high sulphide ores and in mines where caving systems of mining are used, and deals with alloying rock dust, and relation of mining methods to ventilation systems.

MOTOR BUSES

Trolley. The Railless Trolley Bus. Indian Industries & Power, vol. 19, no. 11, July 1922, pp. 405-407, 6 figs. Details of bus produced by Assoc. Equipment Co., Ltd.

MOTOR TRUCKS

Weight Reductions. Notes on Motor Trucks, Cornelius T. Myers. Soc. Automotive Engrs. Jl., vol. 11, no. 4, Oct. 1922, pp. 333-341 and (discussion) 341-345, 12 figs. Author outlines reasons why weight reductions are very difficult to effect, as well as possibilities of standardizing axle details. Use of aluminum to effect weight reduction and various advantages claimed for metal wheels are commented upon. Account of series of tests conducted by large coal company to determine relative merits of wood and metal wheels on its trucks. Discusses question of unsprung weight.

N

NICKEL ALLOYS

Non-Ferrous. The Influence of Carbon in Non-Ferrous Nickel Alloys. Metal Industry (Lond.), vol. 21, no. 9, Sept. 1, 1922, p. 195, 2 figs. Points out importance of using only nickel that is as nearly carbon-free as commercial nickel can be. Nickel made by Mond process is said to comply most closely with this condition.

Properties. Nickel and Its Alloys, Paul D. Merica. Am. Mach., vol. 57, nos. 11, 12 and 13, Sept. 14, 21 and 28, 1922, pp. 397-399, 3 figs.; 450-452, 4 figs., and 484-487, 2 figs. Sept. 14: Commercial uses of malleable nickel; how various percentages of nickel affect steel; production of copper-nickel alloys. Sept. 21: Properties and uses of nickel-silver and monel metal; how monel metal should be melted, cast and forged. Sept. 28: Special tools for cutting monel metal; how it should be worked and finished; alloys for electrical and heat-resisting uses.

NITROGEN

Fixation. Nitrogen Fixation by the Cyanide Process, F.E. Bartell. Jl., Indus. & Eng. Chem., vol. 14, no. 8, Aug. 1922, pp. 699-704, 6 figs. Results obtained with 4-in. batch retorts with capacity of 8 lb. of briquets and with technical sized 8-in. continuous retorts, with maximum cyanizing capacity of not less than 50 lb. of cyanized briquets per hr.

NON-FERROUS METALS

Superheated Steam Effect on. The Effect of Superheated Steam on Non-Ferrous Metals Used in Locomotives, Henry Fowler. Inst. Metals advance paper for meeting Sept. 20-22, 1922, 4pp., 2 figs. Experience and practice with regard to chief parts subjected to superheated steam in case of superheated locomotives on Midland Ry. Photomicrographs. See also Engineering, vol. 114, no. 2960, Sept. 22, 1922, p. 374-2 figs.

O

OIL ENGINES

Airless-Injection. Hesselman Airless Injection for Small and Large Oil Engines. Edvin Lundgren. Motorship, vol. 7, no. 10, Oct. 1922, pp. 766 and 769, 7 figs. Details of method devised by K. J. E. Hesselman on 65-hp. on engine.

Production of Workboat Oil-Engines in the East. Motorship, vol. 7, no. 10, 1922, pp. 764-765, 7 figs. Details of new Wolverine airless-injection four-cycle marine engine.

Solid-Injection. A Swedish Solid Injection Oil Engine, Engineer, vol. 134, no. 3482, Sept. 22, 1922, pp. 290-292, 11 figs. Describes Hesselman engine, special features of which are fuel pump which receives fuel from separate feed pump connected to effective filter; governing and fuel-distributing mechanism, intimately combined with fuel pump; fuel piping; and fuel-injection valve. Translated from article in Swedish publication, by E. Hubendick.

OIL FUEL

Burners. A New Fuel Oil Burner, Arthur Grounds. Oil Eng. & Finance, vol. 2, no. 35, Sept. 1922, pp. 284-285, 3 figs. Describes Meldrum burner for which low steam consumption is claimed. Is modification of steam slot type of burner.

INSTALLATION, SINGER BUILDING. Fuel Oil Shows Big Saving in Singer Building, Norman King. Power, vol. 56, no. 10, Sept. 5, 1922, pp. 348-352, 6 figs. Two years' operation has shown 34-per cent saving over coal and installation paid for itself in 21 months. Details of construction necessary to meet Building and Fire Department's regulations.

OIL

APPRAISAL OF PROPERTIES. Appraisal of Oil and Gas Properties, Roswell H. Johnson. Engrs.' Soc. West. Pa. Proc., vol.38, no. 2, Mar. 1922, pp. 35-43 and (discussion) pp. 44-45. Author urges wide use of production-curve method of appraisal, sometimes called annual analytic method.

OILS

VISCOSITY. Notes on Determination of Absolute Viscosity of Petroleum Oils, W. H. Fulweiler and C. W. Jordan. Jl. Indus. & Eng. Chem., vol. 14, no. 8, Aug. 1922, pp. 723-724. Results of examination of samples of petroleum, animal and vegetable oils. Paper read before Am. Chem. Soc.

The Change in Viscosity of Oils with the Temperature Winslow H. Herschel. Jl. Indus. & Eng. Chem., vol. 14, no. 8, Aug. 1922, pp. 715-723, 12 figs. Author claims there is no satisfactory theoretical equation for change of viscosity with temperature. Discusses methods of calculation in use. Paper read before Am. Chem. Soc.

OIL WELLS

DRILLING. Taking cores in Rotary Drilling Operation, John R. Suman. Min. & Metallurgy, no. 190, Oct. 1922, pp. 21-24, 7 figs. Notes on use of basket-type and auger-type barrel; advantages of Reed & Hepler coring tool; Oil-fields- Hulland core bid; Knapp core barrel; future of reaming-type coring tools.

OXY-ACETYLENE CUTTING

MECHANICAL CONTROL OF TORCH. Mechanical Control of Oxy-Acetylene Torch, Fred J. Meurer. Can. Machy., vol. 27, no. 26, and vol. 28, no. 2, June 29 and July 13, 1922, pp. 27-28 and 28-29, 12 figs. Cutting metal by this process approaches very closely maximum theoretical efficiency; obtaining any desired shape by means of templates; application of radiographs.

OXY-ACETYLENE WELDING

CAST IRON. Principles of Oxy-acetylene Fusion Welding, Alfred S. Kinsey. Ry. Mech. Engr., vol. 96, no. 10, Oct. 1922, pp. 595-597, 2 figs. Welding cast iron.

RAILWAY REPAIRS. Application of the Welding Torch to Railroad Repairs. Am. Mach., vol. 57, no. 12, Sept. 21, 1922, pp. 444-448, 17 figs. It is claimed that welding torch reduces cost of repairs; locomotives need not be dismounted; salvage of many small parts possible.

P

PAINTING

SPRAY. Spray Painting and Finishing by Compressed Air, Ray W. Tripp. Can. Machy., vol. 28, no. 13, Sept. 28, 1922, pp. 28-29, 6 figs. Spraying method said to maintain quality and reduce production costs; one advantage is that ess scaffoldimg is required on high structures.

PILES

WOOD IN CONCRETE. Bond Strength of Wood Piles in Concrete, R. R. Lundahl. Am. Soc. Civ. Engrs. Proc., vol. 48, no. 8, Oct. 1922, pp. 1653-1664, 2 figs. Discusses conditions which necessitated determining bond strength in connection with design of new sewage-disposal plant for Milwaukee, Wis., and gives detailed account of tests, test specimen and apparatus.

PIPE

LEAD, SELF-CORROSION OF BURIED. The Self-Corrosion of Buried Lead Pipes, W. Nelson Smith and J. W. Shipley. Eng. Jl. (Eng. Inst. Can.), vol. 5, dos. 6 and 7, June and July 1922, pp. 291-296, and 259-364, 3 figs. Investigation of corrosion of buried lead pipes in Winnipeg and vicinity, with laboratory experiments on self-corrosion of lead.

PIPE, CAST-IRON

DE LAVAUD PROCESS. Casting Pipe Without a Core. Gas Age-Rec., vol. 50, no. 11, Sept. 9, 1922, pp. 327. Describes the De Lavaud process of casting gas and water pipe, with tests as made by Prof. Peter Gillespie in laboratories of University of Toronto.

PIPE, CONCRETE

FRICTION IN. The Frictional Coefficient of Concrete Surfaces in Pipe and Channels. E. Parry. Engineering, vol. 114. no. 2958, Sept. 8, 1922, pp. 285-286, 2 figs. [illegible] F. C. Scobey on flow of water in concrete pipes, published by U. S. Dept. of Agriculture,and other works.

PLANERS

DRIVES. [illegible] Machy. (Lond.), vol 20, no 522, Sept. 28, 1922, pp. 777-782, 4 figs. Characteristics of various types, including, ordinary belt-driven planers, clutch and shifting belt planers, direct-coupled reversing motor, magnetic-clutch, Newton (Derby) planer, and hydraulic drive.

PLATES

CIRCULAR, STR[illegible] a Circular Plate the Thickness of which is not uniform, Keiichi Aichi. Soc. Mech, Engrs. Tokyo, Japan—Jl., vol. 25, no. 74 [illegible] 61-71, [illegible] strength of circular plate whose thickness is function of distance from its center.

DEFLECTION. The Deflection of Continuous Plates and Rectangular Plates with Free Edges (Biegung durchlaufender Platten und rechteckiger Platten mit frein Rändern), A. Nadai. Zeit. des Vereines deutscher Ingeneiure, vol. 66, no. 36, Sept. 9, 1922, pp. 848-849, 3 figs. Deals with girderless ceilings supported by columns in a rectangularly arranged trellis work of points. Discusses deformation and stress of such continuous plates and state of bending in separate points on edge of unsupported rectangular plates.

PNEUMATIC TOOLS

AIR-CLEANING APPARATUS FOR. Air Compressing and Cleaning Apparatus. Machy. (Lond.), vol. 20, no. 520, Sept. 14, 1922, p. 739, 2 figs. Describes apparatus, comprising belt-driven compressor, air cooler, oil separator and air receiver for purpose of removing oil and moisture and also solid particles with which free-air supply is usually impregnated.

POWER FACTOR

LOW. Power Factors. Elec. Times, vol. 61. nos. 1601 and 1602, June 22 and 29, 1922, pp. 601-605 and 639-641, 7 figs. Notes on low power factors; their prevention and remedy; dealing with English and French conditions; metering method discussed.

POWER PLANTS

EQUIPMENT. Distinctive Power Plant Equipment, J. H. Blakey. Power Plant Eng., vol. 26, no. 19, Oct. 1, 1922, pp. 959-961, 5 figs. Describes the Gaillet continuous water purifier; use of corrugated piping; Ruth's steam accumulator Paradox boiler-tube cleaner.

HARVARD MEDICAL SCHOOL. Power Plant of the Harvard Medical School, Boston, Mass., Charles L. Hubbard. Power, vol. 56, no. 13, Sept. 26, 1922, pp. 482-486, 5 figs. Details of plant supplying light heat and other services to group of 35 buildings having total space of 13,000,000 cu. ft. Equipment includes eight 3000-sq. ft. Stirling boilers, four of which are oil-burning 3 d. c. units with total capacity of 725 kw. and several auxiliaries.

INDUSTRIAL. Power Plant of the Duratex Company Has Many Interesting Features. Power, vol. 56, no. 10, Sept. 5, 1922, pp. 358-362, 7 figs. Plant of 625-kva. has one boiler of 3330 sq. ft. of heating surface and one turbo-generator. Boiler is operated up to 350 per cent of normal rating, is fired by automatic stoker and coal is weighed in weighing larry.

POWER TRANSMISSION

MECHANICAL. Mechanical Transmission of Power, Forrest E. Cardullo and Franklin D. Jones. Machy. (N.Y.), vol. 29, no. 2, Oct. 1922, pp. 85-89, 4 figs. Design and installation of shafting and belt and chain transmission.

PROSPECTING

ELECTRICAL. Experiments in Electrical Prospecting, Sherwin F. Kelly. Eng. & Min. Jl.-Press, vol. 114, nos. 15 and 16, Oct. 7 and 14, 1922, pp. 623-629 and 673-676, 20 figs. Description of experiments and results in various metal mines in eastern and northern United States and southern Canada with "Spontaneous polarization" method, so called by Prof. Schlumberger. Coal also subject to satisfactory tests. Value of method is principally in premilinary determination of advantageous locations for diamond drilling.

PULVERIZED COAL

PNEUMATIC CONVEYING. Conveying Fuel in the Form of Dust by Means of Gas (Beförderung stambförmiger Brennstoffe durch Gasleitungen), Wittfeld. Fördentechnik u. Frachtverkehr, vol. 15, no. 19, Sept. 15, 1922, pp. 247-248, 8 figs. Proposes transportation of semi-coke after grinding in gas lines and separating coal dust and gas on arrival at boilerhouse.

UTILIZATION. The Utilization of Pulverized Coal J. Thomas Dovey and George N. Calkins. Can. Inst. Min. & Metallurgy Monthly Bul., no. 125, Sept. 1922, pp. 992-1001. Central distributing systems; oilburning equipment convertible to burning of powdered coal; principles of use; economies; effected present status of industry.

PUMPING

SOLID-MATERIAL TRANSPORTATION OF. Transportation of Solid Material by Pumping, Victor J. Milkowski, Cement Mill & Quarry, vol. 21, no. 6, Sept. 20, 1922, pp. 23-26, 8 figs. Water supply in proportion to amount of solids to be moved dewatering material at destination; cheap and ample fuel supply a requisite.

PUMPS

CALCULATION. A Calculation System for Pumps, Terrell Croft. Coal Industry, vol. 5, nos. 8 and 9, Aug. and Sept. 1921, pp. 350-353 and 399-402, 16 figs. Aug.; Suction lifts said to be possible under practical conditions. Study of pump heads. Formulas for determining total friction, velocity and measured heads. Sept.: Friction of water in wrought-iron, steel, and cast-iron pipe; frictional resistances in fittings and valves.

PUMPS, CENTRIFUGAL

CURVES. Centrifugal Pumps, E. T. Keenan. Southern Engr., vol. 37, no. 6, Aug. 1922, pp. 55-56, 3 figs. Characteristic curves of various types.

MECHANICS. Mechanics of Centrifugal Pumps, E. T. Keenan. Southern Engr., vol. 38, no. 2, Oct. 1922, pp. 52-55, 3 figs. Elementary mechanics principally laws of motion.

PISTON VS. Piston and Centrifugal Pumps (Kolbenpumpe und Kreiselpumpe als Wasserhaltungsmaschine), A. P. Mössner, Fördertechnik u. Frachtverkerh, vol. 15, nos. 18 and 19, Sept. 1 and 15, 1922, pp. 235-242 and 254-257, 8 figs. Historic development; electric drive; efficiency of quadruple-action piston and centrifugal pumps of same capacity; superiority of electrically driven centrifugal pumps; comparative tables of efficiency of plunger and centrifugal pumps.

PYROMETERS

OPTICAL. An Optical Pyrometer for Practical Use in the Foundry (Optisches Pyrometer für den praktischen Gebrauch in der Giesserei), H. Retzow. Giesserei-Zeitung, vol. 19, no. 36, Sept. 12, 1922, pp. 528-529, 5 figs. Details, manipulation, measuring principle advantages and uses of the AEG (German Gen. Elec. Co.) pyrometer.

See also Wärme, vol. 45, no. 33, Aug. 25, 1922, p. 401, 3 figs.

R

RADIO COMMUNICATION

Heterodynes. On Heterodynes, P. R. Coursey, Wireless World, vol. 10, nos. 6, 7, 9, 10 and 27, May 6, 13, 27, June 3, and Sept. 30, 1922, pp. 161-163; 194-197, 252-255, 279-281 and 845-853, 41 figs. Some advantages, especially for longer wave lengths of separate heterodyne oscillator and directions for building simple forms of apparatus. Sept. 30: Construction of heterodyne wavemeter.

RADIOTELEGRAPHY

Power Provision. The Provision of Power for Wireless Telegraphy, J. H. Whittaker-Swinton. Instn. Elec. Engrs. Jl., vol. 60, no. 311, July 1922, pp. 845-852 and (discussion) 852-860, 10 figs. Survey of various forms of power at high tension used in connection with continuous-wave wireless telegraphy in early stages of development; examination of present practice in experimental working in connection with transmitting sets of small power; statement as to probabilities regarding future.

Crystal Detectors. The Use of Minerals as Radio-Detectors, H. S. Roberts and L. H. Adams. Am. Mineralogist, vol. 7, no. 8, Aug. 1922, pp. 131-136, 1 fig. Summarizes present state of knowledge concerning crystal-detectors and calls attention to possibilities of improvement and desirability of further research. Bibliography.

RAILWAY ELECTRIFICATION

France. Electrification Work and Projects of the Midi Railway (Travaux et projets d'électrification de la Compagnie des chemins de fer du Midi), Fontaine. Annales des Ponts et Chaussées, vol. 1, no. 3, May-June 1922, pp. 277-295, 3 figs. Hydro-electric-power production in Pyrenees; equipment of power stations; program of electrification; change from single-phase to continuous current to eliminate interference with low-tension lines.

RAILWAY MOTOR CARS

Steam-Propelled. Steam-Propelled Unit Railway Motor Car. Ry. Age, vol. 73, no. 16, Oct. 14, 1922, pp. 711-713, 5 figs. Improved power plant with water-tube boiler and oil burner characterize Canadian national car.

Types. Self Propelled Cars on Steam Railways. Can. Ry. & Mar. World, no. 296, Oct. 1922, pp. 525-527, 6 figs. Details of four self-propelled cars of Can. Nat. Rys. on exhibit at Can. Nat. Exhibition, Toronto, viz., storage-battery car, steam car, and two types of gasoline cars. Results with self-propelled cars in United States. Diesel-electric cars.

Train Control. Automatic Train Control, Frank J. Sprague. Franklin Inst. Jl., vol. 194, no. 2, Aug. 1922, pp. 133-163, 11 figs. Notes on early failures and why greater progress has not been made; general requisites; the Sprague intermittent non-contact system.

Robbing Railroading of Some of Its Hazards. Robert G. Skerrett. Compressed Air Mag., vol. 27, no. 10, Oct. 1922, pp. 273-278, 15 figs. Development of automatic train control, and description of the Sprague system.

The Union System of Automatic Train Control, L. V. Lewis. Ry. Rev., vol. 71, no. 12, Sept. 16, 1922, pp. 371-374 and (discussion) 374-375, 6 figs. Describes system developed by Union Switch & Signal Co. to comply with requirements of road conditions. From paper read before Ry. Club in Pittsburgh.

RAILWAY SIGNALING

Alternating-Current, Power Lines. Overload Protection of A. C. Signal Power Lines, Harry M. Jacobs. Ry. Signal Engr., vol. 15, no. 9, Sept. 1922, pp. 345-346, 3 figs. Purpose of overload devices; transformer and substation protection; high-voltage fuses.

Block System. I. C. C. Statistics and Tables in Signaling, Ry. Signal Engr., vol. 15, no. 9, Sept. 1922, pp. 354-357, 2 figs. Annual report compiled by Bur. of Safety of Interstate Commerce Commission pertaining to block signals in service and percentage of all roads equipped with this system.

Interlocking. New Electric Interlocking on the D. & H., W. G. Burns. Ry. Signal Engr., vol. 15, no. 8, Aug. 1922, pp. 304-306, 10 figs. Rear home signals, concrete trunking and independent power plant are unusual features.

Track Circuits. Direct Current Track Circuits, W. J. Thorrowgood. Am. Ry. Assn. Signal Section, Proc., June 14-16, 1922, pp. A336-A340, 2 tables on supp. plates. Discussion of factors involved in standard of safety for track circuits.

D. C. Track Circuits with Welded Bonds, C. F. Estwick Ry. Signal Engr., vol. 15, no. 10, Oct. 1922, pp. 383-386, 5 figs. Determination of characteristics of relay to be used on long track circuits when cut sections are eliminated.

RAILWAYS

Japan. The Japanese Railways and Their Operating Problems, H. K. Smith. Ry. Rev., vol. 71, no. 12, Sept. 16, 1922, pp. 365-369, 5 figs. History, physical characteristics, and character of service; progress toward electrification.

United States and England. Samuel Rea Compares English and U. S. Railroads. Ry. Rev., vol. 71, no. 15, Oct. 7, 1922, pp. 495-496. Conditions affecting railroads in United States and those of Great Britain. Finds progress abroad in regrouping and believes English carriers must make sacrifices as here. From Phila. Public Ledger.

RAPID TRANSIT

Chicago. Chicago Transportation Experience. Elec. Ry. Jl., vol. 60, no. 13, Sept. 23, 1922. Contains following articles. Carrying a Billion Passengers a Year in Chicago, pp. 419-424, 10 figs. Dealing with the Labor Problem, Britton I. Budd, pp. 425-427. How Car Design has Progressed on Chicago's Rapid Transit Lines, H. A. Johnson, pp. 427-430, 4 figs. Maintaining Chicago "L" Structure, G. M. Anderson, pp. 430-431. Signaling Trains on Chicago Elevated Railroads, J. W. Stephenson, p. 431. How "L" Track is Built to Handle 900,000 Cars a Year, H. P. Savage, p. 432, 1 fig. Utility Insurance, Williston Fish, pp. 433-434. Heating and Ventilating Chicago Street Cars, Charles Gordon, pp. 435-439, 7 figs. Developing Chicago's Street Cars, Wray T. Thorn, pp. 440-444, 3 figs. Experience with Chicago Track, Charles S. Holcomb, pp. 445-452, 10 figs. Development of Unified Power Supply and Distribution Systems in Chicago, Ralph H. Rice, pp. 455-461, 5 figs. Requirements Imposed in Designing North Shore Passenger Cars, H. A. Otis, pp. 470-472, 6 figs. Using Direct Suspension Trolley in High-Speed Train Service, Clifford Huttleston, pp. 473-476, 9 figs. Chicago's Traffic Problem, R. F. Kelker, Jr., pp. 481-484, 10 figs.

REFRACTORIES

Compressive Strength. Volume Constancy and Compressive Strength of Refractory Lining of Boilers and Furnaces (Raumbeständigkeit und Druckfestigkeit der feuerfesten Auskleidung von Dampfkessel- und Feuerungsanlagen), W. Ritter. Feuerungstechnik, vol. 10, no. 23, Sept. 1, 1922, pp. 259-261. Methods and results of tests. See also Wärme-u. Kälte-Technik, vol. 24, no. 16, Aug. 15, 1922, pp. 185-187.

Foundry. Foundry Refractories, H. Winterton. Foundry Trade Jl., vol. 26, no. 318, Sept. 21, 1922, pp. 236-238. Notes on siliceous refractories; question of sands; coal dust; defects caused by lime in sand; grist; blackings; graphitic facings.

REFRIGERANTS

Sulphurous Anhydride. New System of Manufacturing Liquid Sulphurous Anhydride (Nuovo sistema di fabbricazione della anidride solforosa liquida nelle regioni sud-americane), H. J. Paoli. Giornale di Chimica Industriale ed Applicata, vol. 4, no. 8, Aug. 1922, pp. 349-352, 3 figs. Methods used by Sulfurica Co. in Argentina; operation of plant.

REFRIGERATING MACHINES

Air. Air as Refrigerating Agent (Sur l'emploi de l'air comme agent frigorifique), Maurice Leblanc. Revue Universelle des Mines, vol. 14, no. 3, Aug. 1, 1922, pp. 165-200, 16 figs. Describes new cold-air refrigerating machine which from tests proves to be as economical as an ammonia machine.

See also Nature (Paris), no. 2529, Sept. 23, 1922, pp. 203-208, 7 figs.

Ethyl-Chloride. Ethyl Chloride Refrigeration, Charles H. Herter. Refrig. World, vol. 57, no. 9, Sept. 1922, pp. 13-16 and 32, 3 figs. Theoretical heat balance of ethyl chloride refrigerating machines; results of actual tests; horsepower per ton in small machines.

RELAYS

Protective. Ground Relays Improve Protection, L. A. Terven. Elec. World, vol. 80, no. 14, Sept. 30, 1922, pp. 711-714, 12 figs. It is claimed that Isolation of accidentally grounded sections by accurate switch operation can be effected in nearly every case by use of proper combination of protective relays.

RESERVOIRS

Providence, R. I. Constructing Scituate Reservoir. Public Works, vol. 53, no. 7, Sept. 1922, pp. 137-143, 8 figs. Construction of earth dam and dike nearly 1½ miles in combined length to furnish improved water supply for Providence, R. I.; capacity of reservoir to be 36,900,000,000 gal.; 7-mile aqueduct to have capacity of 85,000,000 gal. daily, contractor's modernly equipped camp.

Balancing. A Balancing Reservoir, Wm. A. Megraw. Am. City, vol. 27, no. 3, Sept. 1922, pp. 209-211, 1 fig. Describes so-called balancing reservoir recently completed in connection with Gunpowder River improvements to water supply of Baltimore. Its function is to supply deficiency to pumps when too little water is being admitted to tunnel, and to absorb excess when too much is being admitted.

RESEARCH

Industrial. Research: Its Position in the Making of an Industry, John E. Teeple. Jl. Indus. & Eng. Chem., vol. 14, no. 10, Oct. 1922, pp. 904-905. Discusses Problems in connection with manufacture of decolorizing carbon; cracking heavy petroleum; and manufacture of potash.

ROAD CONSTRUCTION

Automotive Equipment. Automotive Equipment in Road Construction, A. C. Godward. Soc. Automotive Engrs. Jl., vol. 11, no. 4, Oct. 1922, pp. 355-357 and (discussion) 357-358. Notes on renting machinery to project to assure return on equipment. methods of determining depreciation, rental charges and ratio of operating costs to fixed charges. Comparison of author's system with that used by Associated General Contractors. Costs of operation of dump truck, caterpillar tractor and steam-shovel.

ROADS

Expreimental Work. Recent Developments in Highway Research. Good Roads, vol. 62, no. 23, June 7, 1922, pp 314-317. Experimental work on Bates, Arlington and Pittsburgh tests roads. Bur. of Pub. Roads devises new instruments for tests.

Policy. Considerations for a Road Policy, M. A. Lyons. Eng. Jl. (Eng. Inst. Can.), vol. 5, no. 10, Oct. 1922, pp. 504-508. Importance of road question : divisions under which road policy should be considered; types of traffic; exclusive requirements; where control should be placed; financing of roads.

ROADS, CONCRETE

Design. Concrete Pavements, H. C. Boyden. Colo. Sci. Soc. Proc., vol. 11, Jan. 1922, pp. 343-366. Outline of correct principles to be followed in construction of pavement and making of the concrete. Notes on fineness-modulus; designing mixtures of known strength; samples of aggregates; plasticity and water-cement ratio; specifications; improper use of principles; fundamentals other than design.

Bar Reinforcement. The Merits of Bar Reinforcement for Concrete Pavements, W. S. Edge. Good Roads, vol. 63, no. 11, Sept. 13, 1922, pp. 91-93. Investigatiom to determine whether concrete pavements needed reinforcement and if so what was best type and proper amount of steel to use for this purpose.

ROADS, TARRED

Great Britain. Practice in Tar Road Construction in Great Britain. Eng. News-Rec., vol. 89, no. 14, Oct. 5, 1922, pp. 564-566. Tars and surface-tarring procedure. Mixed tar and stone roads. Pitch-grouted or penetration macadam roads.

ROLLING MILLS

Electrically Driven. Electric Blooming Mill Drive, S. N. Roberts. Elec. Jl., vol. 19, no. 9, Sept. 1922, pp. 356-362, 12 figs. Deals with drive of Atlantic Steel Co.'s blooming mill.

PROCESSES. The Mechanical Working of Iron and Steel Walter Buckley. Eng. Jl., (Eng. Inst. Can.), vol. 5, no. 10, Oct. 1922, pp. 499-504, 10 figs. Outline of modern rolling mill practice, describing processes in various types of mills.

STRIP AND HOOP. Combined Strip and Hoop Mill of the Whitehead Iron and Steel Company, Limited. Iron & Coal Trades Rev., vol. 105, no. 2847, Sept. 22, 1922, pp. 417-418, 15 figs. on pp. 433-436. Details of continuous mill combining main features of the Acme and the Morgan continuous skelp mill. First on its type to be built in the world.

New Cold Rolled Strip Steel Plant. Iron Age, vol. 110, no. 15. Oct. 12, 1922, pp. 920-922, 5 figs. Finishing stands driven independently of roughing stands; unusual uniformity obtained in annealing ovens of special design. Details of new rolling mills of Wallingford Steel Co., Conn.

S

SAFETY

CODES. Preparation of Safety Codes Under the Auspices of the American Engineering Standards Committee, Morton C. Lloyd. Monthly Labor Rev., vol. 15, no. 3, Sept. 1922, pp. 1-8, 1 fig. It is shown that American Engineering Standards Committee with co-operation of Safety Code Correlating Committee, furnishes machinery for formulation of safety codes in manner which will insure thorough consideration of viewpoint of various interests concerned with safety codes.

SAND, MOLDING

SCREEN TESTS. Analyzes Sand Screen Tesas, H. A. Schwartz. Foundry, vol. 50, no. 18, Sept. 15, 1922, pp. 752-756, 7 figs. Mathematical investigations indicate effect of grains of different shapes and sizes on previousness of molding sand; method of testing; conclusions. Paper read before Am. Foundrymen's Assn.

TESTING. The Testing of Moulding Sands, Ernest J. Davis. Metal Industry (Lond.), vol. 21, nos. 10 and 11, Sept. 8 and 15, 1922, pp. 219-221 and 243-247, 6 figs. Describes how laboratory testing may be carried out. Notes on chemical, mechanical and mineral analysis; bonding strength, mechanical strength of sand molds and cores; thermal conductivity, permeability, porosity and microscopic examination.

SANITATION

TOWN AND REGIONAL PLANNING. Town and Regional Planning in Relation to Sanitation, R. O. Wynne-Roberts. Contract Rec., vol .36, no. 36, Sept. 6, 1922, pp. 879-881. Discusses problems of water supply and sewerage with particular reference to Toronto and district. Suggestions for administration of these services. From Jl. of Town Planning Inst.

SCREW THREADS

MILLING. The Milling of Screws and Other Problems in the Theory of Screw-Threads, H. H. Jeffcott. Instn. Mech. Engrs. Proc., vol. 1, no. 3, 1922, pp. 515-528 and (discussion) 529-562, 19 figs. Account of problems of interest to manufacturer and meteologist.

NORMAL THICKNESS OF WORM-GEAR. The Normal Thickness of a Worm Thread, E. A. Limming. Machy. (Lond.), vol. 20, no. 519, Sept. 7, 1922, pp. 707-708, 1 fig. Geometrical consideration involved in finding true normal thickness.

TOLERANCES. Interchangeable Threaded Work. Engineering, vol. 114, nos. 2959 and 2960, Sept. 15 and 22, 1922, pp. 320-321 and 352-354, 12 figs. Brief survey of practical and theoretical requirements of screw threads and consideration of problems of tolerances. Presents tables of effective diameter tolerances recommended by Alfred Herbert Ltd., for all screw threads to English measurements having thread angle of 55 or 60 deg., and for all metric threads having thread angle of 53 8 to 60 deg ; and recommended for British Assn. screw threads.

SEWAGE DISPOSAL

TREATMENT FOR. Some Recent Experiences in the Process of Sewage Disposal, J. W. Haigh Johnson. Can. Engr., vol. 43, no. 12, Sept. 19, 1922, pp. 367-369. Activated sludge process; zoological character of sludge; experiments on gas evolved during purification; intensity and rate of oxidation. Paper read before Assn. of Mgrs. of Sewage Disposal Wks.

PLANTS. Survey of Sewage Treatment Plants, H. H. Wagenhals. Contract Rec., vol. 36, no. 39, Sept. 27, 1922, pp. 951-953. Result of investigation aiming to secure data on which efficiency could be judged and to suggest standard test and make results at different plants comparable. (Abstract.) From Pub. Health Reports.

SHAFTS

Bending Moments. Bending Moments in Pins or Shafts Determined Graphically, A. M. Winslow. Eng. News-Rec., vol. 89, no. 14, Oct. 5, 1922, pp. 568-569, 3 figs. Effect of forces in different planes expressed by composite moment diagram. Maximum movement found by inspection.

SOLIDS

ELECTRON THEORY OF. An Electron Theory of Solids, J. J. Thomson. Franklin Inst. Jl., vol. 194, no. 3, Sept. 1922, pp. 281-289, 4 figs. Points out that electronic theory of constitution of atom leads quite simply and directly to theory of [illegible] tested, agrees remarkably well with facts.

FAILURE DUE TO STRESS. Laws of Failure of Solid Bodies Due to Stress, Chidô Sunatani. Soc. Mech. Engrs., Tokyo, Japan—Jl., vol. 25, no. 74, June 1922, pp. 1-37, 50 figs. Investigation of laws by which elastic limit and ultimate failure of solid [illegible] stress may be determined.

STANDARDIZATION

FRANCE. Permanent Standardization Committee (Commission permanente de Standardisation [illegible] no. 21, May 25, 1922, pp. 749-750. [illegible] Standardization of dimensions; choice of units; etc.

Permanent Standardization Committee (Commission permanente de Standardisation), Sigma. Métallurgie, vol. 54, no. 36, Sept. 7, 1922, pp. 1311-1313. Plans recently submitted to public discussion on standardization of copper and aluminum buzz bars for switchboards; aluminum wire and cables; and specifications for supplying platinum, platinum-copper, platinum-iridium and platinum-chloride.

MECHANICAL CONSTRUCTION. Standardization of Dimensions in Mechanical Construction (Sur la normalisation des dimensions des éléments de la construction mécanique), F. Bayle. Revue Générale de l'Electricité, vol. 12, no. 10, Sept. 9, 1922, pp. 345-352, 4 figs. Arithmetic and geometric units; practical measures which should be given preference; importance of adoption of standard measures of length.

STEAM

HIGH-PRESSURE. High-Pressure Steam-Heating Lines, Edgar Buckingham. Mech. Eng., vol. 41, no. 10, Oct. 1922, pp. 641-642. Effect of throttling through reducing valve or steam motor; economy of generating steam at high pressure and transmitting it through small line with large line drop.

STEAM ENGINES

ROLLING-MILL RECIPROCATING. Rolling Mill Engine of 25,000 Horse Power. Power House, vol. 15, no. 19, Oct. 5, 1922, pp. 19-20, 2 figs. Built on marine lines for hardest kind of land service; working at full power it reverses four times per min.; three-cylinder but not compound.

UNIFLOW. Another Corliss Engine Firm Building Uniflow Engines. Power, vol. 56, no. 16, Oct. 17, 1922, pp. 600-601, 5 figs. Uniflow engines being built by Murray Iron Works Co. in powers ranging from 75 to 650 i.hp., of side crank bored guide horizontal design.

VALVE GEARS. Engines at Baltimore Refinery Have Unusual Valve Gear. Power, vol. 56, no. 13, Sept. 26, 1922, pp. 498-499, 5 figs. Twin engines 26 by 32 in., operating at 135 r.p.m., direct connected to 1250-kw. d.c. generator.

STEAM GENERATORS

ELECTRIC. Electric Steam Generators and Their Application, P. S. Gregory. Am. Electrochem. Soc. advance paper, no. 12, for meeting Sept. 21-23, 1922, pp. 97-108, 5 figs. Commercial application of electric energy for production of steam by means of water-resistance type of electric steam generators.

STEAM POWER PLANTS

FUEL ECONOMY. Fuel Economy in Steam Power Plants, John B. C. Kershaw. Beama, vol. 11, nos. 2, 3, and 4, Aug., Sept. Oct., 1922, pp. 538-545, 6 figs., 617-625, 7 figs. and 671-681, 11 figs. Aug.: Present-day methods of burning fuel and their defects. Sept.: Improved methods of burning fuel. Oct.: Utilization of waste heat from steam boilers.

STEEL

ALLOY. *See Alloy Steels.*

ELASTIC LIMIT. Elastic Limit and Permanent Deformation of Steels by Multiple Forces (Limite élastique et déformation permanente des aciers dans le cas de forces multiples), E. Malaval. Technique Moderne, vol. 14, nos. 7 and 8, July and Aug. 1922, pp. 289-296 and 345-350, 21 figs. Elastic limit for metals subjected simultaneously to traction and compression; resistance to rupture of cylindrical tubes; effect of simple and compound leads. Bibliograpgy.

FLOW AT LOW RED HEAT. Experiments on the Flow of Steels at a Low Red Heat with a Note on the Scaling of Heated Steels, J. H. S. Dickenson. Iron & Coal Trades Rev., vol. 105, no. 2845, Sept. 8, 1922, pp. 327-331, 15 figs. (Abstract). Paper read before Iron & Steel Inst. See also Engineering, vol. 114, nos. 2959 and 2960, Sept. 15 and 22, 1922. pp. 326-329 and 378-379, 21 figs.

LAG. On the Diminution of Lag at Arl Through Deformation, J. H. Whiteley. Engineering, vol. 114, no. 2961, Sept. 29, 1922, p. 416, 6 figs. Evidence is given that when steel, in metastable region at Arl point is worked, lag is markedly diminished. Paper read before Iron and Steel Instn.

MANGANESE. *See Manganese Steel.*

TESTING. Rapid Determination of Elongation and Resistance to Impact of Steels by Doubling Over a Notched Bar (Détermination, rapide de l'allongement et de la résistance au choc des aciers, par pliage d'un barreau entaillé), L. Jannin. Bul. de la Société d'Encouragement pour l'Industrie Nationale, vol. 134, no. 7, July 1922, pp. 646-656, 7 figs. Results of tests.

TOOL. *See Tool Steel.*

STEEL CASTINGS

ALLOY, MANUFACTURE OF. Alloy Castings from Electric Furnaces, Larry J. Barton. Iron Age, vol. 110, no. 13, Sept. 28, 1922, pp. 784-786, 1 fig. Describes manufacture. properties and heat treatment of nickel, chromium and chrome-nickel steel. Practice of Los Angeles Foundry Co.

STEEL, HEAT TREATMENT OF

LEAD-POT FURNACE. Heat Treating in Lead, R. B. Schenck. Am. Soc. for Steel Treating, Trans., vol. 2, no. 12, Sept. 1922, pp. 1203-1212. It is concluded that greatest argument for lead-pot furnace is high quality of treated product resulting from uniform and accurate temperatures.

NICKEL-CHROMIUM. Heat Treating Changes Volume, Leslie Aitchison and G. R. Woodvine. Iron Trade Rev., vol. 71, no. 14, Oct. 5, 1922, pp. 915-918, 5 figs. Experiments conducted on nickel-chromium steels indicate expansions and contraction is related directly to temperature alterations. Summary shows results of subjecting metal to various conditions. (Abstract). Paper presented before Iron & Steel Inst.

STEEL, HIGH-SPEED

MANUFACTURE. Practical Notes on the Manufacture and Treatment of High-Speed Steel, H. K. Ogilvie. Iron & Coal Trades Rev., vol. 105, no. 2845, Sept. 8, 1922, no. 331-333. Deals chiefly with manufacture in basic-lined electric furnace. (Abridgment.) Paper read before Iron & Steel Inst. See also Engineer, vol. 134, no. 3481, Sept. 15, 1922, pp. 282-283.

STEEL MANUFACTURE

ELECTRIC FURNACES. Electric Steel Production of the World, Edwin F. Cone. Iron Age, vol. 110, no. 11, Sept. 14, 1922, pp. 653-654. Record of leading countries from 1913 to 1921. Post-war and present conditions. Pig iron from electric furnaces.

STEEL WORKS

England. The Devonshire Ironworks, Engineer, vol. 134, no. 3480, Sept. 8, 1922, p. 242, 3 figs., partly on p. 246. Consists in the main of up-to-date blast furnace plant, one of the largest coke-oven plants in United Kingdom, and extensive pipe foundries for manufacture of cast-iron pipe; also comprises large by-product recovery plant, and chemical plant for manufacture of sulphuric and nitric acids, and other chemicals.

Holland. Construction of the Royal Dutch Steel Works at Velsen, Holland (La construction des Aciéries royales néerlandaises à Velsen (Hollande). Génie Civil, vol. 81, no. 6, Aug. 5, 1922, pp. 138-139, 2 figs. Work in connection with providing access; construction of works themselves; buildings for personnel; etc.

STOKERS

Mechanical. Mechanical Stokers and Stoking, Walter N. Polaskov. Management Eng., vol. 2, no. 6, June 1922, pp. 325-330 and vol. 3, nos. 1, 2, 3 and 4, July, Aug., Sept. and Oct, 1922, pp. 29-36, 73-80, 171-179 and 233-241, 50 figs. June: Origin and development. July: Process of combustion. Aug.: Chain-grate stokers. Sept.: Overfeed stokers. Oct.: Underfeed stokers.

Underfeed. Detroit Edison Co. Has Superstoker, E. E. Dubry. Power, vol. 56, no. 14, Oct. 3, 1922, pp. 536-538, 5 figs. 13-retort underfeed stoker having total grate area of 470 sq. ft. replaces double stoker setting under Stirling type-W boiler of 23,654-sq. ft. effective heating surface, and makes possible big reduction in number of overhead bunkers and coal-conveying equipment.

STORAGE BATTERIES

Applications. The Application of the Electric Accumulator, H. Beckmann. Eng. Progress, vol. 3, no. 9, Sept. 1922, pp. 189-194, 16 figs. Notes on stationary batteries; storage-battery rail vehicles; coaches and locomotive; electric motor cars; battery boats.

STRESSES

Cylinder Walls. The Stress of a Thin Cylinder Wall Taking Deformation into Consideration (Die Beanspruchung einer dünnen Zylinderwand bei Berücksichtigung der Formänderung), Josef Krebitz. Eisenbau, vol. 13, nos. 6 and 7, June 20 and July 25, 1922, pp. 119-124 and 143-149, 6 figs. Investigation of deformation of cylinder wall which is free from bending stress.

SUBSTATIONS

Automatic. Features of St. Louis Automatic Substation, Walter H. Millan. Elec. World, vol. 80, no. 16, Oct. 14, 1922, pp. 817-820, 7 figs. Automatic reclosing outgoing feeders; motor-operated valve on cooling system of transformers and regulators; transformer core lifted on steel frame extending through roof.

SURVEYING

Boundary. Sources of Error Occurring in Boundary Surveys, C. V. Hodgson. Eng. News-Rec., vol. 89, no. 13, Sept. 28, 1922, pp. 517-518. Precise triangulation prerequisites to satisfactory boundary determination. Examples of station error in astronomic method.

SWITCHBOARDS

Installation Details. Installation Details of Switchboards and Control Pits, W. Frank Sutherland. Elec. World, vol. 80, no. 15, Oct. 7, 1922, pp. 763-767, 10 figs. Disadvantages of standard switchboard base; examples of sightly and convenient construction; details applicable to boards of various kinds.

T

TANKS

Concrete. Oil-Proof Treatment of Concrete Storage Tanks, Reginald Brown. Petroleum Times, vol. 8, no. 191, Sept. 2, 1922, p. 342. Results of author's experiments.

Industrial. Getting the Most out of Industrial Tanks, Charles L. Hubbard. Factory, vol. 29, no. 4, Oct. 1922, pp. 398-400 and 457-458, 6 figs. Suggestions for selection of right tank.

TERMINALS, MARINE

Freight. Inland Waterways Freight Terminals, H. McL. Harding. World Ports, vol. 10, no. 10, Aug. 1922, pp. 72-77, 2 figs. It is claimed that one direct movement with one operation of freight only, between vessel and shore, gives greatest speed of transference and economy of operation; fewest movable mechanical parts reduce maintenance expense and assist continuous operation.

TESTING MACHINES

Railway Material. Deflection Testing of Locomotive Axles. Engineer, vol. 134, no. 3480, Sept. 8, 1922, pp. 279-280, 3 figs. Describes universal 100-ton testing machine, constructed by A. J. Amsler & Co., Schaffhausen, Switzerland, for performing acceptance tests on railway material, such as hooks, chains, axles, couplings, etc.

THERMODYNAMICS

Heterogeneous Equilibria, Application to. The Application of Thermodynamics to Heterogeneous Equilibria, George W. Morey. Franklin Inst. Jl., vol. 194, no. 4, Oct. 1922, pp. 425-484, 11 figs. By detailed application of described equation (equation 97) problems of heterogeneous equilibria may be solved completely if entropy and volume changes are known in their entirety, and it is possible to predict behavior of system when subjected to changes in pressure, temperature, and composition.

Molecular. Molecular Thermodynamics, Bernard A. M. Cavanagh. Lond., Edinburgh, & Dublin Philosophical Mag. & Jl., of Sci., vol. 44, no. 261, Sept. 1922, pp. 610-640. Analysis of problem of "solvation of solutes" to which is attached discussion of results.

TIDAL POWER

Utilization. Theory of River Tides and Their Utilization (Sur la théorie des marées fluviales et ses applications), Charles Ribiere. Annales des Ponts et Chaussées, vol. 1, no. 3, May-June 1922, pp. 266-276. Mathematical investigation showing that substantial modifications are necessary in current formulas used.

Utilization of Tidal Power (Sur l'utilisation de l'énergie des marées), A. Defour. Revue Générale de l'Electricité, vol. 11, no. 9, Mar. 1, 1922, pp. 313-322, 8 figs. Discusses the Maire, Claude, Etat and Defour cycles and compares their efficiency.

TIRES, RUBBER

Rolling Resistance. Rolling Resistance of Rubber Tires, E. H. Lockwood. India Rubber World, vol. 67, no. 1, Oct. 1, 1922, pp. 13-15, 4 figs. Notes on rear-wheel dynamometer; measuring tire resistance; solid-tire tests; cord and fabric-tire tests; loss of power in tires.

TOOL STEEL

Graphitization. Graphitization in a Carbon Tool Steel, Henry S. Rawdon and Samuel Epstein. Chem. & Met. Eng., vol. 27, no. 13, Sept. 27, 1922, pp. 650-651, 8 figs. Examination of type of black fracture occasionally occurring in annealed carbon-tool-steel bars.

Machinability. The Effect of Structure upon the Machining of Tool Steel, J. V. Emmons. Am. Soc. for Steel Treating, Trans., vol. 2, no. 12, Sept. 1922, pp. 1100-1110 and 1212, 20 figs. Discusses effect of hardness and structure of tool steel upon its machinability. Machining operations considered are turning, milling, drilling, reaming, thread cutting, swaging, wire drawing, punching and shearing. Conclusions as to most favourable structures for various machining processes.

TRACTORS

Caterpillar. Making Tracks for Caterpillars, Howard L. McLean. West. Machy. World, vol. 13, no. 9, Sept. 1922, pp. 311-312, 5 figs. Notes on methods and machines used in Holt factory at Stockton, Cal., for machining and assembling flexible steel tracks.

Road-Building Machinery. Internal-Combustion-Engine Power for Road-Grading Machinery, C. O. Woid. Soc. Automotive Engrs. Jl., vol. 11, no. 4, Oct. 1922, pp. 323-326 and (discussion) 326-327, 4 figs. Deals with large versus small tractors and most suitable type of tractors; engine requirements; use of multiple-unit road machinery behind one power unit; combination tractor and grader units; general utilization of power units; power requirements of concrete-road construction.

Suction-Gas. The Suction Gas Tractor. Engineer, vol. 134, no. 3482, Sept. 22, 1922, p. 306. Considerations relating to use of suction gas producers on tractors and their design and working.

TRANSFORMERS

Auto-Transformers. Auto Transformers, Frank C. Vogan. Power Plant Eng., vol. 26, nos. 14, 15 and 16, July 15, Aug. 1 and 15, 1922, pp. 710-712, 755-756 and 805-808, 4 figs. July 15: Theory of operation, advantages over 2-winding type of transformers. Aug. 1: Determining their rating and factors governing their selection. Aug. 15: Examples showing their application on lighting and power circuits.

TUBING

Steel. Corrugated Steel Tubing for High-Pressure Liquids (Tubes ondulés en acier pour fluides à haute pression), R. Joessel. Génie Civil, vol. 81, no. 6, Aug. 5, 1922, pp. 130-133, 9 figs. Construction, application and advantages; gives greater elasticity lengthwise; has greater resistance to pressures and is easily adjustable to any profile.

TUNGSTEN

Preparation. The Story of Tungsten, W. C. Balke. West. Soc. Engrs. Jl., vol. 27, no. 8, Aug. 1922, pp. 223-232, 8 figs. Notes on place of tungsten among elements and nature of element; and description of various steps through which it passes to finished pure tungsten product; properties and uses.

TURBO-GENERATORS

Protective Apparatus. Protective Apparatus for Turbo-Generators, J. A. Kusser. Instn. Elec. Engrs. Jl., vol. 60, no. 311, July 1922, pp. 761-776 and (discussion) 777-790, 25 figs. Deals with causes of breakdowns in turbo-alternators, particularly in stator winding and discusses means for limiting damage in case breakdowns do occur. Proposes new system of protection which has advantage of protection against faults between turns.

U

UNEMPLOYMENT

Insurance. Unemployment Insurance in Theory and Practice. Nat. Indus. Conference Board, Research Report, no. 51, June 1922, 127 pp. Outline of theory and main questions involved in such insurance; analysis of development of and practical experience with this theory, principally in Europe; survey of theory and problems as related to situation in United States.

Prevention. Prevention of Unemployment, U. S. Bur. of Labor Statistics Bul., no. 311, Aug. 1922, pp. 60-78. Contains following articles: Measurement of Unemployment—The Heed for Additional Information, F. S. Deibler. Contribution of Vocational Guidance to the Prevention of Unemployment, Helen T. Woolley. Reviving Private Industry through Public Works, Otto T. Mallery.

V

VARNISHES

Electrical Conductivity. Changes in the Electrical Conductivity of Varnishes During Drying, H. C. P. Weber. Am. Electrochem. Soc. advance paper, no. 11, for meeting Sept. 21-23, 1922, pp. 89-96, 4 figs. Certain types of varnishes are capable of developing substances of low electrical resistance during drying and oxidation; these substances are acidic, slightly volatile and may be shifted about and accumulated by temperature differences.

VENTILATION

Air-Duct Calculation. How to Figure Rectangular Air Duct Sizes Quickly, W. L. Durand. Am. Soc. Heating & Vent. Engrs., Jl., vol. 28, no. 7, Oct. 1922, pp. 719-721, 1 fig. Presents table prepared by author that will give correct-size rectangular air duct with minimum of effort which means materially simplifying calculations.

Automatic, Ventilators. Comparative Tests of Automatic Ventilators, J. P. Calderwood, A. J. Mack and C. J. Bradley. Am. Soc. Heating & Vent. Engrs. Jl., vol. 28, no. 5, July 1922, pp. 505-513, 6 figs. Tests conducted in engineering experiment station of Kansas State Agricultural College to determine efficiency of various types.

W

WAGES

Incentive Systems. Effect of Labor Setting on Labor Costs, William O. Lichtner. Indus. Management, vol. 64, no. 3, Sept. 1922, pp. 169-172, It is claimed that managers have taken incentive out of wage-inventive systems by unintelligent rate cutting.

Piece-Rate Methods. Putting Production Incentive into Pay Envelopes, Samuel Theaker. Indus. Management, vol. 64, no. 4, Oct. 1922, pp. 216-220, 3 figs. Explains how good points of piecework can be utilized while removing at the same time the disfavour with which it is regarded.

WASTE HEAT

Utilization. Blast Furnace Waste Heat Utilized, Hubert Hermanns. Blast Furnace & Steel Plant, vol. 10, no. 10, Oct. 1922, pp. 531-534, 9 figs. Points out that by employing waste-heat utilizers in conjunction with engines large part of waste heat may be recovered. Account of German experiences.

WASTE PREVENTION

Industrial. A Further Consideration of the Report of the Committee on Elimination of Waste in Industry, Thomas W. Mitchell. Taylor Soc. Bul., vol. 7, no. 5, Oct. 1922, pp. 198-204.

WATER

Specific Heat. The Ratio of the Calorie at 73° to That at 20°, Arnold Romberg. Am. Acad. Arts & Sci. Proc., vol. 57, no. 15, June 1922, pp. 377-378, 10 figs. Describes experiment designed as crucial test of correctness of temperature-variation curve of specific heat of water.

WATER POWER

St. Lawrence Region. Water Power Situation in the St. Lawrence Region, J. T. Johnston. Can. Engr., vol. 43, no. 12, Sept. 19, 1922, pp. 359-361, 2 figs. Relation to St. Lawrence Waterway development; 6,077,427 undeveloped horsepower within 300 miles of Long Sault exclusive of undeveloped St. Lawrence Power; probable demand for power.

Snake River. Snake River as a Source of Power, W. G. Hoyt. Elec. World, vol. 80, no. 16, Oct. 14, 1922, pp. 811-813, 3 figs. Undeveloped power sites total 1,510,000 hp., with existing flow available for 90 per cent of time.

Tastes and Odors. Modern Practce in the Remoual of Taste and Odor, Norman J. Howard. Am. Water Works Assn. Jl., vol. 9, no. 5, Sept. 1922, pp. 766-792. Tastes from microscopic organism; taste and other following chlorination.

WATER SUPPLY

Panama Canal. Water Supply of the Panama Canal, R. Z. Kirkpatrick. Pacific Mar. Rev., vol. 19, no. 10, Oct. 1922, pp. 551-554, 4 figs. Resumé of past, present and future situation.

WATER TREATMENT

Chlorination. How Should Water Be Sterilized? Contract Rec., vol. 36, no. 39, Sept. 27, 1922, pp. 848-950. Report on water supply of London, Eng., contains explanation of methods of using chlorine in its various forms for water sterilization.

WEIRS

Herschel Type. An Investigation of the Herschel Type of Weir, Richard H. Morris and Albert J. R. Houston. Mech. Eng., vol. 44, no. 10, Oct. 1922, pp. 651-654, 8 figs. Results of tests made to determine effect of various modifications in construction on action of improved type of weir designed by Clemens Herschel for gaging in open channels.

WELDING

Electric-Railway Practice. Welding as Practised by Electric Railways. Elec. Ry. Jl., vol. 60, no. 15, Oct. 7, 1922, pp. 567-568. Symposium of papers forming basis of discussion at joint meeting of Am. Welding Soc. and Am. Elec. Ry. Eng. Assn. Fields of several varieties of welding were outlined.

Tube. Contraction in Tube Welding, Marcel Piette. Acetylene Jl., vol. 24, no. 3, Sept. 1922, pp. 120-121, 5 figs. Distortion can be avoided by expanding pieces in opposite sense before welding. Translated from Revue de la Soudure Autogène, with additions.

See also Electric Welding; Oxy-Acetylene Welding.

WIRE MANUFACTURE

Forming. Wire Forming Machy. (Lond.), vol. 20, nos. 516 and 521, Aug. 17 and Sept. 21, 1922, pp. 597-600 and 756-760, 18 figs. Methods used in manufacture of wire goods and general principles applied in design of typical wire-forming machine. See also Machy. (N.Y.), vol. 28, no. 12, Aug. 1922, pp. 239-942 and vol. 29, no. 1, Sept. 1922, pp. 26-30, 17 figs.

WOOD

Heating Value of American Woods. The Calorific Value of American Woods, S. W. Parr and C. N. Davidson. Jl. Indus. & Eng. Chem., vol. 14, no. 10, Oct. 1922, pp. 935-936, 3 figs. Results of experiments to determine "end point."

Testing Machine. Amsler Machine for Static and Dynamic Testing of Wood (Machine Amsler pour les essais statiques et dynamiques des bois). Bul. Technique de la Suisse Romande, vol. 48, no. 17, Aug. 19, 1922, pp. 197-201, 9 figs. Built by A. J. Amsler & Co. at Schaffhausen for bending, compression, impact and other tests; construction and operation.

Z

ZINC

Electrolytic Plant. Electrolytic Zinc Works in Tasmania. Engineer, vol. 134, no. 3482, Sept. 22, 1922, pp. 289-290, 4 figs., partly on p. 300. Details of plant producing 30,000 lb. of zinc per 24 hr.

Consider the advertiser, his course is that of wisdom.

CEMENT-GUN

TRADE MARK

Work done and photograph furnished by Traylor-Dewey Contracting Co., Allentown, Pa.

GUNITE was chosen by the New York Shipbuilding Company, Camden, New Jersey, for the walls of their new buildings, which were erected during the war period, on account of the rapid construction and fireproofing quality.

Their judgement has now been confirmed by the National Board of Fire Underwriters in a report issued May 12, 1922, which gives 2 in. single GUNITE walls a rating of ONE HOUR and hollow GUNITE walls a rating of THREE HOURS and they are an absolute FIRE STOP.

Request for Institute Records

To the Members of The Institute

In order to make the Year Book and List of Members of the greatest possible value to the membership, it is earnestly requested that you kindly fill in the return slip.

In many cases we have not on our records the official positions of our members and it is hoped that all members will return the slip, filled in, at the earliest possible date.

FRASER S. KEITH, Secretary.

SEALED Tenders addressed to the undersigned, and endorsed "Tender for Esquimalt Dry Dock Machinery", will be received at this office until **12 o'clock noon, Monday, January 15, 1923,** for the construction and installation of pumping and other machinery for the Dry Dock, at Esquimalt, B.C.

Plans and forms of contract can be seen and specification and forms of tender obtained at this Department, at the office of the District Engineer, Post Office Building, Victoria, B.C.; Post Office Building, New Westminster, B.C.; Customs Building, Main Street, Winnipeg, Man.; Equity Building, Toronto, Ont.; and Shaughnessy Building, Montreal, Que.

Tenders will not be considered unless made on printed forms supplied by the Department and in accordance with conditions contained therein.

Each tender must be accompanied by an accepted cheque on a chartered bank, payable to the order of the Minister of Public Works, equal to 5 p.c. of the amount of the tender. War Loan Bonds of the Dominion will also be accepted as security, or war bonds and cheques if required to make up an odd amount.

Note.—Blue prints can be obtained at this Department by depositing an accepted bank cheque for the sum of $10, payable to the order of the Minister of Public Works, which will be returned if the intending bidder submit a regular bid.

By order,
R. C. DESROCHERS,
Secretary.

Department of Public Works,
Ottawa, November 25, 1922.

On The Bridges of Canada

Metalastic is an elastic metal paint especially suited for use on structural steel and metal surfaces.

The most satisfactory metal paint where rapid and hard drying qualities are essential.

Metalastic No. 7 (Liquid) is made in four attractive shades—Gray, Olive Green, Dark Green and Red—and is made to meet the demand for a variety of colors for painting iron and steel.

It has the greatest protective value that can be put into colored metal paints.

Wherever maximum surface protection at a reasonable price is desirable Metalastic fills the bill.

Architects and Structural Engineers should write us for illustrated literature and films of the various Metalastic shades.

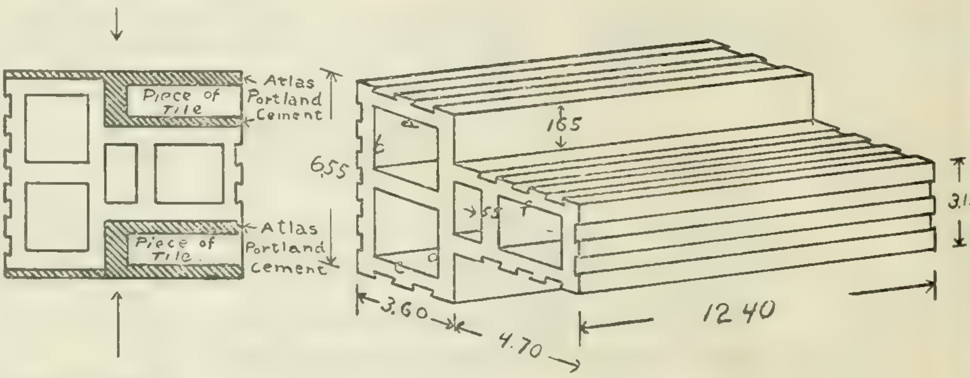
Official Report of a Test by McGill University

THE samples were from stock and only the light and medium burned, or the usual run of material shipped by makers of Interlocking Tile.

The test was made to determine if Interlocking Tile could be safely loaded to the Toronto Building Code Limit of four and one-half tons per square foot.

The results of the tests were so good that a building might be designed in which the walls would carry a load of six tons per square foot.

Direction of application of load



Method of Testing

A Convincing Test of the Qualities of Interlocking Tile.

TESTING LABORATORY McGILL UNIVERSITY

Montreal, January 28th 1921

ABSORPTION TEST

Sample	Dry Weight Lbs.	Weight After Immersion in Water		Increase in Weight, Lbs.	Increase Per Cent
Light	15.317	24 hrs.	17.304	1.987	12.9
burned		48 hrs.	17.336	2.019	13.1
Medium	15.448	24 hrs.	16.183	.735	4.7
burned		48 hrs.	16.225		5.0

CRUSHING TEST

The loading faces were levelled up with Portland Cement and after resting for seven days, the whole of each loading face was prepared with plaster of Paris, giving an even distribution of load.

The net areas of the vertical walls sustaining the loads were determined by measuring the thicknesses from the bottoms of the groves.

	Light Burned	Medium Burned
Length of shells and webs, inches..................	12.2	11.73
Net areas of vertical wall and webs.................	24.91	23.94
Maximum loads sustained, lbs......................	85,700	155,900
Maximum loads in lbs. per sq. in. of vertical section	3,490	6,500
